Then there's that other crowd—the bunch that grabbed the earth and jammed a halo down over its girth and made a trade-mark. Having appropriated all the land and water and clouds, I see that Brandt has roped in a bunch of angels to dance around the emblem of Universal films, and I'm looking for a further adaptation to include the Great Ruler of the universe. Why not go the limit? Bedding says it's the biggest thing ever devised and that goes. Well, the Universal is some husk, at that. It would make a great film story and the scenario man ought to get it. There is a host of characters, all right, including the invincible Patrick Aloysius Powers, himself. A few weeks ago, this misfit effort of trade journalism said that Pat was a whale to work. He is. I saw him in action. I rode with him in his little red buzz wagon when the road was rough and the engine on the bum. I don't know when Pat starts or when he quits, but he beats it all over New York with that wagon of his. He must jolly the studio folks at the Imp, Champion, Rex, Eclair, Victor, Gem and Nestor plants. He whispers to my old friend, Otis Turner; pulls Phillips Smalley into a dark corner; joshes George Nichols, the only director in the world who smiles at trouble; smoothes the wrinkles in Harry Solter's shirt sleeve; crawls over railings to sign requisitions; answers telephones; says it is all right to Aubrey Kennedy and "Go to it" to Jim Carlton; buys the Crystal Film from Ludwig G. B. Erb and the St. Louis Motion Picture Company while he lunches; meets thirty exchange men at 1:30; sees everybody that calls at 1 Union Square, except the two riders of the bull buffalo and the Chicago blonde who steers it; tells Mark Dintenfass to be cheerful, and Joe Engle, he's handsomer today than he was yesterday, and wonders when Dave Horsley is going west, and is glad that Brulatour and Laemmle are in Europe and Bill Swanson in 'Frisco—at least that's three of 'em that aren't right there. Oh, I nearly forgot—he hired C. V. Henkel that day to help him restore order and he told Brandt thirty-seven things to do and eighty-nine things not to do and put Charley Simone in room 711 (can you beat it for luck?) to think out a way to stretch a single sheet to cover three yards of cheese cloth and hold varnish. Really that's only reciting a few minutes of Pat's activities. He has eleven different private rooms, but no privacy. The wheeze artist who says that Pat Powers is also editor of the *Universal Weekly*, published at "Onion" Square, is a prevaricator. That's Bedding's job. Nobody knows it better than Bedding does. The only thing that Powers edits is a check book, and he uses a blue pencil on most of the schedules. The only thing he likes to spend money for is automobile accidents and film exchanges. He has his mark on nearly all the New York trolleys and says if he lasts long enough they'll have to put on air brakes, or he will know the reason.

* * *

Take it by and large, the film business in New York isn't much different from what it is in Chicago—except in Chicago they don't make so darned much fuss about it.

Color Photography by a New Process

Possibilities for Motion Pictures

THE special features of the micro-spectra method of color photography are, first, that by its means pictures absolutely faithful in color, tone, and texture are obtainable by means purely optical without the intervention of any artificial coloring matter whatsoever, and, secondly, that it is a one-plate process involving nothing more than everyday black and white photography. A single negative is taken on a panchromatic plate, a lantern slide is made from it and placed in the position of the negative, white light is projected through the apparatus, and the picture, after slight adjustment, flashes out in its true colors.

The theory of the process is a simple one. It consists in producing by optical means a surface composed of hundreds of complete but very narrow spectra, lying next to one another, the spectra being so close together as to render the individual colors indistinguishable to the unaided eye, so that the surface appears to be white. The photographic positive is used as a mask to block out or weaken those colors which are not wanted, the remainder combining to form the picture.

The surface, composed of those contiguous narrow spectra, is produced by allowing white light to fall upon a fine line screen, of which the opaque lines are three

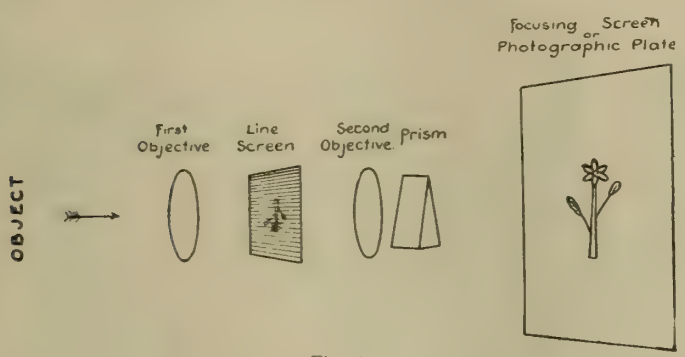

Fig. 1.

times as wide as the clear interspaces, and forming an image on this screen by means of a lens with a prism just in front of it. The prism spreads each white line into a complete spectrum, and is so calculated that the spectra lie next each other on the focusing screen without interspace. If instead of white light falling upon the line screen we allow colored light to fall upon it, only those spectrum colors of which the line in question is composed appear on the focusing screen, the colors which are wholly or partially missing from the spectrum of white light being represented by spaces wholly or partially dark.

In taking the photograph the image of the colored object is projected by means of any ordinary objective lens on to the line screen, the image of which is in turn projected by the second lens with the prism in front of it on to the photographic plate placed in the position of the focusing screen. (Fig. 1 shows diagrammatically the general optical arrangement.) The plate must be approximately equally sensitive to all colors, so that the resulting negative is completely darkened when acted upon by any color in its full intensity, and partially darkened where the incident color is weakened. A lantern slide positive from this negative will, of course, show the reverse effect, being completely transparent where the color has acted with full intensity, of partial transparency where the color has acted less strongly, and opaque where the colors were missing, i. e., in those parts coincident in position with the spectrum colors of white light that were not present in the object photographed. When, therefore, this positive is placed in the exact position of the negative, and white light is projected through the apparatus, it acts as the desired mask to block out those

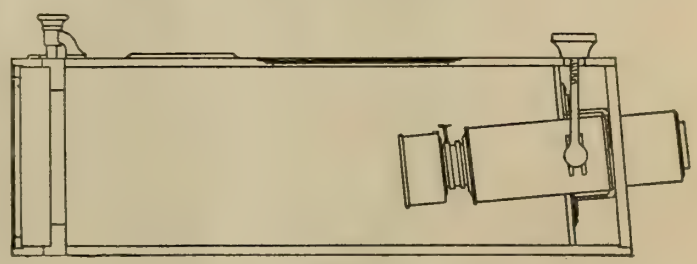

Fig. 2.

colors that are not wanted, and the picture is reproduced in the original colors.

Like so many other scientific problems, however, while the theory was simple, in practice, difficulties in the way of the construction of the necessary apparatus (Figs. 2 and 3) arose at every turn, and matters were further complicated by the necessity of keeping the camera within portable limits. To indicate one of the main sources of difficulty, an ordinary glass prism produces a spectrum widely extended in the violet and blue region and crowded up at the yellow and red end, an effect very detrimental to the proper rendering of the latter colors. This was overcome by the use of a compound prism specially computed to give a spectrum in which the colors are evenly distributed, as in a grating spectrum. The introduction, however, of a thick prism of this kind introduced aberrations of all kinds, both in the images of the object and of the spectra, which had to be successively overcome. It was, for example, found necessary to place the line screen (which has 372 lines per inch) at a slant to bring the spectra all over the field sharply into focus; a cylindrical lens is used in front of the prism to correct for astigmatism; the front of the camera is placed at the proper angle to prevent wedge distortion; a narrow prism behind the first objective brings the object sharply

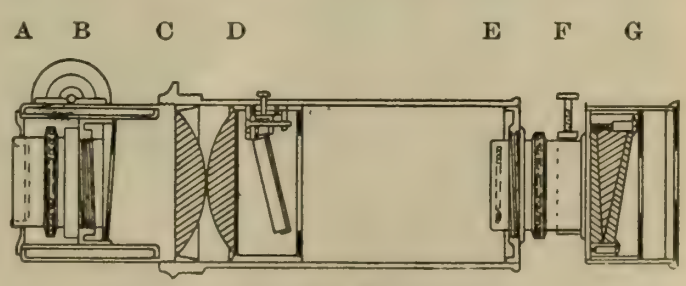

Fig. 3.

into focus, and so on. The objectives used in the camera are two 75 millimeters, Zeiss, micro-planars. A field lens is interposed between the first objective and the line screen to direct the light toward the second objective. The whole optical system can be slightly rotated by means

of a milled head on the left-hand side of the camera in front; at the back is another milled head securing slight lateral movement, and a lever above the viewing screen (not shown in Fig. 1) permits of a slight backward or forward movement of one half millimeter. These three movements are necessary to enable the lantern plate to be brought to the exact position of the negative, but correct registration is easily secured in a few seconds—the readings can, moreover, be noted on the positive.

Besides the method of viewing the picture on the focusing screen of the camera, which requires a strong artificial light source, the pictures may also be viewed direct on the line screen by means of a magnifying eyepiece, for which purpose ordinary daylight or a weak illuminant suffices. This method in practice does not, however, yield *quite* such good results. The pictures may also be projected in a size of 3 to 4 feet diameter on a lantern screen.

Until the advent of a really rapid and satisfactory bleach-out paper, there is no possibility of recording the photograph on paper in colors, and since they can only be viewed in or by means of the camera itself, and the latter (which costs somewhere about $300 at present) will always be a somewhat expensive apparatus, even if the optical and mechanical parts can be further simplified, the process is scarcely one that is likely to become general. That indeed was recognized from the start of the experiments. Nevertheless, given the camera, the process is undoubtedly a simple method of color photography to work, and this should encourage many others to take up the new process.

Operator a Hero

Commissioner Thompson of the Department of Water Supply, Gas, and Electricity, Syracuse, N. Y., has written to the Carnegie Hero Fund at Pittsburgh, asking for a medal for an act of bravery performed by Max Zwillinger, a moving picture operator, at a fire at the Chelsea Moving Picture Theater, 129 Eighth avenue, on May 9.

He was summoned on May 30 by Chief Engineer Lacombe of the Bureau of Gas and Electricity to explain the cause of the fire, but was not able to attend till July 8, when he was still swathed in bandages. He then declared that the fire started through a spark in the lamp house lodging in his clothing. He at once threw the switch controlling the machine and turned on the house lights. Then he put his head through the peephole and asked the audience to pass out quietly.

Next he ran into the rewinding room and tried to tear off his burning clothes. They set fire to three reels of films and he tried to put the fire out. Then he rushed for the street and an ambulance was called. He was taken to Bellevue Hospital unconscious.

A novel entertainment for guests is provided in Baratta's Hotel in Atlantic City in the form of a moving picture show in the cafe. The picture apparatus has been inclosed in a protected chamber, such as is required by law, and the reels of pictures are of the finest that are produced. The pictures are provided without cost to the patrons of the hotel and cafe.

Photoplays From Essanay's

Features for August

AUGUST seems to be Essanay's banner month. Nineteen great releases and that masterpiece of historical film-craft, "The Fall of Montezuma," a tale of Cortez' conquest of Mexico, in three reels. Nothing further need be said here concerning this impressive pageant. The last MOTOGRAPHY contained a well-illustrated descriptive article on the production, which is booked for release the last week in the present month.

Not counting this feature, the Essanay Company announces the release of seven western dramas with G. M. Anderson, acknowledged master of western film-craft, six rollicking comedies from "The House of Comedy Hits," and six impressive dramatic subjects from the Chicago studio. This is an unusually large number of releases for a month, and the established quality of excellence maintained by the Essanay Company trebles the importance of this announcement to discriminating exhibitors. And among the western releases are numbered three "Broncho Billy" and one of the funniest Alkali Ike films yet released—and there have been some funny ones.

The New Church Organ.

"'Alkali' Ike Plays the Devil," is the title of this, the gratest of Essanay western comedies since the release of "'Alkali' Ike's Auto," that created such waves of laughter, and August 27 is the date of its release. With Augustus Carney in his famous role, and a sparkling plot, the production is a sure-fire winner.

"Alkali" receives an invitation from the boys of Pleasanton to come to a masquerade ball with his girl on Saturday night. "Alkali" has to ask the postmistress what a masquerade ball is, then immediately makes arrangements with his buxom sweetheart to go. Next day he is innocently showing a pretty stranger where old Bill Snow's hotel is when his sweetheart sees him, wreaks vengeance on both him and the poor girl and turns down the masquerade ball proposition. "Alkali" is mad clear through, but determines to go a'one, writes a masquerade costume concern for an outfit and they return him a Mephistopheles rig, including tail and pitchfork. Meanwhile, "Alkali's" sweetheart writes to another cowboy and begs him to take her to the ball, but he is playing draw-poker and refuses. Consequently poor Sophie mopes miserably at home while "Alkali" dresses in his Satanic costume and, brandishing his fork, starts down the moonlit trail toward Pleasanton. Suddenly a lone cowboy approaches, takes one look at the devilish figure in the road and disappears wildly in a cloud of dust. Stumbling into the Pleasanton saloon, the frightened puncher gasps out that he has seen "the Devil," at which the boys are having a hearty laugh when "Alkali" strolls through the open doorway. In one instant not a one of the twenty cowboys are visible, and broken windows, overturned tables and spilled whisky tell of their frantic flight. Procuring a bott'e of refreshment, "Alkali" continues his way, but is overtaken by a bullet from the gun of Tom Fletcher, who is trailing him with the frightened boys. After numerous adventures that are screamingly funny, "Alkali" winds up at Sophie's house, where the discovery is made of his real identity, and the boys depart kicking themselves for "durned ga'oots," while "Alkali" and Sophie patch up their quarrel. Augustus Carney has never been funnier than in this subject, and the film is really a masterpiece of original plot and fine photography.

"Broncho Billy's Last Hold-Up," released August 13; "Broncho Billy's Escapade," booked for August 24, and "Broncho Billy for Sheriff," on August 31, are all splendid features of this western series featuring G. M. Anderson in his famous character-creation. The first-named production is a grimly tragic plot, powerful and gripping in tense situations.

After looting an express box, Broncho Billy, a notorious outlaw, escapes into the desert, where he meets pretty Vedah Barclay, who is taking her sick mother across the limitless sand wastes in a "prairie-schooner." Broncho aids the girl in many ways and is saved by her from the pursuing posse. Later Broncho finds the girl and her mother unconscious in a rough shack from lack of water and food, holds up the stage-coach, orders the driver and passengers from it, dashes back to the shack,

Scene from "Broncho Billy's Last Hold-Up."

places the unconscious woman inside and drives furiously to town to place them under the doctor's care. At the gate of the physician's cottage Broncho is overtaken by the posse and is mortally wounded before the sheriff learns of his heroic attempt to save the women. With Vedah bending over him, and her prayers for his recovery echoing in his memory, Broncho dies—a true western hero. Mr. Anderson has never been seen to better advantage than in this fine production, and Miss Vedah Bertram lends him splendid support in her name role. The production contains uniformly excellent photography.

"The New Church Organ," released August 6, is a striking and impressive drama from the Chicago studio, enacted amidst rural scenes of exquisite beauty. Mary Barlow, daughter of a country pastor, finds her father's income will not allow her to dress in the taste of her more fortunate friends. The annual church festival is at hand and Beverly is introduced to Austin Strong, a handsome young organ salesman who is taking an order for a new instrument to be installed in the village church. Seeing the girl snubbed by her friends, Austin becomes interested and realizes he is deeply in love with her. The day of the festival Beverly, ashamed to mingle with her gay companions, serves luncheon in the dingy kitchen of the church, while Austin waits impatiently for her on the lawn. The sudden explosion of the hot stove severely burns Beverly's eyes and she is carried to her room by Austin, while her friends repent of their snobbery in bitter tears. Forced to continue on his route, Austin leaves with a heavy heart. Some months later he returns and is talking with Rev. Barlow in the library when the sweet strains of the new organ echo from the choir loft. Hastening there, he finds Beverly entirely recovered, confesses his love and clasps her in his arms while the wonderful evening light enfolds them in its enchanting embrace. Beverly Bayne is charming in her name role, and Francis X. Bushman adds another success to his long list of fine studies in the role of Austin Strong. The rusticity of the film throughout is admirable, the scenes in the quaint old church being especially true in detail. The last scene of the reunited lovers in the choir loft, with the evening light streaming over them through the window, is a remarkable bit of photographic ingenuity.

One of the funniest comedy subjects yet released by Essanay is "The Tale of a Cat," booked for August 9. Snappy in humorous plot, the story involves four poor mortals in a peck of glorious trouble, all because of a small white kitten. Two swains love the same girl, but refuse to consider her white cat in the marriage game. One steals the cat to get rid of it, then the girl declares she will only marry the one who finds the feline. A series of mix-ups now ensue, in which the cat passes through a dozen hands before the lucky suitor captures it and wins his blushing bride, while the other departs raging at the cussedness of the world in general. Harry Cashman and Howard Missimer play the two suitors in their funniest style, and Eleanor Blanchard is the much-sought sweetheart with the awful feline. The produc-

tion is a continual round of merriment from first to last, and is unquestionably the most laughable comedy released by the Essanay Company for the month.

Watch the next Motography issue for the release date on "The Fall of Montezuma." Lack of space prevents descriptions of all the good features from Essanay this month, but it is sufficient to say August will be long remembered by exhibitors who feature the productions of quality bearing the Indian head.

Davenport and Regatta Picture

Davenport is to be advertised from one end of the Mississippi valley to the other, through moving pictures taken during the recent regatta. Over 400 independent moving picture houses in the valley will receive 1,000 feet of the film containing a panoramic view of the city, river front, buildings, boat races and other interesting things.

The films are now being prepared in Chicago and will soon be ready for distribution. Davenport will receive the films first. They will be shown in nine local independent picture houses.

General views taken of the city were obtained from the top of the new eight-story Putnam building, Second and Main streets. The camera was placed in an advantageous position and completely turned around while the film was being exposed. The picture will show the city in all directions from the Putnam building. A picture was also taken of Second street as it appeared on the Fourth with the immense crowds thronging the streets.

The boat races were taken from the press barge anchored in the river. Several of the fast boats, while tuning up for the races, made exhibition runs past the barge for the benefit of the picture men.

To advertise the coming of the pictures one of the windows of the new Putnam building has been prepared so that slides can be thrown upon it from the interior, and be seen from the street. A list of the independent picture houses that will show the films will be thrown upon the window this evening. The pictures of the city and regatta were taken by the Victor Animatograph Company of Davenport, and after being shown there will be distributed up and down the river.

Voliva Will Have Film Show

Zion City, Dowie's town, was aroused over the announcement that Wilbur Glenn Voliva intends to establish a moving picture show and that a similar undertaking is under way on the part of the independents. Voliva explained that he would fight sin with sin, and that he expected to clean out the project of the independents by giving entertainments free of charge.

The fact that Voliva is going into the moving-picture business caused amazement among his followers, but when he explained that he intended to use the pictures as a weapon against the sins of the independents no opposition was shown.

Scene from Essanay's "Alkali Ike Plays the Devil."

Film Secrets Out

In the course of an action brought by the present directors of the "Artistic film" company of Paris, France, against their predecessors, there emerged some interesting facts as to the payments made by the company to great artists each time they "turned."

Mmes. Rejane, Bartet and Jeanne Granier and the elder Coquelin received $200. The highest fee was one of $300 paid to Mme. Sarah Bernhardt, who in addition was entitled to one halfpenny for every yard of film—given at the length and rapidity of the modern film—no mean perquisite.

Films Show Johnson Master

Moving pictures of the Johnson-Flynn fight of July 4 at Las Vegas bear out most of the stories of the contest as they were told by ringside spectators. The pictures were shown privately at the Monogram theater, 3520 South Halsted street, Chicago. A permit was issued by Mayor Harrison to show the films to local sporting authorities.

If Johnson was "tired" at the end of the eighth round, as one critic asserted, the pictures fail to reveal it. The films show a "joke fight," and wonder was expressed by some that the promoters were not drummed out of Las Vegas by the spectators at the close of the fight.

From the pictures it appears that Flynn never had a chance. He fought in his usual crouch and kept walking into Johnson at all times. Johnson cuffed him around the ring with his open gloves, seldom clinching his fist to strike. In the first few rounds there is little doubt that Johnson held Flynn with one hand and hit him with the other, but as soon as he was warned by the referee the champion stopped.

Flynn's butting brought rounds laughter from the spectators as shown on the films. Flynn repeatedly left his feet and tried to hit Johnson's jaw with the top of his head and a few times was successful. He started this in the fifth round and continued until the fight was stopped. His far famed body punches did not appear to annoy Johnson, and the latter repeatedly allowed him to hit him in the midsection when it looked as if he might easily have blocked.

Johnson never once lost his "golden smile" and throughout the fight appeared to be talking and joking with spectators near the ring. On one occasion when Flynn was wading in Johnson put his arms around the fireman's neck and clapped his hands as if applauding Flynn's efforts.

According to Consul Mason Mitchell, Apia, that city has a population of about 600 whites and half-castes, and the island, Upolu, has 22,000 natives. Moving-picture shows come from Australia several times a year, remaining a month, and then going to the Fiji or Tonga groups. A local company was recently organized in Apia, which gives three shows a week. It uses a French machine and obtains its films from Sydney, Australia. The films are of American and European manufacture.

Higher Education and the Motion Picture

By DeLysle F. Cass*

Copyright 1912, Selig Polyscope Co.

THE term "higher education" has today become almost synonymous with our colleges, where it is generally supposed to find its fullest expression. It has gradually come to be understood as something rather different from its broad original self. Most people now associate the expression with the university class room and forget that its real definition takes no cognizance of any curriculum whatever. "Higher education" really implies a refining or cultural influence. Its application is almost wholly to humanity past the adolescent stage. Any influence whatsoever that tends to exalt the national culture may strictly be classified as "higher education." Considered in this light, the motion picture may be said to fulfill the requirements of the term much more adequately than our colleges are doing today.

Scenes from Selig's Coming Classical Masterpiece, "Monte Cristo."

Europe is found of characterizing America as crude, unintellectual and commercialized in comparison with herself. European educators say that as a nation we are far behind them in point of culture or in our appreciation of the beautiful. In so far, Europe is right, but when the statement is made that our low national standard of culture is owing to a general deification of the "almighty dollar" to the disregard of more intellectual subjects, they are totally wrong.

It is not an all-pervading business instinct which keeps the American cultural average as low as it is. Our comparatively low educational standard is the fault of Europe herself. Daily hundreds of uneducated, poverty-stricken foreigners enter this country through the gates of Ellis Island. They are the rabble, the riff-raff, the lower strata of European society. They are practically the only class which Europe emigrates to this country and their sole object in coming here is to acquire the wherewithal to support their impoverished families. They do not come to America to study or to develop their minds. They come solely to make money. Every such person who becomes an enfranchised American citizen, lowers our cultural average in precisely the same degree that his emigration from his mother country raises the European average. It is Europe that is keeping the American standard down, and it is we who are constantly raising the European standard. That is why we are still the "melting pot,"—a grimy, prosaic thing in comparison with the beautiful marble vase, which might be taken to represent Europe. If that same vase were constantly filled to overflowing with the dregs,

*This article won third prize in the Chicago Press Club contest, conducted by the Selig Polyscope Company. First and second prize winners were published last month.

its artistic beauty might become closely akin to the appearance of our "melting pot."

"But," exclaims the European critic, "What of your hundreds of American colleges? Are they doing nothing to raise your cultural average?"

It is a regrettable fact that this question must be answered in the negative. Our American schools of that category are what is known as "educational institutions," but few of them nowadays exert a really cultural influence upon their students. The American state university is a creation peculiar to this continent. Its avowed aim is to provide a business-getting education—scientific or technical, as the case may be—for its enrollment. Its spirit is commercialized and not cultural. Today there is in the entire United States only one college, the aim of whose curriculum is purely cultural, and that one is Amherst. Even Harvard, Yale, Williams and Princeton have tended largely away from the old idea of a classical college and today they feature their law, their science and their engineering courses more prominently than they do their academic courses.

Hence the colleges as a body contribute little towards raising the national cultural average, and even if they did, they are not available to the great mass of the common people. They work too slowly to overbalance the great daily influx of uneducated immigrants. They require a certain amount of preparatory training, for which the newly Americanized citizen has not the money to give his children. Moreover, he is in constant dread of grim want, which he experienced in his European hovel. He feels that his children should be taken out of school as soon as possible and put to work,—no matter how little they may at first contribute to the family support.

How then to combat this constant lowering of our national cultural average when the colleges will not raise it, and when the ignorant, money-greedy immigrant will not let them do so, even if they could? How to do it?

The answer lies in the motion picture!

The newly naturalized Pole, Jew, Bohemian or Swede, cannot read English, except in its most rudimentary forms. The great classics of our literature, history and science in printed form are totally beyond him. Even the average citizen prefers the light reading of the "ten best sellers," to a perusal of the works of Thackeray, George Eliot, Browning or Shakespeare. His ideas are of the vaguest concerning geography or scientific life. He would be left ignorant of all these things were it not for the motion picture.

Through it, for the sum of five pennies, he can be familiarized with the greatest of our classics in one-twentieth of the time it would take him to read them. Dickens' "Tale of Two Cities," "Nicholas Nickelby" and "Martin Chuzzlewit," George Eliot's "Adam Bede," Homer's "Iliad" and "Odyssey," Tasso's "Gerusalemme Illiberato," Dante's "Inferno," Racine's "Phaedre," Dumas' "Three Musketeers," Lord Byron's "Mazeppa," Thackeray's "Vanity Fair," Browning's "A Blot on the Scutcheon," J. Fenimore Cooper's 'Last of the Mohicans," Tennyson's "The Princess," Flaubert's "Salammbo," Poe's "Masque of the Red Death," Charles Reade's "Foul Play," Whittier's "Maud Muller," Eur-

Scene from Selig's "The Girl at the Cupola," a Story of a Strike at an Iron Foundry. August 8. Copyright 1912, Selig Polyscope Co.

Scene from Selig's "The Man from Dragon Land," the Story of a Chinese Coolie. August 6. Copyright 1912, Selig Polyscope Co.

ipides' "Electra," Biblical stories galore, Shakespeare's "Romeo and Juliet," "The Merry Wives of Windsor," "The Tempest" and a thousand other gems of our storehouse of poetry, drama and prose fiction are all given him in their essence and in a personal, sight-seeing, unforgetable form.

The world-famous operas of which the average American has only heard the name are likewise put before him for five cents. Witness the colored-film releases of Verdi's "Il Trovatore." Saint-Saens' "Samson and Delilah," Thomas' "Mignon," Gounod's "Faust" and Meyerbeer's "Robert le Diable." Releases of this character do more to create a taste for good literature in the general public than all the efforts of our greatest educators combined. It is very possible that the millions who have seen these classic productions will be inspired to read in type what they have seen on the screen. At least they will not be intellectually helpless when the name of some great novel, poem, drama or opera is mentioned in their hearing.

The motion picture develops another very important quality in our newly naturalized citizens. It instills and develops in them the sentiment of patriotism, without which they can never become a useful part of our commonwealth. Our great heroes like Washington, Lincoln and Grant are familiarized to and made beloved by people who have hitherto heard only of Kosiusko or Garibaldi. Our history from Revolutionary times down through the days of '49 and the Civil War is made *their* history. The great crises of the nation are brought far more vividly to their minds in the film-play than ever they would be if read between the covers of even the greatest historical works of a Motley or a Gibbon. How many of us, native born or not, have not thrilled to the stirring pictures "How Washington Crossed the Delaware," "Nathan Hale," "Shenandoah," "The Battle," "The Fall of the Alamo," "Daniel Boone," "The Discovery of America by Columbus," "Barbara Frietchie," or "The Declaration of Independence?" We all have. Such films arouse in us the same spontaneous patriotism that flashes forth when the band plays "Dixie." They make us proud that we are Americans.

But not only is the public shown the stirring events of our own history. The great epochs of other nations as well are also enacted. The people are treated to the sight of "The Death of Edward III," "Guy Fawkes," and "The Battle of Trafalgar" from English history; "The Siege of Calais," "King Philip le Bel and the Knights Templars," "St. Bartholomey's Eve" and "The Betrayal of Charles VI" from French history; "The Crusaders," "The Queen of Nineveh" and innumerable others. Seeing these great historical characters move, gives them a human interest which was lacking in any printed record of their lives and deeds. Moreover, aside from making the facts more realistic, historical films acquaint the observer with the mannerisms and costumes peculiar to the period in which the scenes are laid. Even the Polish immigrant who has once seen "Lady Godiva," enacted on the moving-picture screen would hardly confuse her era with that of Napoleon Bonaparte as does the average American schoolboy.

Geography is more simply and more efficiently

taught through the medium of the picture-film than by any text book ever written. The student may read of the physical aspect, inhabitants and cusoms of some far distant land, but at best his ideas can be only hazy concerning them. On the other hand, that person who sees geographic (or, as they are more generally called, "educational") releases is literally transported into the alien environment where he can actually see it all with his own eyes. He does not need to exercise his imagination. It is all right there before him. Several of the moving-picture companies are making a specialty of photographing the interesting spots of the world and the result is such wholly commendable films as "Old Delhi and Its Ruins," "The Grand Canon of the Colorado," "Working Elephants in Ceylon," "Everyday Life in Malacca," "Art Industries in Kabylie," "Waterfalls in Sweden," "Lyons, the Second City in France," "Here and There in China," "A Visit to the Dome of Milan Cathedral," "Ice Formation at Odessa, Russia," "A Sultan's Marriage in Maylasia," "Picturesque Hungary," "Arabian Types and Customs," "Seeing Indianapolis, Ind.," "Catching Polar Bears in Alaska," " Landscapes in Japan," "An Excursion in the Swiss Alps," etc., etc., ad libitum. Thirty thousand miles have been traversed to get moving-pictures of savage black men living in an almost unexplored country. That is the kind of enterprise which one of the manufacturers cheerfully undertook in order to produce striking and instructive geographic films.

Nor has science been neglected by the moving-picture companies. Only lately a French concern took some pictures of microscopic life magnified from six hundred to one thousand times, at the rate of several thousand per minute. This is a real achievement. Among the hundreds of other interesting releases might be mentioned films showing an X-ray view of the blood in the human body in circulation, with its normal and abnormal contents. Still another shows how the stomach digests food. One notable film shows the tail of a tadpole with its little blood vessels—each 1-2500 inch in diameter—through which the red corpuscles pass with the circulation, while the leucocytes (white corpuscles) change about with an independent motion of their own. The film even shows several of these leucocytes (which are now known to be blood scavengers) in the act of seizing and absorbing foreign matter such as diseased cells or microbes.

Another company recently had several of its films shown before the Lackawanna County Medical Society at Scranton, Pa., and even the authorities assembled there pronounced them to be of great scientific aid to the general medical profession. The views embraced all of the important nervous diseases and even extended through the field of neurology as far as the study of insanity. These films were produced under the expert conduction of D. T. H. Weisenberg, who is himself an authority on the subject.

Botany and zoology likewise are taught simply and lucidly from the moving-picture screen. No laboratory demonstration or study ever showed the astonishing

Scene from Selig's "A Messenger to Kearney," a Story of the Days of Fremont's Expedition. August 12. Copyright 1912, Selig Polyscope Co.

truths of natural history more plainly than do films like "How Plants are Born, Live and Die," "Life in Our Ponds," "Opening Flowers," "Life at the Bottom of the "Sea," "Flowers and Plants in Winter," or "African Birds and Their Enemies."

Similarly the functions of our industrial and technical schools have been usurped in practical educational releases like "Making Cheddar Cheese," "Manufacturing Fireworks," "Making Paper from Wood," "Pottery Making in Thoune, Switzerland," "Making Pianos," "Roentgen's X-rays," 'The Logging Industry in the Northwest," "Making an Aeroplane," "The Education of the Blind," "The Sulphur Industry in Sicily," and "The Wool Industry of Hungary." In these films every process of the manufacture is gone through with, and each tool and its particular uses clearly explained.

Thus it is that the photo-play educates the great mass of the people to the beauties and wonders of art, literature, science and travel. It is a great teacher whose curriculum is that of the University of the Universe. Each course is presented with the most conscientious care and is interpreted by masters of the particular subject under consideration. Rejane and Sarah Bernhardt are utilized in the productions of "Mme. Sans-Gene" and "Camille;" expert scientists, botanists, chemists and workmen contribute their efforts in the explanation of their respective specialties. For a mere pittance the public is given the most competent instructors obtainable.

The time when the moving picture was looked upon as merely a cheap and trifling diversion for children and people of the poorer classes is now past. It has become a great educative and cultural force which may be looked upon as an advanced edition of the printing press. What Gutenberg's crude device was to the people of the 15th century, disseminating knowledge and familiarizing the people with other peoples, other countries and other arts, the motion picture is to the masses today. Just as the printing press did more to inaugurate the mediaeval Renaissance, so is the film leading the uncultured American masses toward a new intellectual birth. Life in all its tenseness, its joy and its pathos as shown on the screen—life, living, breathing, red-blooded—stimulates the imagination, and a sustained exercise of that faculty means an awakening of intellectual powers.

History tells us that the ancient Greeks were, as a nation, the best educated people of their time, and the reason for it was undoubtedly that the authorities made it possible for everyone, no matter how poor he might be, to attend the tragic presentations in the theater. Similarly in continental Europe today the very peasants are educated to an appreciation of high class music because official ordinances provide an entry fee to the opera low enough for even the poor to take advantage of it.

Up to the present time this has been by no means the case in America. All forms of public entertainment have been run by private individuals at an admission fee which put them outside the purse of the majority of the people. The masses have had therefore to content themselves with inferior melodrama, cheap literature and to see the wonders of nature without understanding them.

The advent of the moving picture, however, has changed all this. Its merely nominal exhibition charge bars not even the most needy from its benefits, and under the broad policies now being pursued by manufacturers, it is doing what no other medium ever could have done so rapidly and efficiently—educating the lower classes to a better, deeper, higher plane of appreciative intelligence which some define as "higher education" and others as "culture."

Aeroplane Cameras

Frank T. Coffyn is responsible for an innovation in the taking of moving pictures alone from an aeroplane, says *Aeronautics*. He has nothing to do but operate the 'plane—the camera "works while you sleep." It is accomplished thus: two one-twelfth-horse power six-volt electric motors, connected by chain drive, drive by worn gear the shutter and reeling mechanism of the camera. The unexposed film is

Coffyn's Automatic Aeroplane Camera.

rolled off before the lens from one of the boxes seen in the picture containing the film, and is wound up in the other box. One can see the round belt winding up the exposed film. All the aviator does is to open or close the switch to stop or start the taking of pictures. Power is obtained from two six-volt storage batteries fastened to the passenger's seat next the engine. The motor speed is 1,800 revolutions per minute, the gear reduction to the camera is 14 to 1, giving a speed of 128 revolutions per minute to the camera.

Wolgast Films Barred

That the Wolgast-Rivers fight pictures would not be allowed to be exhibited in Los Angeles, Cal., was the statement of Guy Eddie, city prosecuting attorney, following his action in refusing to allow the management of the Olympic theater to put on the films.

According to Eddie, he was informed that the Olympic was to show the pictures and upon arrival at the theater informed Manager Jacobs that he could not show them. Upon the announcement of the manager to the audience that the authorities would not allow the pictures to be exhibited, the larger part got up and left.

Eddie states that the action he takes is according to the city ordinances and not the state law, which permits and defines what a boxing match is. Under the city ordinance the fight at Vernon was a prize fight, and therefore the picture cannot be shown.

Attorney E. J. Loeb, of the firm of Loeb & Loeb, has been engaged by a local moving picture company to make a test case of the city ordinance, basing their claims on the assertion that the ordinance is unconstitutional.

In addition to taking action on the moving pictures, Eddie declared that he would probably take action on any newspaper which hereafter published any pictures of a prize fight. These announcements are expected to bring about hotly contested suits to test the validity of the ordinance.

Frohman in Film Game

The picture show has been viewed with alarm by some managers of the "legitimate" theater, who have to feel its competition, and has been considered academically by others who stand on the side lines and watch the fray. Then there are others, being the managers who are convinced that the film is a sturdy institution, not only here to stay but to progress. Why should not they be in on the returns?

A distinguished manager who has figured it in the latter way, and who has declared himself, is Daniel Frohman, the director of the Famous Players' Film Company, which has a capital of $250,000. This venture will not be undertaken to the exclusion of his other interests, but wi l be an important department.

The company has made arrangements with Sarah Bernhardt to act before the camera in "Queen Elizabeth." James O'Neill is to be photographed in "Monte Cristo" and James K. Hackett in "The Prisoner of Zenda." Henry E. Dixey will be seen in the creation of the various types illustrating "The Seven Ages of Man."

"In hundreds of towns," says Mr. Frohman, "the communities are too sma l to induce visits from the great actors and the great productions. In these sections our enterprise will especially prove an artistic and educational blessing. Special companies will be rehearsed from time to time under my direction.

"I shall continue, of course, to direct the destinies of the Lyceum Theater, and shall make several new productions, but I shall also be active in the artistic development of the new enterprise."

Copyrighting Moving Pictures

The moving picture business has become so important that Congress has recognized it.

Under a bill just passed by the House of Representatives the use of copyrighted stories or plays for moving picture purposes is prohibited unless the consent of the holder of the copyright is secured. The classics, Shakespearean plays, the epics of Homer or Virgil or Dante, may be shown on the screen, but a popular novel may not be dramatized for picture-playing any more than for stage production without the author's permission.

It is a proper extension of the copyright laws which includes the motion picture.

Two Shows in One

A most unusual and effective scheme for attracting the passing public to take note of "Today's Program" and to patronize a moving picture theater is the exhibition of the operator's booth, says *Popular Electricity*.

The operator's booth upon the street side is fitted with a large plate glass window. With the booth lights on, as they always are during the show, the movements of the operator can be easily seen from the sidewalk below. At all times while the theater is open a crowd may be seen watching the "free show," and a goodly number always become interested enough to part with a nickel to see the "inside show."

Scene from Essanay's "Broncho Billy for Sheriff."

Problems of the Operating Room

By William T. Braun

RESISTANCE AND RHEOSTATS.

FROM Ohm's law, the current in amperes is equal to the voltage divided by resistance, thus we see that the amount of current flowing in a circuit depends upon the resistance of the circuit and the voltage across it. The amount of current can therefore be controlled by controlling the voltage or resistance or both. The control of the resistance is generally the easiest method.

Most operators understand the use of the rheostat, the form of resistance device used in moving picture work, but the simple principles of resistance computation, the difference between multiple and series connections, or why one connection gives more current than the other is beyond many.

In computing the resistance of wires the circular mil system of measurement is used, as this method is easier than measuring the area of the wire in square inches. Since the cross-section of the wire is circular, a circular unit is more convenient. This circular unit of area is known as the circular mil, and is the area of a circle whose diameter is one mil. The term "mil" always means 1-1,000; therefore a circular mil is the area of a circle whose diameter is one-thousandth of an inch. To find the area of any circle by the circular mil system, we have merely to square the number of units in the diameter. For instance to find the area of a wire 1-16 inches in diameter: we have 1-16 inch equal to .0625 inch—62½ mils. The area equals 62½ multiplied by 62½, or 3,906 circular mils.

The resistance of a wire increases as the length increases, but decreases as the cross sectional area increases. Therefore if a wire of one circular mil cross section has a resistance of 20 ohms, then the resistance of a wire of 4 circular mils cross-section will be ¼ of 20 ohms, or 5 ohms. Also a wire 3 times as long as another wire of the same cross-section will have three times the resistance. For measuring resistance we take as a unit the mil foot, that is a wire one circular mil in cross-section and one foot long. In order to find the resistance of any wire, multiply the resistance of one mil foot by the length of the wire in feet and divide by the area of the wire in circular mils.

If the resistance per mil foot of copper wire is 10.3 ohms at 20 degrees centigrade, which equals 70 degrees Fahrenheit, the resistance of 500 feet of copper wire 1-16 inch in diameter would be $\frac{10.3 \times 500}{3906} = 1.3$ ohms.

The resistance per mil foot of wires of different materials varies greatly. For instance, at 20 degrees C. the resistance per mil foot of annealed iron wire is 90 ohms; for German silver wire 114 to 275 ohms. From the above example it can easily be seen that in order to get 4 or 5 ohms resistance in the line, as is sometimes necessary for moving picture work, a very large amount of copper wire would have to be used for the rheostat. For this reason German silver or iron wire is used, as it has a much greater resistance per mil foot.

The reason for stating the temperature is that the resistance of all pure metals increases as the temperature rises. For instance, copper increases .0042 ohms per degree for each ohm at zero. Therefore if the resistance of a wire is 80 ohms at zero centigrade, then at 50 degrees the resistance would have increased 80x.0042x50, equal to 16.8 ohms. Or the total resistance of the wire at 50 degrees C. would be 80 plus 16.8, equal to 96.8 ohms. Other metals increase at a slightly different rate. In every electrical book, tables may be found which give the resistance of 1,000 feet of copper wire of the different standard sizes and temperatures. The sizes are generally designated by gauge numbers,

Mabel Emerson, Playing Ingenue Leads with the American Company.

Brown & Sharpe gauge geing standard for electrical wires. The corresponding area in circular mils is also given.

The standard unit of resistance, or the standard ohm, is the resistance of a column of pure mercury at zero C., 106.3 centimeters long, and of uniform cross-section weighing 14.4521 grams. As this piece of apparatus is difficult to construct, several other methods are used for finding the resistance of a wire. Probably the most important apparatus for the accurate measurement of resistance is the Wheatstone bridge. A complete description of this apparatus may be found in any standard electrical book.

Unless resistance of some description is placed in the ordinary moving picture circuit having a line voltage of 110 or 220, the resistance of the lead wires is so small when the arc is struck that an excessive current would flow through the carbons, burn out the wires and blow any fuses along the line. For this reason, we must either reduce the line voltage to that required by the arc

or introduce resistance into the circuit. With alternating current, unlike continuous current, the voltage can be stepped down by means of a transformer to about 50 volts, which is enough pressure to overcome the resistance of the arc and the small resistance of the wires. But with direct current it is impossible to do this, so a rheostat, which is a combination of high resistance wires, is placed in the circuit. For alternating current the transformer is more economical, as will be explained later. The rheostat for moving picture work usually consists of coils of German silver wire either connected in series, or parallel, or a combination of both,, attached and insulated to an iron frame. Rheostats made of cast iron bars instead of coils are also in use.

Gaston Monaldi, Appearing in Kleine-Cines Films.

There are two ways of connecting two or more pieces of electrical apparatus together, series or parallel, the latter connection being sometimes called "multiple." This applies to rheastat coils as well as to lamps. When the coils are connected in tandem they are said to be in series. This means that all the current must pass through all of the coils one after the other to reach the lamp. When coils are connected in parallel or multiple, the positive ends of the coils are all connected to one conductor and the negative ends to the other conductor, so that the current is divided between the different coils when passing through the rheostat.

When rheostat coils, or in fact any electrical apparatus, are connected in series, the resistance of the entire combination of coils equals the sum of the resistance of the separate parts. The total voltage of a series combination equals the sum of the voltages across the separate resistances, but the current in every part of a series circuit is the same, however the resistance is placed.

For instance, if three coils of two ohms each are connected in series in a circuit, the total resistance would be 6 ohms. According to Ohm's law if 110 volts is the line pressure, then the current received at the arc disregarding the resistance of the arcs would be 110 divided by 6, or 16 2-3 amperes.

In coils connected in parallel more paths are allowed for the current to pass through, therefore the resistance of the entire combination is less than the resistance of one of the coils. The voltage across each branch of a parallel circuit is the same as the voltage across the combination. The current in a parallel combination equals the sum of the currents in the separate parts.

To find the resistance of a parallel combination the current flowing through each coil can first be found by Ohm's law, and then the resistance of the entire circuit, by dividing the voltage by the sum of the current through the combination. Another rule for finding the resistance of a parallel combination is known as the reciprocal method. If the resistance of a wire represents the difficulty with which an electric current is forced through a wire, the conductance represents the ease with which the current passes through the wire. Therefore the conductance is the reciprocal of the resistance or one divided by the resistance. The total conductance of the combination equals the sum of the resistances of each wire divided into one. Again taking the reciprocal of this result, we have the total resistance of the combination.

Suppose we have two rheostats, one of 5 and another of 10 ohms resistance, connected in multiple or parallel. By the first method if the voltage across the line is 110 the current flowing through the 5 ohm coil would be 110 divided by 5, or 22 amperes; that flowing through the 10 ohm coil would be 110 divided by 10, or 11 amperes. The total current through the combination would be 22 plus 11, or 33 amperes. The total resistance would be 110 divided by 33, or 3 1-3 ohms. By the reciprocal rule the conductance of the two would be the reciprocal of the sum of the resistance, or 1-5 plus 1-10, equal to 3-10. The total resistance would be 10-3, or 3 1-3 ohms, and the current, disregarding the resistance of the arc, 110 divided by 3 1-3, or 33 amperes.

I may have dwelt somewhat long upon this, but there are many first-class operators who do not know how to determine the resistance of parallel combinations and they waste much time, first connecting up one way and then another, until they obtain a satisfactory light; whereas if they knew how to figure the resistances of various coils they would save themselves much trouble. This is especially true in road work, where different voltages are run into at every stand.

RHEOSTATS.

Every motion picture machine manufacturer puts out at least one style of rheostat with his projection machine. Rheostats may be divided into two kinds, adjustable and permanent. With the adiustable rheostats resistance may be cut in or out by simply moving the lever, thereby increasing or decreasing the current, but with the permanent type, the resistance is always the same, and also the current, providing the voltage remains the same. For stationary work the permanent rheostat is without doubt the best, but for road work the adjustable type is very handy. In the adjustable rheostats different amounts of resistance are obtained

by moving the contact lever that cuts in various coils in series or parallel combinations.

If for instance you want 35 amperes at the arc, which is about the correct amount in D. C. work for a 12 foot picture, the resistance of the arc with a 45 volt drop across the arc would be about 1 2-7 ohms. With 110 volts on the line the voltage consumed by the rheostat would be 65 volts. With 35 amperes, a rheostat furnishing 65-35, or 1 6-7 ohms, would be required.

The rheostat is generally installed in the operating room, although in some places the laws require that it be placed in the basement. If placed there care must be taken that it is put in a dry place ad insulated from its surroundings.

Jack Nelson, Leading Man in American Films.

The electrical codes in cities generally govern the installing of rheostats. The coils should be well insulated from the frame. The operator should frequently examine the insulation, as a slight ground means a current loss. Sometimes the coils become loosened from the frame and a loose connection always generates heat, raising the resistance of the rheostat. Very often a loose connection of this sort is the cause of the rheostat being overheated when otherwise the machine would not be overloaded at all. The rheostat should be covered with a galvanized iron casing to protect it from inflammable objects which may come in contact with it in case of overheating.

In an iron lined operating room the rheostat should be placed on asbestos board or some insulating material so that should the frame become grounded the current cannot be communicated to the floor. The stranded wires from the lamp should be fastened with lugs to the binding posts of the rheostat. Be sure to have the wires scraped clean before fastening to the lugs. After attaching the lugs the thumb nuts should be screwed down tight. A washer should be placed on each side of the lug so that it will not be bent when fastened down. In an adjustable rheostat with sliding contacts, the contacts should be kept clean, and the lever should slide tightly on the contacts.

When using a heavy amperage, 60 for instance, in projecting the films, many chorus slides will be saved if an auxiliary rheostat is connected up in the circuit for cutting the amperage down when projecting slides. This rheostat should be connected in series and a shunt arranged around the rheostat for cutting it out when projecting the films.

In summer time the rheostat should be placed outside of the operating room whenever possible, as the arc generally furnishes all the heat required to keep the operator warm. The writer has seen rheostats placed on top of the cashiers booth during the summer.

Never overload the rheostat. If the wires become red it is overloaded and a larger rheostat should be installed or another one added in multiple. Enough current is wasted from an overheated rheostat to pay for a new one. If you have a long run, two rheostats should be connected in the line with shunts arranged so that when one becomes heated you can switch over to the other.

Different styles of rheostats, with their capacities, and full directions as to their use, may be obtained from the catalogs of the various motion picture machine manufacturers.

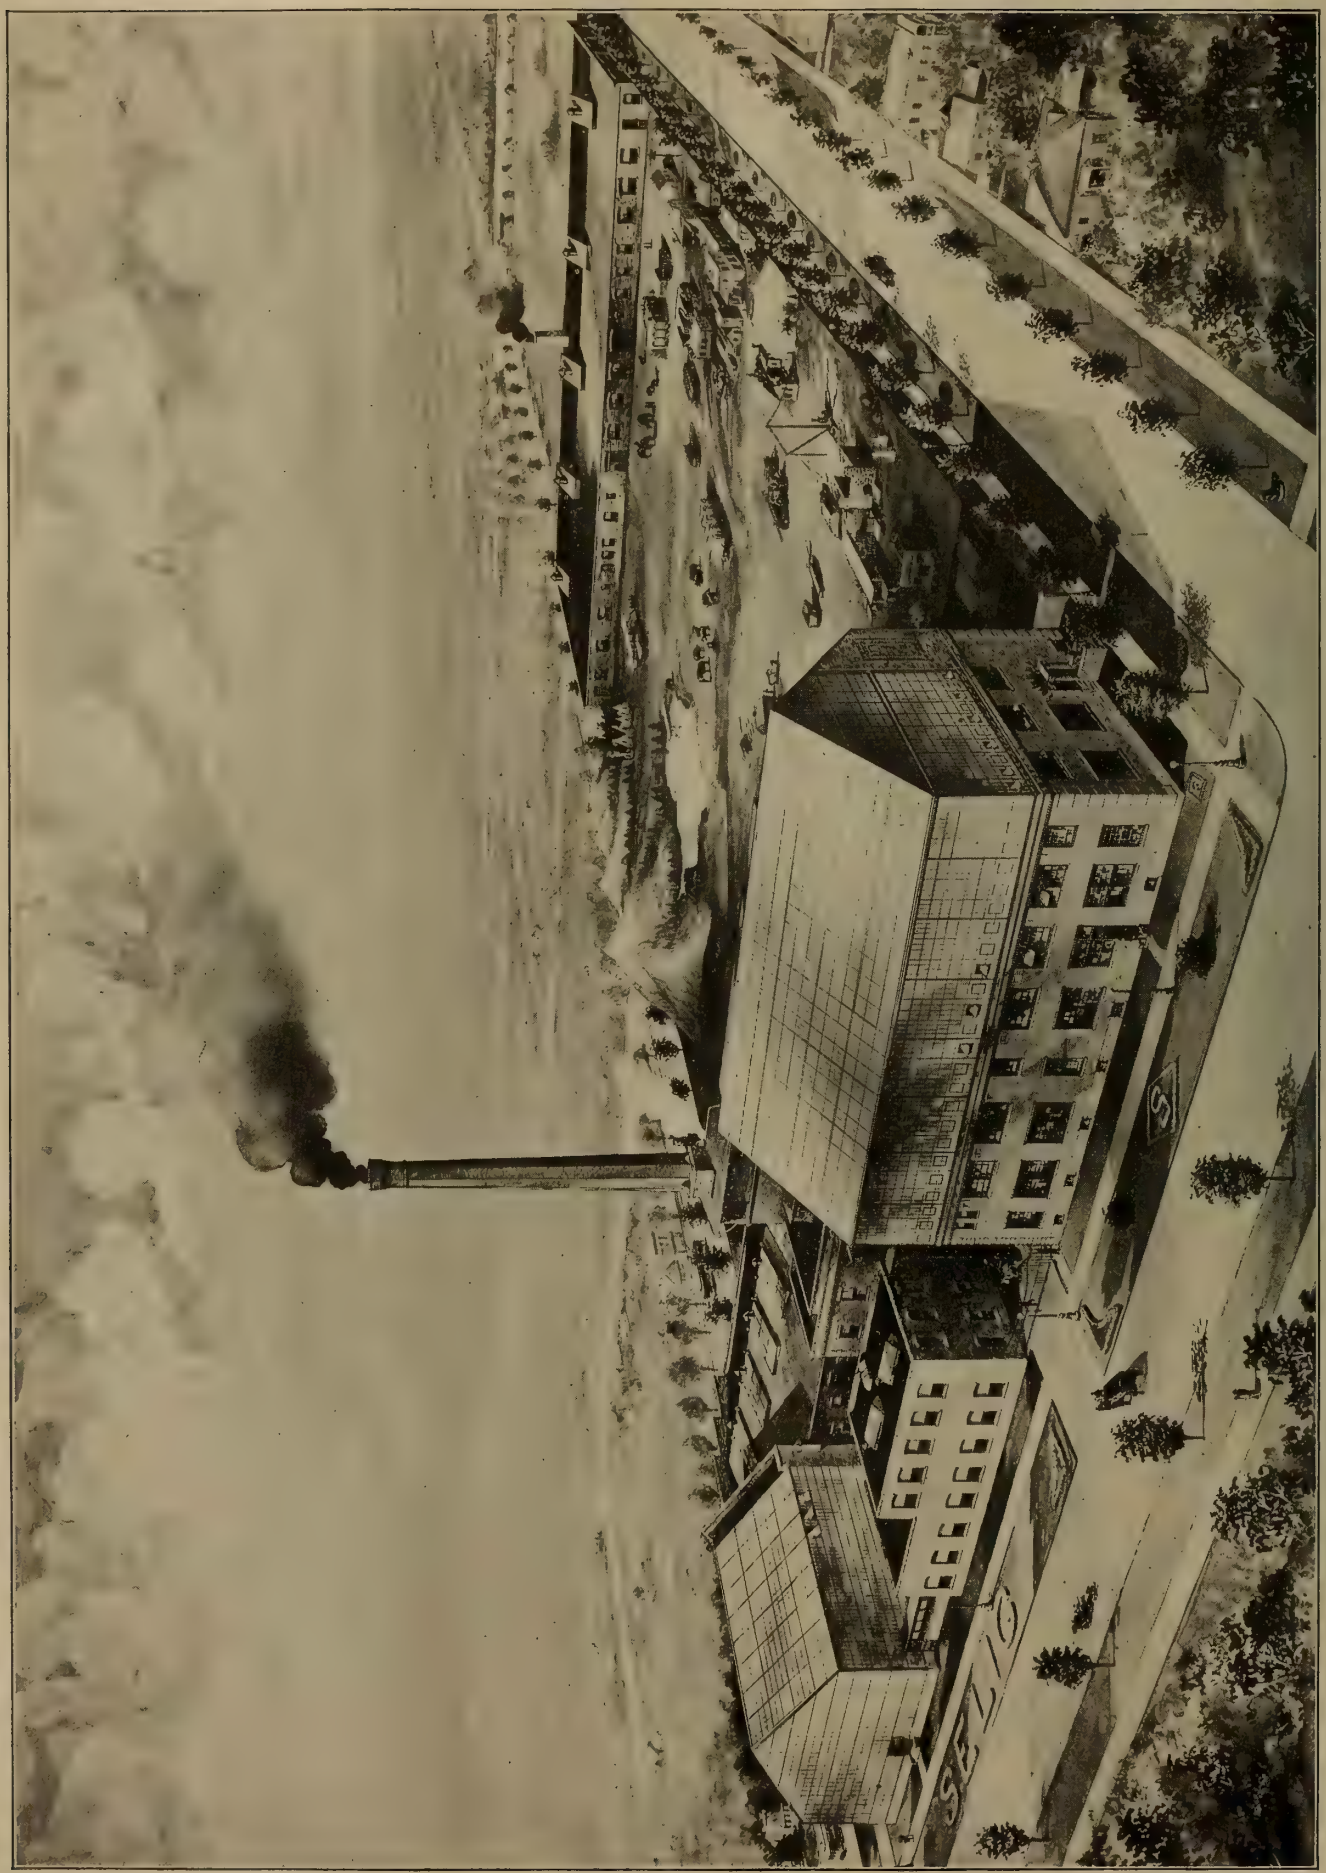
Taxing the Pictures

The Superior Court has decided, in a Philadelphia case, that moving picture places that give vaudeville performances must pay the state license fee of $500, the same as theaters. The places that give moving picture entertainments only, must pay a license fee of only $100, according to a city ordinance. The Philadelphia Common Pleas court decided the other way. The Superior Court ruled that as the place of public entertainment in question contained a stage, drop curtain and scenic appliances, with seats for more than 600 persons, it came clearly within the state law relating to theaters.

If this decision should apply in cities of all classes in the commonwealth, it would hit proprietors of many of these amusement places pretty hard. But there are laws for cities of each class, there are few if any moving picture places outside the larger cities that can seat 600 persons at one time, and it may be that vaudeville performances in the third-class cities do not come within the scope of the Philadelphia decision.

The moving picture business has grown wonderfully in the last four years. There is scarcely a town or village that has not one or more of the shows. For the most part the pictures are clean and unobjectionable, and as the price of admission is very small, the entertainments are popular. The pictures tell stories of all kinds, from grave to gay, and all catch the public fancy.

In Philadelphia there are moving picture places that give big vaudeville entertainments and that are really small theaters. It is only fair that they should pay the theater license fees. There is nothing like them in the third-class cities, and it is probable that the theater law does not apply to any moving picture place in those cities.



Selig Polyscope Company's Plant in Chicago, Where Convention Visitors Will Be Entertained by the Company.

Of Interest to the Trade

MOTION PICTURE EXHIBITORS' LEAGUE OF AMERICA

Second Annual Convention, La Salle Hotel, Chicago, Aug. 13-17, 1912.

Illinois State Branch No. 2 is actively at work to make the National League Convention the biggest thing that has ever been pulled off in the film business. The convention committee is comprised of these well-known exhibitors: Wm. J. Sweeney, Chairman; Samuel I. Levin, Chris. C. Whelan, Crawford L. Hull, George Henry, Robert R. Levy, Louis Schindler, I. Natkin, L. H. Frank, Charles Abrams, A. J. Balaban, M. Hyman, Fred Schaefer, H. A. Hill, J. A. Alcock, John Miller and Charles A. Anderson. Headquarters are at 112 S. State St., Chicago, in the splendid offices of the Orpheum Theater.

The Universal Film Manufacturing Co.

In another part of this issue, it is said that Thomas Bedding believes the Universal Film Manufacturing Company is the one biggest producer in the United States. Bedding is right. The Universal incorporates these well-known independent brands: Imp, Eclair, Milano, Champion, Powers, Rex, Victor, Nestor, Shamrock, Bison, Gem, Crystal and the new Animated Weekly. It represents a tremendous weekly output; a vital factor to exhibitors.

The Universal program is a single manufacturer's product. There is nothing quite so pretentious in America. Evolution will bring the several individual concerns under one roof. The prob'em to-day is to hold the interests amicably, assign the former chiefs to duties that will return the largst measure of prosperity to the big company. This work has been undertaken by P. A. Powers, of the former Powers Company, who is being ably assisted by Charles V. Henkel, of the Milano Company.

The European business is being looked after by Carl Laemmle, of the Imp Company, in person, assisted by J. A. Brulatour of Eclair. Joe Engle of Rex is attending to sales promotion. M. M. Dintenfass has to do with production. Harry L. Solter of Victor is sticking to the direction of de luxe subjects, in which he has few equals. Aubrey Kennedy has full charge of the Animated Weekly and Dave Horsley of Nestor is more active than ever before, confining his operationes to production.

Out of the many individual organizations have come those subordinates best fitted for the enormous routine and detail work that now centers at Union Square. The whole concern is so overwhelmed with its own sheer bigness that a little time will be required to wear down the rough edges.

It may safely be predicted that changes in the program will follow. It isn't fixed as yet, but that the Universal will come through there can be little doubt. It all rests with the staying qualities of the men in charge and the quality of the brands that will issue over Universal's signature.

Motiograph Plant Busy

The Enterprise Optical Manufacturing Company extends to every visitor to the national convention a hearty invitation to visit the Motiograph plant at 564-572 West Randolph street, corner of Jefferson street, Chicago. It is the intention of the company to have an exhibit both at the La Salle hotel and at the factory, and there will be a competent demonstrator in charge of the equipments at each point. This demonstrator will give to every Motiograph user a novel souvenir of great value to the Chicago visitors.

The 1913 model Motiograph is ready for delivery. It contains many improved features. It has heavier star and cam and balance wheel, gears of steel with spiral cut teeth, hardened intermittent sprocket and steel idler rolls; a very large and thoroughly ventilated lamp-house, lined with transite

Scenes from Thanhouser's "Baby Hands."

board; a 125-ampere capacity arc lamp with universal arm and clamp holding carbons from ⅜ to ¾ inch, and with a twenty-inch carbon feed — twelve inches above and eight below. All parts are heavier and better than before, with more adjustments.

The fifteen-inch magazines hold 2,000 feet of film at one threading. A large dowser shutter with ball-balanced handle is mounted on the condenser mount, thus protecting lantern slides as well as films. The handle may be used for lifting out hot condenser chamber. Large, strong film shields protect the entire film passage.

On the 1913 model Motiograph the Togo No. 2 rewind is furnished as part of the equipment. A very rigid "Gibraltar" base is used, with every desired adjustment, and three heights. The many other interesting features may be found in the company's advertisement on another page; after reading which, those interested should make it a point to visit the factory during convention.

Fred A. Clark, the eastern salesman and demonstrator of the Motiograph machine, has been in Chicago, paying his annual visit to the plant of the Enterprise Optical Manufacturing Company, and on Friday noon of last week he left with Mr. Woodward, the manager, for an automobile trip to the different lake resorts in the northwestern part of the state of Illinois, spending three days in going from place to place, during which time Mr. Clark and Mr. Woodward visited Crystal Lake, Wauconda Lake, Fox Lake, McKinley Lake and other points of interest. Mr. Clark expressed himself as being greatly pleased at the beauty of the land which they trave'ed through, and he was surprised to learn that over $150,000,000 is realized yearly on each of two crops in the state of Illinois, oats and corn. After a few days' longer visit at the factory, Mr. Clark will again be in the East, making his headquarters with the General Film Company at Boston, Mass., from which point he will take up his usual visits to the many exhibitors now using the Motiograph in the New England States.

"Baby Hands"

A Thanhouser release of August 6 tells of a well-to-do young man who imagined he was very much in love with a certain actress. He lavished presents upon her, and expected that shortly they would be married. Much to his surprise and grief, however, he found that she was only mocking him, and in rage and disappointment he forsook his old friends and determined to live a simple life in the country. Being young and impressionable, his grief did not last, and, meeting a sweet girl in the neighborhood, he married her and decided he would be happy after all.

Scene from American's "The Wooing of Wathena."

Five years later the actress and a party of gay friends, who were on a yachting trip, happened to land at the little seashore village which was now the home of the former man-about-town. The actress met her old sweetheart, and the fascination she once exerted was again experienced by him, for it must be admitted that he was growing tired of his quiet, uneventful life.

At the suggestion of the girl, he took her out for a sail on his little boat. She flirted with him and he had no desire to withstand her fascinations. Suddenly in the midst of one of his impassioned speeches he experienced a feeling that someone was looking at him. Glancing up, he saw his four-year-old daughter, who, unknown to her father, was aboard the boat, gravely regarding him, and evidently not knowing what to say or do.

The actress was pettishly angry because the third party had spoiled her afternoon. The man was hu-

miliated and conscience-stricken. Still under the spell of the fascination of the woman, he tried to remove the baby hands that were tightly clasped about his neck, but she clung to him, and he then realized that the ties that bound him to his simple life were as tender, yet as firm, as the clasp of the child he loved. Reverently he kissed the little hands and without another word to the woman he turned the boat and put back to shore. The spell of the siren was broken forever.

Selig Actress Near Drowning

Miss Gladys Wayne, the new ingenue of the Selig Polyscope Company's Chicago plant, came within an ace of drowning last Thursday afternoon in Lake Michigan, while several hundred spectators on shore thought that she was merely acting. Miss Wayne was playing the part of the heroine in a summer resort drama which

Scene from American's "The Jealous Rage"

was being produced by Oscar Engle at Clarendon Beach, on the aristocratic north shore of Lake Michigan. She owes her life to the fact that Douglas Lawrence, another Selig actor, who was playing the part of the hero, lived up to his role in real life. In the scene which came so near being fatal, "Billy" Stowell, one of the Selig players, and Miss Wayne had paddled out into the lake about two hundred feet from the shore. While camera men on shore turned their cranks, Stowell, as the heavy man, upset the boat and, carrying out the plot, swam away, leaving the heroine to her fate. Thus far the scene was simply "play" acting, and fortunately it was the hero's cue to swim to the aid of the heroine.

When the boat capsized, Miss Wayne came up beneath it. She could not swim and could not free herself. Finally she managed to get her head partially above the water and when she did she screamed. The scream was real, but Miss Wayne was the only one who knew it. The producer and those on shore applauded her realistic acting. Miss Wayne had disappeared under the water three times when Mr. Lawrence reached the capsized boat, and it was only by diving under the surface that he was enabled to recover her body. When he brought her to the surface he realized that she was unconscious. Up until that moment neither he nor Eagle had the slightest idea that Miss Wayne was in danger, and the camera man kept grinding until Lawrence came ashore with the unconscious body of Miss Wayne. Lawrence at once swam ashore and the life guards were summoned. With their aid Miss Wayne revived, and was later removed to her home.

Exhibitors to Visit Selig Plant

Visitors to the second annual National Convention of the Motion Picture Exhibitors' League of America will have an excellent opportunity to see moving pictures in the making, and to study the many intricate features of a mammoth motion picture plant, on the afternoon of August 14. The Selig Polyscope Company, one of the largest of the licensed manufacturers, whose main plant, offices, and studios are located in Chicago, will throw open its doors to convention visitors, and an excellent programme of entertainment will follow. Exhibitors can reach the plant by taking special street cars that will leave the La Salle Hotel at 1 o'clock sharp. At two o'clock sharp exhibitors will form in double column line at the corner of Western avenue and Byron street, and as they march into the Selig grounds a motion picture of the procession will be taken. This will be shown to the visitors later on in the afternoon. After assembling in the huge yard, the visitors will be divided into small parties and taken through the studios, plant, etc., on a sightseeing tour. One of the Selig players or officials will accompany each party, and every detail of production will

be carefully explained. Refreshments will be served during the afternoon. Exhibitors will be invited to take part in some special motion picture production written for the occasion, and it is expected that this feature will cause much merriment among those taking part.

"Geronimo's Last Raid" A Big Historic

A pretty little story has been written into the life of that last of great American Indians, Geronimo. In producing this subject the American Film Company has spent considerable money and time. There are some elaborate settings that add grace, and beauty, when contrasted with the rough-out-of-doors of the picture. Through his jealousy of a young lieutenant, Captain Gray frames up a strong case against his rival for the major's daughter's hand. It results in the release of Geronimo, who promptly opens a border warfare. It is all explained by attaching the two parts of a letter to the young lieutenant, harmless in its entirety, but dangerous when torn in half with such sentences as "it would, of course, be to your advantage if Geronimo escaped." A dainty love story runs throughout and there is much of a thrilling nature in fights with Indians.

Harry Lonsdale, long known to the American public for both stage and picture work, has recently joined the "Flying A" players of the American Film Mfg. Co. and will play leads in one of its several Chicago companies.

Scene from American's "The Lonesome Trail Pioneers."

Mormon Pictures

Harry A. Kelly, president and general manager of the Ellaye Motion Picture Company of Los Angeles, which proposes to stage a remarkable picture-story to be entitled "A Hundred Years of Mormonism," arrived in Salt Lake and was in conference with the Mormon church officials.

The film will tell the story of Mormonism from its inception to the present day. Forty of the most prominent actors in the motion picture business will take the roles of leading characters in the great historical drama, and more than 300 local men, women and children will be employed to fill lesser parts.

President Joseph F. Smith and other officials of the church may consent to appear before the camera in the latter stage of the production, which will pertain to contemporaneous events in the church.

Mr. Kelly will begin immediately the extensive preparations necessary for making the film. He will defer the actual use of the picture taking machine, in order to take advantage of the clearer atmosphere that prevails in the vicinity in August.

Scores of oxen, mules, old-time prairie-wagons and other paraphernalia necessary to the realism of the film are now being negotiated for. Contracts already have been made with the actors for the leading roles.

The story will begin with the finding of the golden plates in the Hill Cumorah, as recounted in the early traditions of the church. It will show the original founder of the church, Joseph Smith, from his boyhood until the hour of his death at the hands of a mob in a Missouri jail. It will trace the growth of the church from its infancy to the powerful organization it is today, including the ephocal exodus from civilization, the long tramp across the plains and, the founding of a new empire beyond the Rocky mountains. It will deal with the missionary phase, the incidents of pioneer life, the turmoil of territorial days, concluding with an unbiased presentation of actual conditions as they exist today.

Mr. John Pribyl, personal representative of Mr. W. N. Selig, has just returned from a four weeks' business trip through the west, where he went in the interests of the Selig Polyscope Co. He reports wonderful advancement in the motion picture industry on the coast.

One of the Honor Squad

Among the current releases of the Thanhouser Company is the splendid dramatic film, "One of the Honor Squad," that treats of the ambitions and adventures of a young policeman in winning his promotion. The ten-thousand-dollar reward offered by the French government for the capture of the notorious auto bandits of Paris forms the base of the story, around which is woven a tender love story and a series of thrilling exploits.

The young policeman, detailed on plain clothes duty, has a sweetheart, and they plan to get married, as soon as he could save enough money to furnish a home. He was an honest young policeman, and consequently he saved but slowly, and the wedding day seemed far off. When he reported at the station, one day, the desk lieutenant called his attention to the fact that the French government had offered a $10,000 reward for one of the Paris auto bandits, who was believed to be hiding in New York. The detective wistfully hoped that he might get the desperado and the reward, and took the newspaper which contained the criminal's picture, and record, so that he might have something as a reference.

He called upon his sweetheart that evening, and showed her the account. Her little sister also looked at the picture and delighted them by telling that she knew the man and that he lived next door. They were sitting near an air shaft, and suddenly the girl pointed out excitedly, saying "There he is now." The detective looked, and in the room across the court he saw the silhouette of a man that answered the description of the desperado, preparing to leave the house.

The detective was strong and fearless. Bravely he leaped across the air shaft and climbed into the room, expecting to meet one man. To his surprise there were three. But he pluckily tackled them, and when the reserves summoned by his frightened sweetheart arrived the prisoners had been thoroughly subdued.

Revolvers were found upon all of them, and in accordance with the rules of the New York police department these weapons, with all others confiscated, were taken far out to sea and sunk. As an additional reward for his bravery, the detective was one of the squad assigned to take charge of the deep sea burial.

Furthermore, for his bravery he was awarded one of the department decorations, becoming a member of the Honor Squad: a distinction to which every policeman strives to attain. This decoration was conferred upon him at the annual police parade, where the mayor and other high officials did him and his associates honor. The cash reward came to time also, and the detective married the girl he loved.

Scene from American's "The Land of Death."

A Narrow Escape

Miss Evebelle Prout, a widely known and popular member of the Essanay Eastern Stock Company, came very nearly losing her life the past week during the taking of a scene for a forthcoming comedy subject entitled "The Progress of Grassville." Mr. Baker, the director, had the company at Loon Lake, Illinois, and the plot of the scenario was based upon the rescue of a party of girls from the lake, after their boat had accidentally upset. Miss Prout and her companions, including Beverly Bayne, Mildred Weston, Lily Branscombe and Dolores Cassinelli, drifted out in the boat, and, at the signal from Mr. Baker, overturned it and all plunged into the water. Unfortunately Miss Prout's dress caught in the seat of the boat and she was trapped beneath it as it overturned and held under water for a number of seconds. Finding Evebelle missing, the girls screamed to Mr. Baker, who

instantly stopped the camera, and the boys, who were waiting for the cue to plunge in and "save" the girls, reached the overturned boat in record time. Whitney Raymond, the popular young juvenile man of the company, instantly dove beneath the boat, seized Miss Prout in his arms, released her clothing and brought her to the surface. The girl was unconscious and heroic treatment was resorted to before she could be revived. Undaunted by the harrowing experience, Miss Prout bravely volunteered to have the scene taken over again, and after waiting for their clothing to dry the players went through it once more without further mishap. Raymond was warmly congratulated for his plucky dive beneath the boat, and Miss Prout declared it the most terrible experience of her life.

Essanay Entertains

The Essanay Company were proud to entertain at the Chicago studio, last week, Mr. William Shelby, a ranchman from Texas. Mr. Shelby blew in Thursday morning, and immediately inquired for "Broncho Billy." "I've seen Broncho in these movin' pictures out in Texas, and I want to meet him. He sure is th' greatest brand of all-around Westerner I ever saw, and if he ain't a native son of old Texas I'll be the most disappointed galoot this side of the border." It was explained to the enthusiastic ranchman that Mr. G. M. Anderson, otherwise the world-famous "Broncho Billy," was located at Niles, California, with his Western company. Shelby, who was keenly disappointed, said he was in Chicago with a shipment of cattle at the Union Stock Yards, and had come out to see his favorite film-actor. "If Broncho ever comes to Texas he's sure got to come to my Two-Bar ranch," declared Shelby as he sat in the exhibition room, enjoying a new Broncho Billy film booked for early release. The delighted ranchman was conducted through the big plant and viewed with wonder the mammoth studio activities and the processes of developing, drying and assembling of film. After a hearty lunch Mr. Shelby departed for the yards with Mr. Anderson's address in his pocket and enthusiastic over the wonders of the Essanay plant and the "movies" in general.

The Selig Hospital Ward

The "jinx" seems to have transferred itself from the Los Angeles branch of the Selig Company to their Chicago studios. Within three short hours last Thursday, three serious accidents befell members of the Chicago plant. While taking a certain scene in which a huge captive balloon is used, the big, heavily weighted basket fell through the air and alighted upon Gabe Pollock, head of the scenic department. When he was dragged out from under the wreckage it was found he had suffered a broken arm and several slight internal injuries.

An hour later John Lancaster, one of the Selig players, was badly battered up while attempting to roll under a passing automobile, which knocked him down, while he was playing in a comedy scene. Within half an hour the third accident took place. The new two-story machine shop building, which is rapidly nearing completion at the north end of the Selig yards, was the setting for the last and most serious of these accidents. Franklyn Quay, one of the Selig machinists, was buried beneath a pile of scaffolding which collapsed as he was passing under it. Quay was borne to a near-by hospital unconscious, but will be around again in a short time.

Rex de Rooselli, of the Colorado Company, who was accidentally stabbed last week while enacting a knife fight before the camera, went against the doctor's orders and refused to stay out of the cast of this week's pictures. As a result he has contracted blood-poisoning in the wound and will probab'y be laid up for some time to come.

Shows Must Keep Away from Churches

An ordinance prohibiting theaters within 300 feet of a church or school will be passed by the city commission of Omaha, Neb. The councilmen favor the ordinance, but have been differing as to the proper distance.

This ordinance is now drafted. While some of the councilmen be'ieved such theater ought to be 500 feet from churches and schools, others declare 200 feet is sufficient.

The question will be compromised and 300 feet fixed as the limit. This will not interfere with moving picture theaters now established, but will prohibit the operation of such an amusement place at Twenty-third and Davenport streets.

Agitation was started over the establishment of a moving picture theater diagonally across from the Swedish church at Twenty-third and Davenport streets, and this objection resulted in the drafting of the ordinance.

Colorado Selig Players Entertain Prisoners

Sunday, Ju'y 21, was somewhat of a gala day at the Colorado State Penitentiary. After the regular Sunday services, members of the Selig Polyscope Company, at present located in Canon City, Colorado, entertained the prisoners. Miss Stedman sang several songs for the convicts. She has become a great favorite and often sings for them. Mr. Lester Cunio recited and sang, and Mr. Marshall Stedman gave a comedy reading. These two were new to the prisoners, but they became popular immediately and received much applause. There were nearly nine hundred prisoners present at the services, the largest number ever confined in this penitentiary. After the entertainment the chaplain led the convicts in giving three cheers and a tiger for the Selig p'ayers.

New Home for Mutual Film Corporation

The permanent new home of the Mutual Film Corporation after August 1 will be 60 Wall street, where a large suite has been chosen, having three exposures overlooking the East and Hudson rivers and New York bay. Every film man will be welcome at the new quarters.

Mutual Buys Baumann-Kessel Exchanges

The Mutual Film Corporation has bought outright the Baumann-Kessel film exchanges and has exclusive arrangements to release and market the Bison product in the United States. Baumann and Kessel are not to re-engage in exchange ownership for a period of three years.

During the past week Essanay had four companies of players operating in different territories, one working at Lake Superior, another at Reed's Lake, Mich., the third at Wayne, Ill., and the fourth at Moline.

Brevities of the Business

CALIFORNIA.

The "Varsity" is the name of a new motion picture theater opened in the college town of Berkeley by Messrs. Turner and Dahnken, making the eleventh moving picture theater for this firm. Plans are also being made for a new house to be erected at Alameda which will have a seating capacity of 1,200 and will be known as the "New Alameda Theater."

A motion picture theater will be erected at the corner of Germantown avenue and Venango street, Philadelphia, by George F. and Walter Stuempfig, which will have a seating capacity of 3,000. The house will be fireproof and will have cantilever galleries.

Samuel F. Wheeler has purchased a site at 23 North Fifty-second street, Philadelphia, on which he will erect a large motion picture theater.

SOUTH CAROLINA.

Messrs. W. T. Henderson, T. F. Hunt, C. O. Hobbs and others will erect a moving picture theater at Greenville.

The Grand theater at Spartenburg, which will be conducted under the management of Lawrence Lester, is well named, for it is one of the grandest motion picture houses in the state. The ventilating system is perfect, the air being changed every minute and a half. The Grand is supplied with eight oscillating fans, which scatter the fresh air after the 42-inch exhaust fan takes out all of the foul and hot air. The house is equipped with comfortable opera chairs and the floor is so inclined that the view from the rear is as good as from any other part of the house. Mr. Lawrence is also manager of Fairyland theater of that city.

SOUTH DAKOTA.

The Cosy Theater at Aberdeen has been purchased by Nordahl Hollien.

A motion picture theater will be erected at Toronto by H. P. Mortenson.

Tony Sudekum of the Crescent Amusement Company, which operates the Fifth Avenue Theater and several motion picture theaters in Nashville, has purchased the Princess theater in that city. The price paid for the stock is given as $65,000. The house was erected by W. P. Ready and associates. The Princess will be under the direct supervision of Mr. Sudekum.

W. F. Neil, proprietor of the Picto and Crescent, motion picture theaters of Chattanooga, gave the proceeds for one day from these theaters to the "safe and sane" Fourth of July celebration fund. In this way every one was given an opportunity to contribute toward making the day a success.

TENNESSEE.

Two new motion picture theaters have been added to that list of amusement places in Memphis. They are the new Majestic, being erected by R. Brinkley Snowdam for the Majestic Amusement Company, and the Princess, which is being built by the Trumble Amusement Company. They are located on South Main street, near Beale avenue. The Princess was erected at a cost of $60,000 and is said to be one of the prettiest picture theaters in the entire country. It has a capacity of 700, a stage, asbestos curtains, balconies, Mezzanine floor and women's waiting room. The front is especially elaborate, being of Corinthian design, and it will be brilliantly illuminated. The Majestic theater cost $65,000 and has a seating capacity of 1,200. The two theaters are said to be the handsomest in the South.

TEXAS.

Plans have been drawn for the new motion picture theater to be erected on Main street, Houston, for Jesse Jones, which will be among the handsomest, if not absolutely the handsomest, house of its kind in the city.

A new motion picture theater has been opened at Hempstead by Messrs. Rhea and Son.

The Hippodrome Amusement Company will erect a motion picture theater at Dallas.

The Cozy theater at Houston has been purchased by the Bryan Realty Company.

A $5,000 motion picture theater will be erected at McGregor by Messrs. Smith and Morehead.

The Isis is the name of a new motion picture theater recently erected at Houston at a cost of $5,000.

The Mecca, a motion picture theater of Houston, was recently opened in that city under the management of Messrs. Jones and Rouse.

UTAH.

According to the plans of the Jupiter Theater Company, incorporated with a capital stock of $15,000, Salt Lake City will have another moving picture theater within a short time. The company has leased the old Mission theater building and will convert the same into a motion picture house. The name of the house will probably be decided by contest. The officers of the company are: President, L. J. Gilmer; vice-president, A. B. Irvine; secretary and treasurer, J. Fred Daynes; directors, George E. Hale and R. W. Daynes.

A motion picture theater has been established in the Provo Opera House by Epperson Brothers.

VERMONT.

It is the intention to have the Standard Theater at Bellows Falls ready to open to the public on Labor Day. The house will have a seating capacity of about 900 and will be thoroughly up-to-date in every particular.

Dreamland is the name of a new motion picture theater to be erected at White River by F. M. Greenough.

The Majestic, a straight motion picture house was recently opened at Burlington. It has a seating capacity of 750 and is second to none in the town.

VIRGINIA.

The Spiegel Motion Slide Company of Richmond has been incorporated with a capital stock of $200,000 maximum, $50,000 minimum. The officers are: President, George B. Hutchings; vice-president, J. F. Tilley, Washington, D. C.; secretary, F. L. Middleton, Washington, D. C.

The Art theater at Radford has been purchased by J. B. Akers and Earl Moore of Roanoke.

The Film Exchange Corporation, Richmond, has been incorporated with the following officers: President, A. E. Watts, Richmond; vice-president, H. K. Wood, New York; treasurer, W. H. Sellsberg, New York; secretary, J. S. Perry, Richmond; capital stock, $1 000 to $2,500.

WEST VIRGINIA.

The Union Opera House of Bridgeport has been leased by the local lodge of Knights of Pythias, who will conduct it as a moving picture theater.

The Grand theater at Weston, W. Va., has been purchased by Messrs. Hood and Martin, who will operate it as a motion picture and vaudeville house under the name of the Hippodrome.

The Motion Picture Exhibitors' League of West Virginia has been organized, with the following officers: President, M. M. Weir, Colonial theater, Charlestown, W. Va.; first vice-president, F. L. Harris, Bijou theater, Parkersburg, W. Va.; second vice-president, L. C. Washburn, Lyric theater, Salem, W. Va.; secretary, L. R. Thomas, Orpheum theater, Moundsville, W. Va.; treasurer, P. S. Barett, Star theater, Parkersburg; national vice-president, E. W. Haugh, Dreamland theater, Huntington, W. Va. The next meeting will be held at Huntington the first Monday in May.

The H. R. Porters Consolidated Theatrical Enterprise of Parkersburg has been incorporated to promote and operate dramatic, vaudeville and moving picture shows; capital stock, $10,000. The incorporators are H. W. Lane, New York; C. F. Remley, H. R. Porter, J. T. McNulty and N. C. Jones, Parkersburg.

WASHINGTON.

The Auditorium theater will open in Spokane about Aug. 1 with the New moving pictures that talk, according to Dan Weaver. Sid Rosenhaupt is interested with Mr. Weaver, also John Cort and others, who control the invention. The machine is the invention of Dr. Isadore Kitsay of Philadelphia.

WEST VIRGINIA.

The Consolidated Motion Picture Company of Pittsburgh has opened the Ideal picture theater in Fairmount. The company has an option on a lease for a portion of a new building now being erected in Morgantown, in which they propose to install a modern motion picture theater.

The "Pike" is the name of a new motion picture theater opened at Shadyside by Dr. H. F. Weidman, at present the only house of its kind in the place.

The first permit to conduct a motion picture theater in Wheeling under the Vaas ordinance and in accordance with the state laws was granted to William G. Meyer, proprietor of the Avalon theater in that city.

WISCONSIN.

A motion picture theater will be erected at Darlington by Will Peters of Mineral Point.

The Grand motion picture theater of Beloit has been undergoing extensive alterations and for this reason has been closed for two months.

The White Theater at Janesville, conducted by A. J. Gilbertson, has been purchased by Messrs. George and Herman Kahlke.

A new motion picture theater will be erected at Appleton by Neil Duffy, proprietor of the Elite Theater in that place.

The Ripon Theater at Ripon has been purchased by Louis Radliem of Milwaukee, who will conduct the same as a high-grade motion picture house.

WYOMING.

An open air motion picture theater has been opened at Sheridan under the management of J. O. Decker.

WISCONSIN.

The Wisconsin Moving Picture Exhibitors' League was recently organized at Milwaukee with the following officers: President, Charles H. Phillips, Milwaukee; vice-president, Thomas Foster, Stanley and Charles W. Christainson, Racine; secretary, J. W. Clark, Sheboygan; treasurer, Henry S. Klein, Milwaukee; sergeant, Peter Jermain, Milwaukee; trustees, B. K. Fischer, O. Sprecher, Milwaukee; L. W. Anderson, Neenah; C. W. Tiede, Burlington. The league started out with a membership of sixty-five and later it will affiliate with the Moving Picture Exhibitors' League of America.

Saxe Bros. have leased a site on Grand avenue between Fourth and Fifth streets, Milwaukee, and will erect a new theater.

Messrs. Crowley Bros. are erecting a moving picture theater on National avenue, Milwaukee, between Thirtieth and Thirty-first avenues, which they expect to be completed by November 1.

J. W. Tonsor has been granted a permit to erect a moving picture theater on Fond du Lac avenue, near Twenty-ninth street, Milwaukee, at a cost of $9,000 and the Tern Amusement Company has been granted permission to erect an $8,000 theater on Third street, near Clarke in the same city.

A moving picture machine has been installed at the Home for the Feeble Minded, Chippewa Falls and once each week an entertainment will be given for those residing there.

Contracts have been let for the erection of the Bell moving picture theater at Fourteenth street and North avenue, Milwaukee, at a cost of $7,000.

A new moving picture and vaudeville theater, the Lyceum, has been opened at Baraboo by Monroe T. Garrison, who will present only the best. It is said the new theater is one of the prettiest in the state and it is expected that it will be one of the most successful.

William McIntyre is now sole owner of the Bijou theater, a vaudeville and moving picture theater of Kenosha, he having purchased the interest of his partner, John E. Keating. The theater has been redecorated inside and out and no expense has been spared to make it one of the coziest, cleanest and best lighted theaters of its kind in the state. The Bijou is one of the few theaters in the state having a silver curtain to insure the brilliance of pictures. The programs will consist of three carefully selected vaudeville acts and 2,000 feet of moving pictures at each performance.

J. A. Prinsen and E. C. Prinsen, who have been conducting the Royal theater at Fond du Lac, have secured control of the Idea and Henry Boyle theaters.

Plans have been prepared for a new motion picture house to be erected at Monroe by Leon Goetz.

The Victor Motion Picture theater at Eau Claire has been leased by Andrew Porter of Chippewa Falls for five years.

The Cream City theater, Twenty-seventh street and North avenue, Delavan, has been purchased by R. M. Calkins of Williams Bay.

A moving picture theater will be erected at Two Rivers by Frank Bonk of that place.

The Idle Hour theater at Fennimore, operated by E. A. Heberlein, has been purchased by E. T. League, who has improved the same and will conduct it as a high grade place of amusement.

The Royal theater at Stoughton has been purchased by Messrs. Erling Landvik and Jacob Gjestad.

Plans have been prepared for a motion picture theater to be erected at Racine by the Portier Furniture Company.

A moving picture and vaudeville theater has been opened at Muscoda.

A company has been organized at Mishicot with Earl Stoneman as president, Arthur Holst, secretary, and Ray Scheuer, manager, for the purpose of establishing a moving picture theater in that place.

A new motion picture theater will be erected at Ellsworth by Messrs. Norman N. Buck and Harold F. Doolittle.

The Princess motion picture theater at Augusta has been purchased by Messrs. Simpson and Emerson of Spooner, who contemplate improving the same.

Amil Scantland, who for some time has operated the Orpheum motion picture theater at Washburn, has leased the Masonic hall building in that place and after having it thoroughly fitted up will occupy it. The Peterson and Hansen building, formerly occupied by the Orpheum, has been leased by other parties, who will continue to operate the old theater, thus giving that city two motion picture theaters.

The American Theater Company will conduct a motion picture theater at Port Washington under the management of I. C. Layman, which will be modern and up-to-date in every respect.

A company, of which Arthur Holst is secretary, has been organized to erect a motion picture theater at Mishicot.

A new motion picture theater will be erected at 705 Mound street, Madison, by Mrs. Mary Stang, at a cost of $5,500.

A motion picture theater is being erected at Twenty-second and Lincoln avenues, Milwaukee, by Frank Ragowski.

Frank Henry will open a motion picture theater at Lake Andes.

The Bijou is the name of a new motion picture theater recently opened at Grand Rapids.

The Gem is the name of a new theater to be opened at Washburn under the direction of Manager Harrington.

Messrs. Drahelm and Barnes will open a motion picture theater in the Bishop building at Ripon

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

THE LEAGUE AND THE CONVENTION.

AUGUST 1, 2 and 3, 1911, there met in Cleveland, Ohio, some 300 earnest men. They represented, as delegates and proxies, 2,200 exhibitors. These 300 men organized and started on its successful course the Motion Picture Exhibitors' League of America. They elected officers of unusual efficiency, and departed for home with the promise to see each other again in a year.

It has been a busy year. The Motion Picture Exhibitors' League of America is a master association made up of any number of smaller associations. These smaller state and local leagues had to be organized. In some states tentative and feeble organizations already existed. In others there had been no attempt to get together. In all cases the emissaries of the National League had to revivify dead enthusiasm, inspire new confidence, prove that the movement was substantial, positive and certain. Sometimes it was easier to organize brand new associations than it was to revive dead ones, whose members had tried to get together, but failed to stay. It was the hardest kind of work. Those blase manufacturers and exchange men who predicted failure for the league knew how hard it was. They thought it was too hard—but they reckoned without appreciation of the power of enthusiasm. Not for one moment has interest waned in any quarter. Month after month states have organized, one after another, have held their conventions, and have appointed delegates to the National convention. And not content with sending delegates, the exhibitors themselves have come—over 2,000 of them. That is a pretty good growth for one year. And no visitor to the present convention will leave with any doubt of its permanency and power.

Thus from being almost the only important industry without organization, motion picture exhibiting has developed in a year into one of the best organized and most enthusiastically co-operative lines of effort in the world.

The scoffers were astounded by the success of the Cleveland convention of 1911. They admitted afterward that it was motion picture history in the making. There are still a few scoffers left; not many now, it is true, but enough to talk some of "temporary enthusiasm," "new brooms sweeping clean," and other phrases of imaginary appropriateness. These must, by this time, be overwhelmed with the very evident air of establishment that pervades the organization. Even the campaigning for offices, while all good natured, is serious enough to show a high regard for the purposes of the League.

This issue of MOTOGRAPHY must needs go to press before the national officers are elected for the ensuing year. At this writing, therefore, there is no certainty whether the officers of last year will be returned or a new set elected. So the only comment we can make on this subject is that no matter which way the election swings, the League is assured of an efficient administration. This is not idly said; we know the men who are candidates for the presidency of the League. We know their mo-

tives and their ability; and we know the League is fortunate, so early in its career, to find leaders of that caliber. For after all, though the officers are but servants of the association, they can make or mar its record according as they are efficient and enthusiastic or incompetent and indifferent.

The exhibitors got along very well for years without a League. For that very reason, the League has a vast amount of work to do; for the things that needed attention and did not get it have been accumulating—thrust aside for the time being, but piling up like the neglected work on one's desk. The unprotected exhibitor was harassed by a multitude of petty enemies. Many of these have fled like evil ghosts before the light of organization. The very word has sufficed to banish some of the parasites that sap the vitality of disorganized business, and the strength of the League is left unimpaired for battle with the bolder spirits of unfair legislation and abortive reform. The work is scarcely more than started, yet in the one year of the League the picture theaters have attained a dignity they never had before. Today any man may be proud to acclaim that he is an exhibitor and a League member.

We have said that not all the interests of the industry favored the League. Some scoffed at it, others merely doubted its efficacy in promoting the welfare of the picture. Yet, to descend to sordid finance, the hundred-page Official Program of this convention lists contributions totaling $4,325, with advertising aggregating probably another $5,000. And that is a good test of high regard; for men must have faith to open their pockets.

Take it by and large, it is hard to see how the convention could have opened more auspiciously, been more harmoniously conducted, or afforded exhibitors a heartier welcome. In short, it is a success in *every* way.

HAZARDS OF FILM MAKING

IT will be necessary, we fear, to run an obituary column in MOTOGRAPHY in the near future if the moving picture actors and actresses continue to carry out their plays with the reckless abandon that has characterized their work this summer. From the reports received during the last thirty days it would seem that the daily occupation of an aviator is a safe and sane performance compared to the hazards of motion picture scenarios.

An overly ambitious stabbing act, two automobile accidents, with actors in the leading roles, four near-drownings, two runaways, an aeroplane accident, an accidental hanging, and the burning of two men in the debris of a collapsed set, are among the leading attractions for July, which in a way reflect credit on the victims for their strenuous efforts to produce realistic effects. After obtaining the necessary experience in expression, we would suggest that the aspirant to motion picture fame acquaint himself with the elements of "first aid to the injured."

For the edification of the motion picture patrons, the camera man has flown above cities, climbed the steel frame work of uncompleted skyscrapers, jumped from balloons, traveled under sea, fought with the troops on the firing line, stood in the craters of active volcanoes, and explored the fever-haunted jungles of Africa. In almost every case the element of danger, as recorded by the camera, is an actual living fact, and as such should be appreciated by the patrons of the show. Even in the case of the so-called "faked" film, there is always a chance for a slip, or unforeseen circumstance, as shown by the records for July, and the fact that such a film is to a certain extent safeguarded, should not detract from its interest as a "thriller."

Contrary to the general belief, that the accidents mentioned in MOTOGRAPHY emanated from the imaginative brain of the press agent or publicity department of the film manufacturers, the victims are fully entitled to the notice given them, for the accidents actually occurred in the manner stated. In the future we believe the Carnegie hero committee should keep an open eye on the doings of the film actors and camera men.

THE FOX INJUNCTION.

SHOULD the injunction, recently issued against the General Film Company in the matter of William Fox, be carried to the extreme limit of forcing an open market, a matter that is well within speculation at least, no exchange could supply exclusive service to an exhibitor, nor the exclusive right to use any particular make of film. Thus an exhibitor, showing the films of any one maker, would suffer competition from a neighboring show, which, backed up with an injunction, could demand the same films.

It can easily be imagined in what position the producing and distributing branches of the business would be placed, if each film exchange, by the tenets of the injunction, could force any of the producing companies to supply it with films.

While the theatrical profession are protected from this contingency by virtue of the copyrights on their plays, the film people are far from being in that enviable position. Should the film patents fail to be of support in the matter of exclusive film service, there is a possibility of the producers restricting the service by means of copyrights on the films, as is already done in the case of many feature subjects of which state rights are sold. If possible with one class of films, why not with all?

As no one can foresee what attitude the courts will assume in regard to the extent to which this principle may be carried, it is interesting to consider the possible effect of the ruling upon the present system of distribution.

SCIENCE AND CELLULOID.

FROM the information that we have at hand, it would seem that the attention of the entire scientific world is concentrated in discovering in the use of new perils celluloid. Instead of investigating new substances for a reliable substitute, the fraternity is engaged in a sort of scientific "muckraking." Among the contributions that we have received is the following:

"That the peril of celluloid working is not confined to its inflammability alone, is pointed out in the new regulations in regard to the working and finishing of celluloid articles, issued by the Ministry of Saxony. According to a statement accompanying these regulations, there is also the danger of poisoning by prussic acid, which is produced when celluloid burns. Experiments, made by the Hygienic Institute at Leipzig, have shown that 5 grammes of celluloid scraps ignited in the open air will produce about 0.05 grammes of prussic acid, a quantity sufficient to kill one person. The danger is increased when celluloid working is done in the small rooms of private dwellings with insufficient ventilation. The new regulations forbid the manufacturers to give out more than 13 pounds of material at a time to any one family employed in home finishing, and also they are to point out to these people the danger connected with this work."

MOTION PICTURE EXHIBITORS' LEAGUE OF GEORGIA—President, F. Whire; Secretary-Treasurer, A. J. Wood.

Opening of the Second Convention

Delegates to the second annual convention of the Motion Picture Exhibitors' League of America began arriving at the La Salle Hotel as early as Saturday, August 10. President Neff was one of these early ones. By noon Tuesday, August 13, when the convention proper opened, the attendance had reached something like 2,000.

The afternoon was occupied with the usual address of welcome and response by the president, followed by an address by Hon. John J. Lenz, attorney for the Ohio State League. Mr. Lenz' subject was "The Advancement and Educational Features of Cinematography."

Tuesday evening nearly all the visitors at the convention were the guests of the Universal Film Company. The entertainment provided was a lake trip on the steamship "Pere Marquette." A band of Universal western Indians in war paint danced in the cabin while the Universal band on the top deck discoursed popular airs. Dancing of a more civilized sort was also provided.

During the intervals between special entertainment and regular sessions the manufacturers' rooms were centers of great interest. Of the many represented, not one could complain of neglect on the part of the delegates.

The afternoon of Wednesday, the 14th, was devoted to a trip to the plant of the Selig Polyscope Company in special cars. Here the delegates were requisitioned to act in the making of a film; after which they returned down town and spent the evening inspecting licensed pictures at Orchestra Hall.

History of the Exhibitors' League

A need for an organization for the exhibitors of motion pictures was first brought to the attention of the industry in 1909, and early in that year ways and means for perfecting that organization were planned. It was in Ohio that the first convention was held that resulted in the birth of the league.

After hard work a list was obtained of 500 Ohio exhibitors, and in response to the letters sent to every one on the list, eleven men met in the Southern Hotel, Columbus, Ohio, destined to be the fathers of the organization. On September 12, 1910, during this meeting the following temporary officers were elected: President, M. A. Neff, Cincinnati; vice-president, A. Pettis, Conneaut; secretary, F. A. Buesche, Steubenville; treasurer, W. O. Yard, Wellston.

Interest in the new undertaking grew rapidly, for at the third meeting, held about a year after the first con-

vention, the membership had increased to twenty-eight, and at the fourth meeting the question of a national convention was placed upon the board. Shortly after this, at the first national convention, organizations were started in other localities, Louisiana and Texas being the latest addition to the cause. The home of the original association, Ohio, has now over 500 members.

Illinois Branch No. 2 is now the largest and best organized local in the national organization, with its membership of 360 exhibitors. Originating in the "Noon Day Club," the first meeting of which was held January 16, 1911, the subject of organization was discussed, and a call was issued to all of the motion picture theater owners to attend an open meeting on April 25, 1911. Thirty-eight exhibitors responded to the call, and it was the unanimous opinion of those present that a permanent organization be formed.

At the meeting called for May 15, 1911, the membership was increased to ninety-two, and at the next meeting a constitution and by-laws were adopted, and the following were elected officers: President, George Henry; vice-president, C. A. Anderson; treasurer, W. J. Sweeney; financial secretary, S. Katz; recording secretary, John Bell.

Chicago Convention Program

According to the arrangements made by the local film manufacturers and exhibitors, the visitors to the convention of the Motion Picture Exhibitors' League at Chicago will be kept busy with the entertainments and diversions planned for their benefit. In addition to the expeditions to be made to the various film manufacturing plants, and amusement parks in the vicinity, the visitors will witness the International Power Boat Races that are to continue through the week of the convention. Everyone wearing an exhibitors' badge will be the recipient of the best that Chicago can offer in the amusement line, without cost. White City, Riverview, and Forest Park, the city's most prominent amusement parks, have all offered free admission to the exhibitors.

Arrangements were made to open the Chicago convention on Tuesday morning, August 13, at 10:30, in the convention hall of the La Salle Hotel. Matters of importance were discussed on the opening day, and all were urged to be present at this meeting. On Wednesday afternoon, at 1 o'clock, the exhibitors will meet at the La Salle Hotel, to take a trip to the Selig plant, where they will be entertained at luncheon, and where moving pictures will be taken of the guests. While at the studios, the visitors will witness the interesting process of making a typical Selig film. In the evening an exhibition of licensed pictures will take place at Orchestra Hall.

A business meeting will be held at the hotel on Thursday morning, and important matters will be discussed. In the afternoon, the American Film Company will act as host at its newly completed plant, where refreshments will be served and pictures taken. For those who have never seen the making of moving picture films, as well as to the initiated, this trip will prove of great interest. A display of independent pictures will take place at Orchestra Hall in the evening.

On Friday morning, the last day of the convention, a business meeting will be held at the hotel, and in the evening the banquet will take place, completing the week's festivities.

A greater portion of the film manufacturers have arranged to send representatives to the convention, and many of them, as well as the trade papers, have made reservation for space in which to display their exhibits, and to receive their guests, and have made generous contributions to the convention's arrangement committee. Many of the exhibitors will distribute souvenirs to the guests.

The Universal Film Manufacturing Company will send its delegates by auto from New York, and will stop at many of the exchanges during the trip. This procession will consist of at least six cars, driven by P. A. Powers, M. Dintenfuss, Julius Stern and others. A special car will carry the representatives of the Film Supply Company which will leave New York on August 11. This company has engaged a large suite of rooms at the hotel.

Besides having a comprehensive exhibit of its films, the Gaumont company will have camera men on the job to record the proceedings of the convention. The Reliance company will have a beautiful exhibit, and has arranged for the distribution of 5,000 of its souvenirs, a bronze pocket piece about the size of a half dollar.

A practical demonstration of Powers' Cameragraph will be given by the representatives of the Nicholas Power Company, showing the motor drive and loop setter.

Missouri Exhibitors' Convention

The Missouri branch of the Motion Picture Exhibitors' League of America held its first convention on July 30-31 at the Sexton Hotel, Kansas City. The attendance was large and a great deal of important business was transacted. Delegates and alternates were elected for the Chicago convention, and F. B. Wilson was elected to fill the position of secretary-treasurer for the unexpired term. Addresses were made by Congressman W. P. Borland, Acting Mayor Stanley Watson and others at the banquet held in the evening of the last day. Springfield, Mo., was selected for the next convention, which will take place on the second Tuesday in June, 1913.

The Attitude in Indianapolis

The moving picture exhibitors of Indianapolis have changed their attitude toward a high license law and the prohibition of vaudeville stunts, as proposed by Building Inspector Winterrowd in the new building code. At a recent meeting of the picture theater owners, in the Claypool Hotel, an agreement was finally reached that the $100 license feature and the prohibition of vaudeville will be fought. A statement to this effect, setting out the views of the picture men, signed by Dr. J. M. Rhodes, J. A. Victor and John F. Trulock, will be sent to council.

Several weeks ago Rhodes headed a committee that called on Winterrowd and expressed approval of the high license and stated it was in favor of doing away with vaudeville as more money could be made.

Asia Wishes Film Agency

A resident of an Asiatic country informs an American consulate that he desires to obtain the sole agency covering a certain territory for American moving-picture films. His idea is to introduce the films by establishing a film exchange, and with that end in view he would be pleased to receive catalogues and enter into correspondence with American manufacturers of films as to terms and conditions. The manufacturers should call for Query No. 9283, Bureau of Manufactures, Washington, D. C.

League Presidential Timber

M. A. NEFF, now president of the Motion Picture Exhibitors' League of America, has been active in all the attempts that have been made to organize exhibitors since March, 1909. He first called a meeting of Ohio exhibitors at Columbus, September 12, 1910, on his own initiative, and was made president of the resulting association. Several meetings of this body, with constantly augmented strength, developed a demand for a national convention. This was held August 1, 1911, at Cleveland, and Mr. Neff was elected the national president. He still holds the presidency of the Ohio League also. From the first he has given all his time to the work

M. A. Neff.

of the league, but he maintains his interest in three theaters, as well as in the Mercantile Advertising and Amusement Company and the Waldorf Amusement Company, Cincinnati. His connections with picture theaters have included a small unnamed house in West Virginia; the Queen Theater(formerly the Lyceum), at Lebanon, Ohio; the only picture house in Mt. Gilead, Ohio; the Queen Theater at Marion, Ohio; the Dreamland at Chillicothe, Ohio; the Auditorium at Cincinnati; the summer theater at the Lagoon amusement park, Cincinnati; the Theatorium at Oil City, Pa.; and two houses in Kentucky. He has always insisted that no one connected with a film exchange or factory should hold membership in the League, and promptly disposed of his own interest in two companies. Mr. Neff has personally attended and assisted in the permanent organization of

(*Continued on Page 124, First Column*)

WILLIAM J. SWEENEY, Illinois vice-president of the Motion Picture Exhibitors' League of America, treasurer of Illinois State Branch No. 2 and chairman of the convention committee, is so widely known and so popular that it seems almost superfluous to list his various activities in the work of the League. Within the last few weeks he has done remarkable work in financing the convention, canvassing New York City in less than a week and returning with several thousand dollars to the credit of the League. When it is realized that much of this came from sources which, until Mr. Sweeney's visit, were absolutely antagonistic to the League, his qualities of aggression and diplomacy may be more fully appreciated. Mr. Sweeney's work in exhibiting pictures dates back to the first film, and he was in the show business long before that; and many of his associates of those early days are among his fellow workers and good friends today. Mr. Sweeney has a good, practical knowledge of the processes of legislation, and has fought many an objectionable bill to its finish in the state legislature. In Illinois Branch No. 2 he was instrumental in organizing its grievance committee along the lines of greatest efficiency. He was prominent in the recent fight against Chicago's objectionable "sixteen-year-old" bill, which was killed. He is full of vitality, absolutely indefatigable in the cause of the League, and has accomplished a tremendous amount of work for it without any other incentive than enthusiasm. He is

William J. Sweeney.

(*Continued on Page 124, Second Column*)

(*Continued From Page 123, First Column*)

most of the branch leagues, now recognized as affiliated parts of the national body. He is a man of strong personal magnetism, tremendous energy and enthusiasm, and the power to communicate those qualities to others. A great deal of the remarkable growth and success of the league can be credited to his personal efforts. As an organizer especially he is without a superior. He has served well and his nomination for re-election is assured.

Early Convention Notes

Imagine Hite carryin' a Noo Yawk cane!

Everybody that boarded the Pere Marquette had a tickler and a horn to blow for Universal.

Aubrey Kennedy and his Animated Weekly were on the job, taking pictures of everything that would interest M. P. fans. Kennedy was one of the hardest workers there.

Some of the prettiest ladies from the sixth city were there.

Kohl and Schwartz had room 706. That's where the Cleveland delegation was lit up. Kaslon ordered 12 bottles of Bud charged to 706. Don't know who paid.

The Universal band headed the Cincinnati delegation from the I. C. station to the La Salle hotel. Pathe took a picture of it and got in a lot of Universal signs. Some cut out, eh?

Joe Brandt's band serenaded Laemmle's and Hopp's exchanges.

Quite a stunt to get out a daily newspaper, but Joe Brandt says he's going to stick and beat everyone else to it. He never sleeps. Joe claims the non-sleep record of 56 hours.

Think of getting a film man up at 6 o'clock in the morning to head a parade!

Kohl and Lestig, of the Exhibitors' Mutual Supply Co., were there.

The Animated Weekly put out a round red dodger with the legend "It's Alive!"

A useful guide to the mysteries of the city, "Motiograph Tips About Chicago," was distributed by The Enterprise Optical Manufacturing Company, Chicago.

A condensed program of convention events was the souvenir of the Andrews Company.

Joe Brandt distributed cute little Florence Lawrence buttons mounted on rosettes of ribbon.

Chicago souvenir post cards were in evidence with this reminder: "The first thing I'll do when I get back home will be to demand that Universal program."

Lots of people in the National Waterproof Film Company's room, 1812. They all carried away a neat little book, bound with a silk cord, that told "About Waterproof Films."

(*Continued From Page 123, Second Column*)

"Big Bill" Sweeney to hundreds, a man of extraordinary geniality and good humor and with an unusual capacity for friendship, yet militant and aggressive when occasion demands. Unquestionably he is a born leader of men and an able executive, familiar with the needs of exhibitors and with the limitations as well as the capabilities of renters and manufacturers. He operates two picture theaters near Halsted and 63rd streets, Chicago—the Standard and the Ideal. Competition is strong in that district, and in successfully solving his own problems Mr. Sweeney has aided in establishing efficient methods of handling competitive matters in the League—the hardest questions of all to settle harmoniously. W. J. Sweeney is a candidate for the national presidency—and he would make a splendid president.

Indiana Local Organized

The first local branch in Indiana of the National Motion Picture Operators' Association was organized at the Denison hotel, and is known as Indianapolis Local No. 1. It is composed of picture show men of that city. The membership is about the same as that of the old organization which they maintained there, and the new organization was formed to comply with the requirements for affiliation.

There are twenty-three members. The following officers were elected: President, John Victor; first vice-president, T. W. Sanders; second vice-president, M. M. Miller; secretary, A. C. Zaring; treasurer, J. M. Rhodes. M. A. Neff of Cincinnati, president of the national association, presided while the organization was being perfected.

Following the formation of the local, the Indiana Motion Picture Exhibitors' League opened its semi-annual meeting. It was the intention to elect delegates to the annual convention of the national association which is being held at Chicago.

One of the matters under consideration at the state meeting was the formation of a mutual fire insurance company among the picture show men. F. J. Rembusch of Shelbyville, secretary of the state association, said the insurance companies had boosted the insurance rates on motion picture shows to such an exorbitant figure that it was nearly impossible for picture show owners to insure their property.

He said records showed that more tailor shops than picture shows burned every year in the United States, yet the insurance rate on picture shows was many times greater than the rate on tailor shops. He says the picture show people feel that this is a discrimination against them, and they propose to organize a fire insurance company of their own. It is thought that the company will be a national concern.

There are in Indiana nearly a thousand motion picture shows owned by six hundred men. Two hundred of the owners are members of the state organization.

Films for Industrial School

To facilitate the teaching of the children in the State Industrial School at Ogden, Utah, a complete moving picture outfit has been added to the educational equipment of the institution. The films for the machine are to be selected with the greatest care, and series of pictures giving the pupils an insight into various lines of industry will be thrown upon the screen. Officials of the institution say that motion photography can be used to supplement nearly every branch of study.

On the Outside Looking In

By the Goat Man

HAIL, Hail, the Gang's All Here," or they will be by the time this issue of MOTOGRAPHY is spread about, which is only one way of saying that the second National Convention of the Motion Picture Exhibitors' League of America is now in session at the La Salle Hotel in Chicago. As everybody knows, it is the culmination of an ambition of Illinois Branch No. 2, under whose auspices the convention is being held. And Illinois Branch No. 2, especially its committee having charge of the proceedings, should feel that the work has been thoroughly well done. Were it all to be done over again—right away—I am sure that a majority of the committee would hold up its hands. The members would be willing to confer upon their brothers, the honors that have gone with the job, because, be it known, the executive committee has worked very long and hard and without pay. It has had the support of the larger interests, it is true, who have not only patronized the official program, but have contributed generously to funds which will be used for entertainment. That these funds have been well used, will be affirmed by the convention itself and by the hundreds of delegates who have participated in the entertainment that has been provided. It is a safe prediction that exhibitors from all over the country will look back upon the proceedings of the second annual convention of the Motion Picture Exhibitors' League of America with pleasure and profit. My chief regret is that this magazine is obliged to defer its complete report of the convention proper until its next issue. We are not controllers of the calendar. If MOTOGRAPHY is to be a bi-weekly paper, the calendar will doubtless rule its regular time of issuance, but we will give a report of the convention in our edition of August 31. In the meantime, if you have a wheeze that you care to have pulled on the other fellow, please slip it to the Goat Man.

* * *

One of the most agreeable surprises attending the convention was the early arrival of exhibitors, supply men, exchange men and manufacturers' representatives. A lot of them were here Saturday, August 10. More came in on Sunday, and by Monday, the 12th, the corridors of the Hotel La Salle began to take on the appearance of a full-fledged convention. It must be remembered that the convention itself was not called for a date earlier than August 13. The prediction of the promoters seems to have been well founded. They have been declaring right along that exhibitors would come from both oceans and all the way between. I have already shaken hands with men from New York, Oklahoma, Alabama, Massachusetts, Texas and Montana. It has been officially given out that these states will have representation in the convention: Alabama, California, Illinois, Indiana, Kansas, Kentucky, Louisiana, Michigan, Missouri, New Jersey, New York, Oklahoma, Ohio, Pennsylvania, Tennessee, Texas, Washington, West Virginia and Wisconsin. In all probability there will be a sufficient number of delegates from other states to form state branches and be accepted in the second annual convention. As I am blowing this stuff down the tube of an Edison business phonograph, S E. Morris of Cleveland is passing out a beautiful blue badge and a button which booms M. A. Neff to succeed himself as president of the League, and over there by the display of trophies for the water carnival, is big Fat Frank Kenny, of Cleveland, buttonholing every man he meets and whispering that he has a new baby at his house. Then there is Anthony J. Xydias of Houston—get that name, please, for it was made in Greece and its real—he'll tell you that; and A. F. Dittmann of Brownsville, the original Texas Bull Mooser, holding over from the big show of a week previous. If there isn't going to be a hot time in the old town this week, these early indications are certainly misleading.

King Baggot, Leading Man in Imp Films.

* * *

Time flies, in which respect it has nothing on the film business, because the film business certainly does move. Two weeks ago I was beating it around Gotham eating

out of everybody's hand, and now the whole New York crowd is beating around Chicago, some of them eating out of my hand! When I was in New York, the Universal crowd hadn't made up its mind how it was coming to Chicago, but since I left there, I have learned that the several manufacturers representing the Universal program were coming to Chicago in automobiles. I hope you will not think that they choose the road route because it would save railroad tickets. You may not be familiar with the cost of running an automobile across country. It is one of the most expensive modes of conveyance devised by man, but as long as the novelty holds there will be men to try it. You can buy a first-class ticket on the limited trains from New York to Chicago for $30.00. The trip in automobiles ranges in price from $150.00 to $1,500, all depending upon what kind of a driver you are and how luck favors you. I have ridden with Pat Powers in his little red Marion, and I know he has no luck. I imagine that if Pat starts in that rig of his it will cost him $2,000 to fetch up in front of the La Salle Hotel. I am presuming that Pat Powers will lead the procession, and if he does Horsley and Henkel and Dintenfass and Stern and Porter and Swanson and Engle and Kennedy will have their hands full in following his lead. I have been over some of the road myself, but under the most favorable conditions. I fear that the rain we have been having lately will put some of the road in too bad state for the Universal crowd to make it in time. When you can't make it by the usual method, the thing to do is to pile your car on a train and come by express. I suppose if Thomas Bedding comes along they will tie him to a rumble seat!

* * *

The Film Supply crowd are coming in a special car. The original intention was to appoint Charlie Hite as banker, equip each representative with a sufficient roll to last until they got to Buffalo. At Buffalo, Hite was to reimburse the loser, and the game was to start over again. At Cleveland, it was expected that Mandelbaum would come aboard with his Indians and sweeten the kitty. Then Hite would retire as banker. From Cleveland, it was to be every man for himself, and no handicap for E. Berry. It will be a gay party.

There are all kinds of ways to come to a convention. J. Stuart Blackton of the Vitagraph Company has brought a train load of Baby Reliance motor boats and expects to take away the exhibit that now poses at the La Salle Hotel. If you have any idea that you will find Mr. Blackton at the convention, you are mistaken. The way to get him is to travel east on Randolph street until you cross Michigan, and then continue traveling east until you have crossed the Randolph street viaduct and pier. At the end of the pier, you are to hire a dingy, and when you see the best looking motor craft in the Chicago Harbor you will doubtless find Mr. Blackton aboard, but you will be wise if you take my advice and talk motor boat instead of films.

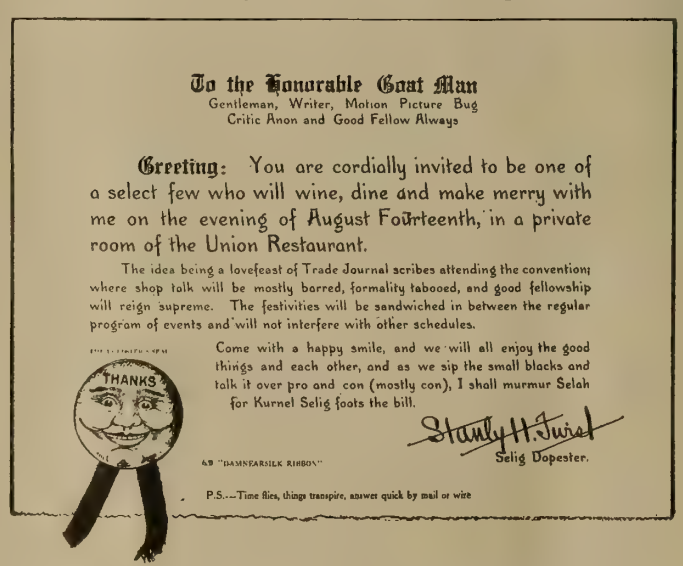
H. S. Dickson, Indiana
Vice-President.

William Ullman, Michigan
Vice-President.

H. F. B. McLain, West Virginia
Vice-President.

* * *

Life has its little compensations as we go along. If you don't believe it just read the following:



To the Honorable Goat Man
Gentleman, Writer, Motion Picture Bug
Critic Anon and Good Fellow Always

Greeting: You are cordially invited to be one of a select few who will wine, dine and make merry with me on the evening of August Fourteenth, in a private room of the Union Restaurant.

The idea being a lovefeast of Trade Journal scribes attending the convention; where shop talk will be mostly barred, formality tabooed, and good fellowship will reign supreme. The festivities will be sandwiched in between the regular program of events and will not interfere with other schedules.

Come with a happy smile, and we will all enjoy the good things and each other, and as we sip the small blacks and talk it over pro and con (mostly con), I shall murmur Selah for Kurnel Selig foots the bill.

Stanley H. Twist
Selig Dopester.

49 "DAMNFARSILK RIBBON"

P.S.—Time flies, things transpire, answer quick by mail or wire

In acknowledging this rather unique and extraordinary invitation, I was careful to suggest to the prime mover of the event, that fourteen inches be allowed at each side of the plate for elbow room. You can better believe the big eats will make a hit with me.

J. J. Rieder, Treasurer. C. M. Christensen, Secretary.

M. A. Neff, President.

S. E. Morris, Ohio Vice-President. W. J. Sweeney, Illinois Vice-President.

Officers of the Motion Picture Exhibitors' League of America, August, 1911 to August, 1912.

Some of the out-of-town film fans have formed the very creditable habit of dropping into our sanctum when they visit Chicago. Among our visitors during the past two weeks was Clem Kerr, an exhibitor at Dayton, Ohio, who is also the official organizer of the Motion Picture League of Ohio. Mr. Kerr is one of the vigorous type, who emphasizes his belief in a permanent film business. He is enthusiastic every minute and plans bigger things for the future than he has ever attempted in the past. We certainly wish him every sucess in his undertakings. Another of the out-of-town visitors was Howell Graham of Chattanooga, Tennessee. Mr. Graham is the general manager of three theaters in Chattanooga, all showing licensed films, which he secures from the General Film Company at Atlanta. He tells me that he takes the full program and that he parcels it out at his several theaters, catering to the different clienteles by that method. That he is successful goes without argument. He looks like ready money from his shoes to his hat, and his headlight is of the usual standard size. Still another visitor was A. C. Bromberg of Atlanta, Ga. Mr. Bromberg has been exhibiting films for a number of years, but recently engaged in the business of supplies for motion picture theaters. His report would indicate that the hot weather in the south has had very little effect on theater attendance. It is our wish that exhibitors from all over the country keep this office in mind and make it headquarters when they are in Chicago.

* * *

Among the things I did in New York was to visit the manufacturing establishments of the Nicholas Power Company and the Precision Manufacturing Company. Almost everybody knows that the former is the manufacturer of Power's No. 6, and that the latter manufactures the Simplex machine. I was amazed at the care taken in the production of these meritorious projectors and hope some day in the near future to go into the details regarding them. I am almost conceited enough to believe that I could pick out a Motiograph from a Simplex and that I might be able to distinguish the difference between an Edison and a Power's No. 6. If the exhibitors of this country will be patient with me it may resolve itself into something more than a Goat, and in passing, if the film interests of this country continue to be kind to me as I hope to be kind to them, it is barely possible the heading of this department will be changed to read, "On the Inside Looking Out." Gee, fellows, that is a beautiful dream.

* * *

You will please pardon me while I snicker in my sleeve. I have read a new interpretation of the valve-handle joke in the dear old *Billy Boy*, a contemp that has been trying to play the legit in film publications, with indifferent success. *Billy Boy* is alright as the best "fakir's" paper in the country. It offers substantial evidence along this line by printing a story that J. J. Kennedy, P. L. Waters, Chas. Baumann and Ad. Kessel are hooking up in a common cause to be the biggest aggregation in the film world. I won't spoil it. The story appears under a four column heading and races along in true style to its finish. Then a poor little jim dash is shoved in, which is followed by Mr. Kennedy's denial. If you can beat that, you gotta go some.

* * *

It is reported that George K. Spoor has purchased from Frank L. Dyer one of the slow-going motor boats capable of maintaining a speed of only thirty miles an hour! What are those easterners trying to slip us now? Do they all carry motor boats as a side line? Well, when we learn how to run 'em at thirty miles, we'll get into the real speed-boy class and come down and burn holes in Long Island Sound with the best there are. Out west, we plug along on the safe side while we're safe. We play with fire when we can apply our own matches. I'm actually hoping that J. Stuart Blackton wins in his class. Every man likes to win. It's a cinch that Mr. Spoor will win with his, for he never enters on any other basis. But I'm wondering if the eastern crowd thinks it can't come west without a cargo of motor boats. What?

* * *

That Mutual Film Corporation thing that has been stirring up the animal down east, goes us one better and breaks into the very teeth of Wall street. Why, it doesn't seem to care a tinker's darn what it does! It pulls off something new every few minutes. When it slipped those New York "Universal" exchanges into its game bag there was joy for the whole Mutual F. S. Co. crowd and I fancy it is planning other coups right along. Getting into Wall street was one of those foxy moves that is natural when you reflect that the Mutual is a pure out-and-out tall grass aggregation.

* * *

Ben Beadell filched a pewter goat from his son Donald's lunch bag and sent it to me as the proper insignia for everyday use. I suppose I'll be taken for a Moose from now on.

Frisco Board of Censors Named

The new board of censorship of San Francisco, Cal., and the five members now composing the board are Miss Mary Ashe Miller, James S. Webster, E. M. Hecht, P. W. Wobber and Corporal Coshon. The new board will meet shortly and organize.

Miss Mary Ashe Miller is a newspaper writer and was appointed by Mayor Rolph to represent the Board of Education. He had been requested by the board to appoint a member of the commission and in response to that request named Miss Miller.

James S. Webster was also appointed by the mayor and was given a place on the censor board as a member whom the mayor appoints under the provisions of the ordinance.

E. H. Hecht is an officer in the Society for the Prevention of Cruelty to Children, and was appointed by that association as its representative on the board.

P. W. Wobber was appointed by the moving picture interests as their representative, while Corporal Coshon was appointed by Chief of Police White as the representative of the police department.

The former board became so entangled that it was unable to accomplish any work, and finally Mayor Rolph called a meeting of the board and suggested that all of the members resign and give an opportunity for an entire new board. This was agreed to, and the new board is now completed and will begin active work.

Wheat Fields in Motion Pictures

On the large wheat ranch of Ernest and Tom Goodenough of Rattlesnake Flat, Washington, 3,000 feet of moving picture film was used in gathering views of two combined harvesters at work. The machines were pulled by caterpillar engines, each of which does the work of 35 horses. The camera men were sent out by a San Francisco concern, and it is said the views are to be shown all over the eastern states and Europe.

Hobart Bosworth in "Monte Cristo"

A Selig Classic

BOOK publishers of today speak of their "best sellers of the year" as if they were but transient, ephemeral things. And mostly they are. The popular novel is widely advertised about the time of publication. It sells, perhaps, to the extent of some hundreds of thousands the first year. The second year less are sold—other best sellers have come upon the stage. The third year the publisher strives to revive the waning interest by issuing a fify-cent edition. Then that, too, dies out; and the late popular novel is almost forgotten.

Alexandre Dumas wrote "The Count of Monte Cristo" years ago; yet that famous romantic novel is as popular today (if popular be not too light a word to apply to a production so truly great) as it was the year after its issue—perhaps more so as we learn to appreciate the subtle excellencies of that master story teller. And further, it is difficult to see how a tale of adventure and romance could well surpass the history of Edmond Dantes. What more could be asked by the lover of excitement via the printed page than the marvelously interwoven kaleidoscopic sequence of events that throws Dantes into a dungeon, delivers him to the wealth of a Croesus, and renders him that dramatic vengeance upon his enemies that is one of the sweetest of elemental joys? All the dramatic elements are there—the ship at sea, the donjon keep with its secret passage, the wild scheme of escape, the smugglers, the treasure caves and the chart, the caravan across the desert, and finally riches, social intrigue, and vengeance.

The Count of Monte Cristo Travels by Caravan.

But to translate Dumas' masterpiece into pictures—to make of it a silent drama, with all the wondrous

Edmund Dantes Under Arrest.

At the Reception. Dantes Meets Mercedes Again.

changes wrought by that author of infinite detail—that were a task to daunt any but the most hardy producer. Given the task of selecting that producer, but few names would be insistent in their suggestion; and prominent among them would be Selig.

It was at the Selig Los Angeles studio that Colin Campbell wrote and produced "Monte Cristo," a three-reel film story and one of the biggest subjects of even that house of big things. For Edmond Dantes was cast Hobart Bosworth. A better for the role could not have been found. The cast of characters in the film is as follows:

Edmond Dantes	Hobart Bosworth
Danglars	William T. Santschi
Fernand	Al. E. Garcia
Villefort	Roy Watson
Nortier	Frank Clark
Caderouse	George Hernandez
Morrell	Nicholas Cogley
Napoleon	George Hernandez
Captain LeClerc	Robert Chandler
M. Dantes	William Hutchinson
Abbe Faria	Fred Huntly
Mercedes	Eugenie Besserer
Haidee	Bessie Eyton
Carconte	Lillian Hayward

Napoleon's Guards, Gendarmes, Prison Guards, Sailors, Smugglers, Fishermen and Fishermaids, Arabs, Cavalry, Potentates and Nobles.

FIRST REEL.

The first reel opens with the departure of the ship Pharaoh from Marseilles, with Dantes and Danglars, the man who later becomes his deadly rival, as supercargoes. During the voyage the captain dies. At the moment of his death he gives the charge of the ship to Dantes, and also entrusts to him the secret message to Napoleon, with the imperial ring which will admit him to private audience with the illustrious exile.

Dantes succeeds in his mission to Napoleon, and sails back to France with a communication from Napolean to Nortier, who dispatched the original missive.

On arrival at Marseilles, Danglars tries to get the command of the Pharaoh away from Dantes, but Morrell, the shipowner, is well satisfied with Dantes, and gives him his captain's papers.

Dantes, after an affectionate reunion with his old father, visits his sweetheart, Mercedes. Fernand, a fiery young fisherman, has been trying to win her for himself, and is much incensed at Dantes' return. He discovers Danglars' enmity for Dantes, and conspires with him and several habitants of the Reserve Inn to bring trumped up charges against Dantes. Their nefarious scheme succeeds so well that Dantes is torn from a jolly prenuptial feast by the magistrate's guards and hustled from the distracted Mercedes' side to a dungeon in the Chateau D'If, in Marseilles harbor.

SECOND REEL.

The second reel depicts the awful years spent in the dungeon by Dantes. He grows grizzled, ragged and unkempt in the solitude. He manages finally to get into communication through a secret passage, with a fellow prisoner, an old abbe, who is being persecuted by political and religious enemies. The abbe is an eccentric person, whose one thought in life is the recovery of immense buried riches, the key to the finding of which he holds in the form of an old chart. Dantes learns from him of the social advancement of his enemies and the death of his father, and vows vengeance. Finally the abbe's time comes to die, and he entrusts the chart to Dantes.

After the discovery of the abbe's body by the guards, and while the latter have gone to fetch shots with which to weight the sack in which they have wrapped the abbe preparatory to casting him into the sea, Dantes manages to drag the corpse into his own cell and substitute himself for the remains. He is thus cast from the parapet of the castle in the sack which is supposed to contain the dead body. He has supplied himself with a knife beforehand; and as the sack sinks Dantes rips it open and swims to an isolated rock, from the top of which he shouts, in his exultation over the escape, "The world is mine!"

THIRD REEL.

The third reel opens with the rescue of Dantes from the rock by a smugglers' schooner. During the cruise of the schooner Dantes induces the captain to put him ashore on the Isle of Monte Cristo, the spot named in the abbe's chart as the depository of the hidden treasure. He discovers the cave, and unearths the treasure. He makes his way to the mainland and lives in luxury among the Arabs, adopting as his daughter the beautiful girl, Haidee. Captain Albert, of the French army, gets into difficulties during an attack upon his troops by the Arabs, and Dantes, by his daring, saves his life. Albert, on taking his departure from Dantes' tent, thanks him profusely and invites him to visit him in Paris. Dantes, who has seen something familiar in the captain's face, starts when he reads his card, but promises, without comment, to attend the reception at Albert's.

Dantes' Meeting with Napoleon.

Dantes and the Abbe in the Dungeon.

Dantes, in disguise, and known as the Count of Monte Cristo, visits Paris with Haidee. There he comes face to face with his old sweetheart, Mercedes, who has married his enemy, Fernand. Mercedes informs him that the young captain, Albert, is his own son.

The final scene is a desperate duel between Dantes and Fernand, in which Fernand is killed.

Children and the Show

The Council Committee on Ordinance, Charter and Reform of Richmond, Va., wisely tabled the proposed regulation forbidding the admission of children under fourteen years of age to moving picture shows unless accompanied by parent or guardian. The resolution was not accurately drawn, and it did not answer the real need. The true issue is to devise some means for making the moving picture a means of education and innocent recreation and to reassure those who attend them.

There are three points to be considered. Is the actual show in itself or its surroundings injurious to young people? Is the journey to and from the theater and the absence from home and immediate parental control injurious? Is there a waste of time and a possible tendency towards extravagance and the surreptitious securing of money with which to visit these shows? And finally, if any or all of these evils attend the picture show, the need is not to forbid children an admitted means of education and amusement, but to use it for the best ends.

As far as real picture shows are concerned, under the present method of censorship, the films are rarely of an objectionable nature. They may sometimes be silly and pointless, but they are not suggestive of immorality. The so-called "vaudeville" which has usurped the real picture field to a great extent is often vicious in its influence, degrading to good taste and utterly worthless as a form of amusement. It has no value from any point of view. A strict local censorship of the acts shown would be a good thing for adults as well as children. The entire elimination of vaudeville from picture theaters would be a real blessing to the cause of good amusement. Outside of the performance, the other conditions in picture theaters should be regulated. Safety, ventilation, conduct and lighting should be of the best

Photoplays From Essanay's

Some Coming Features

THE great Water Carnival and Naval Review, held off Grant Park in Lake Michigan, August 10th to 17th, wlil be filmed by the Essanay Company, which obtained the exclusive rights to picture the pageant, said to have cost over $75,000. In a small fleet of the swiftest craft obtainable the Essanay photographers will follow the splendid program throughout the week, and obtain wonderful scenes of the powerboat championship races, the international yacht races, Lipton cup races, United States life-saving service exhibitions, swimming and diving championships, water polo, aquatic gymnasia, naval reviews, sham naval battles, submarine boat demonstrations and the exhibitions by the United States sailors, marine corps, revenue cutter service, naval reserves and cadets from the training stations along the great lakes. From many thousand feet of film, the Essanay Company will select a full reel that will teem with spectacular features, and will release it during the first two weeks in September. This great marine production is unquestionably one of the finest features ever booked and because if its international interest should prove a live wire to exhibitors the world over.

What might have been a serious accident was narrowly averted on the first day of the Water Carnival and Naval Review held off Grant Park, Chicago, on Lake Michigan, when one of the Essanay Company's special launches was almost swamped by one of the terrific streams of water from a river fireboat that was giving an exhibition. In the launch were V. R. Day, manager of Essanay's Chicago office; H. Tipton Steck, Essanay's publicity manager; A. L. Haase, advertising manager of MOTOGRAPHY, Chicago; and Harry Zech, the camera operator. Returning from filming the finish of the morning yacht race, the launch was heading for the mouth of the river, when it ran into a dense fog of mist and rain. Immediately the engine was stopped and the party were endeavoring to peer through the blinding blanket of mist when suddenly a roar from off the left smote their ears and the next instant a terrific stream of water struck the launch broadside, ripping the canvas covering into shreds along one side and splintering the railing. Quickly the engineer started the engine and the launch heaved to the right and out of range of the deluge. The next moment the big fireboat churned past with its half-dozen nozzles spouting streams of water. A few minutes afterward the fog cleared and the launch limped back to the Chicago Yacht Club with its drenched party, who were only too happy to realize they had escaped with their lives. The terrible force of the water projected by a fireboat is great enough to batter down

Scene from Essanay's "The Return of Becky."

Scene from Essanay's "A Corner in Whiskers."

the stone walls of burning buildings along the river, and it is a wonder the launch was not sent to the bottom instantly. The canvas covering in all probability broke the force of the stream, and the quick starting of the engine saved the lives of the entire party. It was a narrow escape and one not relished by the drenched men who were forced to dry out in the engineroom of the yacht club and made wry faces while Stack covered several pages of paper with notes on the incident.

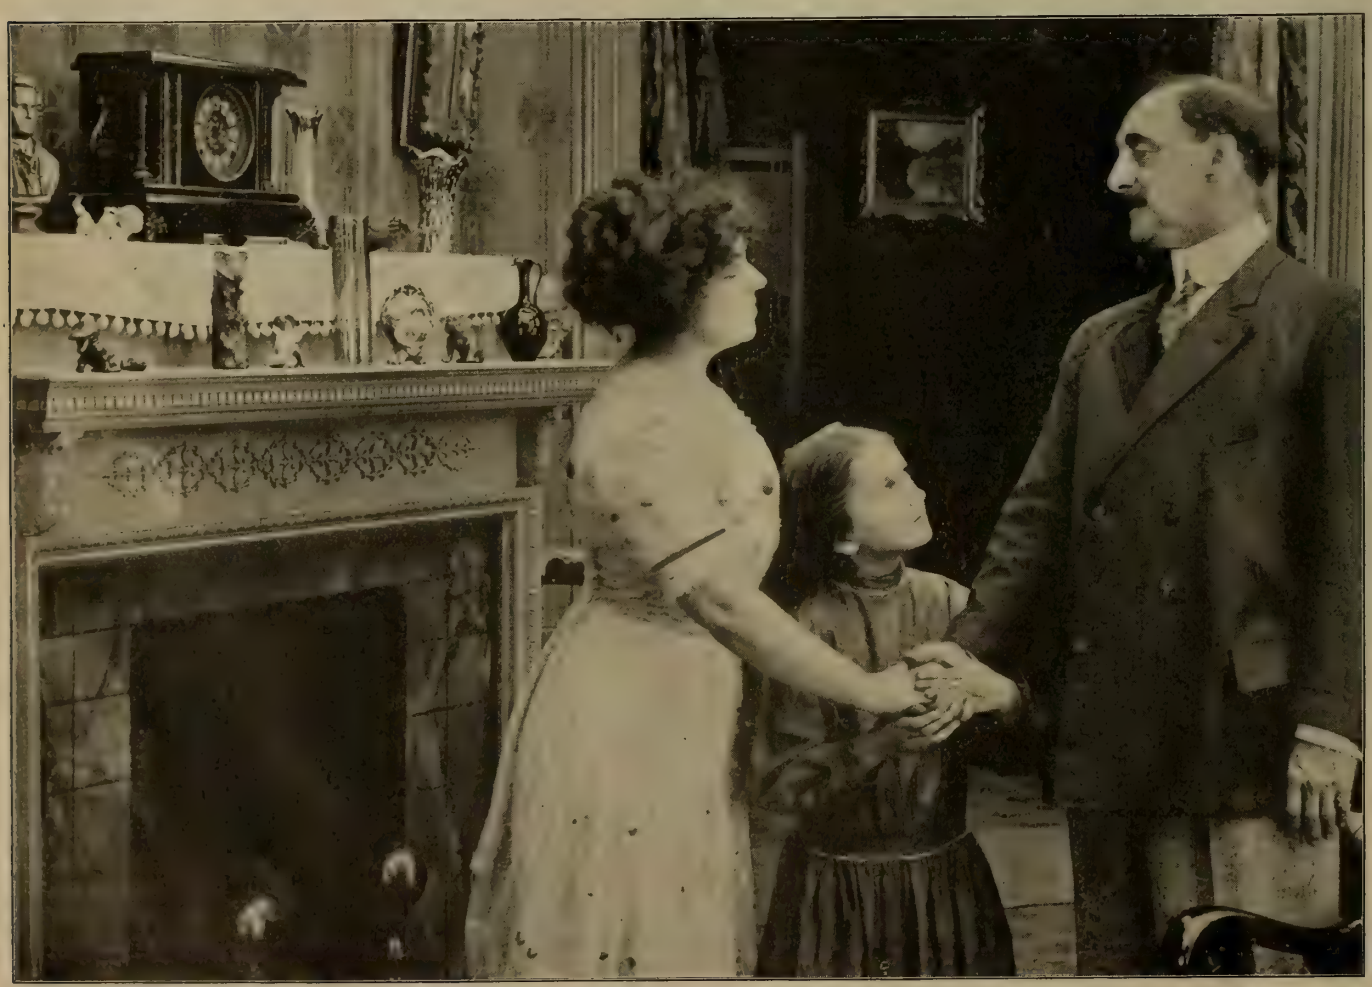
The Essanay company which recently returned from Bayfield, Wis., after a trip of some eight weeks, underwent an experience on the Apostle Islands, in Lake Suprior, long to be remembered. Under the direction of Theodore Wharton the players crossed to Devil's Island on the lighthouse tender, preparatory to filming scenes in a forthcoming production entitled "Neptune's Daughter," a story of the sea. Work progressed nicely until after lunch time, then suddenly a terrific storm arose. Old sailors on the lake declared it one of the worst in ten years, and the Essanay players were entirely at the mercy of the elements. All of that afternoon they clung shivering and drenched from the torrents of rain that fell in the shelter of the rocks that rise sheer from the water. In rough weather it is impossible to land on Devil's Island because of the rock formations jutting from the water. The night came on, and still the storm surged over the furious lake. At midnight Mr. Wharton managed to make a small fire in the shelter of a huge rock, and the players crouched over it, thankful for this small spark of warmth. Dawn came and still the storm continued with unabated fury. By this time the company were suffering severely from exhaustion and hunger, but it was not until late in the afternoon that the storm abated. Frantically the players signaled across the lake, and a lighthouse tender crossed to the island and landed after much difficulty. Drenched to the skin and shivering from the terrible experience, the company were hustled down into the engineroom where glorious warmth prevailed and the tender took them ashore. Martha Russell, Ruth Stonehouse, Helen Dunbar and Mrs. Wharton of the ladies, and Francis X. Bushman, Harry Mainhall, Harry Cashman, Wm. Walters, Bryant Washburn, Fred Wulf, Director Wharton, the camera operator and the property man were the poor unfortunates to undergo the terrifying twenty-four hours on the storm-swept island. Nevertheless, a return trip to the island was pluckily made the following day and the scenes were taken successfully without further mishap.

"Across the Broad Pacific" and "China and the Chinese" are the titles of two beautiful scenic films the Essanay Company has booked for release during the first two weeks in September. The former is a trip to Japan, the flowery kingdom, and the latter is an intimate view of the new Chinese republic. Both productions are replete with the wonders of the far East, and the spectator is transported across the sea, acquainted with the cities of Yokohama, Tokyo, Kobe, Manila, Hong Kong, Shanghai and Canton, conveyed in junks up the Yangtse, Wangpoo and Pasig rivers, shown the formidable array

of warships always on hand, representative of the world's great powers, views the customs, agriculture, pastimes and occupations of the natives and, in short, becomes a living, breathing part of a life going on thousands of miles across the continent caught by the Essanay cameras. The films are exquisitely photographed and have been richly toned.

The Essanay players who recently returned to the Chicago studio from Bayfield, Wisconsin, were called upon to take part in a terrific lumber-mill fire, that threatened for a time to destroy the town of Bayfield. Their work was finished, and the company on the point of boarding the train for Chicago, when the conflagration started. Director Wharton immediately forgot about Chicago, hustled the cameras to the scene, and improvised a dramatic story on the spur of the moment that called for the saving of "de poipers" from the office by Francis X. Bushman. With no time to change wardrobe, Bushman tore off his coat, vest and collar, the camera was stationed at a point of vantage and Bushman dashed into a doorway that belched forth flame and smoke. Quickly the camera was hustled to the other side of the office and Bushman was photographed as he burst his way through the glass and, drenched to the skin with streaming water from the hose, staggered over to his friends with "de poipers" clutched in his hand. A fine series of scenes of the fire were secured that are replete with spectacular smoke effects and bursting columns of flame. The scenario was completed at the Chicago studio and the films will be finished immediately.

Miss Martha Russell, authoress of the scenario "Neptune's Daughter," recently filmed by the Essanay players at Devil's Island in Lake Superior, was called upon to play a mermaid and very nearly lost her life in consequence. Garbed in the "fishy" costume of the sea maiden, Miss Russell was suddenly washed from the rock on which she was lying by a huge wave. Miss Russell is an expert swimmer, but the heavy costume baffled her efforts to breast the waves and she was sinking for the third time when Francis X. Bushman, Harry Mainhall and Harry Cashman reached her, after a terrific battle with the angry surf. Their united efforts were needed because of the back wash from the rocks, and Miss Russell was only brought safely back to the jutting formation after another struggle with the waves. During this exciting rescue Director Wharton and the camera man, Dave Hargon, who were leaning breathlessly over the rocks, were knocked insensible by a huge wave that broke against the rock and swept them from their feet. They were revived with difficulty, but Wharton declared he would take the scenes in spite of the machinations of the surf and elements. Miss Russell pluckily agreed, and the picture was finished without any further serious accident, though the greatest precaution was exercised because of the heavy sea. The production is now being completed at the Chicago studio, and is a masterpiece of original plot and portrayal.



Scene from Essanay's "Her Adopted Father."

The Future for Kinemacolor

By E. B. Lockwood

WE have all admired the artistic hand colored pictures of the past, but recently we have had the privilege of viewing moving pictures projected in natural colors. They are produced by the Kinemacolor Company, which has spent large sums of money and a great deal of time bringing these pictures up to their present standard of perfection. For one to attempt to describe the beauties of the Kinemacolor pictures would be folly, for a mere word description is inadequate. They are wonderfully natural. Those who have had the pleasure of seeing the Coronation or the Durbar have marveled at the beauty of the natural coloring.

The Kinemacolor Company, up to the present time, has only produced feature subjects, but has decided recently to produce scenarios, and has erected a large spacious studio at White Stone, Long Island. It has an ideal location near the sea shore. The men at the head of the Kinemacolor Company realize the possibilities of Kinemacolor pictures, kept them in mind when they planned the studio, and equipped it with the best that money could buy. They are now arranging to build two more studios, one in the West and the other in the South where they will stage their productions in the future.

I recently overheard the remark that the general public did not know whether Kinemacolor was a patent medicine or a breakfast food. This would suggest that there has been a lack of good advertising and publicity. There is hope, however, as the Kinemacolor Company has secured the services of Mr. E. L. Barker as manager of its advertising department. Mr. Barker has for some time past been connected with the International Harvester Company of America, and has had charge of the moving picture publicity carried on by it. At the time Mr. Barker took hold of this work for the International Harvester Company "The Romance of the Reaper," an illustrated lecture depicting the wonderful development of the agricultural world, was little more than a smouldering ember. It was not long, however, under Mr. Barker's care and careful supervision until it was revived and became a blazing beacon instructing and entertaining thousands annually. It was then that Mr. Barker wrote "The Story of Bread," which was published and circulated by the hundreds of thousands throughout the country, and caused much favorable comment among the critics as well as the public. "The Romance of the Reaper" was such an overwhelming success that Mr. Barker conceived the idea of the dramalogue, "The Dawn of Plenty," which he launched last

Scene from Essanay's "Broncho Billy's Escapade."

spring and it also has been greatly appreciated by the public. His numerous articles on moving pictures as an advertising medium, published in *Printer's Ink* and also in Motography, were revelations. They opened up new channels and presented novel ideas for consideration, which were backed up by practical demonstration.

With a competent man such as Mr. Barker has proven himself to be, in charge of the Kinemacolor Company's advertising department there remains no doubt that the public will no longer remain in ignorance as to what Kinemacolor pictures really are. Mr. Barker is never too busy to lay down his pen and talk of the possibilities of moving pictures for a few moments. He welcomes those who wish to interview him with a pleasant smile and outstretched hand. To know him is a pleasure. There is no doubt in the minds of his friends and admirers, both of which he has many, that he will demonstrate his ability far beyond all expectations. They have but one regret, and that is he will be compelled to take up his residence in New York City.

Sunday Closing in Jackson

The Pastors' Union of Jackson, Miss., took the motion out of the moving pictures Sunday, August 4, in prompt and decisive manner, and the capital city is on the verge of a lively scrap over this question that is likely to last for some time.

The moving picture establishments on West Capitol street had opened for the first time on Sunday, and were enjoying a thriving business up to the hour of 6 o'clock, when they were raided by the police and forced to close up.

Five of the shows had entered into an agreement to open on Sunday, and would not have been molested had it not been for the action of the Pastors' Union. The movement was led by the president, Rev. W. A. Borum, pastor of the First Baptist church, who stated that all other Protestant clergymen in the city had pledged him their support. Mr. Borum hunted up Chief of Police Allen, insisted that all of the theaters be closed, and offered to make affidavits, if necessary, charging them with violation of the Sunday law.

While the clergy was unanimous on the subject, the general public was evidently not in that mood, as the moving picture shows were enjoying a thriving business. Some of them were showing sacred pictures, and others presenting the scenes ordinarily offered on week days.

Some of the motion picture men declare that they are going to try it again, and, if necessary, they will protect themselves from interference by injunction process.

Pictures in Cincinnati

The voluntary commission that investigated the moving pictures of Cincinnati learned some interesting fact concerning these places of amusement. Noteworthy among the newly discovered facts is that the ventilation, on the whole, is good, while the pictures themselves, from the moral point of view, average a good deal better than had been expected. Of the hundred and one theaters investigated, only fourteen were classed as badly ventilated, while thirty-five were marked as "good," and twenty-six as "fair." That people, both young and old, will continue to frequent film theaters as long as they furnish amusement is a foregone conclusion; that they should be as sanitary as possible doesn't admit of argument.

One of the curious results of the investigation was the number of adult men found in the audiences. "They predominate," the report says, "even during the afternoons. In spite of the general opinion, the real support of the theaters comes from adults, rather than from children." For years the effort of the theatrical managers has been to please the "tired business man." It looks as if the moving picture people were accomplishing something along that line themselves.

Pictures Approved by Teachers

That Supt. J. J. Keyes and the Board of Education of Nashville, Tenn., have quickly grasped the vast possibilities of the moving picture show as a means of education, and the fact that arrangements are to be made in the new High School whereby the pictures will be used as a means of instructing the children, met with the hearty approval of educators all over the city.

Nashville is the first city in the South to take advantage of the motion pictures as an aid to the teacher in instructing history, geography, physiology and kindred subjects, and that the new high school will be supplied with the pictures will delight the hearts of the students as well as the teachers.

Prof. J. W. Brister, state superintendent of p instruction, said: "It is a very wise movement. The moving pictures are of splendid educational value, and I am glad to see Supt. Keyes take the lead in Nashville. I hope other cities and towns will soon follow the example. Moving pictures should be highly valuable."

Another prominent educator said: "The moving pictures have come to stay, and the schools should be quick to grasp their great possibilities of usefulness. I think that teachers will find them of decided advantage."

Non-Inflammable Celluloid

The valuable properties of celluloid are seriously affected in its use for some purposes by its high degree of inflammability. As a result, a non-combustible substitute for celluloid has long been sought. The French chemists, Bethisy, Fochard and Fignes, according to the *Technische Rundschau,* have produced such a substance from tetranitrocellulose which contains 40 to 50 per cent of water, from a fluid carbohydrate. The water is removed after the mixing of the mass by pressure and the residue transformed into a plastic mass by the addition of glacial acetic acid, ether, acetone, acetate of amyl and alcohol. After twenty-four hours it is pressed between heated rolls until it assumes a solid form, after which the cylinders thus produced are cooled and denitrated by suitable means. The rolling is then continued and the sheets obtained are treated in a steam chamber under a hydraulic pressure of 150 atmospheres for about six hours. The pressure is now increased to 200 atmospheres and in place of steam it is exposed to the effects of a stream of cold water. Under this treatment the sheets are transformed into blocks of great hardness which are again divided up into sheets or rods and dried. The process given provides also for the production of a collodion-like substance.

Tennessee to Organize

Mr. Warren Clay Scott of Harrison, Tenn., manager of the Edisonia theater, is engaged in organizing a League branch in Tennessee, and a meeting will be held in the near future, probably at Nashville, where an organization will be perfected. A delegation was sent to Chicago.

The Scrambled City

By Charles Lederer*

Copyright, 1912, Selig Polyscope Co.

WE were far above the earth when we heard a woman's agonized cry for help—Uncle Jim had taken me for a skim in his new aeromobile. A few moments later, our altitude decreased, we saw whence the cry had come. A lady, apparently young and beautiful, had fallen into a small body of water that lay near a large crystalline building. Evidently she had been rowing in a small skiff, endeavoring to gather some water lilies, when the craft overturned. Ere the aeromobile landed I had leaped to the ground and rushed to the rescue. Before I could even gain the edge of the water another man—I noted even then that he was young, handsome and agile as a panther—hastily threw off his coat, plunged into the water, and with a few strokes reached the side of the drowning girl.

At this absorbing moment I was rudely grasped and thrust aside.

A sibilant voice hissed close to my ear. "You are in range," it seemed to say. There was a whirring sound. I am familiar with the warning that a rattlesnake gives and recognized the blood-curdling intonation. I sprang aside, frightened, disconcerted, puzzled. Above my head I heard a throaty laugh. I gazed aloft. Uncle Jim was swirling away, grinning back at me as he gripped the wheel. "I'll come back for you in an hour," he shouted. Never before nor since had my Uncle Jim come so near being disowned.

That was how I became stranded in a strange city —a little city that I soon discovered was full of mystery piled on mystery.

I am no master tailor in expression, expert in patching together flowing periods, and I am merely a blacksmith's helper at word-picture painting—I usually make a smear of it. So I set down here merely the fleeting impressions I received—not unlike those of some distinguished foreigner after a few hours' sojourn on our shores.

* * *

The young lady and her heroic rescuer had disappeared. I gazed around at the strange scene and strangely garbed forms.

A South Sea Islander, so I judged him to be from his attire, or rather lack of it, was making friends with a shaggy-haired Eskimo dog. I was amazed, but I should have been more so if the animal had been hairless like a Chihuahuan. A w. w. cowboy, with lariat, guns and chaps, sat on an upturned birch-bark canoe conversing affably with a gentleman in immaculate evening clothes, although the afternoon was scarcely ripe.

Things reeled before me—a whirling sensation encompassed me—I had a sense of seeing stories in action —a film appeared before my eyes, thousands of them. Then I myself reeled, overcome, as it were, with astonishment. When I became unreeled I found a pleasant looking man beside me. "Welcome to our townlet," said he, smiling genially the while. "Let me show you some of the sights." But I was wise to that sort of game and declined his company and assistance.

An enormous coliseum-like edifice, not unlike a crystal palace I had seen described in my boyhood days, attracted my attention. I entered without being molested by numerous heavily armed men whom I imagine might be the guards of the palace. But what was very mystifying was the wide diversity of their attire. Some were in the uniform of the American army; others wore heavy armor and several were dressed like cavaliers in the time of a Louis—exact number unknown and unessential.

In a part of this monster building I found all the appurtenances of a first-rate clubhouse, but so divided that both sexes were on an equal footing, though separated to an extent. Everything was convenient, sanitary and luxurious. There were bathrooms with every conceivable appliance, reading rooms with all the latest literature, and a smoking room for men.

I wandered aimlessly from room to room. One that interested me most was nearly an acre in extent, and a perfect saturnalia of rubbish intermingled with the most expensive and rare articles. It was not like a museum, not in the least. Nothing was on show or labeled. Yet there was an orderly confusion, if I may use an equally confused expression. There seemed nothing under the sun that could not be found here at a minute's notice—and so it could, the custodian told me. There was everything, from a rolling pin to a cardinal's robe, from a Roman helmet to a dictagraph. Hanging from the ceiling I described among ten thousand other things a druggist's pestle-and-mortar sign, an Indian's pipe o' peace, a silk or "beaver" hat of the vintage of '47, a bock beer sign, a baby's rattle, a two-handed Japanese executioner's sword, a stuffed owl, a spinning wheel like your grandmother used to use when she wasn't loafing, a "Rooms for Rent" sign, an imperial crown, a pair of ragged and patched overgaiters or spats, a wedding veil, an anvil, a base drum and a battered dishpan, a policeman's star, belt and stick, and—well, really it would be ever so much easier to enumerate the things that were not there.

Passing through a maze of stairs and passageways, I entered a glass-covered thoroughfare where hovels leaned against palaces, and the homes of ordinary people elbowed the abodes of evil genii dealing in the blackest of black magic.

The people of the place were strange as there surroundings. Outside their homes they seemed unusually good tempered and sociable, even with me, a stranger. But once inside the walls of their homes their actions and words betokened mostly turmoil and trouble strongly tinged with romance and adventure.

Notwithstanding their cordial treatment of me, I seemed very much in the way most of the time. It was "Please don't stand there," and "Step to one side, please," or "I wish you wouldn't smoke just now—it's so apt to obscure things, don't you see?"

I couldn't take offense, everyone was so suave and smiling withal.

But I was mightily mystified.

Almost as much as I dare to hope you are, dear reader.

The sky is glass in this queer town. That's the way

*This article was one of the fourth prize winners in the Chicago Press Club contest conducted by the Selig Polyscope Company.

they like it. Not that it really matters. So little does. Someone introduced me to a Miss Williams. Her looks betokened unusual intelligence, so I asked her about it. But she answered me evasively. Still she was strangely, elusively beautiful, with an exquisitely powdered face and neck. Her eyes were of that Irish blue so rarely seen, while her eyebrows loyally matched them—they were of a deep emerald hue. Her lips were tinted a rich brown. Just for doing that and sundry other charming stunts, she draws, so I'm told, a salary of a hundred and fifty dollars per—per week, mind you, not per month. And she's worth every penny of it. Yet she was dressed in rags, poor thing—though I'll say this, her hands were clean and daintily manicured. You see, it was like this: She had had a cruel stepfather. That was long ago, however—almost yesterday. Just now her affliction is a drunken sailor-husband, a modern Enoch Arden with an ancient, deep-set, deep-sea grouch. Hence these rags. A little later, quite ignoring the divorce court, she's going to marry the dissipated marquis whose heart has become enmeshed with the witchery of her brown smile and the naive arching of her parsley-colored eyebrows. The home of splendor in which the marquis holds forth is adjacent to that from which she has just emerged.

I was silently cogitating—there's really no other way—on the mutability (and, by the way, I'm going to look that word up some day to see exactly what it means)—the mutability of human affairs, as I was saying, when a very stout and energetic individual, dressed in a corduroy Norfolk suit, with a belt flowing behind like streamers, seized her gently by the shoulder and smilingly pushed her back into the squalid home.

"Once more, from the beginning," said he, in firm but kind tones.

It was more than I could stand. I passed on.

Not a peanut's throw away was the magnificently decorated drawing room of a railway magnate. His baby daughter had just been kidnaped and held for ransom. Yet I hurried on. My mind was glutted with the onrush of incident and making of adventure.

Perhaps I was dreaming, after all! These strange things could not all really be! I pinched myself to see if I were really awake. But even this is not always a sure test, so, seeing a uniformed police officer standing near by, I asked him to pinch me. "I've no doubt you ought to be," said he, "but I haven't the time. I'm due to lend a hand with that secret service push in less'n three minutes." He pointed a few paces away, and there I saw a meagrely furnished room—a rusty stove, a broken kettle, and on a rickety table a crust of bread on a cracked plate. Half hidden in a corner was all the paraphernalia for making counterfeit money. Three or four roughly dressed men slouched in, followed by a man who was apparently their leader.

"Remove all this evidence!" he cried. "We are shadowed! The gumshoe men are on our track and we must fly." Hardly had the words left his lips ere the executive session of the counterfeiters—for such they were, undoubtedly—was disturbed by the breaking down of the door. Half a dozen men wearing stars, presumably those of the United States secret service, and the policeman with whom I had had short converse, rushed in, covered the four men in the room with revolvers, and demanded their surrender. I felt sorry, in a way, for the culprits and turned away. I heard pistol shots and smelled the smoke of battle. How it ended I do not know, for I became interested in a scene contrasting strangely to that which I had just witnessed. It was, so I soon discovered, the home of a village belle. Evidence of the abode of pastoral innocence seemed in the very atmosphere. The cottage doorway was ivy-clad; fragrant looking flowers waved slightly as if in the mild draft of an invisible electric fan.

Without warning, two ruffianly appearing fellows suddenly darted behind the vines near the entrance of the bucolic home. The village maiden appeared, clinging lovingly to the arm of her ruddy-faced yokel sweetheart. Oddly enough, they, too, have browned lips and green eyebrows. It must be the prevailing fashion in town and country! How unobserving I must have been!

But the happiness of this twain was all too short-lived. In the twinkling of an eye the sturdy ruffians sprang from cover and after a brief struggle pinioned the rustic youth, while, all unavailing, the damsel voiced and gesticulated her grief.

It quickly developed that the captive was not so truly rural as he appeared, but, instead, the leader of a bold band of smugglers in disguise. Whether this was the truth, I was unable to determine, for at this juncture a husky lad in overalls touched me on the coat-sleeve and said: "Ther guy wit' de little airship has came back for you, sor, an' besides, ther w'stle 'll blow in five minutes, an' den it's good-by, anyway, old top."

Turning in my narrow seat in the aeromobile I gazed back at the strange little city we were leaving behind—at an eighty-mile an hour gait. On the largest of the buildings I read the words:

SELIG POLYSCOPE COMPANY.

I had visited the mammoth plant of the big concern that makes the films for the moving-picture shows all over the country. The people I had seen were all connected with the "works." Actors and actresses, stage managers, stage carpenters, electricians, mechanics, supernumeraries and all were part of the theatrical staff constantly engaged in getting up new attractions for the most popular form of amusement in the history of the world.

The green eyebrows and brown tinted lips were so because in photography those colors "take" best. The whirring sounds were made by the moving-picture camera operators while grinding out the long negative films.

All the strange weird abodes were so many stages—there are a dozen in course of construction or operation all the while. The clubroom is the greenroom—the largest in existence—for the convenience of the performers. The glass-covered room, nearly an acre in extent, is the photographic studio, also exceeding all others in space and the elaborateness of its fittings. The "rubbish" chamber is the "property room" where almost any accessory that may be conceived for the stage may be obtained at a few minutes' notice.

Advertising City By Pictures

Motion pictures, as a means of advertising Norfolk, were discussed at a luncheon of the Norfolk Ad Club. It was stated at the meeting that the club is one of the few in the country that has continued to operate and hold enthusiasm during the warm weather.

A representative of Pathe Brothers, film manufacturers, will show the ad club next month what has been done to advertise other cities through the medium of picture shows. The ad club will seek the co-operation of other organizations in the city to have films of Norfolk made and syndicated, to be shown in every city of importance in America, should it favor the scheme.

Current Educational Releases

Here and There in Oregon.—Pathe. A scenic film which takes you along the line of a new railroad which has just been completed at a dangerous altitude, showing the rugged beauty of nature unadorned in this rapidly growing region. There are numerous gigantic commercial projects disclosed which have been completed only after many almost insurmountable difficulties have been overcome by engineering genius.

How a Letter Travels from the Great Lakes of Central Africa.—Pathe. A series of interesting views showing some of the obstacles which had to be overcome by the postal authorities before letters could be transmitted between the four corners of the earth. It is not only interesting, but instructive as well.

On the Trail of the Germs.—Selig. A semi-educational story produced under the auspices of the Chicago Tuberculosis Institute, which presents to the public some interesting side lights upon the prevention and cure of the Great White Plague. Great care has been taken to arrange this subject in a technically correct, and absorbingly interesting dramatic form. A series of interesting experiments and tests is given showing the effect of fresh air, good food, rest and sunshine upon the victims of this dreadful scourge.

San Diego.—American. Some rarely beautiful views from San Diego gateway to Panama, which are highly interesting and instructive; its wonderful harbor and surpassing beauty of street and business section.

Giants of Steel.—American. Some excellent views of New York City's skyscrapers.

The City of Washington, the Capital of the United States.—Edison. In the opening scene we find ourselves looking down Pennsylvania avenue, a broad and picturesque thoroughfare. Standing out majestically and prominently in the background against the sky, is the great white dome of the Capitol, like a lofty brow that harbors the brains of a nation. The executive mansion, familiarity known throughout the world as the "White House," bespeaks an air of simple elegance, with its domestic architecture and shady lawns, kept green by sparkling fountains. There are many other views showing the buildings of national importance such as the War Department building, the Treasury, the Congressional Library and the National Post Office. The views also include the theater in which President Lincoln was assassinated and the National Cemetery.

Building a Church in a Day.—Imp. Pictures showing the construction of Elbethel Methodist Church, which was erected at Spartanburg, South Carolina, in one day. Mayor A. H. Kirby drove the first nail at six o'clock in the morning and the congregation worshiped in the building in the evening. One hundred and fifty workmen were engaged on the building and thousands watched their progress, so widespread was the interest.

Havana, Its Streets, Buildings and Fortresses. —C. G. P. C. An entertaining series of views showing the quaint beauty in the capital of the Star of the Antilles.

A Little Trip in the Colorado Mountains.—Pathe. A series of views setting forth the majesty and beauty of the scenery which greets the traveler in the Colorado mountains.

Pueblo Indians in Albuquerque, N. M.—Lubin. An educational picture of the present condition of the Pueblo Indians. The scenes are taken at Albuquerque, N. M., where the government schools are fast educating them in the systems of civilization. The Indians, though still favoring the passion for barbaric ornaments and trimming, dress in the Mexican-American fashions of the state. Many of the scenes are taken at the hotels and missions of the city, which are very interesting to those who have not traveled the states on the border line of old Mexico.

The Right Way and the Wrong Way.—Selig. An exceptional subject of vast educational value, showing the right and wrong method of getting on and off cars, extinguishing fires, crossing crowded streets, getting in and out of boats, etc.

In Maoriland.—Selig. An exceedingly interesting educational travel subject setting forth the beauties of New Zealand's "Yellowstone."

The Wreck of the Vega.—Selig. A dramatic educational subject showing how big wrecks are salvaged.

The Los Angeles Police Department.—Selig. An educational subject of unusual interest, showing the police drills of the city.

Egyptian Sports.—Kalem. An interesting picture portraying scenes on the race track at Cairo, Egypt.

The Mosquito.—Pathe. A film showing the mosquito in all its different forms from the time it emerges from the egg until it is full size and begins to do damage. It also shows how easily this pest may be exterminated by pouring oil on stagnant water. The subject is very instructive, as it shows many things about this little pest which should be known.

Strawberry Time.—American. An interesting subject showing the picking, canning and shipping of this delicious fruit.

Picturesque Darjeeling, India.—Edison. Darjeeling is delightfully located in the Himalayan mountains and the picture includes a view of Mt. Everest, the highest mountain in the world, whose peaks are crowned with ice and snow. As picturesque as the scenery are the people, whose habits and customs have not been affected by the onward march of civilization. A market scene with hundreds of natives trading and bargaining, also a general view of the town, give a fair conception of the life of the people.

The Maple Sugar Industry at Thompson, Pa.—Edison. As indicated this film was made at Thompson, Pennsylvania, and shows the entire process of the manufacture of maple sugar from the tapping of the trees, from which the sap oozes as thin and colorless as spring

water, to the final stage of crystallization, after which it is made ready to crate and ship to the market. The process of evaporation, depicting the old and new method, is of decided interest when one learns that for every gallon of maple syrup forty gallons of sap have been collected, boiled down and put through the necessary processes to complete the product. The entire film cannot fail to interest, but especially will the final scene waken a responsive chord in the hearts of those who in youthful days may have been guests at maple parties such as the one depicted. The scenic part of the film is also good, thus adding to the attractiveness of the subject.

Nile Hippopotamus.—Kalem.

Governor Wilson at his Summer Home.—Imp.

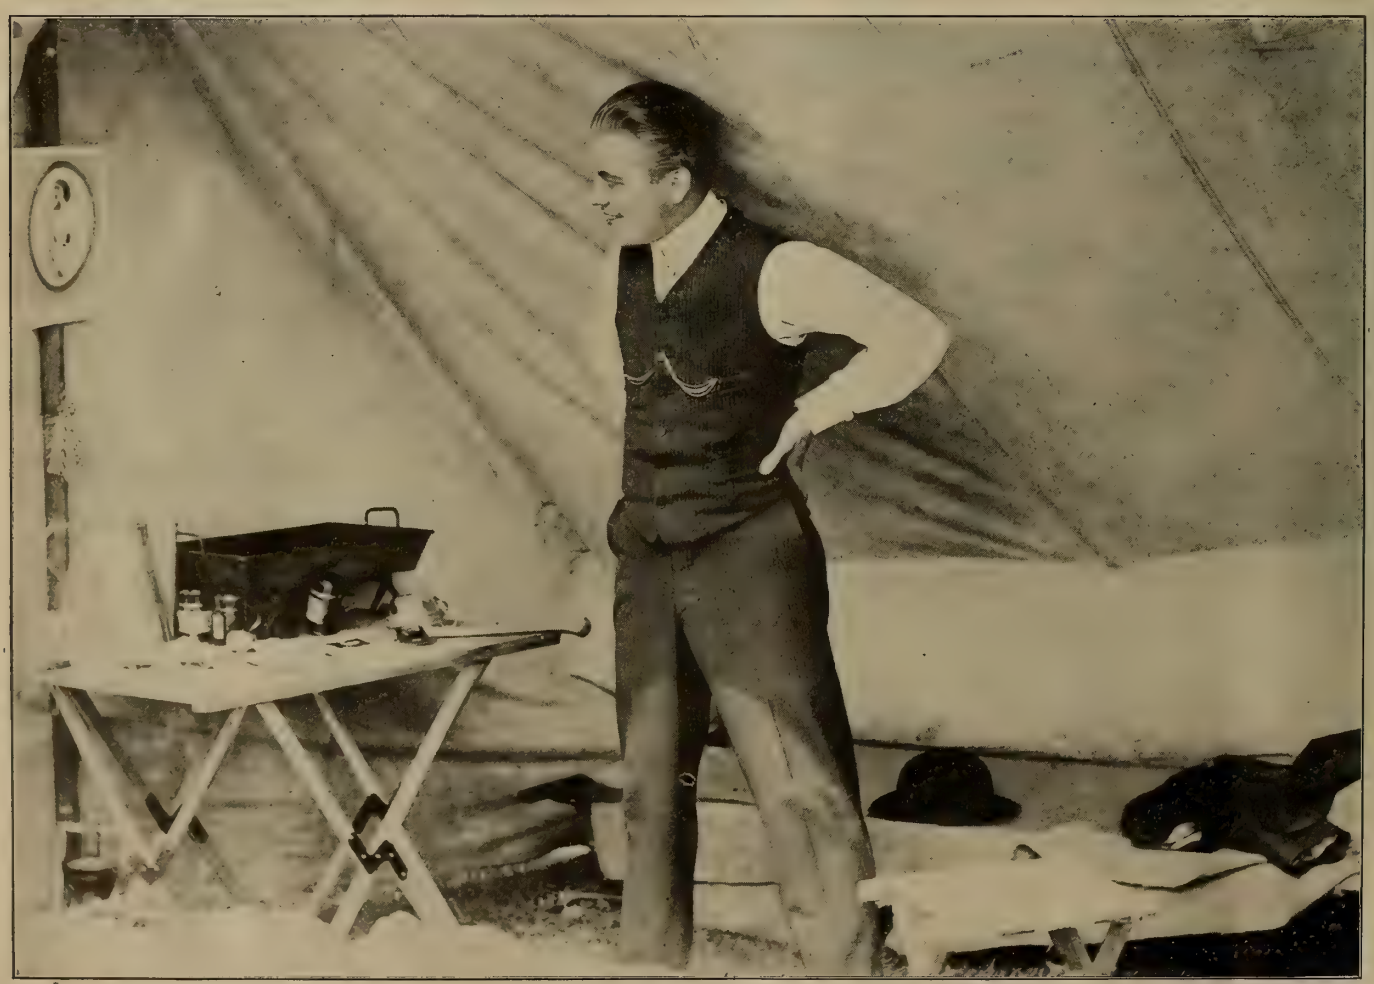
Across the Caucasus.—Imp.

Pictures of the Pope

The success of the first moving picture exhibition given in the vatican was so complete that another entertainment of a similar character was given for the benefit of the pope recently. Without letting him into the secret the photographer secured some excellent films of the holy father attending his favorite flowers in the gardens of the vatican. When he was shown himself moving about true to every gesture and expression he remarked: "Wonderful! Wonderful indeed! How God must love these Americans to bless them with the power of creating such astounding things! Why, that is life itself!"

Clary Proves Himself a Hero

Charles Clary accomplished a daring feat recently during the Selig production of "Officer Murray," which was released on Aug. 1. During the action of the piece Clary finds himself alone on the lofty top of a burning building. He calls on some steel workers on the building next door and they are supposed to rescue him by lowering a huge steel derrick chain to his side: two extra men garbed as steel workers, and clinging to the blazing roof, while the cameras registered the thrilling and realistic feat of rescue. The building, which had been especially secured for the occasion, by this time was one mass of flames, and as the steel workers lifted Clary clear of the blazing roof, they both became faint from the fire and smoke. The steam derrick was doing its work, however, as per scheduled program, and the trio went sailing skyward. The extra men, big and husky as they were, were fast losing their grip on the chains to which they clung, and an unlooked for tragedy seemed imminent. Clary took in the situation at a glance, and with almost superhuman strength, encircled both men with his arms, in which position he held his fainting companions until they had reached the roof adjoining. As they touched the temporary planking on which the huge derrick was located, Clary's strength finally gave way, and he was carried to the ground below in an unconscious condition. Needless to say that portion of this thrilling scene which was caught by the Selig cameras makes one of the most realistic bits of daring ever seen in a motion picture.



Scene from Essanay's "The Hermit."

Eclair Company's "Robin Hood"

With a scenario founded on the old English romance of "Robin Hood," with which evryone, young or old, is more or less familiar, the Eclair Company has produced an artistic and interesting film. Beautiful costumes and scenery, together with the superb work of the caste, under the direction of E. Arnaud, results in a play of surpassing beauty. While many of the incidents of this three-part story may seem mythical, it is true that the characters of Robin Hood, Maid Marian, and Allan-a-Dale, are founded on actual personages of English history, a recently discovered fact that adds much to the interest of the play.

The story begins at the time when the young Earle of Huntingdon, who adopted the alias of "Robin Hood," roamed through the Sherwood Forest, robbing the rich, and distributing the booty among the poor in the surrounding country. The first scene opens at Old Merwyn's, who is urging his daughter, Maid Marian, to become the bride of a wealthy man, Guy de Gisbourne. This she refuses to do, being in love with Robin Hood, who, as can be imagined, is not popular in the family circle. Friar Tuck, the friend of both Maid Marian and Robin Hood, enters at this juncture asking alms to mask his real purpose of informing Marian of the presence of Robin at the meeting place. Taking advantage of the confusion caused by Friar Tuck, Marian slips out, but is soon missed by her father, who sees her with Robin. Enraged at the sight, Old Merwyn promises the hand of his daughter to Guy de Gisbourne, providing he will capture Robin Hood.

On the following day, Guy again meets Robin and Marian at their tryst, and, vowing vengeance, assembles his band and starts to the Sheriff of Notingham to procure a formal warrant for the arrest. Obtaining the warrant, Guy places his men in ambush, and as Robin and Marian pass by, they seize them both, and leave Robin bound to a tree. During the turmoil, Marian slips away and enlists the services of Little John, the armorer, for the rescue of Robin, who speedily frees him from his bonds.

Guy de Gisbourne Seeks Maid Marian's Hand.

Robin Hood Escapes Through the Fireplace.

Guy in the meantime repairs to Old Merwyn's house, and shows him the warrant, exultingly, believing of course that Robin is still tied to the tree. They start out, with a body of armed men, to complete the subjection of the brigand, but on entering the forest, fall into an ambush set by Robin Hood, who has been warned of Guy's approach. The armed men of the expedition are in their turn tied to the trees by Robin's men, who then speed off to Nottingham for a bold attempt on the person of the sheriff. While sneaking into the sheriff's bedroom, Robin's band is surprised by the guards, is captured, and placed in prison. On the following day, Marian learns of the capture, and, with a girl friend, hastens to the prison where her lover is confined, hoping by some means to liberate him.

The result is, that while the sentinels are standing at the foot of the prison walls, guarding against the escape of the prisoners, Marian comes upon one of them and succeeds in luring him away. The other two sentinels on the same side see him leaving with Marian, follow, and are led to a rock, where Marian's two companions are waiting, and soon the trio are engaged in a flirtation, during which Robin and his friends descend the prison walls by means of a rope, and run off to safety. The following day, in revenge for this fresh outrage to their dignity, the sheriff puts a price upon Robin's head which naturally causes him to bury himself deeper in the Sherwood Forest, where daily new recruits join the band, late victims of the Sheriff's stupidity and cruelty. After his last experience at the hands of Robin and his band, Guy de Gisbourne returns to Nottingham, stripped of his fine raiment, beaten and sore. He swears to win the reward and have Robin's head in revenge for his humiliating treatment.

A Scene in Sherwood Forest.

In the meantime, Robin and his merry men continue to exact toll from the fat, rich travelers, and distributing the money, etc., to the poor suffering peasants who worship him as a King.

The following cast impersonated the characters of the play:

CAST OF CHARACTERS.

Marian Merwyn (maid Marian)		Miss Barbara Tennant
Housekeeper for the Sheriff		Miss Julia Stuart
Maid at Merwyn's		Miss Mathilde Baring
Fennel		Miss Isabel Lamon
Christabel	Marian's Companions	Miss Muriel Ostrich
Robin Hood		Mr. Robert Frazer
Friar Tuck		Mr. M. Hannafly
Little John		Mr. Guy Oliver
Allan-a-Dale	Some of Robin Hood's merry Men	Mr. George Larkin
Will Scarlet		Mr. Chas. Hundt
Much		Mr. John Troyano
The Unknown (Richard Coeur de Leon)		Mr. Hollingsworth
Sheriff of Nottingham		Mr. Alex. B. Francis
Guy de Gisbourne		Mr. Lamar Johnstone
Thos. Merwyn		Mr. John Adolfi
Sir Monceaux		Mr. Burkell
Innkeeper		Mr. Stowe
First Sentinel		Mr. Richard Sterling
Second Sentinel		Mr. Sheldon
Third Sentinel		Mr. Fischer

Guards, Halberdiers, Merry Men, Courtiers, Guests and citizens, by a corps of experienced artists.

SECOND PART.

A wayside tavern near Nottingham. Merwyn, the Sheriff, Guy de Gisbourne and an unknown knight are seated at the table, with the landlord busily engaged waiting upon his customers. Friar Tuck, pretending to be drunk, overhears something the unknown knight says, and, sneaking down to listen, overhears a plot to attack and kill a person coming to the tavern. Guy, looking up, sees him, but Tuck, pretending to be drunk, goes up to the table and is about to be sent out, when the advent of an unknown traveler attracts attention. Friar Tuck has seated himself at the end of table near the stranger, and at a table directly in front of a huge fireplace. In the meantime, the conspirators below have promised to help, and as the stranger sits at the table, the knight signifies that is the man. They all tell the landlord to send in a guard, whom the sheriff tells to notify all the soldiers and guards to wait outside the door. Friar Tuck in the meantime has warned the stranger of his danger, and they are now prepared for the assault. The signal is given, the soldiers enter and attack the stranger, who aided by Tuck, gives a good account of himself. The resistance is so strong that the knight and Guy de Gisbourne aid their men.

Seeing that the odds against them are too great, Tuck advises the stranger to climb up the fireplace. They do so and the stranger, being a powerful man, pulls the massive table up against the opening of the fireplace, blocking it, and giving them a chance to distance their enemies. Friar Tuck now leads the stranger to Sherwood Forest, the asylum of all victims. One day he and Robin have a friendly bout with swords, and much to the surprise of Robin and his friends, he is disarmed. Robin in his surprise exclaims, "There is only one man who is capable of disarming me!" The stranger says, "Who may that be?" Robin replies, "Our most gracious King." Then, dropping his long coat, Richard Coeur de Leon (the erstwhile stranger) says, "I am the king!" Some time later, the king witnesses the departure of Robin and three followers disguised as monks, bids them godspeed, and sanctions their mission. Arriving in town, they find their way to Merwyn's house. Tuck finds Marian, tells her to expect Robin Hood, then calls in his brother monks and disposed them in advantageous places. Just as he and Marian are about to leave, they are met by Merwyn and Guy, who had been warned by the maid. Marian beckons Robin off at a side door as he pushes them back. They escape. Allan has an idea; gives to Marian his monk garb, and tells them to go on. As they pass out he sees a girl, and induces her to change costumes with him. As he disappears, the sheriff and soldiers come down the road in full pursuit. At the roads they stop, when Allan in a girl's costume is seen. He is interrogated. "Yes, he has seen such people," and misdirects them. As soon as Robin with Marian arrive at camp, he presents her to

the king, who straightway orders Friar Tuck to marry them, and beneath a tree, upon the trunk of which has been fashioned a cross made of daisies, Tuck pronounces them man and wife. The lookout gives the alarm, and the band prepare to receive their visitors. All hide themselves save Robin and Marian. They seize Robin and Marian. The King advances and says, "Hold! That is Robin's wife." Merwyn says, "She is my daughter, and I shall tell the King." The King replies, "I am he," and then orders Robin's men to sweep them out of his path. Our hero and heroine return to the camp. Richard Coeur de Leon creates Robin Earl of Huntingdon, which restores to him his father's estate.

"Robin Hood" is to be released August 22.

Cheyenne to Issue Indian Films

After the completion of the three-reel film taken of the Frontier Day Celebration at Cheyenne, Wyoming, the Cheyenne Feature Film Company, of that city, intends to turn out at least one reel per week, thereafter. Associated with this firm is Mr. Thayer, the well-known producer; Mr. Irwin, who is to put on the Frontier Celebration, and Messrs. Weller and Carrol, respectively secretary and manager, who have not only been in the film business for some time, but who have made a special study of Indian and frontier life.

With this experience, and its efficient staff and equipment, it is evident that this firm is capable of producing some very interesting and instructive Indian subjects.

Selig Actor Has Narrow Escape

During the production of a picture the Selig Colorado company found that it was necessary to secure a realistic prison scene. Accordingly arrangements were made with Warden Tynan of the Colorado State Penitentiary to use the grounds and some of the costumes. The discipline at this institution is very strict, and the guards do not hesitate to shoot at an unruly prisoner. William Duncan, the Selig leading man, was dressed in one of the convict suits and was given some work to do on the rock pile with some of the real convicts. After the scene was finished Mr. Duncan was walking around the yard with his hands at his side, and smoking his pipe.

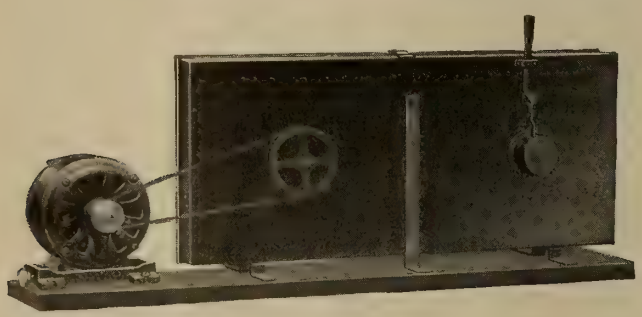
When he approached one of the turrets that surmount the wall at regular intervals, holding the armed guards that keep watch over prisoners, the guard pointed his gun at the astonished leading man and yelled, "Take that pipe out of your mouth and fold your arms, as you are supposed to, or I will fire." Duncan, thinking that the guard was joking, blew a smoke wreath toward the man with the Winchester, and started to walk on. Suddenly he heard a sharp crack from the turret, and not two feet in front of him a bullet plowed into the ground. Duncan now realized that the guard was in earnest and threw up his hands just as the guard was taking aim for the second shot. Fortunately Warden Tynan was close at hand, and after he had explained that Duncan was only in convict's garb for the time being, there was a good laugh all around.

Main Street of Camp Hutchinson, Starved Rock, Ill., American Film Company.

Of Interest to the Trade

New Rewinding Machine

Our attention has been called to the new device being placed on the market by the Dietz Safety Magazine Company of which Mr. V. R. Day, First National Bank building, Chicago, Ill., is general manager. This new apparatus is known as the Dietz Safety Rewinding Machine of which we show two illustrations, one being a front view with the door open showing the arrangement of the reel spools, the other showing the back of the case with the motor drive mechanism. As will be

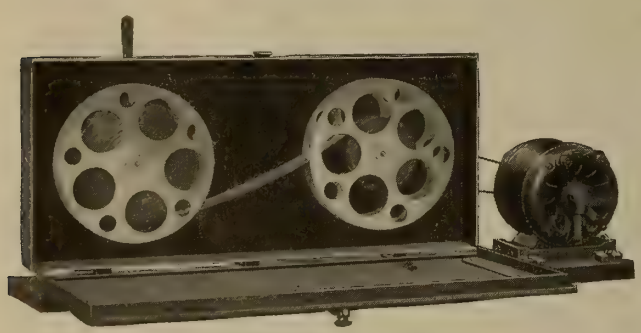


The Dietz Rewinder.

seen from the illustration, the machine consists of a case 30 inches long, 15 inches high and 3 inches wide and is made of 1-16 inch seamless sheet steel. A flanged door makes the case absolutely fireproof when closed.

It is claimed by the makers and borne out by a practical demonstration, that this apparatus absolutely prevents carelessness on the part of operators. By an ingenious arrangement the reel spool is placed on a central shaft where it is permanently locked by a spring attachment from turning. When the door of the case is tightly closed and latched, a lug on the door presses the spool down and engages it with a locking device on the motor drive mechanism, and it is only then that the spool can be revolved.

When the door of the case is tightly latched, the entire case is necessarily fireproof and since the rewinding can only be done with the door latched there is no opportunity for carelessness to cause a fire.



The Dietz Rewinder, Open.

A small motor is gauged to a speed which will tightly rewind all film 1,000 feet per minute without further attention and the company claims the entire cost of such rewinding for the average theater will not exceed five cents per week.

The chief electrical inspector for the Chicago Department of Electricity has this to say about the device which was submitted to him for tests:

"Dietz Safety Machine Company,
"Chicago, Ill.

"The Dietz Safety Machine, submitted by you, has been tested by this department and complies with all requirements.

"I wish to state that the device not only meets with the approval of this department, but I wish also to state that I highly recommend it as being in compliance with the recommendations of the ordinance.

"V. H. TOUSLEY,
"Chief Electrical Inspector."

"Animated Weekly" Reorganized

Ushering in a new era of the Animated Weekly—setting a new and better standard for topical and current event films generally. While the "Animated Weekly" is one of the standard brands of topical films, deservedly popular and generally acknowledged as being worth while in every respect, the Universal Film Manufacturing Company maintains that its efforts toward a reorganization of the executive and operation staff of the Animated Weekly has been conducive of a film greatly superior in every respect to previous issues of this current event release.

Through dint of the lavish expenditure of money, brains, and unceasing effort on the Animated Weekly brand, the "Universal" has tried to attain perfection. While the final verdict of necessity rests in the hands of the Universal exchange men and exhibitors, the consensus of opinion of all of the directors of the Universal Film Manufacturing Company is that this film will be acclaimed superior to all former releases of the current topical variety, nor will the efforts and hard work that have been expended on the exclusive production of this brand cease with the first release. The intent is to make each successive release of the "Animated Weekly" better than its predecessor.

Assertions have been made through the medium of innuendo, that the Animated Weekly will not, or could not, obtain topical pictures of current events occurring other than in the United States and Canada. In the second release after reorganization, the Weekly itself will prove the falsity of this assertion. It is true that the "Animated Weekly" will not place any great stress upon European events, as compared with important occurrences in America, but the fact remains that the Animated Weekly organization, as now constituted, receives from Europe each week, on the fastest steamships, over one thousand feet of negative film depicting events as they occur in all the principal cities of Europe. Americans are of necessity more interested in events occurring in their own country than in Europe, and this fact will be borne in mind. Nevertheless, each issue of the Animated Weekly will contain European subjects that the Universal Film Manufacturing Company consider will appeal to the the American exhibitor and his clientele.

The scope of the Animated Weekly is practically unlimited. It is virtually impossible for an item of current interest to escape the cameras of its representatives, either in the United States or Europe. Twenty-six thoroughly capable, well trained camera operators, with "a nose for news," are stationed in every one of the larger centers in the United States.

Fifteen camera men, thoroughly imbued with the

American spirit of aggressiveness and progressiveness, represent the Animated Weekly in the larger cities of England and the Continent. The second issue of the reorganized Weekly bids fair to greatly surpass, in worth and timely interest, the previous issue. Some of the exclusive features depicted in the second edition are as follows:

YOUNGEST AVIATRICE.

Katherine Stinson, 17 years old, youngest aviatrice in the world in her qualifying flight for Aero Club, Chicago, Ill.

U. S. REGULAR ARMY MANOEUVERS.

Crack regiments of U. S. Army in war practice at Sparta, Wisconsin.

CHINESE FUNERAL.

Century old customs contrast strongly with modern mourning in Chinatown, San Francisco, California.

FATTEST BABY IN THE WORLD.

Rosa Lee, age 5 years, weight 250 pounds.

KING GEORGE AND QUEEN MARY AFLOAT.

The King and Queen of Great Britain use their state barge for the first time at the Henley Regatta.

LONDON FIRE BRIGADE.

The annual inspection in Battersea Park, London, England.

and the property transferred. He fixed the bonds in the sum of $25,000.

Judge Britt asserted that the Universal violated the provisions of the contract by allowing Brulatour of New York to withdraw from the combination without the consent of the defendants. His contention was that the Universal had a proper remedy at law and did not need an injunction, the granting of which would break up the business of the New York Moving Picture Company without corresponding profit to the Universal. Associated with Britt were Attorneys Graham and Kemp.

Former Judge McKinley, who, with Haas and Dunnigan, represented the Universal, argued that the action was based on the theory that Balshofer was the agent of the Universal; that in all of his actions after he returned to Los Angeles from New York, he acted as the Universal's agent and therefore he should account to the Universal. He contended that Balshofer violated his relations to the Universal and attempted to hand over the property to the New York concern.

Scene from "Geronimo's Last Raid," an American Two-Reel Release for September 12.

The verdict of the exhibitors receiving the Universal program, in the new Animated Weekly, is looked forward to with confidence by the management of the Universal, and comments, criticisms and suggestions will be received with thanks. Their desire to please the American exhibitor is sincere and the policy of the "Universal" particularly in connection with its Animated Weekly is distinctly co-operative.

Universal Film Injunction

In granting a temporary injunction asked for by the Universal Film Manufacturing Company to compel Fred J. Balshofer and the New York Moving Picture Company to turn over certain picture studios at Edendale and Ynez Canyon, Judge Buckles of Los Angeles, Cal., declared the evidence demonstrated that the sale had been made

Exhibitors Play in Making Films

The Chicago Studio production department of the Selig Polyscope Company has begun work on an elaborate three-reel production of "The Fort Dearborn Massacree," which will, in all probability, take weeks to complete and will cost many thousands before the final negative is finished. For many weeks preparations have been under way for the production of this picturesque subject, and the entire energies of the Chicago Studio producing staff will be concentrated upon this one task for some time to come. The work is going on under the direct supervision of Mr. Oscar Eagle. Mr. W. N. Selig himself will devote no little time to its staging. The Selig Company by special arrangement with the government authorities has secured the services of almost a hundred Indians from the northern reservations. Many of the

picturesque costumes and properties, that will be used in this production, were secured direct from the government. If the weather permits, several of the greatest scenes from this story will be produced on Wednesday afternoon, August 14, in order to allow exhibitors who visit the plant on that afternoon to see a real big subject in the process of making.

Essanay's Warm Welcome to All

Room 1811, LaSalle Hotel, Chicago! That's where Essanay's Big Chief has his wigwam and has already met hundreds of exhibitors from all parts of the country who dropped in to smoke the pipe of peace and learn more of Essanay's film popularity "steam roller"!

Essanay is sparing neither time nor unlimited expense in getting out the finest, most novel photoplay subjects obtainable for the programs of exhibitors throughout the world. In the first two weeks of September Essanay will release two wonderful scenic productions that have kept cameras scouring Japan and China for over four months. Essanay is even now grinding out the last feet of film on the spectacular Water Carnival and Naval Review held on Chicago's water front this week, a marine pageant of international water craft competition that has been in preparation since midwinter and is said to have cost over $75,000. Essanay has secured several thousand feet of this great spectacle and will release a full reel production of it during the first two weeks of September. Essanay's three-reel masterpiece of film craft, "The Fall of Montezuma," a tale of Cortez' conquest of Mexico, will be released during the first two weeks in September as a great special feature production through the General Film Company, and the big Essanay Chicago studio is again boiling with activity over the preparation of another massive three-reel production that requires wonderful costuming and some of the greatest scenic settings ever constructed for a moving picture. Essanay's great western dramas, produced under the personal supervision of and featuring G. M. Anderson, famous throughout two hemispheres for his character creation of "Broncho Billy," are known to licensed exhibitors as perfect portrayals of far western life as it was in years gone by. Essanay's famous "Alkali" Ike western comedy series, originated by Mr. Anderson and featuring Augustus Carney in his renowned role of "Alkali," has set the entire film world rocking with mirth. Essanay is featuring comedy subjects and putting over real "hits" week after week that earn the praise of both critics and public.

1811 LaSalle Hotel! Go in and meet the Indian Head face to face and hear of the big film surprises it has in store. The right hand of good fellowship and warmest welcome is extended to all.

Universal and the New Bison

William H. Swanson, secretary of the Universal Film Manufacturing Company, has during the last month been busily engaged in reorganizing the California plants of the Universal Company. His chief task is that of purchasing a mammoth equipment for the purpose of making "Bison" pictures of size and scale greater and better than they have hitherto been made. The "Bison" pictures, as is well known, have dealt with stories which involve the employment of large numbers of Indians, soldiers, cowboys and the denizens of the West, which when handled by skillful directors, such as F. E. Montgomery, whose reputation has been made through these "Bison" pictures, produces those fine pictures, so free in action and movement, which have won praise from moving picture theatergoers on both sides of the Atlantic. The stories will be familiar to our readers. They belong to the history of the country, and where they are not of a historical nature they are of great romantic interest. Mr. Swanson's work is nearly completed and the "new Bison" pictures will shortly be seen on the screen.

Scene from the American Release of September 11, "The Vengeance That Failed."

Mr. Montgomery is the director-in-chief of the new pictures and the company, through Mr. Swanson, has engaged the services of a great many capable actors and actresses familiar with this class of work. The engagement of the Indians was made with the co-operation of the United States government.

The directors of the Universal are sparing no effort nor expense in this extra matter, gratifying the tastes of so many moving picture patrons. It is indicative of the high favor in which these "Bison" pictures are held in all parts of the world that communications are almost daily reaching the directors of the Universal desiring a continuance of these pictures. These requests come from exchange men as well as exhibitors.

Kleine's Cines and Eclipse

Of particular interest are the three releases of the Kleine group, for the week ending August 31. It would seem that they have selected films of unusual strength to complete a notable month in the history of this concern. Three highly dramatic subjects have been selected, a tragedy, a semi-historical romance, and sleuth-melodrama forming the collection.

"The Bride of Lammermoor," scheduled for release on Tuesday, August 27, is a romantic tragedy based on the classic old Scotch tale by the same name, and portrays with faithful realism, amid poetic surroundings, the tragic love and unhappy ending of the beautiful Luccia de Lammermoor. The most popular members of the Cines players are seen to good advantage. The story is well carried out, beautifully photographed and splendidly staged.

"The Golden Curl," an Eclipse for Wednesday, August 28, is a consistent and thrilling detective story, with a well laid plot and excellently acted. It is predicted that this film will cause spectators to sit on the edge of their seats and watch with thrilled interest the unfolding of the story, the crime and the gradual weaving of the evidence which leads up to the ultimate capture of the culprit. A tress of golden hair plays a prominent part in the solving of the mystery, as suggested by the title. A company of selected and well known players portray the characters with realism, and aided by the usual irreproachable Eclipse photography and fine settings, this tale of clever crime detection is well worth seeing.

"Richard, the Lion-Hearted," the Cines feature and semi-historical drama, based on Sir Walter Scott's famous classic, "The Talisman," is to be released Saturday, August 31. The period of the story is laid in the days of the early Crusaders, and, for a single reel of beautiful scenery, gorgeous costuming, live action, and absorbing interest, the spectator will travel far to see its equal. The military and court dress of that period as we see them now, are, to say the least, quaint and picturesque. The high ruffs on the court ladies' gowns, the coats of bright steel mail of the Crusaders, highly polished heavy armor, visored helmets, mail gauntlets, steel spears and lances, and armored and gaily caparisoned chargers all add unusual interest to the pictured story, and are most pleasing to the eye. The scenes depicting the fight to the death of two completely armored knights, mounted on their spirited war chargers before the king and his entire court and retinue of hundreds of followers furnishes a series of exciting pictures and exhilarating thrills, which hold the interest of the audience to the very last. Altogether, this is a remarkable one-reel feature, magnificently portrayed by the most prominent Cines players, aided by a large company of auxiliaries, and ably backed by clear, perfect camera work.

Scene from the American's Release of September 9, "The Dawn of Passion."

Temporary Elmira Organization

A temporary organization of the moving picture people of Chemung county was effected at a meeting at

Elmira, N. Y. The temporary officers will arrange for a meeting to be held in the near future at which time a permanent organization will be made. Malcolm Gibson, manager of the Majestic theater, was elected temporary president, and F. W. Ross, of the Colonial, temporary secretary. Every motion picture house in the city was represented at the meeting. Secretary W. H. Rosenthal, of the state association, was there as the personal representative of President Trigger. The state association is affiliated with the national organization. The object of the society is to oppose unfavorable legislation and to neutralize, as far as possible, the work of other entertainment promoters who succeed in passing laws that are discriminating against the motion picture houses.

"Lucile"

The beautiful poem, "Lucile," by Owen Meredith, has been produced in pictures by the Thanhouser Company, and is a welcome addition to the high grade films recently placed on the market, based on standard literature. In filming this three-reel picture none of the beauty of the original work has been lost in the silent reproduction, as is so often the case in producing photoplays of this character. "Lucile" is probably one of the most widely known of all poems, and is deserving of its fame.

Sir Alfred Returns Lucile's Love Letters.

Lucile Becomes the Soem Seraphim.

Lucile, the Countess de Nevers, was engaged to a young noble Lord, Alfred Vargrave. Being deeply in love, Lucile did not conceal her affection, and her attentions finally wearied Lord Alfred, who neglected his fiance. They quarreled finally and separated, but not until Alfred had vainly attempted a reconciliation. Lucile told him that she was afraid to trust him, but proposed a year's separation, with the understanding that if he still loved her at the end of that time, she would be willing he should return.

The doubts the Countess had of her lover's constancy were justified, for before the year was over she received word of his engagement to the beautiful Miss Darcy, whereupon she wrote him, asking the return of her letters, which in accordance with his pledge, he was to bring to her personally. Alfred, although he was ashamed that he had so soon forgotten his old sweetheart, obeyed and started for Lucile's home with the missives she had written him.

Upon his arrival he was amazed to see how beautiful Lucile was, and how much the older men admired her. His old affection returned, and he pleaded with her to forgive him, declaring that his heart was not and never had belonged to the other woman, that he was simply going to marry her for position. Lucile refused to listen to him, but this simply inflamed his eagerness. He managed, by watching her, to meet her, presumably by accident, while she was out riding, and gained her consent to accompany her. On the road they encountered a furious summer storm and took refuge in a cave. Lucile, whose one dread was of lightning, was hysterical from terror, and did not repulse Alfred when he clasped her in his arms.

She consented to forgive her recreant lover, and the two returned to her home together. There they met the Duc de Luvois, who long had vainly courted Lucile. His jealous eye soon noted that the man who stood in his way was Lord Alfred, and as the latter left the house, the Duc drew a revolver, determined to kill him. The brave Lucile noted the action, threw her arms about him and pinned him fast. Alfred looked around at this moment, just in time to see, as he imagined, his Lucile embracing another man. Deciding she was false, he waited not for explanations, but hurried to the home of Miss Darcy, and the were promptly wedded. The Duc, repulsed by the woman he loved, returned sadly to his lonely castle, while Lucile, weary of the world, sought refuge in a nunnery, determining to devote her life to God.

Twenty years after the lovers had separated, Lucile was leading a helpful and holy life as a sister of charity. From this seclusion she was summoned to act as one of the nurses for the soldiers on the field of battle, when the allied armies of England and France met their common foe on a foreign shore.

Of Lucile's former suitors, one, Lord Alfred Vargraves, had been happily married, and in the affection of his devoted wife and their only son, now grown to manhood, the sadness of his youth had been forgotten. Her other suitor, the Duc, had remained unmarried, but into his lonely life one ray of sunshine had penetrated. This was the daughter of his dead sister, a merry girl of sixteen, who came to brighten his dismal castle when he felt that he had lost all interest in life. With her he had visited England, meeting his old friends for the first time in many years, as he felt his life of seclusion would not be a happy one for the young girl.

In England, Lord Alfred's son and the Duc's niece met unknown to their parents, and promptly lost their hearts, one to another.

When Lord Alfred heard of his son's affections, he placed no obstacle in the path of his only child's happiness. He felt no animosity toward the Duc, simply feeling that although they had been rival suitors at one time for the hand of Lucile, the past should now be buried and forgotten. But the Duc, who for years had been nursing his anger and jealousy against Alfred, feeling that it was he who lost him Lucile's love, never forgave. When he learned that his niece wished to marry the son of his ancient enemy he refused absolutely to sanction the union.

The Duc, who was a French general, and Alfred's son, a lieutenant in the English army, were called to the front shortly after their first meeting.

The young Englishman was wounded, and, being carried to the hospital tent, was nursed tenderly by Lucile. But the young soldier had no desire to live, knowing he could never wed the girl of his choice. Lucile gradually learned from him the cause of his secret sorrow, and going to the Duc entreated him for the memory of the love he once bore her, not to make desolate the life of his young niece, as her life had been made desolate. The Duc moved by the prayer of the saintly Sister of Charity, was finally won over, and the young lovers reunited, while Lucile, her mission accomplished, returned to her convent, happy in having brought friendship and joy into the life of the man she had once loved.

The film will be released August 27-30, and should be seen by all who appreciate a film beautiful in scenic value and subject.

J. E. Robin, who represents the Precision Machine Co., New York, is on the job during the convention at room 1821. He has on display there the latest model of the Simplex machine. It is equipped with 17-inch magazines to take 2,500 feet of film. This machine will

J. E. Robin

be ready for delivery in about five weeks. This is the first machine permitted to use motor drive in the state of Massachusetts.

Mr. Robin is a practical man and has been in the motion picture business a number of years. He was formerly with the Kinemacolor Co. as an expert. He has met with considerable success at all the conventions, and he's a good mixer.

Convention Scribes at Press Club

Through the courtesy of Mr. Twist of the Selig Publicity Department, trade journal writers who visit the exhibitors' convention in Chicago will be taken care of at the Press Club. A special room will be set aside for those who wish to do their writing there. This room will be fitted up with typewriters, writing desks, paper, etc., and will be known as the Motion Picture Correspondents' Headquarters. Cards will be issued to the writers, giving them the privileges of the entire club while in the city. Mr. Twist is desirous of hearing from all correspondents who intend to be at the convention, so that he may forward them cards.

Louisiana Exhibitors Organize

At the organization of the Louisiana state branch of the Motion Picture Exhibitors' League of America, on July 28, E. V. Richards, Jr., was elected state president. Mr. Richards is the manager of the Saenger and Palace theaters in Shrevesport, La., and is an active business man and a firm believer in organization. Mr. Neff could not spare the time to go to Shrevesport, but it was through his efforts and correspondence, together with Mr. Richards' activity, that the organization came into being. Louisiana promised to send delegates to the Chicago convention.

Texas to Organize

A Texas state branch of the Motion Picture Exhibitors' League of America will be added to the list in the near future, Mr. Neff having secured the co-operation of Mr. E. T. Peter of Dallas. In addition Mr. Neff is now in communication with the following gentlemen who are anxious to organize the state: J. C. Penn, McKinney, Texas; J. H. Snively, Paris, Texas; R. A. Healy, Ft. Worth, Texas; Dalton Bros., Ft. Worth, Texas; J. J. Hegman, Temple, Texas; Besserer & Marshall, Austin, Texas; W. L. Terry, Waco, Texas; Mr. Lytle, San Antonio, Texas; J. C. Clemons, Beaumont, Texas; H. C. Stearns, Pt. Arthur, Texas; William Giebig, Houston, Texas; G. K. Jorgensen, Galveston, Texas.

Wurlitzer Orchestral Device

A new orchestral attachment for the piano is described in a recent bulletin issued by the Rudolf Wurlitzer Company of Chicago. This instrument contains the violin, flute pipes, mandolin attachment, bass and snare drums and triangle, and can be played with either paper music rolls or used with a manually operated piano.

The violin, flute and mandolin sections are connected by touching small buttons, and the drums brought in by foot pedals, in such a simple manner that any piano player can readily master the attachment.

Laemmle Takes Home Pictures

Carl Laemmle has had a series of moving pictures made at Oshkosh, Wis., his former home. Mr. Laemmle produced this subject because of his civic pride and a desire to exploit the city of his earlier days. The Oshkosh pictures are representative of the place, showing the delightful parks and summer resorts, power boat races on Lake Winnebago, the Oshkosh fire department in action, thousands of Oshkosh school children drilling and at play, and other industrial and scenic features of unusual beauty and interest.

Brevities of the Business

PERSONAL NOTES.

E. L. Barker, formerly with the International Harvester Company, Chicago, has been appointed advertising manager of the Kinemacolor Company of America, New York.

E. B. Lockwood, who has contributed several articles to MOTOGRAPHY on the subject of education by pictures and who is quite well known to the trade, has joined the Kinemacolor staff in New York.

ROLL OF THE STATES.

ALABAMA.

It has been announced that a handsome new hippodrome with a seating capacity of more than 3,000 will be erected in Birmingham soon It will be modeled after the theaters already operated by Karl Hoblitzelle, head of the Interstate Amusement Company in Houston and Fort Worth, Texas, only it will be much bigger. Mr. Hoblitzelle now operates the Majestic in Birmingham. The new theater will have a roof garden for summer use which will add greatly to its attractiveness. Actual construction work will begin in a short time, according to Mr. Hoblitzelle's manager, the site already having been selected.

ARIZONA.

A deal has been consummated whereby G. A. Cox has sold his interest in the Rainbow theater at Phoenix, to J. Marks and the house will be conducted under the new management.

ARKANSAS.

After undergoing complete renovation and being equipped with all the modern improvements known to motion picture playhouses, the Majestic theater, Hot Springs, has been reopened to the public. The program will be first class in every respect and will cater to ladies and children and separate accommodations will be provided for white and colored patrons.

CALIFORNIA.

Plans have been completed by Architects Noonan and Kysor for a motion picture theater to be erected at Boyle Heights for Messrs. Adams and McKee which will have a seating capacity of about 800.

Messrs. Turner and Dahmken, who operate the largest chain of theaters on the Pacific Coast, have completed plans and specifications for a handsome theater to be erected on the south side of Santa Cruz avenue, near Park street, Alameda and it will be known as the New "Alameda." The entire structure will be carried out in an Egyptian design, will represent an investment of $50,000 and will have a seating capacity of 1,700. Turner and Dahnken have been desirous for some time of locating in Alameda, realizing the need of a first class place of amusement such as this will be. The house will be elaborately equipped, leather upholstered chairs throughout and the tapestries and carpets will be of the finest. Wide aisles, perfect ventilation, a new system of lighting and heating and the perfect blending of rich colors on the inside are features. In addition to the balcony, which will seat 600, there will be a commodious dress circle for ladies and their escorts. At the left of the entrance and just off the foyer, a retiring room for ladies and children will be arranged, also sanitary drinking fountains. The lobby will be of very handsome finish, with rich tiling on the floor, and marble wainscoting

The Turner and Dahnken circuit is now operating twelve theaters around the bay towns. Among them are the Oakland Photo theater, Berkeley, Richmond theater, a theater in Stockton, one in Fresno, two in San Jose and one in each of several other towns. The New "Alameda" will be the best of the circuit.

An additional attraction of this new house will be a pipe organ constructed especially to harmonize with the decorations of the interior, and to render music to fit scenes during the presentation of the photo plays, to which the house will be especially devoted. It will be under the management of C. L. Langley, making the sixth house of this circuit under his charge.

A new motion picture theater is being erected on Twenty-third avenue, adjoining Castle Wall, Oakland.

CANADA.

A vaudeville and motion picture theater will be opened at Winnipeg by C. H. Milen, of Detroit, Mich.

CONNECTICUT.

Manager Wooster has disposed of his motion picture theater at Westport to a New York firm, who will reopen the same in the near future.

COLORADO.

Contract has been let for the construction of a $100,000 motion picture theater to be erected on Curtis street, between Seventeenth and Eighteenth streets and it is expected to have the new house ready to open to the public by January 1, and will have a seating capacity of 2,200 which exceeds that of any motion picture theater in the city. There is also another motion picture house being erected in the same block on the opposite side of Curtis. There are five vaudeville and motion picture houses in the two blocks on Curtis between Sixteenth and Eighteenth streets.

IDAHO.

An up-to-date motion picture theater has been opened in the Olmsted block at Driggs by H. D. Winger.

The Bijou motion picture theater will be opened at an early date at Monmouth under the management of George Howard.

ILLINOIS.

Joseph C. Henning, S. B. Herrington and J. T. Henderson have leased the Joliet Theater at Joliet.

The Orpheum motion picture theater at Rockford is being thoroughly renovated after which it will be reopened to the public.

The Capital City Amusement and Park company has been incorporated at Springfield with a capital stock of $5,000 by Geo. W. Voland, Walter Hucks, G. J. Schave, G. F. Wanbacher, J. A. Bauer and G. M. Williams, to operate an amusement park in Sangamon county.

INDIANA.

At a recent meeting of the Indiana Motion Picture Exhibitors' League, held at Indianapolis, it was decided to ask the next legislature to enact a law for the creation of a state board of censorship to pass on all motion picture films before they may be exhibited in the picture theaters throughout the state. F. J. Rembusch, of Shelbyville, and H. W. Summers, of Indianapolis, were appointed to prepare the bill and engineer its enactment into law. All members present voted in favor of the proposition for state censorship. It was pointed out that this plan would assist in the uplift of the motion picture business and help to place it on the high plane where it belongs. F. J. Rembusch, of Shelbyville; W. R. Deaton, of Warsaw; S. B. Sampson, of Anderson, were elected delegates to the national convention in Chicago. J. Bomerschiem, of Fort Wayne; Herman Rife, of Logansport, and J. E. Brennan, Evansville, were elected alternates.

Indianapolis local, League No. 1, has elected as delegates to the national convention, John A. Victor and J M. Rhodes; alternates, John H. Hubert and Charles Ferguson. Mr. Hubert was named local organizer for Branch No. 1 and the state organization later will put an active organizer in the field to bring all Indiana motion picture exhibitors into the organization.

The state organization will hold a meeting at the call of H. S. Dickson of Winchester, within the next six months to elect officers for next year.

The officers of Indianapolis Local No. 1 recently organized, are as follows: President, John Victor; first vice-president, T. W. Sanders; second vice-president, M. M. Miller; secretary, A. C. Zaring; treasurer, J. M. Rhodes. It is claimed there are nearly a thousand motion picture theaters in Indiana owned by six hundred men and that two hundred of the owners are members of the state organization.

Plans are being prepared for a motion picture theater to be erected at the corner of Wayne and Clinton streets, Fort Wayne, at a cost of $50,000.

The Lyric moving picture theater, operated at Rockville by John Pruett, has been purchased by the International Film Company, of which Arthur Powell of Montezuma is manager.

Charles McKellar and Danald Avey, both experienced motion picture men at Fort Wayne, have purchased a motion picture theater at Pierceton and will operate the same.

The Lyric theater at Lafayette has been undergoing extensive improvements and will be reopened to the public in the near future.

A motion picture theater will be opened at Richmond by J. Morris of Liberty. It will be located in the Millikan building.

A motion picture theater will be opened in the Burroughs Block, Fremont, by the Fox Circuit Company.

IOWA.

The Grand motion picture theater at Lake City has been reopened to the public.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

AFTER THE CONVENTION.

SHORTLY after the last number of MOTOGRAPHY went to press, the Motion Picture Exhibitors' League, in convention at Chicago, re-elected for the ensuing year all the old officers, Mr. Sweeney having withdrawn as a candidate for the presidency. This arrangement was quite satisfactory to most of the members, although there was considerable comment on the rather precipitate way in which the election was conducted.

The convention passed a number of interesting resolutions. Whether they will develop action or slide noiselessly into that oblivion to which most resolutions descend, only those responsible for them can decide. The one condemning the patent royalty of two dollars a week seems in a fair way to receive attention, now that government eyes are turned upon the industry. The resolution against the word "movie" is directed toward the newspapers and trade journals. So far as we know, none of the latter have used the term, unless to argue against it. The newspapers picked it up in New York's East Side, and will probably continue to use it until something equally short and slangy turns up.

The anti-advertising resolution, aimed at the producers of those films which, under the guise of drama, comedy or topical, do not hesitate to present views of billboards, labels or packages advertising certain brands of goods, is worthy of respect. None of our high-grade literary magazines would tolerate a parallel commercialism for an instant. The motion picture should be regarded as equally dignified.

It is announced that the League has put into operation a system of insurance for its members. Details of the project will be found on another page. This idea is practical and excellent, and members should hasten to avail themselves of it. Similar schemes have proven very successful and satisfactory in the work of associations in other lines of effort.

To an observer, the convention was remarkable above all else for its tremendous vitality, energy and enthusiasm. These are the qualities of success.

INACCURATE FILMS.

THOROUGHLY appreciating the difficulties encountered by the film manufacturers in eliminating errors in the scenic effects and atmosphere of their plays, it is true, nevertheless, that a greater part of the work turned out by the studios could stand much revision, and "editing," in the small but essential details. To the close observer, many of the misfit properties, and inconsistent stage "business" detract from the effectiveness of the play, and in some cases makes the show highly ridiculous. A little observation on the part of the director and property man, would result in the production of a much more realistic film.

Battle scenes are notorious offenders in this respect, with their eternal saluting and flag waving, and when one of these monstrosities is thrown on the screen we are

always sure of a good giggle. The sight of a company of men going into action with two or three gross of flags, turning square corners, and saluting friend and foe alike, is enough to convulse an audience who has seen the actual maneuvers in the field. There is no excuse for an error of this kind, as there are military posts scattered all over the country, where the producer could witness every article in the manual of arms carried out under service conditions. The writer has particularly in mind a film in which an entire company marched in double column directly into the face of a field piece. Humanitarian motives alone prevented the gun crew from cleaning up the opposing column by one pull of the lanyard.

Indian battles also contribute their mite to the comedy features of film warfare. Among the errors common to the Indian films may be mentioned the total disregard for tribal costume, methods of defense and attack, and the all pervading grandiose sentiment that the white has seen fit to inflict upon his red brother. Nothing is so ridiculous as an Indian attack in close formation, in open country, nor a retreat of the entire body en masse, as any director will discover if he will take the pains to read the bulletins issued by the war department. Providing Apache Indians with horses is another unique feature of a well known film.

Love affairs of Indians and Japanese, the two races that abominate a display of affection as known to the Caucasian, are being continually placed on the screen for the edification of the moving picture patron. Scenario writers would do well to investigate the customs and characteristics of a people before placing them in plays that are entirely foreign to their nature. Romantic tales of Japanese love affairs are pure nonsense from the standpoint of racial instinct. Such a story, except for the scenic value and display of the dainty costumes, might as well be written for an Esquimo film.

Among the peculiar slips that have been made recently was that made in a life saving scene, taken on the Atlantic coast. A coast guard is shown discovering a wreck that lies at least two miles from shore, by means of a bail lantern held between himself and the ship. Under such conditions the lantern would be about as effective in making the discovery as a white bean. But this heroic guard actually preferred this method to using the million candle power projector on the lighthouse, close at hand!

Death scenes on the films usually afford the actor or actress an opportunity in which to display their ability as contortionists and high divers. So firmly established is the writhing and twisting ceremony of death that no film, nor legitimate play, for that matter, would be complete without the almost superhuman efforts of an active and exceedingly healthy actor. Even were these scenes true to the life, we think that the grewsome act should better be omitted from the films.

Lack of space prevents the mention of many of the careless slips that we have witnessed in the makeup of a film, that might have been prevented by the exercise of a little judgment on the part of the producer.

THE GOVERNMENT SUIT.

ON another page details are given of the suit brought by the United States government under the Sherman act against the members of the Motion Picture Patents Company. We cannot attempt to forecast the opinion of the court, although it would seem that the fact that manufacturers outside the combine are openly doing business without hindrance might have some bearing on the monopoly charge. But we cannot see that the trade has anything to fear, whatever the final decision.

Even a dissolution of the Patents Company as a holding company would not affect the output or the product of the manufacturers licensed by it. It might, it is true, enforce a license grant to those concerns now operating as "independent;" but since they are already successful, it is hard to see wherein the license would benefit them directly. The possibility of an enforced open market is the only really vital factor for consideration.

The open market has been discussed academically for many years. Europe affords a good example of its workings. There the renter buys such films as look good to him, regardless of who made them; and the exhibitor makes up his program on the same basis.

That is the good side of the open market. The evil side is the tendency to price cutting and the consequent deterioration of quality. No manufacturer's production system is so efficient that he can reduce his price thirty per cent and continue to improve his product. Nor is it possible, with a wide-open market, to avoid the attempts of the poorer class of makers to build up their trade by cutting prices; and there are still a good many exhibitors who would be attracted by low price as against good quality. The final decision on quality, of course, is up to the public, and the public has been educated to good films. So it may be that a cheaper and poorer program would find no patronage anywhere, and so fall by its own weight.

Our faith in the good and constantly improving film, as against the poorer and cheaper film, is so great that the possibility of an open market gives us little concern. Whatever purely commercial readjustments are possible as a result of the government suit cannot embarrass the exhibitor.

INSURANCE FOR LEAGUE MEMBERS.

THE Motion Picture Exhibitors' League of America has perfected and put into operation a system of insurance for members of the League, under which both fire and liability insurance will be handled on the inter-insurance plan. This plan has been in operation among the leading concerns in other industries for more than thirty years and has been found to be by far the strongest, safest and most desirable form of insurance in use. In addition to these advantages, the cost is reduced nearly one-half as compared with the rates of the public companies insuring all classes of risks. John W. Daugherty, of St. Louis, Mo., an experienced and successful manager of this class of insurance organizations, has been put in charge of this system for League members, and he is rapidly putting the department into the same successful condition as the systems he manages for other industries. There are many important advantages of this system which cannot be mentioned in this brief notice, and the members of the League now have the same advantages in this respect as most of the organizations in the principal lines of trade and manufacture, such as banks, breweries, mills, lumber interests, steam laundries, coal operators, druggists and wholesalers. This subject was briefly discussed in the annual report of the national secretary, and was to be explained in detail to the convention by Mr. Dougherty, who, unfortunately, did not reach the convention in time.

Billy Quirk, formerly of Biograph and more recently of Pathe Freres, is now with the comedy force of the Solax Company.

The Second National Convention

As an evidence of the interest taken in the second annual convention of the Motion Picture Exhibitors' League of America, a number of delegates arrived at the Hotel La Salle on Saturday, August 10, a full three days before the opening of the convention proper. President Neff was one of these early ones, and in his characteristic way, started the ball rolling immediately after his arrival. For besides holding a formal conference with the convention committee of Illinois Local No. 2 an hour after he reached Chicago, he spent the rest of a busy day in receiving delegates and exhibitors at his headquarters in the Hotel La Salle, and in filling out the skeleton program arranged by the convention committee.

Viewed from any point, the affair was a great success, the attendance was large, the program entertaining, and the exhibits made by the manufacturers were varied and interesting. Over 1,000 exhibitors and their friends were present, which, with the 250 delegates, and visiting non-members brought the total attendance to well over 2,000. As a social gathering, the convention was all that could be desired, for harmony prevailed within the ranks of the exhibitors, and manufacturers as well, and fortunnately there was but little of the bickering and wrangling spirit that is almost a characteristic feature of trade conventions. Established on this friendly basis, all were enabled to enjoy the affair to the utmost.

Except for the arrival of the New York and New Jersey delegations, who were accompanied by the representatives of the Film Supply Company, Monday was an uneventful day, the majority of the exhibitors devoting their time to putting their displays in order, and in the case of most of the firms, this was some job.

* * *

On Tuesday, August 13, at 1:30 P. M., the opening session of the convention was called to order by President Neff, in the convention hall of the Hotel La Salle. The address of welcome which was to have been delivered by Mayor Harrison of Chicago, was delivered instead by his proxy, Mr. Maclay Hoyne, as the mayor was busily engaged in adjusting the threatened strike of the street railway employees. Mr. Hoyne was followed by Sydney As-

cher of New York City, whose short speech preceded the gift of a gavel. Mr. Ascher, of course, did not fail to put in a boost for New York as the next convention seat, in which he was heartily seconded by the eastern exhibitors and manufacturers. Mr. Ascher spoke in terms of the greatest praise for the work accomplished by Mr. Neff in New York, and begged him to accept the gavel, as a mark of appreciation from the exhibitors of that State.

Following the presentation speech, the Hon. John J. Lenz, an ex-congressman of Ohio, and the attorney for the Ohio League, gave an exhaustive speech on the motion picture. The talk given by Mr. Lenz dealt principally with the educational value of the moving picture, and was given in a masterly manner, making the subject both interesting and instructive. He was so persistently applauded at the close of his talk that a motion was passed to tender him a vote of thanks for his efforts. This was accorded unanimously. Mr. Lenz said in part:

Mr. Chairman and Ladies and Gentlemen of the Moving Picture Exhibitors' League of America, and Friends: Many of you men and women are probably aware that Edison has recently said that with all that he has been credited in the inventive world, he believes that Ford, the inventor of a moderate priced

Bird's Eye View of the Crowd.

and serviceable automobile, has succeeded in outstripping him in work for humanity. If the Ford machine in setting a modest price and compelling others to bring their price down to within the reach of the many has surpassed and exceeded in inventive ingenuity and in service to humanity the great Edison, then, my friends, how much more are you succeeding in surpassing Edison and Ford when you bring the entire world before the vision of the boy and girl, the schoolmaster and the preacher, the doctor and the lawyer, the merchant and the mechanic in a few minutes' time for the paltry sum of a five-cent piece?

In the coming winter you men and women will for a nickel a show educate the boyhood and the girlhood, the manhood and the womanhood of the United States, to a higher degree of intelligence and efficiency than any king or bishop ever obtained in the history of the world. You show them the civilizations of the entire world. It was the dream of a great literary character to make a trip around the world in eighty days. I was going to say that you do it in eighty minutes. I believe it would be equally true if I would say that you can take us on a trip around the earth in about eighty seconds if you wanted to do it with a moving picture machine.

Stan Twisting Officiating.

The time is ripe when you men and women should be known to the law makers of the land as a potentiality that it will not be trifled with, and that you will not allow every Tom, Dick and Harry of some little municipality to hamper the progress of the picture play—the greatest luminary in the universe of intellectual life.

I said at Dayton, in talking to our state league, that I believed that the time was not far distant when you would take your place in our public schools and give to the boys and girls within a single winter's course all the history, all the physical geography, all the knowledge of humanity, enterprise and industry, government, religion and science that they are now accustomed to get by the time they graduate from a university. Why not save this time?

I believe in not one Sunday and six work days; I want the time to come when we shall have six Sundays and only one work day, and I believe with the machinery and the electricity and the inventive ingenuity of the people such a time is coming to pass in your day and my day. Carroll D. Wright said we could produce all the clothing, shelter and food we now have if each one of us worked two hours and thirty minutes a day, using electricity and steam power and all the appliances that we now have. If that is so, work would be like playing golf two hours and thirty minutes—it would only be wholesome exercise.

In centuries of time a few men have carved immortal names. One of them we call Michael Angelo. We speak of another as Raphael. We speak of Rubens and Rembrandt and others, but what was the history of Raphael's greatness? What was the greatness of Michael Angelo? It was to take from the heart and brain and put upon canvas or upon a wall a picture that had a suggestion of form and above all *motion;* and they worked for centuries to produce a Michael Angelo. They worked for centuries to produce a Raphael who could by touch of something put into the color and the light of a great portrait that which would suggest *motion,* the divinest thing of the universe; *motion, that which makes of spirit matter.*

Think of the pathetic story of Abraham and Sarah; think of Hagar and Ishmael driven out! See them upon the desert and you can't conceive of any preacher

or orator ever portraying that picture of that woman and that child driven from the household of Abraham as it could be presented to the world in a few minutes by the moving picture (applause).

Think of Jesus of Nazareth laid in a manger; think of Jesus of Nazareth at the age of twelve propounding the questions to the doctors and philosophers of the Jewish religion! Think of Jesus in His humble garb in His miserable plight so far as this world's goods were concerned down with fishermen by the seaside. See Him in your moving picture with publicans and sinners. Are these lessons worth learning? Yes. How soon? At the earliest moment in a child's career. Give the child mental muscle. Think, if you please, of Solomon with the two women each claiming the child. Think of the wisdom and the psychologic power of Solomon when he says, "Bring me a sword that I may divide the child." Think of the one woman saying, "O, just judge, divide it," and the other saying, "No, give it to her." He learned in a moment which was the mother, a lesson that is at the foundation of the processes of a cross-examination and decision in the mind of every lawyer and every judge that is a student of human nature. Why not bring that to the boy and the girl at the age of ten? Why wait until they have wasted

Crowd Forming Into Line for the Moving Picture Camera in Front of the Selig Studio.

another fifteen years before they get this lesson and this philosophy?

"A small fire kindleth a great mass," is a scriptural proverb. You are but in the infancy of this great work, and you are now progressing so much more rapidly because you are a national organization. This work of yours in Chicago now and in New York, as I hope it will be next year with all due respect to my friends from Chicago—of course, they have the habit here in Chicago of expecting everything all the time, but we have got to teach them to divide up a little and let New York have her share. So I think you ought to go to New York next year.

The thing for you to do is to make the national congress and the state legislatures and the municipal councils of the whole country sit up and take notice that you are organized. The mere fact that you bring the greatest education in the world for the least price is no evidence that you are to be sneered at or that your work is to be treated with contempt. To bring the best to the humblest has been the mission of the world. The division of property or the doctrine of live and let live was one of the teachings of Jesus. It is the one doctrine of all the great religious philosophers of all the denominations of the world. It was the grandest message of a great human heart that has been given in the last hundred years; it was the message of Joseph Mazzini, that great heroic soul of Italy that had to be banished and crucified, so to speak, because he loved humanity. He said, "Democracy is the progress of all through all under the leadership of the wisest and best." He had in mind the intellectual qualification of the humblest boy and the humblest girl in the land. It was Thomas Jefferson's idea when he proclaimed the doctrine of universal education at state expense; that the mission of mankind is not to be busy building jails and penitentiaries and equipping a standing army with guns and policemen with clubs. Jefferson believed and taught that our highest purpose was to make intellectual kings, queens and princes of all mankind. It is not simply the business of Illinois to raise fine cattle and fine horses, but the business of Illinois and of New York and the other states is to breed and rear the highest type of manhood and womanhood, and you, the moving picture people, are developing the mental muscle every time you get a boy or girl into your show.

We are going to have a chance in these United States of America before we have four hundred and fifty millions of people as they have in China to have the man and the woman to whom you sit next in a street car just as elegant in manners, in culture, in clothing as those who ride in carriages and automobiles, when our manhood and womenhood will be brought up and our common level will be a higher intellectual quality. That is the beauty of the picture of America in my vision. That must be the conception of the best manhood and womanhood of the United States, many of whom are represented here this afternoon.

The progress of all through all under the leadership of the wisest and the best. You are teachers, you are ministers, you are serving the people. Some of you are doing it for mercenary purposes, I know, just as there are men in every community who are in it only for the money there is in it, but among you there are many men and women who realize the moral obligation and the opportunity of your business. In every walk of life there are men who are manufacturers, there are men who are doctors, there are men who are lawyers, there are men who are preachers, there are men who are in the moving picture business who realize that the common uplift of the entire human family is the God-

given duty and responsibility imposed upon each and every one of us. It is true that we carry some along with us with coarser grained fiber and less qualification to appreciate and understand. Every brain is a receiving instrument, every brain. Take the crude brain like a crude soil of a prairie or the swamp, if you please; it will depend upon how you treat it as to what it will grow. It will depend upon what kind of a germ you put into it. Much of this talk about our heredity is nonsense. Most of the development of mankind and womankind is through environment. Take an ordinary brain in any ordinary waif in any ordinary city and begin to plant in it the germs of high purpose, the beautiful pictures of manhood and womanhood, and it will grow up into a royal personage even though it may not have money for the fine raiment, and you are contributing to that growth and future of our citizenship as no teacher and no preacher, no lawyer and no doctor is today.

If you can take a boy and a girl at six or seven and in one winter's course show them the Jap and his institutions and the Chinaman and the Hindu and the Persian and the Turk and the Armenian and the Arab, if you please, and the Russian, and the Austrian, and the Italian and the Spaniard and the Portuguese, and come on across into this country, and show them the different types of manhood and of womanhood and couple up their educational institutions, or their lack of them, and couple up with them the religious institutions, if you please, and the quality of manhood and womanhood they produce under it, because you have got as good a right to judge a church by the manhood and womanhood that it produces or fails to produce as to judge a tree by the fruit it bears; and I will not allow any preacher or teacher to talk to me about a mob in this country. If he has got a mob under his pulpit he is to blame for it. Why doesn't he educate them up to a level of normal manhood and womanhood? He has no business to keep a mob for three or four or five or six hundred years. The big men and women of the world have grown far above that, and if you take boys and girls and put them under the divine inspiring influence of your moving picture and show them this world, with all its many kinds of manhood and womanhood, do you think they would continue to hate each other?

One of the wisest and best things said for the human family was said by Thomas Jefferson, if it wasn't said by Mazzini, in my former quotation from him, and I believe that it is wiser than that of Mazzini. Jefferson wrote down several things in a book which he kept, and one of them was this: "Resistance to tyrants is obedience to God." He said that tyrannies do not all consist in the autocratic power of kings. There are tyrants of the human mind; and then he wrote these immortal words, which I think are the best to illuminate a human mind of anything I ever found in literature: "I have sworn on the altar of God eternal hostility to every form of the tyranny over the mind of man."

Now, think of it. You hate somebody that is a Jew because you are a Christian. You hate somebody that is a Catholic because you are a Protestant. You hate somebody because you are neither Jew nor Catholic nor Protestant. Now, you are a

A Few of the Visitors.

pretty small potato to allow that kind of stuff to tyrannize over your mind. Many lower animals kill for food, many kill to protect their young, but it remains for men to assassinate physically, intellectually, morally, socially, professionally their rivals in the world.

Whom can you name today who bring before them the Catholic and the Jew, the Protestant and the Agnostic and educate them and liberate them from these miserable tyrannies over the mind of man so much and so effectively, so fortunately and so completely as the moving picture men and women of the world?

I solemnly believe that the battleships are to be abandoned. I believe that in this generation we shall see the beginning of the beating of swords and spears into ploughshares and pruning hooks, but it will not be done by the men in one pulpit lying about the denominations that support another pulpit; it will not

Crowd Passing Before the Camera in Entering the Yard.

be done by the one man of one religion filling a people with prejudice against another; it will be done by the men and women who bring all nations before the eye and the brain and the heart of the little boy and the little girl of the future and then the peace congress at The Hague will be a success and no state, no ambassador of any country, of any republic, of any kingdom, of any empire will contribute as much to the peace of the world in 1932 as the manhood and the womanhood that I have been honored and permitted to address today.

I want to congratulate you, I want to commend you, and in any way that I can be of service command me. Your work is the work of the God of love, of the God that makes for the brotherhood of all mankind. Organize and continue to organize into national and state leagues and put your force and power upon the statute books, because after all legislation is the greatest education (applause lasting about five minutes).

I only want to say this in closing as a parting word in recognition of the very generous and cordial applause you have given me, that nothing ever appeals to me quite so much as to find a manhood and a womanhood for whom I have made their own speech. You have demonstrated to me that you are in accord with my views on this subject, and you are upon the great highway to finish the work in which you have embarked.

Mr. Neff followed with a brief address in which he referred to the rapid progress and present status of the organization, and welcomed the manufacturers and film men present. The trade press was also given due recognition in his talk, for the success of its efforts in building up and bettering the League and industry. Mr. Neff then appointed committees on credentials, order of business and membership, which were composed of the following members:

ADVISORY COMMITTEE.

President; Secretary; L. J. Ditmar, of Kentucky; Sydney Ascher, of New York; W. J. Sweeney, of Illinois.

COMMITTEE ON CREDENTIALS.

Chairman, F. J. Rembush; George Henry, Harry Reid, Samuel Trigger and Mrs. Louis Smith.

COMMITTEE ON RULES AND ORDER.

Chairman, Peter J. Jeup; L. R. Thomas, L. H. Ramsay, G. W. Wiley and G. A. Robinson.

COMMITTEE ON MEMBERSHIP.

Chairman, H. S. Kleine; Fulton Modesky, Ben Michaels, John H. Blumenthal and Charles C. Goff.

The meeting then adjourned until 9:30 Wednesday morning, at which time the delegates were to meet in executive session. During this, their first session, the committee on organization created an eruption on the part of

the Chicago delegation when it recommended an election of officers at once. The celebrated "bolt" of the convention held previous to this, was in the way of being repeated by the Chicagoans when the organization committee fell foul of that on entertainment. The latter committee demanded an immediate adjournment to prevent a possible interference with their plans and for a few moments the prospects of a general upheaval seemed imminent. The demand for adjournment was still further stimulated by the fact that the Chicagoans wished a delay in the interest of their candidate for president, Mr. Sweeney.

As Mr. Sweeney had not had time to properly present his claims to the coveted office, it was felt that a delay would be of great benefit to him. As a compromise, the election was postponed until the Wednesday morning session. Later Mr. Sweeney withdrew, and as a result all of the old officers were re-elected.

secret session excluded both the daily and trade press, and gave out only the most meagre details of proceedings. This method of conducting the meetings resulted in the loss of some publicity, for the Chicago papers paid but little attention to the convention as the information was too difficult to obtain in proportion to its value as a general news item. It seemed to be the common belief of those present that the general public should have been put in close touch with the work accomplished by the committees.

The question of nominating and electing officers was postponed until evening, so that the proposed afternoon session would not interfere with the inspection trip to the Selig plant. Before the adjournment of the morning session, the following committees were appointed:

RESOLUTIONS COMMITTEE.

Chairman, W. J. Sweeney, Chicago; Peter Jeup, Detroit; E. V. Richardson, Shrevesport; C. H. Phillips, Milwaukee; W. L. Rupert, Ottumwa.

Exhibitors Viewing the Indian Camp in Selig's "Yard," with a War Dance in Progress.

Tuesday evening nearly all of the delegates were the guests of the Universal Film Company on the steamship Pere Marquette, and a thoroughly enjoyable lake trip was made. A band of Indians in war paint danced and made things lively in the cabin, while the Universal Band discoursed popular airs on the top deck. In addition to the war dance of the aborigines, dancing of a more formal nature was provided for the guests.

Unfortunately, unfavorable weather prevented the guests from witnessing the display of fireworks planned by the management of the Water Carnival, then taking place on the lake front. This trip was in keeping with the enterprise and good fellowship exhibited by the Universal Film Company in boosting the Universal program. Everywhere, the Universal Company was one of the chief subjects of conversation among the exhibitors, and it was deserving of all the praise that could be given.

* * *

At the appointed time on Wednesday morning, the meeting was called to order behind closed doors. This

WAYS AND MEANS COMMITTEE.

Chairman, L. H. Ramsey, Lexington, Ky.; H. S. Dixon, Winchester, Ind.; Samuel Trigger, New York City; W. H. Wiley, Kansas City; O. O. Ludeking, Cincinnati.

CENSOR BOARD.

Chairman, Clem Kerr, Dayton; Dr. J. M. Rhodes, Indianapolis; Robert Levy, Chicago; E. M. Day, New York City.

PRESS COMMITTEE.

Chairman, J. A. Maddox, Columbus; Sydney Ascher, New York City; C. A. Anderson, Chicago.

* * *

At 1:30 on Wednesday afternoon, over 1500 of the visitors took special cars at the door of the Hotel La Salle for a trip to the plant of the Selig Polyscope Company. This was a thoroughly enjoyable affair and a decided novelty to the great majority of the exhibitors, few of whom had ever seen the interior workings of film manufacture.

As each car was unloaded at the studio, the visitors were formed into line, and as they passed through the big gate they were brought face to face with the moving picture camera which recorded their movements for ex-

hibition later in the evening. Separate films were afterwards taken of the League officials in various characteristic poses, that were productive of wild enthusiasm when thrown on the screen at Orchestra Hall.

The principal feature of the entertainment at the Selig studio was the production of a scene from the "Fort Dearborn Massacre," a forthcoming Selig release. In this scene nearly one hundred Indians were used in the attack upon the fort, who were brought from the Northwestern reservation under a special license from the government. This scene had been under preparation for several weeks, with the express intention of having everything in readiness for the visiting exhibitors. A luncheon was served, presided over by Adrienne Kroell, of the Selig forces.

With the guests divided into small parties, and with a Selig actress at the head of each division as a guide, the visitors made an inspection tour of the plant, that disclosed the details of film making. As may be imagined, this trip was of the greatest interest and value to the exhibitors, and the Selig Company is to be congratulated for the clever way in which the affair was conducted.

Many of the visitors to the Selig plant extended their pilgrimage to the Essanay studios, at which point they were presented with souvenirs. A dozen or more of automobiles under the supervision of John Rock, of the Vitagraph, were the means of transporting the crowd from Selig's to the Essanay homestead.

No introduction was necessary at the latter plant, as all had become acquainted with the "Indian Head" officials and their hospitality at their popular exhibit in the hotel. The following were the visitors carried in the Vitagraph autos:

W. C. Quimby, H. C. Hanson, Mr. and Mrs. I. Van Runkle, Miss Rose Telser, Mr. and Mrs. E. Jones, D. Munstock, M. S. Marks, Fred Fisher, Mr. and Mrs. J. D. Rose, Mrs. J. F. Fisher, Miss Marion Rose, Miss Ida Mertski, Miss Rothschild, V. R. Day, C. A. Mehrs, M. Marks, J. D. Hoffman, Mr. and Mrs. D. Hyman, Mrs. Watzinger, Mrs. Lindon, Harry Munn, F. Cook, A. Issner, J. Rhodes, Mr. and Mrs. B. W. Beadell, Miss Patterson, Miss Aitkins, C. K. Cregier, Mr. and Mrs. J. Miller, Mr. and Mrs. Lockett, Mr. and Mrs. J. B. Rock, S. A. Canton, Mrs. P. Powell, Harold N. Desky, Pearl M Sahlin, A. L. Haase, A. Powell, Arthur Pooli, M. Sahlin, Arthur Markwalter, Clara Nilke, F. E. Samuels, William Heishberg, Allen Beckett, W. H. Claibone, J. J. Reidn, H. C. Dorsey, Henry F. Hoeft, Louis Phillips, Mr. and Mrs. J. N. Barry, A. F. Pond, Mrs. Margaret Knopfel, Mr. and Mrs. J. L. Bell, T. F. Howe and daughter, Henry H. Turner, J. R. Brennen, Mr. and Mrs. W. A. Daniels, Mrs. Chas. Camp, Mr. and Mrs. Scates, Mrs. Afelt,

Another Indian Uprising.

W. K. Hollander, Joseph Farnham, P. A. Keppler, Mr. Tischart, J. J. Gilmore, Mr. and Mrs. Harlan, Mr. and Mrs. Barney Coffey, Mr. and Mrs. W. J. Sweeney, Mr. and Mrs. E. J. Mock, Warren Patrick, Mrs. H. H. Hemmelick, F. X. Bushman, S. M. Spedon, Morris Jones, Jos. G. Holmes, J. L. Hoff, J. S. McQuade, Mr. and Mrs. F. G. Jones, George H. Morriss, Maurice Johnson, Mr. and Mrs. B. J. Courtney.

In the evening, the election of officers took place, and Charles T. Beeching of Cincinnati, nominated M. A. Neff after making a short address upon Mr. Neff's ability, and the great work that he has accomplished for the League. Wm. J. Sweeney was then nominated as a candidate for the presidency by J. J. Levy of Chicago, upon which Mr. Sweeney withdrew from the contest, and moved that Mr. Neff's election be made unanimous. Mr. Neff's nomination was seconded by E. Schwartz, of Cleveland; F. J. Harrington, Pittsburgh, and T. A. Keppler of New York City. The nomination of C. M. Christenson as secretary was made by C. G. Ruhlman of Tren-

One of the Inspection Parties.

ton, N. J., and seconded by F. J. Harrington, Pittsburgh. His election was unanimous.

The election of J. J. Rieder as treasurer was unanimous, as J. M. Rhodes, the other candidate for the office, withdrew. After the election, the officers read the reports for the past year.

Immediately preceding the election of officers, a press banquet was given at the Union restaurant by the Selig Polyscope Company, the presiding officer being Stanly Twist, chief of the Selig publicity department.

* * *

While the ballot war raged at headquarters, and the press was gracing the festal board of the house of Selig, several hundred of the non-combatants were guests at an exhibition of licensed pictures at Orchestra Hall. In addition to the regular releases shown at this show, the pictures of the exhibitors that were taken at the Selig plant were thrown on the screen. The cheers and laughter that greeted the appearance of some well known personage upon the screen created a veritable riot in the hall, and to say that this method of entertainment was a success, was putting it mildly.

An interesting feature of this exhibition was the use made of the various types of projectors in showing the pictures, the different makes of machines being used turn about, so that a comparison could be made between the projecting capabilities of the different makes. This resulted in a spirited contest between the manufacturers that was of the greatest benefit to the exhibitors and prospective exhibitors in the audience. The steadiness and definition of projection was a revelation to the majority, and was indicative of the great progress made during the last year in efficiency of the projector mechanism. Preceding each picture shown was an announcement slide giving the name and type of machine that was to display the following film. Music was furnished by a Wurlitzer Orchestrion installed on the stage, which was demonstrated by Dr. Ronfort.

The licensed program comprised the following subjects:

King Rameses of Egypt, Cines; As You Like It, with Rose Coghlan in the role of Rosalind, Vitagraph; The Convalescent, Lubin; The Moth and the Flame, Melies; The Rivals, Eclipse; Rube Marquard Wins (two reels), Kalem; Spring Log Driving

in Maine, Edison; Alkali Ike Plays the Devil, Essanay; With the Enemy's Help, Biograph; Kings of the Forest, Selig; Pathe's Weekly No. 34.

* * *

The Thursday meeting was the most important held during the convention, for it was indicative, to a great extent, of the stand to be taken regarding the problems before the League. The ways and means committee sub-

Visitors Entering the Selig Studio.

mitted their report, and it was moved that the salaries of the League officers be increased. The salaries were fixed at $1200 for the president, $600 for the secretary, and $100 for the treasurer. Paul Le Marquard, a Canadian, was made a delegate, with power to establish branches of the League in Canada. It is expected that a body of Canadian exhibitors will be present at the next annual convention.

Due to the hard plugging of the numerous New York delegates, New York City was chosen for the third annual convention. The Hon. J. B. Foraker was retained as counsel for the League, and a vote of thanks was tendered him for past services. A resolution was carried to have the counsel of the league compel the General Film Company to furnish film to exhibitors who have heretofore been denied service by this company.

A motion was carried that means be taken to stop the Patents Company from charging the licensed exhibitor two dollars per week as a license fee. This motion was the result of a report made by the resolutions committee. It was also resolved that a request should be made of the General Film Company to establish a uniform price for film service, as it was felt that the schedule now in force was not consistent. An instance was cited showing that while a price of $15 per diem was charged in Detroit, that a charge of $75 was made in San Francisco. A resolution was passed recommending that legal action be taken in cases where the Patents Company tried to prevent licensed exhibitors from exhibiting independent films, especially feature subjects.

Each state president was requested to have legislation enacted through his senator in regard to the board of censorship in his state. A motion was carried that all of the manufacturers be notified to eliminate, as far as possible, all death-bed scenes, drunkenness and scenes of depravity.

* * *

Owing to some mistake made in the arrangements, the trip to the American plant, scheduled for Thursday afternoon, was abandoned, but a great number of the delegates took the trip on their own account and were amply rewarded for their trouble. Souvenirs were given to the visitors.

In order to maintain their reputation for rapid-fire hospitality, the committee were obliged to substitute a sight-seeing tour for which the A. H. Andrews Seating Company furnished five "rubber neck" automobiles. A trip was taken through the city, taking in the points of general interest, including a trip to the company's factory, where J. M. McLaughlin escorted them through the enormous seating factory. The visitors witnessed the complete process of manufacturing a chair from the crude material to the polished and finished product.

* * *

On Thursday evening, an exhibition of independent pictures took place at Orchestra Hall, showing both the Film Supply Company's pictures, and the Universal program. The program was thoroughly enjoyable, and, as on the preceding night, the projector contest was in evidence. In addition to the films taken in front of the hotel and at the Selig plant, a number of views were shown of the Universal band and representatives in their historic march around the streets of Chicago.

The following were the subjects offered on the Universal program:

The Diary, Powers; In Old Tennessee, Imp; Robin Hood, Eclair; Animated Weekly, Universal; 101 Bison; The Great Event, Great Northern; Japanese Idyll, Rex; The Climax, Nestor; Chance Shot, Victor.

The pictures shown by the Film Supply Company were the following:

Lucile, Thanhouser; Geronimo's Last Stand, American; Equine Spy, Solax; The Stolen Cub, Gaumont; Phillip Steele, Reliance; Refugee's Casket, Gaumont; and the Gaumont Weekly.

One of the features of the afternoon's entertainment was the arrival of "Little Bear," a full blood, who livened up the corridors of the eighteenth floor with his Tom-Tom and whoops.

A re-discussion of the location of the next convention occupied practically all of the Friday morning session, and Niagara Falls, Cincinnati and New York City were all given due consideration. After many deliberations it was finally given to New York by a unanimous vote. It was decided to have the third annual convention open on the second Monday in July, 1913.

John Rock Embarking on Selig's Lake.

The resolution committee, during the afternoon session, passed on the bylaws, and the various local committees were thanked for their part in the success of the convention. A resolution was adopted, allowing five delegates from each state, and five alternates at large, and one delegate for each fifty members in good standing. Officers were installed, and officially the convention was a thing of the past.

In the Italian gardens of the Hotel La Salle, which had been engaged especially for the occasion, the delegates assembled for the last and crowning feature of the week's festivities. Small tables seating from four to six people each, were set for the delegates, whose attendance was considerably over 600. President Neff, National Secretary Christenson, Toastmaster Sweeney, and the guests of honor, which included the press, were seated on a raised platform near the center of the room. On either side of this dais, were arranged the tables at which were seated the stock companies of the Essanay and Selig plants.

At about 8 o'clock, the guests were engaged with the following menu:

Canape La Salle

Celery Olives

Potage St. Germaine

Boiled Lake Trout, Hollandaise

Potatoes, Parisienne

Noisette of Lamb String Beans

Roast Spring Chicken

Lettuce and Tomato Salad

Ice Cream Fantaisie Assorted Cakes

Roquefort Port du Salut

Crackers Coffee

The first speaker introduced by Toastmaster Sweeney was Comptroller Lawrence McGann, who represented Mayor Harrison of Chicago. Mr. McGann showed by his remarks that he was thoroughly conversant with the development of the motion picture industry, not alone from the standpoint of a city official, but from that of a motion picture "fan." He spoke of the attitude of the city officials in regard to the importance of the photoplay houses, and of the civic interest in the safeguarding and uplift of the business.

President Neff followed with a short address of appreciation in which he thanked the convention for the new honors tendered him, and for the confidence displayed in his ability.

Stephen Bush, of the *Moving Picture World*, was the next in order, with a tribute to the late James Petrie Chalmers, the founder of the *World*.

Miss Flo Jacobson, the singer, was then called upon and was repeatedly encored for the excellence of her selections, in some of which Abe Balaban joined.

W. A. Daniels, president of the National Waterproof Film Company, enlivened the assemblage with his humoristic address, creating an unlimited amount of applause

Showing Evidence of the Selig Guests' Hunger.

and laughter. Mr. Daniels is well known as a wit and speaker, and he not only sustained his reputation, but established a new record as well. For this reason we take pleasure in reproducing the hit of the evening:

Shakespeare says, "Words are but wind," so I have been wondering if your toastmaster was insinuating anything when he asked me for "a few words." Accepting the invitation as best I can, I welcome you to Chicago, "The Windy City by the Lake."

Years ago some one coined the phrase, "It is an ill wind that blows nobody good," but here we have a saying which reads, "It is a Chicago wind that blows good for all."

Of course there are some spots in Chicago where it blows better than in others. These good places you can easily locate by noting a dozen or more native hosiery experts standing near by. Although I would not look myself, I hope those of you who

President M. A. Neff and Others.

have "blown in" from great distances to attend this delightful "blow out" will not leave until you have seen some of these windy sights. The "Blow that Almost Killed Father" was one of these. It happened when mother got wind of it and caught him straining his eyes with the boys of the corner!

Our weather man here has instruments for measuring the velocity of wind, but just how high it blows you can best learn from these stocking experts. A New York camera man once tried to cinematograph the pranks of a Chicago wind. He obtained a reel all right, which, for stags and lodge purposes, he figured would be "great stuff," but alack and alas! our good Chicago censor ordered it cut in so many places that the New Yorker in despair began to plead that he be allowed to use it as it was, claiming that he really had taken but a few feet anyway. Then the intelligent censor paralyzed him by saying, "Yez can lave in the feet, but, begorry, yez must cut out the legs."

Of course you all know that the moving picture business has four principal factors: The manufacturers, the exchanges, the exhibitors and the National Waterproof Film Co. With the exception of the exhibitors, all of these grand divisions have their own troubles. Exhibitors have no trouble, for all they have to do is to exhibit pictures, attend conventions and eat, drink and be merry. If anything goes wrong with the show, all they have to do is to swear at the operator or some other person around the place, but this is no trouble for an exhibitor. No, indeed, it is just natural. You can always expect a natural flow of language from an exhibitor when a certain promised reel, which he has advertised for a certain day, "slips a cog" and fails to materialize. After hearing what he thinks about it we can all be thankful that "Film Supply" of this sort is not "Universal" nor for the "Mutual" good. An exhibitor so treated is fully justified in getting service where the "General" treatment is reliable. He can be "Independent" about it, too, and, believe me, he would have "license" to be.

Now, in all seriousness. I want to congratulate you upon your association. Association, you know, is just another name for combination, and combination is the outcome of the divine law that "In union there is strength." This law of strength in union was decreed with the law of planetary revolution, with the law of gravitation and evolution, with the fixing of tides, etc.

In a homely sense, it means that if your piano is too heavy for you to move alone, you can combine your strength with that of others and move the old thing just where you want it. This law of strength in union applies not only to moving pianos, but to moving pictures, and to all business and things commercial as well as physical. Through it you can accomplish much which singly and alone you could not hope to attain. To think alike on all subjects would possibly be the worst that could happen to you, but on this fundamental question of the benefits of association there can be no division.

Long before the day of photoplays some great orator said, "We must hang together, or be hung separately." I say to you now that "You must stick together, or be stuck separately."

It is no uncommon thing to find people who do not care for poetry and now and then you will run across those who have no love for music. But you can never find any incapable of interest and enjoyment in pictures. This love of pictures develops early in childhood and continues throughout old age. It is exclusively a human blessing for which dogs and the lower animals have been given no appreciation whatever.

As we grow and become cultivated in pictorial matters, we demand better pictures, and this certainly means that moving pictures presented to our view shall not be marred with dirty scratches and oil spots, whether they be seen on release day or not until months after.

The novelty of moving pictures may fill the theaters for a time, but as novelty wears away people will demand quality. As we become familiar with a subject, we become critical of it. If we get a job in a stable, we soon become a good judge of horses. The same phenomenon occurs with regular patrons of a picture show—they become critics and you can hear them already discussing focus, light, oil spots and rain with as much knowledge as is possessed by the best of us. As you realize that the public is growing particular, it must be evident that to keep pace you must supply pictures which will meet their exalted views. This means among other things cleaner pictures.

Although I am interested in waterproof films, which can be easily cleaned by washing with soap and water, I am an advocate of cleaning by any process which cleans. It is not expected that the work of cleaning should devolve upon you exhibitors. This slight labor should be performed by the exchanges. About all you gentlemen can do towards cleaner films is to kick, kick, kick, and keep on kicking until you get them.

A Still Closer View of the Officials.

This reminds me of old Uncle Eph who used to work for a Chicago exchange. His duty was to keep the floor swept so that the customers would not fall over the money that was constantly overflowing from the pockets of the proprietor. You know that all exchange proprietors are very, very careless with money. Well, after Uncle Eph had worked here for a few months he had picked up enough money to buy an old mule and a wagon with which he went into the express business. Meeting him one day with his outfit, I said, "Uncle Eph, what name do you call your mule by?" and he answers, "I calls him 'Exhibitor'." "Why do you call him 'Exhibitor'?" I asked. "Case," said Uncle Eph, with a chuckle, "I calls him 'Exhibitor' case he such a pow-ful hard kicker."

Another story I read the other day told of a colored man meeting a dusky belle on the street and saying to her, "Howdy, Miss Mandy, whah is you gwine?" and Mandy replied, "I's bin whah I'se gwine." "Say, gal, whah you mean wid talk like dat, you'se bin whah you'se gwine'? Dat ain't no sense." Mandy's ire arose instantly and she said, "Looky hyah, nigger, don't you try to larn me nuttun. I'se bin down to de picture show, an' I'se gwine agin, so sho 'nuf I'se bin whah I'se gwine."

Concluding, I wish to again congratulate you upon your league, and to tell you that the best money you can possibly spend will be for dues and assessments in nourishing and maintaining it for all time to come.

Following Mr. Daniels was Miss Alice Walsh, who entertained the assemblage with several songs. George Magie of the Film Supply Company, made a few remarks of interest regarding the business in general, and his company in particular.

Stanly H. Twist, the well known Selig publicity man, expressed his regrets that Mr. William N. Selig, president of the Selig Polyscope Company, was unable to attend because of his absence from the city. He congratulated the organization upon its rapid progress, and its usefulness to the industry at large.

Introduced as the "Goat Man," Ed J. Mock, publisher of MOTOGRAPHY, made a short address. Special reference was made to the efficiency of the Chicago entertainment committee, and Mr. Mock asked for a rising vote of thanks to the committee.

Sydney Ascher, of New York, who was instrumental in having the next convention in New York, referred to the oppression of the exhibitors by the various municipalities, and offered a standing invitation to all present to take part in the New York festivities.

Joe Engel of the Universal Company, gave great credit to the members of the Chicago committee.

Referring to the relative positions of the "legitimate" theater, and the moving picture house, J. W. Farnham, of the New York *Morning Telegraph*, made an address of interest to everyone present. J. R. Freuler, of the Mutual Film Corporation, and C. M. Christenson, the national secretary, made brief remarks on pertinent subjects.

They were followed by F. J. Harrington, vice-president of the Pennsylvania branch, Mr. Eisener of the General Film Company, George W. Stevenson of the *Billboard*, John R. Rock of the Vitagraph Company, and Joseph Hopp of the Standard Film Exchange.

Convention Notes

Pat Powers didn't come. Dog-gone him, anyway.

Harrington, Pennsylvania—the only fil-lum man at the convention. Which is the worst, "movie" or "fil-lum?"

They say Sam Schiller lost a stick pin at the refreshment bazaar across from Selig's. But what is a stick pin to our only Sam! Searched the committee yet?

Universal got the baby dolls. Oh, you Jo-Bill Engle! As a picker of perfume you'll do.

MOTOGRAPHY, thou art a jewel.—*F. S. Daily.*

"The Goat Man" tells me he wants more time to prepare for future conventions. He overlooked the most important cog in MOTOGRAPHY's machinery. Ran out of subscription blanks yesterday and had to use his cuffs to record new subscribers. It beats the dickens how they clamor for Mock's MOTOGRAPHY, even though it's the classiest picture sheet extant. Blame it on "The Goat Man" and his "Man Friday," Haase!—Clipping from *F. S. Daily*—Bert Adler's caricature on reverse side. We turn all the good things over!

The busiest little delegate at the convention was Clem Kerr of Dayton. Next year they're going to buy him a phonograph.

Johnnie Rock is the real automobile kid—nobody but Johnnie ever thinks of trying to corner the available supply. Made quite a hit for the Vitagraph at that.

Eric Morrison was tickled stiff over running eight of the twenty-four independent reels Thursday night.

Harry Raver is some hiker. Anyone who will walk up to the eighteenth from the fourth floor has our sympathies. His little stunt was to leave *F. S. A. Dailies* on every floor. Next time he'll ride up and walk down. It's more fattening.

Claude Deagan butted Sinn into acting as piano player for him.

Kiewert's Pinkus Cigarettes burn like his Bio carbons—both good.

Did anyone see Woodward of the Enterprise Optical Company sell those Motiographs Thursday?

A. S. Traub was around glad-handing the exhibitors. Traub is getting away with the Amusement Supply stunt in great style. No one deserves more. Traub is a hard worker.

Fat Kinney says he only drinks at conventions. He's in favor of a convention every two weeks or so.

Robin the bird was given a hand when demonstrating how easy it was to set a "Simplex" shutter with the machine running. Great stuff, Robin, but why not cut out the slide thing? All the machine men are good friends.

Manager Day of the Essanay Company gave a little dinner Thursday to Dolores Casanelli, H. Tipton Steck, Stan Twist and A. L. Haase. Day is some little host with his "go as far as you like."

We have it on good information that Adrienne Kroell has two new scalps at her belt named Beecroft and Baker.

You may have notions of your own about dignity, but George Magie and Harry Raver were showing samples when they dictated their famous letter to Mr. Neff. The letter itself was done at midnight in 409 and put on ice till breakfast, when it was served in the *F. S. Daily*. A uniformed special messenger served it at luncheon on the nineteenth floor.

Who was the gink who asked why Saunders resembled a motorcycle? Just the same, Saunders doesn't skid!

H. E. Aitken and Fra Freuler, the braves from 60 Wall, blew in Friday and blew out Saturday. Poor Fra Freuler, he put in seventeen full minutes at the Chicago Mutual headquarters—the place that's near and dear to him, though far, far away.

The best wheeze that Bert Adler pulled in his daily grind was this: "Wonder how we'll all be lined up next year?" Everybody doesn't know. What is more, Bert wasn't thinking about himself.

It is pretty tough to lose your goat, but suppose somebody deliberately stole your Indians. Wouldn't it jar you? That Universal trio did it. They did everything.

After all, the convention as is a convention is yet to come. The idea of holding a ripper without the full quota of manufacturers! And then it will never look right till we have Carl and his lawyer; Bill Swanson and his smile; Pop Rock and his rocks; Pop Lubin and his laugh; Kurt Linn and his limp; and scores of others. While it was some show, there are others ahead. The game is a baby—wait till it grows up.

Old Mamma Two Beans was there, but they kept her behind locked doors. What they did to her was a plenty.

You see, it was like this: "Oh, what's the use! Ask Railroad Nehls to tell you what happened to the contemplated cruise to Granville avenue plant.

Bison, Bison, who's got the Buffalo?

Gee, fellows, didn't your ears ring a little when Bro. Neff slipped that hot one when he hinted that Bro. Bill couldn't handle the crowd? Well, they all stood up in the seventh inning and voted to a man that Bill and his crowd *could* handle 'em, didn't they?

As exhibitors of the unusual sort—the kind who exhibit—Balaban and Whelan are the real thing.

Faxon M. Dean, camera correspondent, was the only Pathe representative on the job, but did you see the bill boards?

Why did Charles Francis come along?

Daniel Webster McKinney—Dear Old Doc—was handing out a new card with the Great Northern's bear on the upper right. The Kennedy tag "It's a Bear" wasn't alluding to McKinney's.

Bernard M. Corbett, with his caddie, the Waterproof Ben, were doing the honors for Thomas A. Edison, who didn't even wire his regrets. You'll see all the big 'uns when you hit little old New York next year.

Did you meet old Chief Ogallafire in the fire water department of Essanay's?

Remember this: George A. Spoor and J. Stuart Blackton were the only heads of licensed concerns who graced the eighteenth floor with their presence. Hurrah for the braves!

How many of you met Cobb's cousin? And did you notice that Cobb and Magie had the real meg voices of the convention?

Geo. Kiewert made 'em smoke Bio carbons.

They say Jim Hoff is about to marry. Maybe that's why he wore his open face day and night.

Please forgive the Universal Band, even though you can't forget it.

The real heroes of the convention who came, who saw, and then ducked before the close. It's tough to be such slaves to business. Of the Universal crowd, Dave Horsley and Aubrey M. Kennedy beat it back to New York right in the heat of it. Al Warner, of Warner's Features, chaperoned 'em.

The Pere Marquette thirst dispensers will know better if the gang ever gets back.

The inscription on the loving cup that President Neff carried away with him reads: "An appreciation of the officers of the Universal Film Manufacturing Company." We are wondering yet how Messrs. Engle, Brandt and Kennedy could think of everything first.

After all, it isn't every convention that can boast of two daily newspapers. But there were two; count 'em: *The Film Supply Daily* and the *Universal Convention Daily*—both humdingers, boosting the *only* independent program.

Essanay Indian Heads in watch fobs and hat pins found an eager reception. The American "Flying A" fob was also very popular. Cobb made it too easy to get his gold. Everybody had a pocket full.

Who knows why A. K. Greenland went to Milwaukee? Is there somebody up there who likes the chap better than he is liked anywhere else? It would be a big contract, for Gaumont's representative is a prime favorite.

Who said that Selig wouldn't score? You could see the Diamond S in every eye after Wednesday.

John Rock's party of a hundred went via automobile and stopped off to see how the Essanay plant was faring. Geo. A. Spoor gave everybody in John's Vitagraph wagons the glad hand, and his camera man took the pictures. After which came Selig's. Hotel La Salle was a desert on Selig Day at the big show.

General Film Company knew there was something doing in Chicago alright. Its special representatives and general managers from all over were in evidence everywhere.

B. C. Coles had his regular Power No. 6 smile all polished and he used it effectively. You don't happen to know anyone else who smiles so nicely as Coles, do you?

It was quite a menagerie at that—a goat in Room 1813, a duck in 1812, a bear cat in 1811, some bull across the hall and a fox in 1806.

Stark says he wants to horn into this paper. Well, here you are, Skin-nay.

Michaels makes a better lecturer than a piano player. How about it?

The goat man butted into the *Universal* and *F. S. A.* dailies .500. Some butting average.

Kid Cobb was on the job. You can't pay for advertising with that phoney money, Kid.

Geo. Magie, with the Bull Moose voice, showed up every now and then on the 18th. George was tied up down in Room 408 most of the time.

Who won $7.85 and lost $8.75? Does anybody know?

"Well, by the gods" was missing from the line-up Thursday. He must have encountered a crisis.

3,800 copies of MOTOGRAPHY were passed out in two days and we didn't pinch down our regular mailing to do it. But we don't say 20,000, either.

Davis, of the International News Service, was on the job all the time. His is a new face—may we see more of it.

Joe H - - p (he has to buy his advertising if he gets any) was chief of the Pere Marquette Indians. Joe was such a good Indian, Little Bear's squaw got stuck on him. Oh, you Joe!

There's no use talking. More people duck the last of a three-reeler than go out at intermission. The manufacturers are going to wake up to this, after a while.

Too bad Oes wasn't there to hear the applause on his bully film. Daniel Webster wore a smile a mile long, Friday.

How long are these poor plundered advertisers going to fall for the 20,000 circulation bunk? There were two MOTOGRAPHYS to one of any other journal at the convention.

Essanay's Convention Activities

Another "scoop" was registered by the Essanay Company during the recent convention of exhibitors, inasmuch as Essanay was the only licensed manufacturer having an office at the Hotel La Salle headquarters in which to entertain the exhibitors, their wives and friends. Room 1811! This was the magic portal, with its electric sign blazing Essanay, that greeted the eye as one stepped from the elevators, and the steady stream of badge-bedecked conventionites crowding down the hallway and into the Big Chief's wigwam proved the fact of their having discovered a welcome oasis in the midst of a vast and thirsty desert. Not a stone was left unturned by the Essanay Company in providing comfort and conviviality for their good friends. Souvenirs consisting of handsome Indian head watch-fobs for the gentlemen, and Indian hat-pins for the ladies, were distributed, and tables at which an elaborate menu of refreshments were served were constantly filled by representatives from all parts of the country. Throughout the entire week the popular members of Essanay's eastern stock company, including Francis X. Bushman, Dolores Cassinelli, Beverly Bayne, Mildred Weston, Helen Dunbar, Evebelle Prout, Eleanor Blanchard, Lily Branscombe, Frank Dayton, Harry Cashman, Whitney Raymond and Bryant Washburn, were at Essanay's headquarters daily to welcome and meet the exhibitors and their friends personally. Honest endeavor always has it's reward, for at the conclusion of the brilliant banquet in the La Salle roof garden, a committee of six representatives extended to the Essanay Company, on behalf of the Exhibitors' League, a vote of thanks and appreciation for the courteous hospitality and entertainment provided by Essanay during the convention.

The big Essanay Chicago studio, seething with activity over the mammoth adaptation and dramatization of Longfellow's beautiful poem, "Robert of Sicily," in three reels, was crowded with interested exhibitors and their wives throughout convention week. The greatest wonder and admiration was expressed at seeing this massive production being enacted before their very eyes. At any other time the studio floor is always cleared of all persons not taking part, but for convention week this rule was set aside and the exhibitors and their friends were seated comfortably and given an excellent view of everything transpiring on the floor. Competent guides then conducted the visitors through the plant, explaining the various processes of developing, drying and assembling of film. Essanay's beautiful lawn with it's multi-colored flower-beds, and the newly constructed wall about the large grounds called forth expressions of admiration, and the exhibitors returned to the city with a substantial knowledge of the intimate workings of a big moving picture plant, and a keener insight into the product that is thrown upon their screens.

"I want to meet G. M. Anderson."

This was the first request of every licensed exhibitor upon entering the Essanay headquarters at the La Salle Hotel throughout convention week, and their disappointment was evident when told Mr. Anderson was with his company at Niles, Calif. However, this was swallowed up along with the excellent menu of refreshments served by the Essanay representatives and, armed with the Anderson postal photos in two poses, they departed with expressions of appreciation for Essanay hospitality and good-fellowship.

More Aeroplane Pictures

Weldon B. Cook, of Oakland, Cal., the youthful aviator, who has thrilled thousands of spectators with his daring flights at Lagoon, concluded his exhibitions at Salt Lake City, Utah.

While all of the flights of Cook have been successful and unmarred by accident, it was said by those who witnessed his exhibition that it seemingly represented the acme in aerial navigation. Mr. Cook took up a camera and at a height of 1,000 or more feet succeeded in getting some excellent views of the surrounding country. It is probable that an effort will be made to have the Commercial club use these views in some "boost" literature which will shortly be issued.

Letters to the Editor

Among the many letters that we have received regarding the following deserves more than passing notice, for it reflects not only our opinions on the subject of motion picture vaudeville, but also substantiates the feelings of the daily press, examples of which are published elsewhere in this issue.

EDITOR MOTOGRAPHY:

"It would be a gain for the motion picture business, ethically and aesthetically, and probably also financially, if your remarks on 'Vocalistic Afflictions,' page 39, No. 2, July 20, of MOTOGRAPHY, would be as widely appreciated as they deserve. I am a frequent patron at moving picture shows, but persistently avoid patronizing shows with a vaudeville attachment. Recently, while staying a week at Chicago, I visited two and three shows every evening, 5, 10 and 25 cent shows, but avoided all with a vaudeville attachment.

"While my doing so, did neither injure nor benefit any one show in Chicago, as far as a single patron is concerned, yet the frequent expression of my objection to the combination of vaudeville with the motion picture show may have a deterring influence upon others. In my humble opinion, the addition of the vaudeville lowers the character and standing of the motion picture show. The maudlin song and cheap imitation of the minstrel dance merely appeals to the sensual and the lower emotional instincts of the audience."

On the Outside Looking In

By the Goat Man

MY prayers go out to the exhibitors who didn't attend the second annual convention of the Motion Picture Exhibitors' League that was held in Hotel La Salle, August 13-17, inclusive. It was a truly great meeting. It taught those who came that the exhibitor was a particularly vital factor in the film business. He realizes, as never before, that there is strength in his numbers and that the membership in his League is one of the best of his investments. The exhibitor down the street who is his competitor will be regarded in a better light. Instead of trying to match his show, he will now be urged to join the League and learn the lessons that will make for a more profitable effort. W. A. Daniels had some nice things to say about the effectiveness of organization. Read what he said and profit thereby. I must hurry along.

* * *

Now that you are all back home and have had time to think it over, you discover that your business got along first-rate without you. Dolly took in the nickles and dimes and Bill took in the tickets and Isaac got 'em on the screen, whether you were there or not. And suppose that Bill did invite Martha and the four of 'em had an ice cream soda at your expense—what does that matter? You had a soda or something at somebody's expense, maybe, and that squares it. You found out that your business, as the proprietor of a picture show and as a member of the Motion Picture Exhibitors' League, could spare you for a solid week and that you and the missus could get away and have a perfectly delightful time. You are going to do it every year, too. And what is more, you are going to bury the hatchet and make friends with your exhibitor-competitor and next year you'll all go to the convention together.

* * *

There isn't going to be any attempt made here to cover the convention. It is too big a job. It is gratifying to the only m. p. magazine in the west that it didn't overestimate when it promised you a good, worth-while time if you would come to Chicago. It didn't repose more confidence in the entertainment committee of Chicago's Local than the committee deserved. If anything, the committee came in for too little praise. President Neff, himself, let a foot slip when he openly doubted Chicago's ability to handle the affair. But his fears were needless. Chicago's boys put it over and did it well. Other conventions will follow and there will be others to handle the details. After practice, there will be less bouquets and more kicks! Wait and see. This thing of handling a big convention isn't child's play. You must take care of everybody. You can't hold 'em out. Chicago had places for the biggest convention that has ever been held here this year, excepting the national political blow-outs.

* * *

But before I forget it, I want to slip Aubrey M. Kennedy, specializing the *Animated Weekly;* Joseph William Engle—handsome Joe; and Joseph Brandt—homely Joe—wott'ell does he care; every good thing I have in the shop. They were an unassuming, modest bunch, calling themselves "the live ones." What the rest of two thousand exhibitors and visitors called them was a plenty. No three men ever hit a convention harder or more often. They were simply up and at everything—day and night. They had a band and a boat and a blow-out. They captured the pretty maids and draped silk and silver banners on them. They hung something on somebody all the time. "It's Alive;" "It's a Bear;" Florence Lawrence; King Baggot; loving cups; Indians. They had every other thought locked up in the cellar. From morning till morning it was ever, everywhere "Demand that Universal Program." When you were properly bedecked to the limping point, they threw you into a seat and slammed the *Universal Convention Daily* into your tired arms and said: Read that. I have been going to conventions for fifteen years, but I never saw so much of everthing coming from one place. They had you fighting for your wind all the time. The best part of it all was the bully good humor that went with it. As a rule an advertiser can overdo on such stunts, but the three Universal boys came on with a big smile and something new

The Banquet Tendered to the Press by Stan Twist, the Selig Dopester.

every hour for four days and actually had the gang hollering for more. I thought the Cleveland stunts of these same fellows—minus Brandt—was the limit, but I'm now crazy for the next convention, just to see 'em work on their own ground. Hurrah for the two Joes and A. M. And to think that Horsley had to sign all the checks with his one good arm!

* * *

Johnny Rock, he of the Chicago Vitagraph office, reserved a place for me on one of his gasoline buggies, the day we all went out to the Selig plant. John had ninety-nine others along and to show the kind of stuff he's made of, he stopped his party at the Essanay plant where we had an open-air reception on Mr. Spoor's green grass. It was a happy stunt all around. John included the press boys, and we sailed up Michigan avenue, through Lincoln Park and along Sheridan road while the big crowd were traveling in the special cars provided for the cruise from the hotel to Selig's front door. At Essanay's plant the Vitagraph cars were filmed and, of course, Selig took us as we broke through the gates into his big corral. So that is how the Rock hundred got to Selig's.

* * *

Maybe Selig didn't get his as a result of Selig Day. If there was anybody left at the hotel, he must have been ossified. Look at the pictures of the mobs that were entertained at Selig's. They tell the story better than mere words. Stanley Twist was master of ceremonies and an extraordinary megaphone manipulator. Selig actor-folk were party pilots, and exhibitors by the hundred were shown how films were produced. In the wonderland they have read about, they became a part of it—were in the pictures themselves for the first time. What a pity the big Edendale plant might not have been transported to join the Chicago lay-out for just that day. Miss Williams and her animals were far apart! But there was enough in Chicago to satisfy, and if there wasn't enough within Selig's four city blocks, there was another block, north by northwest, just across the street, that had barrels of it on ice. The Selig day can't be written. It left thousands of variable impressions which would boil down to a single gladsome war-cry, all in favor of the Selig Polyslope Company and its popular head and staff.

* * *

Then the Film Supply Company of America; what of it? This: It was there. Down on the fourth floor, for a reason I can't figure out, but General Manager H. R. Raver for the Film Supply was on the job day and night, nevertheless. Then there was George Magie of the Solax Company, and Daniel W. McKinney of the Great Northern Film Company, and R. R. Nehls and Omer Doud of the American Film Manufacturing Company, and C. J. Hite and Bertram Adler of the Thanhouser Company, and Albert K. Greenland of the Gaumont Company, and C. Lang Cobb of the Reliance Company, and H. E. Aitken of the Majestic Film Manufacturing Company, all on the day and night staff of the big fourth floor suite. I couldn't spare the time to visit the fourth floor as often as I might have wished. When I went down there somebody always wanted to walk up to the nineteenth floor! They've got so used to walking up in New York that they did it in Chicago. All except Charlie Hite—his little stick wasn't strong enough. But I would like to know why that fourth floor thing.

Scene from American's "The Marked Gun," Sept. 4.

* * *

A couple of weeks ago I acknowledged receipt of an invitation to dine with Stanly H. Twist, Kurnel Selig footing the bill. It was some concession on my part to heed the "Plea of the Diamond S Dopster," but when 6:30 P. M., August 14, arrived, I was there. Jim McQuade, I think it was, delayed the festivities. He put in an hour overtime doing the valet stunt for Jim Hoff, who couldn't eat without his evening togs. At any rate, we waited an hour and the *World* might as well get the blame as not, for it can stand it. When seven-thirty came a

lot of half-starved newspaper men were ushered into the presence of this menu: La Hoya Cocktail; *Clipper* Clams—(Patrick offered grace); Celery, Olives, Radishes; Chicken Broth, *World* Wafers—McQuade, Bush and Hoff bit the froth in their steins); Boiled Salmon, Hollandaise, a la MOTOGRAPHY—(Woodruff, Haase and the Goat drank red wine to Selig's health); Parisienne Potatoes; Filet Mignon, Jardiniere, *Mirror* style—(Baker and Beecroft faced the East, in reverence to New York's second-grade cuts); Browned New Potatoes; Roast Philadelphia Squab, a la *Billboard*—(and to think Stevenson couldn't be there to help Ver Halen!); Julienne Potatoes au Cresson (Gee, I hadn't noticed before that potatoes were around three times, already, and the white wine just coming on); Hearts of Lettuce and Tomato—*News* style (for Saunders' sake, who had fried eggs and lentils); Cantaloupe, a la *Telegraph*—(with Babe Farnham on the corner of the table and Hollander and McArdle holding him from slipping—as if he could.) Then there was coffee and cigars and cigarettes and if I've forgotten something, I'm already forgiven. There was a quotation: "And a bite of this and that was tasted between drinks," which might have been just as apropos as Sid Smith would say, had it read: "And a drink of this and that was taken between bites."

* * *

And if the Twist invitation was unique, which I proved by showing in the previous number under the sign of the hollow-horned ruminant, the feed program was uniquer! On the covers were illustrations of the Selig Dopster and his troubles. There was the inscription: "In memory of a few hours spent with a few good fellows at the love feast given by Stan Twist—Selig Dopster." It was one of the events of the convention week that will outlive all the others.

* * *

The place cards were hand-tooled by Briggs and Smith of the *Chicago Tribune*. The menu covers were by Lederer. And to think that everybody skinned their coats after the picture was took. Fancy Hoff doing chicken broth in his open face!

* * *

What I want to know is why Selig gave out the licensed film makers pennant puzzle to a horde of people he expects to court favor with. I know that I can get a petition signed by every mother's son and daughter who got a puzzle that will blankety-blank the thing off the face of the earth. There is an admonition that goes with the box of blocks which says Selig got there after many years of unrelenting effort and struggle. So will you and the puzzle—after many years. Ding the thing, anyway!

* * *

It was a whirlwind week—the m. p. convention thing—and no mistake. With me it has been a whirlwind ever since. There were all kinds of attractions, and many, many people. When I recall the banquet; its order; its elegance; its eager men and radiant women; I wonder if the memory will cling to others as it does to me. When you realize that the whole program, from Tuesday till Friday, was the creation of a committee whose business before that week was identical with yours—booking and exhibiting films—you will agree with me that the committee was entitled to a rising vote of thanks. When six hundred people arose from their seats in appreciation of the efforts of the officers of the League and the members of Chicago Local, it was the least they could do. When they did it, the Goat felt that the part he had played wasn't half bad. I forgave Behold Me Saunders and Tear-Faced Bush and drowned myself in a bowl of Vitagraph suds. Oh, you convention banquet and your Bill Sweeney and your Pop Daniels and your A. J. Balaban and your Chris Whelan and your Joe Farnham and your John Rock! When I forget—not yet, not yet! Then to conclude, I saw the Blue Room going around, and around and Rock and Beadell and Spedon and Miller eating Welsh rarebits and club sandwiches. I recall that John Miller took me home in his car in the wee sma' hours of the next day. How grateful I am.

* * *

The next afternoon I was taking pictures on the Glad Tidings for Essanay. You'll find me dangling on the fore trysail vangs in the water carnival release. You gotta go some to maintain undisputed right to be the goat in the film business.

* * *

And to think that the last little token was a Universal carnation which was universally worn!

Proceeds Against Film Combination

It is reported from Philadelphia that the federal government has attacked the motion-picture combination in a civil suit filed there August 16 for the dissolution of the Motion Picture Patents Company and the General Film Company. Ten prominent moving-picture film concerns are accused of combining to monopolize the business, even to the extent of increasing or decreasing the number of motion picture theaters in which they have no proprietary interest.

The suit is regarded by the Department of Justice as one of its most important moves under the Sherman law, as it squarely asks for a judicial determination of the relation of that statute to the patent laws. The action will test the right of corporations and individuals to join their respective patent monopolies into one big monopoly through combinations and agreements.

The following corporations and individuals, who are officers or directors, are named defendants:

Motion Picture Patents Company.
General Film Company.
Biograph Company.
Thomas A. Edison (Inc.).
Essanay Film Manufacturing Company.
The Kalem Company (Inc.).
Lubin Manufacturing Company.
Melies Manufacturing Company.
Pathe Freres.
Selig Polyscope Company.
Vitagraph Company of America.
Armat Moving-Picture Company.
Frank L. Dyer.
H. N. Marvin.
J. J. Kennedy.
William Pelzer.
Samuel Long.
J. A. Berst.
Siegmund Lubin.
Gaston Melies.
Albert E. Smith.
G. K. Spoor.
W. N. Selig.
George Kleine.

Each of the defendants is alleged to have overstepped the bounds of the lawful monopoly granted by patents, and the petition asks that several complicated interlocking license restrictions, tying patents together, be ordered cancelled.

The government charges that unreasonable and oppressive restraints and conditions have been arbitrarily imposed on the manufacture and leasing of films and machines, depriving the public of the advantage of competition, especially the competition of foreign films.

A Pair of Edison Novelties

Philanthropy and Poem

IN the whole history of cinematography has there been made a film that has proven its usefulness more than this: The Rescue, Care and Education of Blind Babies?

The International Sunshine Society, a band of workers who labor without pay, opening the light of education and knowledge to blind infants and saving from certain

The Rescue, Care and Education of Blind Babies.

death and idiocy ninety per cent of children before the age of eight years, has given the Edison Company every assistance in the production of this picture.

Until recently blindness was connected with idiocy. Modern research in the treatment of the sightless has proven that idea a fallacy. Until within a year, the blind infants of New York state were placed in institutions

Believe Me, if All Those Endearing Young Charms.

for the feeble minded. Unless they are taken at an early age they will soon grow up to be idiots; living in the dark, groping along suspicious of everything and everyone, not even knowing how to eat solids before the age of eight, they either die or become hopeless idiots.

This film shows how these unfortunate children are educated. You see them run and play, dance, read and write, and the blind teaching the blind to walk. You are shown little Rachel as she appeared before the governor and how, through her pleadings, a bill was passed allowing blind infants before the age of eight to be placed in proper institutions. You are also shown the Arthur Home, the only one of its kind in the world (a free institution for blind children where they are taught the beauties of nature and of life). Rachel is a living example, as she was rescued from one of the institutions for the feeble minded when only a few months old. She can do almost everything that a child with eyesight can accomplish.

A remarkable, interesting and astonishing film to one who does not know of this work.

All lovers must hold dear in their memory and secret within their hearts the name of Thomas Moore for perhaps no other singer of sweet songs has played more upon the tender chords in the lovers' litany than the Irish bard, Tom Moore. And of all the songs "Believe Me, If All Those Endearing Young Charms," is the sweetest that has been sung. In setting this beautiful melody to the

Blind Babies at the Arthur Home.

canvas the Edison Company has handled it in a distinctly modern style, yet retained all the poetical atmosphere of its theme.

CAST OF CHARACTERS

Helen Van Worth.....*Laura Sawyer*
Robert Burton, the artist.....*Benjamin Wilson*
Mary West, a model.....*Bessie Learn*
Guests at the reception, hotel employes, etc.

A famous artist is in search of a model to pose for a picture entitled "In Love" and he finally engages a sweet faced young girl whose beauty and simplicity capture his heart.

One night after a reception at his studio where the simple model learns of the artist's love for her, a society lady, whose imagination had led her to believe that she would soon become his wife, wakes up to the fact that she has a rival. We are introduced to the lines of this beautiful poem and the manner in which the Edison Company has carried out its theme is brought about by an accident to the model which bids fair to disfigure her for life. Still having faith in her artist lover she awaits his

coming in the hour of her misfortune, but by a ruse of the society lady the model is prevented from knowing that her lover is hastening to her with a famous specialist and she, poor girl, believes that the loss of her beauty is the cause of his loss of affection so she flees from her rooms leaving no traces behind her to tell where she is going.

After months of weary searching the artist gives up hope of ever finding her again. She returns thoroughly restored to health and beauty and on entering his studio she finds him asleep in his chair. Not knowing whether he entertains any further affection for her, she leaves a note upon his table. But fate decides it is never to be read and he burns it up not knowing that it contains the one knowledge he most longs for.

Months afterward they are brought together and "the heart that has truly loved, never forgets but as truly loves on to the close."

Frohman's "Queen Elizabeth"

Artistic in every sense, not only in the superb work of Mme. Sarah Bernhardt and her all star company, but in the costuming and scenic effects as well, the four-part historic photoplay, "Queen Elizabeth," is one of the most beautiful and strongest films yet produced. Although the writer knew in advance of the capabilities of the producers, the film exceeded even his expectations, and the Famous Players' Film Company are to be congratulated upon their success in this great undertaking.

The play opens at the time when the Spanish Armada lay in the Thames threatening to destroy England body and soul, with Elizabeth and her court anxiously awaiting the news of the impending battle at Plymouth. At last the long night of suspense is at an end, when the news of the defeat of the Armada at the hands of Sir Francis Drake is carried to Queen Elizabeth by Robert Devereux, Earl of Essex.

From this moment the Earl of Essex becomes the acknowledged favorite of the Queen, and the pampered favorite of the court, and when a new Lord Lieutenant is to be appointed to Ireland, Essex obtains the coveted position.

Edison's "Believe Me, if All Those Endearing Young Charms."

While Lord Essex admired his generous sovereign, and appreciated her regard for him, it was impossible for him to return her love, for she was many years older than himself. Unfortunately for Essex, his affection turned to the Countess of Nottingham, which resulted directly in his downfall, and the death of Queen Elizabeth. Before departing for his post in Ireland, Essex comes to bid farewell to the Countess, and with her in his arms, is observed by Nottingham, who vows vengeance on Earl Essex.

Bent on the downfall of Essex, the Earl of Nottingham conspires with Bacon, and accuses him of treason and deceit. Through an anonymous letter written by Nottingham, the Queen learns of the clandestine love of Essex for the Countess of Nottingham, the truth of which is proved to the Queen by accident.

First Aid to the Picture Men. Thanhouser in "The Capture of New York."

Torn between her emotions of love and pride, the Queen orders his arrest and conviction, and finally yielding to the entreaties of Nottingham, signs his death warrant and orders his execution.

Lord Essex was brave, bold, courageous Little wonder that as Queen Elizabeth watched him pass through the crowded street on his return from Westminster after his condemnation, literally walking to his own funeral, she sobbed in self-reproach and repentance, and realized, in the moment of his impending death, that his life was necessary to hers and its happiness.

From the day of Lord Essex's execution, every hour brought Queen Elizabeth nearer the grave. The ghosts of the happy minutes of the past, when she lived in Essex's smiles, would steal into her memory and leer at the futility of her repentance. The gaiety and laughter of the palace were succeeded by the sombre silence of a thing worse than death—hopelessness. Until at last the broken heart and the weeping soul found peace in the final rest.

Otis Turner Joins Universal

For the past two months Wm. H. Swanson has been laying his plans for the production of spectacular western pictures. He has secured a great number of horses and quite an army of Indians and other people necessary to give the gigantic effect so eagerly sought for by exhibitors in western pictures. He has also gathered around him some of the most capable directors that have produced pictures in this country as well as abroad.

The latest to join Mr. Swanson's company is Otis Turner. Mr. Turner has, for some time past, been connected with the Imp brand of Universal pictures and has produced many photoplays of exceptional merit. Otis Turner has a creative mind and is one of the most wonderful producers that has been identified with either the licensed or independent manufacturers.

"The Daughter of the Spy"

A Cines Feature

THE story is called "The Daughter of the Spy," by Cines. It opens in one of those revolutionary states where it is customary for parties to be at variance and where plots and uprisings are of frequent occurrence. Count Rossi is the leader of a party of malcontents, and holds meeting after meeting with his friends until their plans for a general uprising of the populace against the government are perfected. At length the time is ripe for the insurrection, and immense crowds gather together, and, led by the count, make a determined attack upon the castle. The soldiers are evidently prepared for their coming and a terrible fight takes place, ending in the total defeat of the insurgents. Rossi manages to effect his escape for a time, and seeks shelter through a window in a cottage. Here he finds a frightened girl whose first impulse is to scream for help, but the count explains his plight, and, showing his wounded arm, her sympathy soon outweighs her fear, and she procures hot water and dresses his wounds. Beatrice, for that is her name, is only the daughter of a cottager, but she has a woman's gentleness in tending the afflicted, and soon the count is made comfortable, while she goes to apprise her father of the strange guest she is entertaining. At first her father is indignant but his cupidity shows him a way by which he can profit, when the name of the count is mentioned, for a large reward is offered for his capture. He accompanies Beatrice to her apartment, where he is satisfied of the count's identity, and then leaving them together makes his way to the authorities and betrays the count's whereabouts. A file of soldiers is immediately sent and Rossi is made a prisoner.

The Spy Refuses His Daughter's Supplications.

As the soldiers are taking him away he overhears the officer in charge tell Beatrice's father that the reward shall be his; then he understands that he has been betrayed. Furious, he would have killed the spy, but for the intervention of the soldiers, and thinking Beatrice also a party to his betrayal, he pours out upon her all the bitterness of his heart, for he had learned to love her, and her apparent duplicity fills him with indignation. He is taken to the governor, where after a mockery of a trial he is condemned to death. His liberty is offered to him if he will consent to betray his associates. The offer he indignantly refuses, and he is carried away to the dungeon. Beatrice is heartbroken at her father's treachery, and makes up her mind to leave him. She has a humble lover, Louis, the son of the head jailer of the prison where the count is confined, awaiting his execution. Through him she hopes to be able to assist the count to escape. She makes her way to the castle and sends a message to Louis, who comes out to meet her. Together they wander through the pretty grounds, until Beatrice promises to be his wife. They enter the castle in order that Louis may present his intended wife to his father.

In the kitchen seizes an opportunity when the two men leave her to herself, to place a note in the loaf of bread intended for the count, bidding him watch for a friend. The prisoner receives the letter from his unknown friend, and is at once buoyed up with hope. Beatrice prevails upon Louis to show her around the castle, and where the noted prisoner is confined. She makes her plans and at a convenient moment presses a drugged handkerchief to Louis' mouth. She procures his keys and makes her way to that part of the castle where the count is imprisoned. The key of his cell is missing, but the heroic girl enters the cell above, and with a pickaxe breaks her way through the ceiling after removing the heavy flag stones. She throws down a rope and the count climbs up to where she is waiting for him.

When he discovers who has rescued him, his first impulse is to return to his cell and suffer death rather than be indebted to her for his release. She throws herself on her knees and begs him to escape, explaining her entire innocense, and denouncing her father for his treachery. His faith once more restored in the devoted girl, he assists her in the preparation for their flight together. By means of a strong rope, they climb out of the window, and descend the castle walls until they reach the beach, a wonderful and daring feat. Meanwhile the spy

is on the battlements with the sentry, keeping watch over the prisoner's cell.

All at once the spy discerns the figures of the count and girl descending the rope. He seizes the rifle from the guard and just as the escaping prisoner and his companion reach the beach he fires and shoots Beatrice. The count lifts Beatrice in his arms and carries her over the rocks into the open sea, but when he finds that she is dead he returns to the shore with his burden, and awaits the appearance of the officers. The alarm is given, and soldiers swarm from all parts of the castle and descend to the beach, where the spy discovers that he has killed his own daughter. The shock kills him instantly, and the count is carried back to his cell to await the time of his execution, heartbroken at the fate of the devoted girl, who had given up her life for his sake.

Picture Show Deal Called Fake

The story that centers about the cleverness of Alton C. Mann and his double-action, in-and-out moving picture show deal ends in arrest and prosecution on a charge of swindle. Otto C. Duke, innocent purchaser and now disgruntled proprietor of the theater, double-action and all, is an honest man and is entitled to his money back.

Mann realized the other day that his theater was not a money-making concern. Being, as aforesaid, a clever man, he decided to advertise. The result was that Duke appeared on the scene with $1,000, good and true, and a possible buying mood. But Duke asked to see the money going in at the little glass-fronted office before the main entrance before he turned over his thousand. And Mann was willing to do the showing.

With his eyes shining forth appreciation of the fortune that soon was to be his, Duke distinctly counted several hundred apparently enthusiastic customers who passed before the slot in the window and dropped in their nickels.

"Please, Mr. Mann, I think I'll take the theater," Duke said, as he counted out the purchase price and signed up the lease.

Then he stepped through the door and saw for the first time the interior of the building. At last had been found a theater with sufficient exits. And all of the exits had been put to serviceable use, too. The "hundreds" of patrons of the theater had entered the front door, rushed through the side and rear entrances and appeared once more at the front window with a newly acquired nickel. Only thirteen persons were seated in the playhouse.

"He used his friends to double up on me," Duke complained, "and I want him arrested."

The arrest was secured and Mann now is being held under a warrant for swindle.

Mr. H. H. Buckwalter, Manager of the Denver Branch of the General Film Co., was an interested visitor at the Selig Plant in Chicago.

Scene from Cines' "The Daughter of the Spy."

Photoplays From Essanay's

Some Coming Features

FOR the first half of September the Essanay Company announces a fine booking of unusual subjects, both dramatic and comedy.

"Back to the Old Farm," a bucolic comedy-drama released September 3, is a pleasing and novel, as well as educational production, relating the story of a young city chap who returns to the old farm on which he worked as a boy, only to find it now a marvel of up-to-date improvement and equipped with the latest labor-saving machinery. On spirited mounts he rides over the broad acres with his sweetheart, and one of the things that strikes his fancy is an auto-wagon used to convey various material in the fields. The good farmer tells the boy the auto-wagon is good for anything, and therefore is astonished next morning to discover a note from the happy couple declaring the auto-wagon is just the thing for moonlight elopements and that they will be back soon. So the fatted calf is slain and elaborate preparations made for the welcome home-coming. Beverly Bayne, William Bailey, Lily Branscombe, E. H. Calvert and Frank Dayton have the principal roles.

"The Wildman," released September 5, is a hilarious comedy subject that is a riot of mirth from first to last, and features Howard Missimer, Essanay's popular comedian, in a roaringly funny role. The story has to do with the love of Billy for Mildred, the charming daughter of old Barnabee. Charles, an artist, also loves the girl, but Barnabee objects to his attentions and urges Mildred to accept Billy. She refuses and accompanies Charles on a sketching trip into the woods one morning. Billy sees them and informs Barnabee, who rushes into the forest in his shirt-sleeves to bring the headstrong girl back. Meanwhile, Billy finds the artist's deserted outfit and, for revenge, pours a bottle of glue over a log, thinking Charles will sit in it. But the trick proves a boomerang, for old Barnabee is the victim and loses an embarrassing portion of his trousers, so is forced to decorate his exposed person with tree branches and other odds and ends. Consequently he is taken for a wildman by some girls and the town constable at the head of a posse start in pursuit. Billy joins the crowd and proves himself an arrant coward. Charles comes upon Barnabee and the mystery

"The Wildman" Himself.

"Twilight."

is explained. Billy is forced to confess and Barnabee orders him from his sight while Charles takes Mildred in his arms, much to the old constable's bucolic amusement. Mildred Weston, Billy Mason, Charles Hitchcock and Harry Cashman have the other principal roles.

"Twilight," released September 6, is a beautiful dramatization of one of the sweetest musical compositions ever written. The fading years of two old sweethearts bring back the tenderest of memories as they watch the budding romance of their pretty granddaughter. Within the old-fashioned parlor, lights turned low and the twilight flooding its enchantment through the window, the old lady sits at the spinet and once more plays the wondrous chords that transport them back again to the days of their youth and the tenderest of courtships. Then the life on the little farm unfolds before them. Gradually the years creep on, and the old people find that the dim seclusion of the parlor is much better than following the plow through the heat of midday, and once again the sweetheart of his youth takes her place at the spinet and plays while the old man slowly beats time with his withered hand and the smoke from his pipe curls upward in the darkened room. The fading scene returns us again to the parlor just as the pretty granddaughter and her lover enter and discover the old people nodding over the last strains of the wonderful music. Slowly he takes her in his arms and kisses the wan lips, while the flickering flame leaps up rejoicing, then only the wondrous twilight bathes the room as the shadows steal over all. Francis X. Bushman gives another masterpiece portrayal in the character of the old man, Martha Russell is his aged wife, Ruth Stonehouse is the granddaughter and Harry Mainhall her sweetheart.

"Billy McGrath's Love Letters," released September 13, is another of this well-known series with John Steppling in his popular role of Billy. The plot is unique, in that Bill has a quarrel with his sweetheart and their engagement is broken off. Then the inevitable little sister breaks up the affair by getting hold of Billy's love letters and distributes them in the various mail-boxes around the neighborhood while playing a kid game. The efforts of Billy and his sweetheart in recovering the letters lead to a reconciliation and all ends happily. Beverly Bayne plays Billy's sweetheart and little Eleanor Kahn is the mischievous small sister.

G. M. Anderson, the popular photoplay star, is seen in his famous role of Broncho Billy on September 14, when "Broncho Billy Outwitted" is released. The plot is strong and unusual, and deals with the cleverness of a Western girl in outwitting Broncho in a most unique way. The production is one of the finest of this great series, and Miss Vedah Bertram is seen in support of Mr. Anderson in a gripping portrayal.

For the latter half of the month the Essanay Company announce several productions of unusual merit, including the wonderful scenic release "Across the Broad Pacific," a trip to the flowery kingdom of Japan, and many others of great interest.

Scene from Essanay's "A Woman of Arizona."

Moving Pictures—Our Greatest Humanizer

By Rev. W. H. Carwardine*

Copyright, 1912, Selig Polyscope Co.

WHERE is the prophet who can foretell the ultimate significance of the moving picture? I question the ability of any man to say just when this new thing under the sun will reach its climax of development. The more you study it and ponder over it, and let your imagination move out under the spell of it, the more wonderful does the art applied to the production of these little films seem.

That we are all instinctively children is the philosophy of the moving picture. We are children in that we love pictures. Give me a book with pictures and I prefer it every time. A few years ago, and not a newspaper in the country displayed pictures in its columns. Today no journal can exist without the aid of the camera. Important on the staff of every paper in town or country is the man with the camera. The advertiser must have pictures to display his wares in the advertising columns. The city editor demands a photograph, and you must get it if you expect to hold your job. It is a great day for the illustrator. The clever cartoonist is the man who gets the big salary.

The moving picture man has caught the spirit of the age. He knows that the appeal to the eye is the charm that captures us from childhood to old age. To the picture he has added the vital force of action. Action added to the scene is a double increase of delight. We must have action in the story, we must have action on the stage, and plenty of it. And so action becomes the red blood and vital energy of the moving picture.

At once the universal world is brought before us in the motion picture, and all its wealth of mystery and beauty is mine for the looking. Nothing in the heavens above, the seas beneath, or on the face of the earth, can be hidden from view. "All the world's a stage," said the great master of dramatic art. It is a dictum that we accept as we do the gospel. But it has been a stage circumscribed and cramped within certain definite lines and boundaries.

The moving picture has crossed the lines and broken down all boundaries. Wherever you can focus a camera, and that means everywhere, you can have a picture of real life of which the fathers never dreamt. The teaching of the good Book has come to its own when it says, "There is nothing hidden that shall not be revealed."

From a prize fight to the coronation of a king, all the myriad happenings of life, serious, solemn, humorous and fantastical, are caught by the wizard of the films.

It is the real thing. It is not a make-up nor a make-believe. Infinite details that your artist with pen and made plain. Nothing is lost on the crowded street; the

Scene from Essanay's "Back to the Old Farm."

brush, your scene painter, can never produce, are here military procession, the bull-fight, a naval target practice, a presidential candidate making a speech before his enthusiastic audience, the big steamer moving out of her dock toward the ocean voyage, the excitable moment of a big baseball game when bedlam breaks loose, a train wreck, and, marvelous to relate, the every motion of a flying machine careening through the air, breaking a world's record.

You cannot deceive the little pictures, nor lie to them. They are the embodiment of honesty. Even if you try to hide your face, they will disclose your evasion. The man with the film machine is the modern Nemesis. He will get you if you don't look out. He delights in the good. But the weak things and the foibles, things crooked, shams and inconsistencies, cruelties, injustice and violations of law are equally accessible to him.

The moving picture is the art preservative. You have seen Edwin Booth in Iago. What would we give to have the real expression of the great actor so preserved that in after years we could see his every shade of facial look recorded on the screen. This could have been done. And the very intonations of his voice accompany the picture. The great orator, the stage artist, will in time come to appear before the lens and shutter, so that posterity may also enjoy the reality of expression emphasized by genius. Clinging to the rafters over the head of William Jennings Bryan, I heard him deliver the speech of "The Cross of Gold," that paved his way to fame. What a scene the vast coliseum presented, and what a chance it would have been for the moving picture mechanician! Some one speaking of Madame Bernhardt, says that "to watch the movements of her fingers in one scene would be a liberal education to the ordinary actress."

The day is coming when all art, invention, scientific investigation, research into the realms of nature, myriad forms of industrial achievement, reforms of every description, travels and explorations, will pay their homage to the power of the moving picture manipulator.

As an accompaniment of education, who can estimate the value of the moving picture in the class room? If you want a clean city, if you would hasten the eradication of vice and dirt and disease, would teach the children what a dirty little disease-breeder the common house fly is, show up the rottenness of foul and badly ventilated tenements, emphasize a thousand lessons in the adulteration of foods, the difference between the production of clean milk and bad milk, then you will have to do it with the moving picture. The awakening of the masses to the terrors of the white plague, illustrated by the man with the moving picture machine who deals with every phase of the battle with tuberculosis, is worth more than a thousand volumes and a million lectures. The moving picture makes every school boy a reformer and every school girl a more intelligent mother and homekeeper in the days to come.

The moving picture is the most humanizing device this side of eternity. It will hasten more desirable reforms in social and industrial conditions in quicker time than the pen of the magazine muck-raker or the impassioned oratory of the intense reformer. Show them up, these bad conditions of the sweat shop. Throw on the

Scene from Selig's "The Indelible Stain." Copyright, 1912, by Selig Polyscope Company.

Scene from Cine's "The Daughter of the Spy."

lime-light and let your picture man spin his films, so that we can see the actual working conditions of the little children dwarfed and dying at the loom, on a pitiful wage, that dividends may be produced out of flesh and blood. The over-worked employee amid the raging fires of the steel mill, the colliers who risk life in the bowels of the earth, the toiler in all places dangerous, should thank God that out of the brain of an Edison, and the craft of the moving picture man, the world sees and feels his needs as never before.

The preacher has found the moving picture to be an aid to his work. Its potency in that direction has not yet been fully discovered. It will not take the place of liturgy or sermon, where personality, voice and gesture will ever play the first and essential part in the emphasis of truth. But it will have a part in the program of religious development. It will help to win back the crowd. It will aid in the appeal to the heart. It will attract men to the temple of worship. The parables and miracles of the Divine Master can be so presented to a certain type of humanity as to make real, with added voice of the preacher, the lessons of holy writ. What a power it would be in a Sunday school to close the session with a five-minute film review of the day's lesson. That would bring out the youngsters. The drink habit, the cigarette evil, and many of the vices against which the church would warn its youth could not be more strenuously exposed than with the moving picture.

The moving picture has revolutionized the field of playwright. It is simply a new development in the world public amusement. The development of the five and ten cent theater has been the marvel of the age. It has been good and bad in its influence. Municipal legislation has met the emergency and weeded out the bad. This lighter and cheaper form of amusement is here, and here to stay. It must be regulated and its better side developed. It will not do to rail at it, and seek elimination. You can regulate Niagara easier than eliminate the demand for amusement. We live in a weary day, a toilsome age, a strenuous time for the average man who lives in the city and strives for a living. Even if his wages are better, all else is higher in price, and the struggle is bitter. The jaded nerves, the throbbing brain, the tired muscles demand relaxation. Better rest the body through the eye and flash a good picture on his mind than fire his brain in a saloon with rotten whiskey. Provided that the show is clean, better that the lad should seek amusement in the motion picture amusement hall than in the pool room.

As an illustration of this, a saloon keeper of Chicago observed a falling off in his trade. He missed the youth who had frequented his place. A few doors from his saloon he found them with hats off, enjoying the moving picture entertainment. Later another one started on the other side of his saloon. This was too much. He sold out his saloon, went into the moving picture business, and made more money with a clearer conscience than in his former business.

The moving picture demand is not a destruction of legitimate drama nor an infringement on the field of the

of amusement. The one cannot do away with the other. New forms are ever arising in the many sided phases of human activity. We stumble on new inventions and it disorganizes old notions and preconceived ideas. Adjustment inevitably follows, and antagonisms are smoothed over by time and custom. After the public desire for the moving picture amusement has been satisfied and its satiety been overcome, this form of pleasure will seek its proper level, accepting its share in the public demand, and the glutted market recede to its legitimate and natural level. The old form and the new will each find their place and have their share in the ducats spent on this type of pleasure.

That the moving-picture industry is not altogether a producer of amusement, that it has an application to manifold other important fields of human effort, and that it has an accepted standing in the commercial life of the nation is evident when one considers the matter from a business standpoint.

A visit to the Selig Polyscope Company's plant is a revelation to the uninitiated. Situated on the northwest side of the city of Chicago, occupying an entire block, it is at once unique, strange and fascinating. It is one of the three plants owned by this organization in which over a million dollars is invested. Like all other big combinations of centralized capital, it is the survival of the strongest and the fittest.

At the south end of the block is situated a building well adapted to the exigencies of the Polyscope industry. The summit of the building is a great enclosure of glass, a mammoth sun parlor, an immense photographer's studio. It is as light as all outdoors. In this auditorium, ideal for its special purpose, is floor space on which settings are arranged for the portrayal of any scene demanded by the playwright. I observed seven distinct scene settings in which little plays were being enacted by first-class actors and actresses. I watched one little bit of play for a half hour. The prompter held sway over five actors. Again and again they enacted the part, which was but a brief portion of the play that was to be sent out on the road. What patience, reiteration, and rushings back and forth, to get every detail in gesture ready for the film. It was real acting. They spoke their lines in order to get right facial expression and force of gesture. Very patient were these players. I caught a lesson that I will never forget. If a preacher was as particular in the preparation of the delivery of his sermon as these actor folk to amuse the people, how much more effective would be his sermonic message. Just at the crucial moment when the prompter had the piece to his liking, he had the film man turn his reel as they went through the scene in its final representation.

Every convenience for the actors is supplied on another floor in the way of dressing rooms and rest rooms, equal to those of the best playhouses of the city. The best artistic talent is employed—high salaried people. One young woman long in the employ of the Selig company is said to be the best motion picture artist in the profession. The property room is as complete as anything of its kind on the continent. It is a marvel of orderliness, a well-equipped store room for any imaginable thing required at a moment's notice by the stage setter. An army of carpenters, mechanics, painters and roustabouts were at hand busy in the working out of details connected with plays to be enacted before the lens and transferred to the films. Cosy little rooms are here and there interspersed in quiet corners where the playwright can work out the scenes and creatures of his imagination.

In connection with this part of the industry was a half block of outdoor enclosure where open air scenes could be enacted. Scattered about the grounds were representations of coal mines, tunnels, a great revolving arrangement on which scenes were painted, real cars set up and a train wreck portrayed. A three-story house had been erected on the grounds, set afire, and a realistic fire scene, fire department and all, was enacted for the man with the films. There were old castles, grottoes, Peary's north pole expedition, a great cement bottom arrangement for a lake of water on which real ships are built and scenes of the sea presented. There were bronchos, ponies for the wild west cowboys, a very valuable collection of dogs, some of them from the far north, dog sleds and the paraphernalia of an Arctic expedition. Vehicles of every description, ancient and modern, were stored in a large building, ready for the scene required.

Intensely interesting was the section where the films were prepared for the market by expert hands. The washing, drying, tabulation and preservation of these films require highly skilled labor. Thousands of yards of films were arranged in a room where at a moment's notice they could be produced for the trade. Even the dark rooms were remarkably adapted for the special work required of them.

Finally we were conducted into the room where in darkness the completed product could be thrown on the screen. Here each film is thoroughly tested, marked and catalogued for service. We were treated to a view of one of the choice products of the company entitled "Lost in the Jungle." It was a little bit of love and danger in the wild jungles of South Africa. The heroine had fled into the deep forest. There she was attacked by a tiger, killed the brute, and was rescued by a pet elephant. To produce this the Selig Polyscope Company had spent a small fortune, had trained two tigers and an elephant, and had repaired to Florida with the entire outfit to produce the real thing—a good illustration of Yankee enterprise and an evidence of the risk, expense, patience and determination incident to an industry that is one of the marvels of the twentieth century.

List of Registered Exhibitors

ARKANSAS.

Saul S. Harris, Gem-Royal, Little Rock.

CALIFORNIA.

Ben Michaels, five theaters, San Francisco.

CANADA.

Paul Le Marguard, Starland Theater Co., Winnipeg, Manitoba.

AUSTRALIA, N. S. W.

D. C. Jeffrey, The Greater J. D. Williams' Amusements Co.

GEORGIA.

W. H. Peck, Atlanta.

ILLINOIS.

New York Health Films

The moving-picture shows which have been given in Manhattan during the summer by the Department of Health and the committee on the prevention of tuberculosis will be shown in some of the Bronx parks.

Ferdinand D. Sanford, assistant secretary of the committee, said that he felt that the picture shows had been a great success. More than 100,000 people saw the pictures in Manhattan during twenty performances.

Hundred Indians Camped on Selig Grounds

For the last two and a half weeks, the Selig Polyscope Company's Chicago studio grounds have borne the appearance of an embryo Indian reservation. Over one hundred Winnebago red men from the government quarter at Black River Falls, Wisconsin, have been camped on the Selig grounds while that company has been producing its big three reel Fort Dearborn massacre picture. The picture is being made from the story or historical novel by Randall Parish entitled "When Wilderness Was King." The Selig company says that it will be the greatest Indian picture ever released by the house and this statement means a great deal when we remember former successes along these lines. Many of the famous Indians who took part in the Selig production of "Custer's Last Stand" are again seen in the present visualization, among them being Aleck Longtree, William Whiteswan, Mr. and Mrs. Harry Brownbear (who are on their honeymoon), James Ogalalafire (a Sioux chief), Henery Eaglebend, and the great Adam Thunder, considered the greatest living chief.

Insane Asylum Films

Preparations are under way by the state hospital commission for a unique exhibit at the state fair, to be held in Syracuse, N. Y., in September, which will illustrate by moving picture films the daily routine of life in the state hospitals for the insane. The film will be 1,000 feet in length, and depict the fittings and workings of the wards of the state, their field work and other doings at these eleemosynary institutions.

Special operators have been at work for several weeks securing the pictures and no detail has been spared to include every interesting feature from the time the patients arise in the morning until they retire at night.

In order to spare both the patients and their friends and relatives humiliation, the identity of every inmate will be carefully guarded. In groups where it is necessary that features be transmitted through the camera, nurses and attendants will pose.

When it is considered that there are 32,000 inmates of the several state charitable institutions under the jurisdiction of the state hospital commission, the interests which this carefully collected series of films will arouse is immediately apparent.

Secretary Timothy E. McGarr, of the state hospital commission, is arranging for the moving picture exhibition. He stated that the pictures would be exhibited twice each hour in the booth which will be set apart for the use of the state hospital commission. Referring to the project, Mr. McGarr said:

"Our exhibition will be a decided adjunct to the knowledge that the average citizen at present has of the workings of the state institutions over which the state hospital commission has jurisdiction. We have triel to include in our views every interesting feature connected with the daily life there."

Pictures of Physical Tests

The behavior of metal tubes under compression has been the subject of interesting experiments by a French scientist, who has made tests with metal cylinders as tiny as 0.023 inch in diameter, 0.027 inch high and with walls only 0.00004 inch thick. These little tubes were submitted to compression in a hydraulic press, the piston of which moved at a constant slow rate of speed. The gradual changes in the shape of the tubes were photographed by a motion-picture camera.

Installation of Projectors

An extensive set of specifications has been made recently for the Underwriters' Equitable Rating Bureau of Portland, Ore., by F. D. Weber, their electrical inspector. Parts of the specifications are as follows:

It is urged that, wherever possible, the moving-picture machine be located at the end of the room opposite the entrance, instead of at the entrance, as is usually the case.

The arc lamps used as a part of the machine must be constructed similar to arc lamps designed for theaters, as far as practicable, and the wiring to the lamp must, at least, be the equivalent in current-carrying capacity of No. 6 B. & S. gauge copper wire.

Wiring must all be in approved rigid or flexible conduit (this includes booth, auditorium, dressing rooms or any part of the moving picture theater). Each picture machine, dissolvers, flood or spot light must be wired as a two-wire circuit, and a two-pole switch and cut-out must cut off and protect the resistance and arc for every machine. All conduit must be brought to a point as near as possible to the arcs of the machines. Connections from arcs to conduit must be made with asbestos-covered wire. Conduit must be rigidly supported in every case.

Rheostats or other necessary current-reducing devices must be made entirely of non-combustible material and of approved design. Must be mounted on non-combustible support in such a manner that there will be an air space of at least 3 inches on all sides. The rheostat must be of inclosed design or be completely inclosed by a netting with a mesh not greater than 0.5 inch. When the resistance is not hung in the operating room and the same is excessively hot, it must be properly protected by asbestos. It is strongly advised that resistances be suspended from the ceiling on straight insulators. When it is possible, the resistance should be located outside the booth.

Top and bottom reels must be inclosed in steel boxes or magazines, each with an opening of approved construction at the bottom or the top, so arranged as not to permit the entrance of flame to the magazine. No solder is to be used in the construction of these magazines. The front side of each magazine must consist of a door having spring hinges and swinging horizontally, and provided with a substantial latch. An automatic shutter must be provided, and must be so constructed as to shield the film from the beam of light whenever the film is not running at operating speed. The shutter must be permanently attached to the gate frame. In addition, a non-automatic shutter must be provided, placed in front of the condenser, so as to be readily closed by hand.

Extra films must be kept in individual metal boxes equipped with tightly fitting covers.

Reels containing films under examination or in process of rewinding must be inclosed in magazines or in approved metal boxes similar to those required for films in operation, and not more than two feet of the film shall be exposed in the booth.

Scene from Selig's "An Equine Hero." Copyright, 1912, Selig Polyscope Company.

All booths must be at least 6.5 feet high, or high enough to provide space for gravity sliding doors, with floor space to vary according to the number of machines in the booth. The floor space for one picture machine alone must be 6 by 6 feet; for one picture machine and one stereopticon, 9 by 6 feet; for two picture machines and one stereopticon, 12 by 6 feet.

Openings per machine in the booth must consist of one for the operator and one for the machine. Opening for machine shall not be more than 8 inches high and 12 inches long. Operator's window shall be not more than 12 inches wide and more than 12 inches high. All openings in other portions of the booth, except ventilator in ceiling and entrance doors, must not exceed 8 inches wide and 12 inches high. All openings to this booth, excepting entrance doors to this enclosure or house, must be arranged so as to be entirely closed by doors or shutters constructed in the following manner: Doors must be hung so that gravity will tend to close them (only vertical sliding doors will be approved) and be held open by a twine arranged in such a way that it will pass directly over the film when in place. All doors over openings, except entrance doors, must be sliding doors, and be constructed of two pieces of No. 20 B. & S. gauge galvanized iron, one piece placed on each side of one-quarter-inch asbestos; lap 1 inch around the corners, and the whole riveted together. The doors must lap over all edges of openings at least 1.5 inches. The same must run in galvanized iron guides of at least No. 14 B. & S. gauge, the guides to lap over door at least 1 inch, and fit snugly against the openings covered. The guides must be placed inside of the booth and all the heads of nails or screws holding them in place must be concealed by a single lock formed on the guides. These guides must be continued across the bottom of the opening to form a seat for the door to drop into, corners of guides to be lapped and riveted.

Ventilation must be obtained through the ceiling in all booths to the outside air, and no ventilator to be of smaller size than 36 square inches in cross section per machine. This ventilator must be constructed with lock joints or rivets, and solder must not be depended upon for holding sheets of metal in place. The gauge of metal must be the same as used in the construction of iron booths.

Stationary wooden metal lined booth must be constructed of sheathing at least three-quarters of an inch thick, supported by 2 by 4-inch wooden studding, not more than 18-inch centers, presenting a smooth and solid surface on the inner side of booth. All studding, braces, etc., must be on the outside of the booth. The ceiling and walls of the booth must be lined with at least one-eighth-inch asbestos under galvanized sheet iron as thick as No. 24 B. & S. gauge, and the joints must be locked. The floor must be covered with galvanized sheet iron, at least as thick as No. 20 B. & S. gauge sheet iron over one-eighth-inch asbestos. The metal must be secured in position by nails and the heads of these covered by an approved lock joint, made with the metal linings of the booth. Entrance doors must not be larger than 2 by 6 feet.

Scene from Essanay's "Billy McGrath's Love Letters."

Of Interest to the Trade

Manufacturers Convention Exhibits

Probably no other feature contributed so much to the success of the convention as did the manufacturers' exhibits on the "Midway," located on the eighteenth floor of the hotel. The halls and lobby were one seething mass of interested exhibitors viewing the attractive displays and familiarizing themselves with the apparatus pertaining to the moving picture theater. Considering the number of devices offered for the use of the motion picture exhibitors, it is surprising how quickly inventive genius has risen to simplify the conduct of the new industry.

It would be difficult to say which of the following displays proved to be the most attractive, for every room was crowded throughout the week, and nearly everyone announced sales of considerable magnitude.

A. H. Andrews Company.—This company displayed a line of opera chairs in Room 1814 that proved of much interest. The exhibit was in charge of J. M. McLaughlin who was assisted by J. D. Carr, W. A. Bishop, A. N. Carstens and Geo. P. Shea. Automobile busses were provided by the Andrews Company to carry visitors to their big plant to see the interesting processes employed in the manufacture of chairs.

General Electric Company.—A comprehensive exhibit of electrical apparatus suited to the needs of the moving picture show, such as mercury arc rectifiers, transformers, flood lights, fans, radiators, and ozonators was exhibited in Room 1815, in charge of Mr. C. W. Gallup, and his assistants, J. L. Buchannan, J. H. Doritz, and F. M. Rosseland. Being a comparatively new device, the ozonators attracted a great amount of attention and the room was crowded practically all of the time. The rectification of alternating current for use in projectors by means of the mercury converter is a proposition that is rapidly becoming of importance to exhibitors.

American Seating Company.—A very complete display of opera chairs was shown in Room 1816, under the direction of Mr. A. E. Dickerman, assisted by J. G. Carlsen and George Anderson.

Hunton-Fell Elliott Company.—An exhibit of current event slides, photographs and motograph display racks was made in Room 1817 by this company, under the direction of Mr. E. F. Renner and T. D. Hume of New York.

Nicholas Power Company.—Room 1818 was the home of the Cameragraph, with H. B. Coles of New York in charge, assisted by F. W. Swett. The many exhibitors using the machine congratulated the representative of the company on the service that they were receiving, and their testimony was without doubt a big boost to the business accomplished during the week of the convention.

The Kiewert Company.—Who occupied Room 1819, exploited the "Bio" carbons, and distributed cigarettes bearing the Bio seal as souvenirs. Needless to say, these were among the most popular souvenirs issued. The exhibit was in charge of Robert W. and George F. Kiewert.

The H. M. Hirschberg & Company of New York occupied the same room, and gave an interesting exhibit of Siemens Lamps. A. E. Saloman had charge of the latter display.

Enterprise Optical Company.—This firm, with headquarters in Room 1920, had a very complete display of the latest 1913 models of the Motiograph. L. A. Woodward was in charge of the exhibit and was assisted by F. A. Clark and F. W. Horn. Like the majority of the other projector exhibitors, the Motiograph participated in the projector contest at Orchestra Hall.

Precision Machine Company.—Under the charge of J. E. Robin, the Simplex projector made hundreds of friends, both at the headquarters in Room 1821 and at Orchestra Hall as well. In many ways the machine was a revelation to the visitors.

Novelty Slide Company.—A display of photoplayer, advertising and announcement slides was made by this company in Room 1822.

Pyrene Company.—The well known fire extinguishing fluid, Pyrene, was demonstrated by J. D. Cole in Room 1825.

American Moving Picture Machine Company.—Was represented by Eric Morrison of New York, who demonstrated the many good points of the Standard machine in Room 1826. His machine was an active competitor for honors at Orchestra Hall.

Kansas City Slide Company.—Made an extensive display of announcement and player slides in Room 1807. A clock slide exhibited by this firm attracted a great deal of attention.

Exhibitors Advertising Company.—This company, which was located in Room 1806, was represented by V. R. Rouls and C. C. Pyle, who explained the merits of their licensed posters and slides to the many visitors. A ticket-registering device is also handled by them.

Mirror Screen Company.—The Mirror screen, Room 1849, was represented by F. J. Rembusch, who was assisted by F. P. Bloomfield. A souvenir mirror was distributed to the guests.

International News Service.—L. M. Davis occupied Room 1853, showing International News Service current events slides, and Pathe Weekly Lobby displays.

American Photoplayer Company.—The exhibit of this company attracted considerable attention through the operation of their instrument which was installed in Room 1847. By the use of this player it is possible to obtain practically all of the orchestral effects that could be desired. The exhibit was under the charge of C. C. Spaulding, president of the company, who was assisted by B. R. Van Valkenburg, the inventor of the instrument.

Decorators Supply Company.—Catalogues and circulars were issued by this company from their headquarters in Room 1850. They were represented by A. F. and R. D. Powers.

American Song Slide and Poster Display Company.: A. B. C. posters, photoplayer and announcement slides were exhibited by this company under the direction of A. L. Heyman in Room 1850.

J. C. Deagan.—Nearly everybody at the show availed themselves of the privilege of playing the electric bells or Vitaphones on display in Room 1845. The Vitaphone, which consists of a series of electrically operated chimes of beautiful tone, was the principal feature of this exhibit, and their value was thoroughly impressed on the visitors by J. C. Deagan, Jr.

Essanay Film Manufacturing Company.—The Essanay headquarters, Room 1811, were a most popular retreat for both the visitors and the exhibitors. Besides the cigars and drinks that were proffered to all, the entertainment committee, which made things pleasant for the guests, distributed unique watch fobs and hat pins bearing the Essanay Indian head. Charles Stark, E. R. Day, H. Tipton Steck and Miss Dolores Cassinelli entertained in behalf of the company.

Film Supply Company.—The headquarters of this company was located in Room 408, and it was there that the popular Film Supply Daily was issued by editors Raver and Magie, with the farther assistance of Furnham, McArdle and Bert Adler of the Thanhouser Company. It was far from the madding throng of the "Midway," but it was a busy place at that.

Universal Film Company.—The hustling Universal of Room 1848 was the most prominent feature of the convention. To recite their activities in detail would require an extra edition of Motography. This was the room in which the enterprising Universal daily was edited by Joe Brandt, Joe Engel and Aubrey Kennedy, and it was also the headquarters of the celebrated Universal Band of rotunda fame. Besides all this, the Universal Company were the sponsors of the boat ride, one of the prominent features of the convention.

D'Arcy Ticket Vending Machine Company.—Mr. F. P. D'Arcy, who is the owner of a theater in Kalamazoo, Mich., demonstrated his ticket vending device in Room 1813. To meet his own needs, Mr D'Arcy developed this machine, and finding it met every need, decided to place it on the market.

The Rudolf Wurlitzer Company.—The Wurlitzer Company occupied Room 1716, where it exhibited several of its instruments. Another instrument was installed at Orchestra Hall, where the pictures were shown. The exhibit was in charge of T. P. Clancy, G. H. Parker and A. Libbin.

Trade Papers.—Nearly every paper or magazine exploiting moving pictures was represented at the convention. The *Mirror* was represented by Mr. Beecroft; the *Bill Board* by J. H. Mayer and C. J. Ver Halen in Room 1804; the *Clipper* by Warren Patrick; and the *Morning Telegraph* by J. D. McArdle and J. W. Farnham in Room 412.

The *Moving Picture World* was represented by J. S. McQuade, G. P. von Harleman and G. M. Gabe, who were assisted by W. S. Bush and J. L. Hoff from the New York office, in Room 1846.

The *Moving Picture News* was represented by A. H. Saunders.

"The Capture of New York"

"The Capture of New York," by Thanhouser, shows scenes attending the attempted capture of New York by the Red army in the recent maneuvers in Connecticut, and is complete in one reel. Twenty thousand men participated in the attack, and the Blue army was steadily driven back to the great city it was defending, stubbornly contesting the ground at every retreating step. All the different forces that made up the victorious Red army are shown in action in the film. The whole picture is very realistic. The Thanhouser "war correspondents," according to the finished film, stuck close to the battlefield and got some fine close-up views of the fighting. It is the kind of stuff that makes you change your mind about wanting to be a soldier! The picture starts with the machine; Lieutenant Milling coming down; Aviator Havens landing after flight; Haven and Milling taken after landing; aviator at work. In addition to the aeroplane and wireless views, the use of the army automobile is also demonstrated. Finally the fight commences and the camera takes you after the Red army in their pursuit of the Blues. The battlefield scenes are remarkably clear and in nowise obstructed with smoke as in the case of many scenes of this nature filmed heretofore.

Civic Moving Pictures

Free moving picture exhibitions will be given by the Forum Institute of New Orleans, La., which succeeded the Forum, every Saturday, beginning with October. The institute has been incorporated and the board of administrators is comprised of the following: Dr. H. Elmer Gilchrist; A. B. Booth, vice president; E. Carl Schnabel, secretary; Carl F. Redwitz, treasurer; Henry Wisner, C. A. Stair, W. T. White, T. W. Lunt, E. E. Edwards, A. W. Davis, Alvin Porter, J. M. Gwinn, C. H. Behre, St. Clair Adams, Dr. B. A. Ledbetter, Guy Guthridge, Foster Olroyd, Dr. C. J. Lopez, J. B. True, Jr., Dr. Oscar Dowling, H. E. Groffman, Paul J. Cendon, B. J. Daly and J. A. Charbonnet.

As stated in the act of incorporation, one of the objects of the institute is to bring together those interested in social and civic culture. It is non-sectarian and non-partisan in character, and the pictures used will be of all descriptions.

Scene from Selig's "The Fighting Instinct." Copyright, 1912, Selig Polyscope Company.

transporting of cavalry and their preparations to move to New Canaan. Then section A of the aerial squadron is shown sending out wireless messages. You see a wireless field set and the hangars of the aerial squadron. Some of the other scenes shown are installing wireless apparatus on Burgess Wright's aeroplane in the aerial squadrons; Aviator Lieutenant Milling, U. S. A., and his Curtis machine; cavalry division of Blue army; cavalry on "hike" in heavy marching order; rear guard of cavalry division leaving camp; officers' mess; "camp canaries;" army cook tent at a busy hour; "roast beef for dinner!" "making himself comfortable;" "a little game of black-Jack;" "his own tailor;" General Lasker Bliss' headquarters; Aviator N. Y. N. G. Beckwith Havens in Curtis'

Kleine's Cines and Eclipse Releases

The scenes of "A Tragedy of Long Ago," Kleine's Cines release of Tuesday, September 3, are laid in the romantic surroundings of Southern Italy, during that exciting period when the numerous provinces were governed by the powerful and tyrannical dukes and when treason, conspiracy and plotting were the principal occupations of the day and honored professions. The beautiful Beatrice of Tenda is persuaded by the Archbishop of Milan to marry the Viscount Philip in spite of the fact that she has little affection for him. Thus begins an enthralling tale of conspiracy, plotting and counter-plotting, love, hatred and revenge. The self-sacrificing love and loyalty of the followers of Beatrice stand out in warm relief from the tragical story. Costumes and settings are in keeping with the part. The photography throughout is good.

One of the finest travel pictures the Urban-Eclipse people have ever put out is, "From Lauterbrunnen to Murren, Switzerland, by Rack Railway," (5200 feet high), which will be seen Wednesday, September 4, on the same reel with the excellent topical subject, "Small Game at the Zoo," which pictures in highly amusing fashion the antics and adventures of an eccentric sportsman. This is an unusual reel full of instructive diversion and entertainment and as usual with the Eclipse subjects, beautifully photographed.

The Saturday's Cines for September 7 is a thrilling and intensely interesting military subject depicting battle scenes and hand to hand conflicts which occurred during the terrible period of the sacking of Rome, May 5th, 1527. The fact that it is based on historical data attaches additional interest and importance to the story. When the Duke Bourbon refused to grant Pope Clements' request not to pass through the pontifical territory, great terror was spread throughout the city of Rome; the people fled to their homes to barricade them against possible plunderers while the garrison rushed to man the city's gates and walls to repulse the invaders. The Bourbon's army proved the more powerful and on May 5, 1527, they effected breaches in the walls which enabled them to enter the city and commence their robbing, murdering and burning orgies. Woven about these exciting incidents is the love story of the Duke Renzo of Ceri and Giulia Vallati, his betrothed. The duke's valiant effort to save the beautiful Giulia, their hasty flight in which they are overtaken by the marauders and the duel in which the duke and his followers are outnumbered and the poor lady accidently receives a fatal wound, are scenes of absorbing heart interest which cannot but thrill with human sympathy any class of audience. Many beautiful scenes are shown, including the famous and historical St. Angelo Castle bastions and scenes in the vicinity. The action is vivid and very realistic, being ably portrayed by a selected company of Cines players and beautifully set forth by perfect photography. A short scenic has been added to complete the reel and in "Picturesque Sardinia, Italy," are shown beautifully colored and highly interesting views of the principal town, the harbor, cathedral, royal palace, St. Remy's ramparts and a delightful scene of the sea.

Scene from Selig's "Circumstantial Evidence." Copyright, 1912, Selig Polyscope Company.

Lubin to Build New Plant

Sigmund Lubin, the Philadelphia producer of moving pictures, has purchased Betzwood, the 250-acre country place of the late John F. Betz, on the east bank of the Schuylkill, north of Norristown, Pa., for $100,000. The property will become a home of moving pictures.

Convention Exhibit of the Kansas City Slide Company.

Mr. Lubin plans to expend more than $1,000,000 on buildings and their equipment. Part of the tract will be devoted to homes for some of the 600 employes of the factory. Besides this it is planned to use much of the rugged scenery as settings for thrilling plots and romantic scenes in picture theatricals. The property cost its former owner more than $400,000.

To Tour Picture Circuit

F. William Clapp, principal assistant to J. E. Pearce, general manager of the Pearce photoplay houses in New Orleans, accompanied by his son, F. William Clapp, Jr., is visiting Pittsburg and a number of other large cities. While on the trip Mr. Clapp will visit some of the licensed photoplay establishments where the pictures are manufactured and made ready for reproduction in the popular price places of amusement throughout the United States. Mr. Clapp and his son intended to spend a few days in Pittsburg and from there go to Exposition Park, on Conneaut Lake, Pa.

Hot Springs in Moving Pictures

The Business Men's League of Hot Springs, Ark., and the officials of the Arkansas State Fair have decided to make the coming State fair into one great moving picture film. Champ Clark, Joe Robinson, all the congressmen, senators and about 700 of the state's foremost men and such a crowd as no moving picture ever exhibited in the state will be shown. It is probable that every visitor to the fair will sooner or later see himself in moving pictures, and if he never travels around the world his picture will.

It is probable that from one to five moving picture shows, working under the auspices of the Business Men's League of Hot Springs, will be on the road this winter. Two reels of moving pictures of this resort have already been made, each of 1,000 feet, and arrangements are being perfected whereby two more are to be taken, one of these illustrating the State Fair in November, the other to cover the entire city. In addition to this display of reels colored slides of about 100 of the buildings and local scenes of interest will be used with each outfit. Lecturers for the city will accompany the pictures.

Loop Litigation Ends

For several years there has been litigation between the Motion Pictures Patents Company, the owners of the Latham patent, as complainant, and the Indenpendent Motion Pictures Company, as defendant. The Independent company was the former name of what is now known as the Imp.

While the latter concern has carried on the litigation the issue really involves the entire independent side.

Latham, in 1895, specified a loop for the film in a projector, but not in a camera, and before he could apply for a patent rectifying this omission, Armat Jenkins covered the camera proposition with another patent. Both patents, however, were antedated by a French patent issued to Joly which, of course, eliminates the feature of absolute originality.

The bill of complaints of the Patents Company against the Independent Company was dismissed with costs by the United States Circuit Court of Appeals. As this court is the last resort in patent cases, this suit is definitely settled, and hence the Independent is vindicated in its use of the apparatus that was charged to have been an infringement.

"The majority of the Court are of the opinion that the decree appealed from should be affirmed with costs upon the opinion of Judge Hand; and it is so ordered."

This means that the majority of the court of appeals were satisfied, not only with the decision of Judge Hand in the District Court, but also with the reasons expressed in Judge Hand's opinion and upon which he reached his decision.

This decision is directly to the effect that no camera is an infringement upon the Latham patent. In effect the decision means more than that, since if any attempt should be made to sue a user of a projecting machine the very

Thanhouser's "The Capture of New York."

reasons that lead to a holding of non-infringement in this particular case must lead to a holding that the patent is invalid because it is conceded that if the patent is limited to a projecting machine was anticipated by the projecting machine of Armat and Jenkins and also by the French patent to Joly.

August 16 was Marshall Stedman's birthday. The Selig plaers, led by Miss Myrtle Stedman, gave a surprise dinner party in honor of their manager. The entire company and many well known Canon City citizens were present and a pleasant evening was passed.

Brevities of the Business

PERSONAL NOTES.

H. Tipton Steck, whose likeness adorns this page, is a fine example of Chicago-bred, hustling youth. He is only twenty-four years—birthday October 24, every year. From the page from the "Life of a Dopster" it is easy to find that Steck graduated from the city public schools, but that he fluked from high, preferring something more substantial, by the short-cut method of two years' business college training. This equipment left him to choose between book-keeping or attaining a speed-record with one or more fingers on a typewriter and he tried the former. It was a short trial, for H. Tipton Steck thinks fast. He kicked over his high stool, slammed on his hat and said, "Never again." Steck is nearly like stick and his resolve was exactly like stick. He never went back to ledgers. He grabbed his typewriter and began to write. That was what it was for and why he had it. So he wrote, and wrote and wrote—sometimes with one finger, at that. Pretty soon he had something he tried to sell and after a time he sold it—sold it to the *Ten Story Book* for real money. It was the beginning. After a time he sold more stories to those editors who saw the appeal in his eyes. Steck was getting along. His typewriter looked good to him. He put castors on it and wheeled it around town. One day he dragged it into the *Record-Herald* and got a cub's assignment. The evolution of his newspaper career led him to press agent work. He covered the Flower Show and the Poultry Show and Isadora Duncan's dances! For a kid, this was progress, and when Blue Island wanted an editor for the *Beantown Bugle*, Steck made haste. He became an editor with a free hand. He ripped everything up the back—kicked some bad men out of office, put some good men in their places; attended the best the town afforded in social entertainment; shooed the girls out of his path; was getting on lovely when up went the balloon. All newspaper men have such experiences. Right here, a copy of *The Editor* attracted Steck's attention, because of an advertisement for scenarios. It was something new under the sun. Steck didn't know that a scenario was a possibility for him, but he made it his business to find out. He found out right away. His first attempts fell flat—three times. Three usually puts a man out. Steck sold his fourth, fifth and sixth. Then he ground 'em out so fast that he was invited to take a desk at the Essanay studio. He discovered that G. M. Anderson wanted westerns. G. M. got 'em, four a week—got 'em from Steck, who also found time to read about five hundred script a week. He put on his glasses as extra equipment. And then, well, it was natural to slide into the dopster's sanctum, where he still holds forth. H. Tipton Steck has a fine connection with a live house. He fits in. They don't make 'em cleaner, more vigorous, more versatile or more affable than Essanay's chief of publicity. If you should slip up to the vicinity of the Essanay plant in the middle of the night and say, "Montezuma," for example, you'd be grabbed by the collar and asked what you meant. Steck, like others who dope the dope on split reels and regulars or three-reel features, sleeps with one eye open. His first name is Harry—you thought we didn't know.

John B. Rock, the affable western representative of the Vitagraph Company of America, is in New York.

Mr. and Mrs. W. A. Daniels are sojourning in New England where they went to attend the wedding ceremony of Mr. Daniel's niece. Waterproof films is one of the subjects that has been temporarily tabooed.

One of the recent additions to the Selig producing staff is Mr. Henry McRae. Mr. McRae is a well known producer in the legitimate field and has had a long and successful career as a producing manager. For the last few years he has been identified with theatrical affairs on the Pacific coast. Mr. McRae will be connected with the Chicago studio production forces for the present. His first pictures have been submitted to the Selig officials and are pronounced to be O. K. Mr. McRae has been a keen student of motion picture productions for some time.

J. J. Dougherty and A. R. Nelson have opened their moving picture theater in Perham.

J. F. Carroll is general manager and treasurer of the Cheyenne Feature Film Company, newly organized at Cheyenne Frontier park, and its event will be one of the company's first offerings to the public. It is the first time the park has "posed" for a company other than one from the east. Otis B. Thayer, theatrical producer, is with Mr. Carroll in his new venture.

ROLL OF THE STATES.

ALABAMA.

Local men of Birmingham are planning to open up a moving picture theater for colored people in the old Belle theater.

ARKANSAS.

E. H. Butler's moving picture theater at Russellville was destroyed by fire at a loss of $8,000.

CALIFORNIA.

A one-story, three-room moving-picture house will be built at 4811 Normandie street, Los Angeles, by E. F. Langton. T. E. Hamson is the builder. The total cost will be $5,000.

The Manteca theater, at Manteca, has been opened and is providing its patrons with the latest films. J. F. Johnson and R. E. Covell are the owners of the new theater.

At the recent meeting of the new Board of Censorship at San Francisco, E. M. Hecht and William P. Wobber were named as a committee to confer with the motion picture theater proprietors and lay before them the plans of the board and solicit their co-operation in enforcing the law.

Plans are being prepared for a moving picture theater to be erected at Reno.

A moving-picture theater, to comprise one-story and cost $6,000, is to be erected by J. F. Manny, at 5200-5204 South Park avenue, Los Angeles.

Architects are completing plans for a one-story brick moving picture theater building to be erected in Boyle Heights, Los Angeles, for Messrs. Adams and McKee. It will contain an auditorium with a seating capacity of about 800 and two small storerooms with plate glass fronts.

Plans have been prepared by President George H. Frost, of the G. H. Frost Trust Company, of Pasadena, for the erection of a new theater on South Broadway, with a seating capacity of 1,600 to 1,800.

COLORADO.

At Trinidad, Manager R. W. Davis, of the Photoplay theater, has installed eighty new cushion seats for the comfort and accommodation of the patrons of his popular moving picture house. He has also arranged to seat about fifty people in the balcony. This increases the seating capacity of the house to about three hundred and fifty.

The Empress Theater Company of Pueblo has been incorporated under the laws of the state. The articles of incorporation show the directors for the first year to be E. I. Crockett, D. C. Meigs, A. H. Stanard, G. A. Loveland, Benjamin Bergerman and Miles G. Saunders. The three latter are incorporators. The capital stock is placed at $25,000. The company proposes to conduct a general amusement business in Pueblo and elsewhere, the Pueblo theater being the new Empress theater now under course of construction at Fourth and Santa Fe.

CONNECTICUT.

The Wittstein & Diamond Company, Incorporated, New Haven, will do a moving picture business at No. 52 Congress avenue, New Haven; capital stock, $10,000; to begin business with, $8,000. Incorporators, Frank Wittstein, Edward Wittstein, Phillip Wittstein and Morris Diamond, all of New Haven.

DISTRICT OF COLUMBIA.

J. M. Swanson, 1732 Lamont street north, gives the Lyric Amusement Company credit for planning the finest moving picture theater in Washington. The lobby will measure 20 by 50 feet, the auditorium 40 by 90 feet, and the ceiling 21 feet. The appointments will be elaborate and the seating capacity 500. Moving pictures will be shown exclusively.

Contracts are let for the building of theaters in Washington by W. T. Carrington, 62 H street N. W., and W. F. Holtzman, 1365 H street N. W.

FLORIDA.

A new moving picture theater is promised Orlando. It will occupy the first floor of a five-story building to be erected by J. L. Guernsey.

ILLINOIS.

A one-story brick theater will be erected at 212-14 East Fifty-eighth street, Chicago, by M. Samuels.

H. W. Cross, Farmington, has bought out the Johnson interest in Dreamland and now owns three-fourths of this enterprise. The house is open every week night and moving pictures and occasional vaudeville form the entertainment.

Highland is to have an $8,000 opera house, plans for which are being completed.

William Nolting has leased the Ewart theater in Greenup and will operate it as a moving picture theater.

The contract for building the new theater in La Salle was let to McClure & Kearney of Denver. The contract price for the complete work amounts to $20,991.

H. C. Glore has sold his half interest in the Airdome Electric theater at Spava to Laurel Clemens, who will take charge of it. The other half is owned by James Bryant. The business has been making the owners some money ever since it started and as the new service is giving better satisfaction it no doubt will receive still better patronage as the autumn days draw near.

Gaden's Hall, Chicago, Ill., the largest building in Forest Park, was destroyed by fire. The structure was owned by Mrs. Rose Gaden and contained a saloon, restaurant, dance hall and moving picture theater. The fire started on the fourth floor from crossed electric wires. Loss to building and contents was about $30,000.

The Star theater, Elgin's original vaudeville play house, has been opened as a moving picture theater under the management of James O'Beirne. It has been thoroughly renovated and equipped with new curtains. A new motion picture machine has been installed.

Articles of incorporation have been issued to the Illinois Feature Film Company of Peoria with a capital stock of $2,500, to deal in films and operate picture shows. The incorporators are Robert N. McCormick, Frank W. Williams and Josephine A. Johnson, all of Peoria. Mr. Williams is manager of the Liberty theater.

INDIANA.

The Spraver and Schneider nickelodeon of Jasper has been purchased by A. W. Flick, who intends to remodel the little picture house and make it a first-class one.

A contract has been awarded to H. J. Kaiser for the erection of a new theater to be erected on the corner of Wayne and Clinton streets, Fort Wayne.

At Linten, Robert Scherer purchased the Nickelo theater from William Ham.

Owing to the high bids received for the erection of the new theater on the Oliver Hanna property at the corner of Clinton and Wayne streets, in Fort Wayne, the plans will have to be altered before new bids can be advertised for.

IOWA.

The Iowa theater of Davenport, a moving picture house located at 324 West Second street, was sold by its owner, J. H. Blanchard, to Oscar Wernentin.

E. L. Madsen and F. M. Packard of Belmond will erect a new moving picture theater at Eddyville.

A new moving picture theater has been opened up at 324 West Second street, Davenport, by J. Harry Blanchard.

A new moving picture theater, known as the Lyric, has just been opened at Eldora.

The Majestic theater of Waterloo has been renovated and had its opening August 26. At Cedar Falls a five-cent theater is being erected on the Dayton estate.

The concrete foundation for the new five and ten cent theater that is being constructed at Cedar Falls by the Dayton estate has been commenced by A. E. Randall, who has the contract. The structure will be one of the finest and most complete little playhouses in the state.

W. L. Hart has completed arrangements to operate a new moving picture theater at Pleasantville.

The Idle Hour theater at Leon has opened and its many improvements are being enjoyed. An elevated floor has been placed in the building, the seating capacity increased, and a new front put in the lobby, which has also been redecorated. The operating room has been fireproofed with asbestos and sheet metal, the new front is finished in mission style and is very attractive.

KENTUCKY.

Articles of incorporation have been filed at Hopkinsville for the Garrick Theater Company. The incorporators are W. T. Cooper and H. W. Linton of this city; G. A. Bleich of Owensboro, and R. S. Dulin of Madisonville. The capital stock is $24,000. The right is reserved to do a general theater business, including moving pictures and vaudeville, and, if necessary, to buy, sell or lease property.

MARYLAND.

The Liberty film theater of Cumberland has been formally opened. It is spacious and cool, with a seating capacity of 1,000. The seats are arranged on a raised plane, and there are seven exits.

MASSACHUSETTS.

John E. Koen has acquired the Millea property in Federal street, Salem, which enables him to enlarge his theater, which is at the corner of Washington and Federal streets, giving to the auditorium a seating capacity of 1,506 on the floor. The building will be of brick, four stories high on the front. The upper floors will be devoted to offices.

The Consolidated Amusement Company of Boston has been incorporated with a capital of $100,000. The incorporators are James Magann, William M. Strachan and Richard J. Watts.

MICHIGAN.

In Detroit, C. Howard Crane let for the Eureka Theater Company the contract for the erection of a theater at Woodward avenue and Elizabeth street.

The new Windsor theater in Pitt street east, Detroit, will be ready for occupancy by September 1. It will have a balcony and four boxes and will seat 800.

The town of Hudson is living in hope that Leroy Brenner will make his new garage building a two-story one, so that the upper story may be used for an opera house, of which Hudson is greatly in need.

MINNESOTA.

Wm. Barnes of Rochester has leased the Bijou theater of J. F. Reid, proprietor of the Metropolitan and other playhouses, and is conducting a moving picture theater under his own management.

MISSOURI.

A new $30,000 moving picture theater will be erected on Prairie and St. Louis avenues by the William Goldman Amusement Company, St. Louis.

A three-story theater, to cost $60,000, will be built in St. Louis by the Rex Realty and Investment Company.

Motion pictures as a means of entertaining waiting passengers are going to be utilized by the management of the new union depot at Kansas City. For this purpose a large hall is being equipped. Tired and weary passengers awaiting trains will be refreshed by a perpetual series of such entertainments.

Two 99-year leases were recorded on the southeast corner of Lucas and Grand avenue, St. Louis, from Alonzo C. Church and Mary Gregory to the Rex Amusement Company. Coincidentally, the lessee obtained a permit for the erection of a three-story building for a theater to cost $60,000.

A $30,000 motion picture theater will be erected at Prairie and St. Louis avenues by the William Goldman Amusement Company.

Plans will be made for a moving picture theater to be erected at 3313-15 Main street, Kansas City, for Hugo Eysell.

An airdome theater will occupy the 50 by 100 foot lot at Main and John streets, Brookfield. D. T. Hayes recently purchased the lot, which was that of the Baptist church, for $4,500. The new structure will be of concrete and stucco, with a view to being fireproof, and will cost $10,000. It will be open winter and summer, closing up with a roof in winter and being heated by steam. There will be six exits. Strother H. Messerley will be the manager. It is expected to have the new theater completed by October 15.

NEBRASKA.

Baird & Heck of Central City have installed their moving picture machine and player-piano. They show every Tuesday, Thursday and Saturday nights, with a complete change of program each night. At North Bend, C. O. Armstead has leased the moving picture theater located in the Doubrava building, and at Alliance, H. A. Dubuque and C. E. Calder have purchased the Crystal theater.

PENNSYLVANIA

Iewin and Leighton are drawing plans for a moving picture theater to be erected on Sixty-second street and Woodland avenue, Philadelphia, for Charles E. Futcher.

TEXAS.

The moving picture show building in Cameron was destroyed by fire at a loss of $3,000.

UTAH.

F. A. Dillingham of New York is planning to erect a theater in Salt Lake City.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

SELIG'S EASTERN COMPANY.

Special Features

Sept. 9, '12 **Splendid Pathe Production** Four Reels

THE BLIGHTED SON

Story of a prodigal son, who, having killed his mother and sister and made a street beggar of his aged father by his extravagances and wild deeds, suffers many hardships, but finally returns home—a man. A great story told with many thrills.

SEPT. 16 1912

A Great Cines Picture—The

DAUGHTER OF THE SPY

TWO REELS

Romantic story of revolutionary days dramatically portrayed in which daughter of spy gives her life in a vain attempt to save her nobleman lover, who has been betrayed by her father.

Coming Sept. 30, 1912

PATHE **THE MAN HUNT** Two Reels

A story that holds the audience intense with interest—one that is most vividly told in pictures by the Pathe players.

FILM COPYRIGHTS.

EXPLANATORY circular No. 7, on the subject of Motion Pictures, has just been issued by the Library of Congress, Copyright Office, Washington, D. C. It gives directions for securing registration under the amendatory copyright act of August 24, 1912. The text it not voluminous, and is reproduced here in its entirety:

The amendment of the copyright act, approved August 24, 1912, provides for obtaining copyright for two new classes of works, namely:

Class "1," "Motion-picture photoplays," and Class "m," "Motion pictures other than photoplays."

In order to secure registration of claims to copyright for such works the following steps should be taken in compliance with the express provisions of the act cited.

MOTION-PICTURE PHOTOPLAYS.

I. Motion-picture photoplays not reproduced in copies for sale.

Deposit in the copyright office, Washington, D. C.

(1) the title of the motion-picture photoplay.

(2) a description of the work, preferably either printed or typewritten.

(3) a photograph taken from each scene of every act.

These deposits should be accompanied by an application for recording the claim to copyright. For this purpose use application form "L 2," which will be furnished by the copyright office upon request. Also send with the application a postoffice or express money order to pay the statutory registration fee of $1.00.

II. Motion-picture photoplays reproduced in copies for sale.

When the motion-picture photoplay has been published (i. e., placed on sale, sold, or publicly distributed) with the required notice of copyright upon each copy, promptly after such publication deposit in the copyright office two complete copies of the work, accompanied by an application for recording the claim to copyright in the published work. For this purpose use application form "L 1," which will be furnished by the copyright office upon request. Also send with the application a postoffice or express money order to pay the statutory registration fee of $1.00.

MOTION PICTURES OTHER THAN PHOTOPLAYS.

I. Motion pictures other than photoplays not reproduced in copies for sale.

Deposit in the copyright office, Washington, D. C.

(1) the tlitle of the motion-picture.

(2) a description of the work, preferably either printed or typewritten.

(3) two or more photographs taken from different sections of the complete motion picture.

These deposits should be accompanied by an application for recording the claim to copyright. For this purpose use application form "M 2," which will be furnished by the copyright office upon request. Also send with the application a postoffice or express money order to pay the statutory fee of $1.00.

II. Motion pictures other than photoplays reproduced in copies for sale.

When the work has been published (i. e., placed on sale, sold, or publicly distributed) with the required notice of copyright upon each copy, promptly after such publication deposit in the copyright office two complete copies of the work, accompanied by an application for recording the claim to copyright in the published work. For this purpose use application form "M 1," which will be furnished by the copyright office upon request. Also send with the application a postoffice or express money order to pay the statutory fee of $1.00.

In all cases the money order remitting the registration fee

should be made payable to the "Register of Copyrights." Send the title, description, prints, copies, application and fee in one parcel, addressed to the Register of Copyrights, Washington, D. C.

If any motion-picture has been registered as a work "not reproduced in copies for sale," it must nevertheless be registered a second time if it has been afterward published.

The forms referred to are cards containing descriptions of the particular films or class of films it is desired to protect by copyright.

Obviously, the classification interesting to the trade at large is motion pictures, whether photoplays or not, reproduced in copies for sale. The act requires that two complete copies of the work be deposited in the copyright office.

There is nothing new in this ruling. Publishers and photographers have been following it since the first copyrights were issued. But the act itself is new, which might have afforded some reason for hope that a method would be devised to obviate the requirement.

The producer of six reels of film per week (toward which goal all makers seem to be pushing) must, if he would enjoy copyright protection, deposit in the copyright office twelve reels of positive film per week. The raw stock alone for this amount has a value of over $400—an annual total of about $20,000.

Some economy is offered by the use of paper positives as file copies. But this involves special work, outside the routine of shop production, and probably the labor cost, not considered in the figure given, is higher than for film positives. Any way you take it, getting copyright protection on motion picture films *reproduced in copies for sale* is an expensive process. The distinction is noteworthy, for it will be seen that film subjects not reproduced in copies for sale may be adequately protected by the filing of a photograph taken from each scene of every act in the case of a photoplay, or two or more photographs taken from different sections of the film in the case of motion pictures other than photoplays.

Viewed purely in the light of logic, without any special knowledge of the intricacies of copyright law, it would seem that what protected in the one case should be adequate in the other, and that mere reproduction for sale should not entail a special burden on a commodity which when not commercialized is amply protected by conditions easily met.

CRIME AND THE SHOW.

SINCE the last issue of Motography we have made an extensive addition to our collection of local newspaper items relating to the alleged close connection between the moving picture show and the criminal. At least sixty per cent of these reports were sponsored by the newspaper reporters themselves, for reasons unknown to the writer, and the remaining forty per cent were about equally divided between the clergy and the local "reform" leagues, which, as everyone knows, must assail some institution in order to keep their names before the public.

An incident which appealed to us as being one of the most ridiculous defences ever offered by a prisoner was that given credence by a Western newspaper in an arson trial. The accused, who had been up to that time one of the city's most respected and influential citizens, attended a moving picture show while suffering from a "psychological reaction," and was so impressed by the villainy displayed upon the screen that he set fire to his neighbor's house immediately after the show. Notwithstanding a feud that had been known to exist between this man and his neighbor for twenty years, and that this enmity was at its height during this period, the intelligent court, aided and abetted by the press and clergy, immediately placed the blame upon the moving picture show. As a result of this remarkable charge, the exhibitor was placed under the ban of the local solons, and will, perhaps, be compelled to discontinue his business from lack of patronage.

Another remarkable feature connected with this affair is the fact that the censor bureau of this town is unusually strict, and that every film shown during the evening of the brain storm had received the sanction of the censors. Who is wrong, the censorship board or the court?

Still another example of the so-called "degrading influence of the moving picture show" is that of a New Jersey man who eloped with a married woman. When brought before the judge both of the delinquents accused the moving picture show for their misdeeds. Strange to say, the film that incited this act was one that is based on a standard work by a well known author, and one that has had the approval of the reading public for many years.

Before the advent of the moving picture machine, the dime novel received the credit for the adventures of the restless boys who had the "Indian fighting" germ. Due to the activities of various interests, the blame for these earliest ambitions of youth is transferred to the moving picture theater. The "Wild West" spirit is as natural in the average red-blooded boy as his desire to eat and sleep, and in our experience is neither suggested nor magnified by books or shows. Who are there among our readers that have not at some time been the leaders of an imaginary gang of bandits or Indian fighters of the bloodiest and most forbidding type, even when the family censorship on literature prevented him from getting even a glance at "Denver Dick"?

Far from suggesting or promoting interest in outlaws or their crimes, the films exhibited in the moving picture show of today close every scene in such a way as to make a lasting impression upon the audience in regard to the final judgment that awaits the criminal. This is in strong contrast to treatment of the subject contained in many of the books commonly accepted by the critics of the moving picture theater. This prejudice against the film will continue until we can get the enemies of the show into the theater to witness a performance, for it is only among the non-attendants that this spirit exists.

HOW ABOUT THE NEWSPAPERS?

It is hard to understand how a daily newspaper doping off the Sunday colored supplement stuff can consistently pitch onto any kind of a moving picture show. It is marvelous how the daily papers publish such sweet scented and soothing moral editorials in one column and cut loose with the putrid literature in another. Lurid descriptions of foul murders, nasty divorce cases, and all that sort of thing, are good for little Johnny to read at his own fireside and ponder on, but he must not have his little mind fussed up with moving pictures until after the disturbing elements have all been removed. Why not remove the rot and suggestive stuff from the dailies? Doesn't it put you in mind of the total abstinence man who yells himself hoarse condemning liquor from the pulpit or in the assembly hall and goes directly home and takes a good big one for his stomach's sake? We're a great bunch of moralizers and wind-jammers, but pretty weak on seeing ourselves as the other fellow sees us.

MOTION PICTURE EXHIBITORS' LEAGUE OF GEORGIA—President, F. Whire; Secretary-Treasurer, A. J. Wood.

Minnesota Organized in Convention

The first convention of the Motion Picture Exhibitors' League of Minnesota opened Wednesday morning, September 4, at 11 o'clock, at the St. Paul Hotel, St. Paul, Otto N. Raths acting as temporary chairman. About 100 exhibitors from all parts of the state and also from adjoining states were represented.

The chairman introduced Thomas R. Kane, president of the Common Council of St. Paul, Mr. Kane acting as spokesman for Mayor Herbert P. Keller, who was unable to be present on account of a previous engagement with the Game and Fish Commission. Mr. Kane welcomed the visitors to the city of St. Paul and spoke of the motion picture theater as a great asset to the many industries of the state.

Governor Eberhart of Minnesota was next introduced. There was great enthusiasm when his name was mentioned and it was several minutes before the governor could be heard. He spoke at length of the possibilities of the motion picture. He said he was a regular patron of the picture theater and was always pleased with the educational subjects and received great enjoyment from the dramas and comic pictures. He urged the small towns in Minnesota to encourage the moving picture theater, saying it would be the means of keeping the boys and girls on the farms and in the small towns instead of coming to the large cities if they could have advantages of education such as the moving picture offers.

William J. Sweeney, Illinois, vice president of the Motion Picture Exhibitors' League of America, was then introduced. He told the exhibitors of the great good that would be derived from an organization of this kind in Minnesota, and explained the working of good results in Chicago and all over the state of Illinois. He referred to the national convention held in Chicago last month, where almost every state in the Union was represented, and about the great number of visitors from all corners of the United States, Canada, Germany and Aus-

tralia, and of the character of men and women at that convention. He said it convinced him more than ever before that the motion picture theater was here to stay and that its foundation was as solid as the rock of Gibraltar.

C. M. Christenson, the national secretary from Cleveland, was the next speaker. Mr. Christenson talked at length on the censor board proposition. He said that one National Censor Board such as exists in New York City, composed of fifty odd members of ministers, society women and business men, should provide sufficient judgment whether the pictures are good or bad, and their approval of such pictures should be sufficient proof of the moral, educational and comic standards; and that there should be no further question on this score by any city or municipality in the United States.

Mr. Christenson related the history of the Motion Picture Exhibitors' League of America; how it started with eleven members two years ago in Ohio, until today it has over 6,000 members, and is growing every day. He spoke of the different conditions that existed in the various parts of the United States, citing that exhibitors were charged $75 a day in one section of the country and $15 a day in another for the same films exhibited on the same day.

Labor has been met with and there is a great deal better understanding between employer and employee. The League has been instrumental in helping state and city authorities in correcting evils that existed in the way of building codes and many city ordinances; and today in the eastern states exhibitors are 100 per cent better off in the way of regulations than they were a little over a years ago. There is established an insurance branch of the League for members, covering both fire and casualty insurance at about 40 per cent less than they have been paying; and it also covers films and machines, which no other insurance company has done. The underwriters of this country were bent on charging exhorbitant rates on insurance, not alone on chattel property, but insisted on increasing the rate of insurance on the entire building and on all other business in such buildings where theaters were located. Members should take advantage of this insurance plan, thus assuring the national officers, who worked long and hard, that their efforts have been appreciated.

Captain C. C. Pulis, 2nd United States Artillery instructor of Minnesota, said he was a lover of the motion picture and that he has realized for a long time the great possibilities there were in store for the young man of today in the way of education. It is possible for a young man to be taught the lessons of military life in less than 30 minutes by the moving picture, where in the past it has taken days and weeks of actual experience; in fact there has been experienced a great deal of trouble to get the young men to enlist in the army, for the reason that they had the wrong impression of army life. Motion pictures show the young man the actual and beneficial training derived in the army; the result is that there is not that hesitancy on the part of young men to join the army, and this has all been accomplished in a short space of time by the projection of army life on the moving picture film.

Mr. Preller, manager of the local General Film Company branch, addressed the convention, assuring the exhibitors that he was always willing and glad to meet the committee of the Exhibitors' League and to do all within his power to adjust matters that were reasonable; and assured the members that the General Film Company was in hearty accord with the exhibitors' movement in organizing.

Mrs. M. E. Brinkman of Bemidji, Minnesota, was a very enthusiastic member. She claimed she was able to get enough information to save all her expenses on her trip.

Resolutions were passed thanking the motion picture trade journals of the country for their loyalty and support given the League.

Another resolution indorsed the League insurance plan.

A resolution offered by Mr. J. F. Cubberley, a traveling exhibitor, to the effect that a board of censorship should be appointed by the president to pass on all special films offered by others than regular film exchanges; and that no member should contract for any such film or films unless the approval of such a board was obtained, and a card by the League issued giving the name of the picture, number of reels and name of its owner, was carried unanimously.

After a short talk by John Wentworth of Spring Valley, Minn., the convention adjourned to meet in June, 1913.

The officers elected were: Otto N. Raths, president, St. Paul; Thomas Furniss, vice-president, Duluth; E. F. Purdee, secretary, Minneapolis; H. A. Sherman, treasurer, Minneapolis; George Osborn, national vice president, St. Paul. Executive committee, John Wentworth, Spring Valley; L. A. Robbins, Winona; C. E. Guthman, St. Cloud; John Christopherson, Benson; George Osborn, St. Paul. C. F. Rose, St. Paul, is sergeant-at-arms.

The headquarters of the League are at Vista Theater, E. F. Purdee, secretary, Minneapolis.

The ladies' entertainment committee is composed of Mrs. H. S. Mitchell, Mrs. James Gilowski, Mrs. C. F. Rose, Mrs. Geo. W. Dayton, Mrs. Davis, and Mrs. O. N. Raths.

The following firms had displays: Nicholas Power Machine Company, represented by Mr. Sweet; Simplex machine, by Mr. Robin; Motiograph, by Mr. Woodward; Western Display Company, By W. A. Wilwerscheid; Geo. H. Webster Booking Exchange, represented by Geo. H. Webster of Fargo, N. D.; Co-Operative Vaudeville Association, by C. W. Gates; St. Paul Feature Film Company, by Sam R. Thompson; Werner Feature Company of Minneapolis; Universal Film Company, by Mr. Bryson; Mutual Film Company, by Mr. Jeudell; General Film Company, by Mr. Preller.

Organization Movement Everywhere

Since the close of the national convention at Chicago the president of the Motion Picture Exhibitors' League of America has been very busy in arranging to organize new states. The South is enthusiastic and ready to organize. Mr. Neff is arranging to make a trip through the states of Tennessee, Mississippi, Louisiana, Alabama, Georgia, Florida, North and South Carolina and Virginia, starting the latter part of November. A meeting of the exhibitors of the state of Texas has been called in Dallas on the 15th and 16th of October, and a meeting for the state of Oklahoma will be called for the purpose of organizing some time near the 18th and 19th of October. Kansas and Arkansas are getting ready to organize and the dates of their meetings will soon be known. There are a few details to perfect before the national president calls these conventions.

The national president and the national secretary were both invited to attend the Minnesota convention, which met in St. Paul, Minnesota, at the St. Paul Hotel on the 4th and 5th of September. Owing to matters of

importance which have recently developed in the East it was impossible for Mr. Neff to leave his office. C. M. Christenson attended the convention and assisted Minnesota in perfecting a permanent, thorough organization. There are now twenty-two states belonging to the League. Canada has been taken into the organization, and North and South Carolina, Mississippi and Virginia are knocking at the door.

Mr. Neff contemplates a visit to the East in the near future as he expects to attend the big ball which will be given by Local Branch No. 1 of Greater New York on the 14th of November. He is anxious to get in touch with all the eastern exhibitors who have no state organization, that such organization may be formed, especially the states of Massachusetts, Maine, Rhode Island, New Hampshire, Vermont, Connecticut and Maryland. It is time the eastern states were organized. It is only through an organization that the motion picture exhibitors of New England can secure their commercial rights and a fair and square deal for all.

Two new local organizations were formed in the state of Ohio last week; Troy Local Branch No. 6, and Sandusky Local Branch No. 7. The officers of Troy Branch No. 6 are: J. H. Johnson, president, Troy; J. W. Newman, first vice-president, Piqua; Fred Adams, secretary, Tippecanoe; Howard Pearson, second vice president, Troy; Cyrus Shafer, treasurer, Piqua.

Officers of Sandusky Local No. 7 are: J. D. Kessler, president, Sandusky; F. P. Richert, first vice-president, Port Clinton; W. E. Higgins, secretary, Sandusky; D. P. Larkins, treasurer, Sandusky.

Cincinnati Local Branch No. 2 has leased the Zoological Garden for one day, October 5, 1912, and will take motion pictures of everything at the park as well as members of the League and their friends. The Zoological Garden of Cincinnati is one of the largest in the world and has the largest collection of animals, fowls and fish and also has two of the largest snakes in the world.

The state of Texas will hold a state convention on the 15th and 16th of October at Dallas, Texas, at the hall of the Chamber of Commerce. The Chamber of Commerce will co-operate with the local committee in making the convention a success. All of the film companies in Dallas will work together to entertain the exhibitors who are visiting there, especially the lady visitors.

New York Meeting

A meeting of the Motion Picture Exhibitors' Association of Greater New York was held at its rooms, 136 Third avenue, on Tuesday, September 3. The meeting was opened by President Trigger, who explained that the object of the meeting, in addition to the usual course of business, was to receive reports from the chairman of the ball committee and make plans for the 1913 convention.

Chairman A. Coleman of the ball committee reported that they had received over one thousand dollars worth of advertising and had also sold a large amount of tickets.

The privilege of the floor was then granted to C. F. Ray to explain his idea of conducting the first motion picture trades exposition, to be held in conjunction with the national convention of 1913, and the motion was made by Mr. Tischenor and seconded by Mr. Asher that Mr. Ray be permitted to submit a proposition and that a committee be appointed to get bids from promoters for handling the exposition. The following committee was appointed: Mr. Tischenor, Mr. Samuels, Mr. Asher, H. W. Rosenthal and Lewis Bloomenthal of New Jersey. A committee was also appointed to visit the trade papers and request their co-operation in this undertaking.

It was also arranged that Mr. Trigger, Mr. Asher and Mr. Rosenthal, in conjunction with Mr. Cornell, vice-president of the Albany Local, Mr. Davidson, second vice-president of the Albany Local and Mr. Davis, treasurer of the Albany Local meet on Thursday, September 5, at the New Kenmore Hotel, Albany, for the purpose of promoting the interest of the up-state exhibitors in the convention of 1913 and also to formulate other locals in the state.

At the meeting of the ball and convention committee a resolution was adopted that a world's exposition of the moving picture trade be held in conjunction with the convention to be held in New York, July 7, 1913. Communications have already been forwarded to Europe, Africa and Australia asking the co-operation of the trades throughout these continents. Committees were also appointed to commence work immediately on the second annual ball of the New York state exhibitors and the following committees were appointed:

Committee on Publicity: M. Needles, Arthur Jacobs, Mr. Coufal, L. Rosenthal, Ed. Valensi, R. C. Whitten, Mr. Eckman, William Allen and L. Germain.

Committee on Arrangements: Sidney Asher, F. E. Samuels, H. W. Rosenthal, Grant W. Anson, Mr. King, Mr. Golfarb, Frank Allen.

Committee on Ways and Means: A. Coleman, M. L. Fleishman, Mr. Eckman.

Reception Committee: Samuel H. Trigger, F. E. Samuels, Adolph Bauerenfreund, Arthur Jacobs, R. L. McNabb, Ed. Valensi, Sidney Asher, Grant W. Anson and L. Rosenthal.

A Token of Esteem to M. A. Neff

"Just before the adjournment of the Chicago convention of the Motion Picture Exhibitors' League, Joe Rex Engel, on behalf of the Universal Film Manufacturing Company, presented a loving cup to M. A. Neff, president of the league.

Pres. Neff's Loving Cup.

In making the presentation Engel said: "To you, M. A. Neff, the man, and as president of the Motion Picture Exhibitors' League of America, I wish to tender this token of esteem. Do not, however, infer that because the name of the Universal Film Manufacturing Company appears thereon that it is in any sense a gift of a portion of the motion picture industry. In presenting this loving cup to you I do it as the representative of a group of men identified with the film industry who individually wish to show their appreciation of the work you have done and the progress that the league has made under your able administration.

"Accept this token of respect and esteem from the officers of the Universal Film Manufacturing Company individually and as men who wish you the greatest possible success in your new term of office."

Popular Picture Actress Dies

The death of Vedah Bertram means the cutting short of a career that promised a splendid fulfillment for the young and pretty actress. As leading lady of the Essanay western company, she scored countless successes and was a favorite with all patrons of motion picture films. Her death occurred on the morning of August 26 at the Merritt hospital, Oakland, Cal., and resulted from an appendicitis operation. She was a Boston girl, a graduate of Wellesley, and a member of a wealthy sorority. Because her parents objected to her going on the stage, she kept her identity quiet, not revealing her real name, Adele Buck, until just before the operation. She had been with the Essanay company for little more than a year, having gone west at that time with G. M. Anderson's company. In playing leads for "Broncho Billy," Miss Bertram was as much a part of the success of the western stories as "Broncho" himself.

Vedah Bertram.

For some time before her final illness, Miss Buck had been in poor health, but she did not let this make any difference with her work. Each new film found her ready to do her share of the work, and so she acted right up to the time of her going to the hospital. It was then she disclosed her real name. Her father is a professional writer of Boston.

The members of the company mourn her loss as that of a true friend. She was unanimously liked, and is equally as much missed. The entire film world tenders the Essanay company its sympathy at the loss of one of the cleverest actresses the motion picture world has known.

Newark Houses Prosperous

One million four hundred and forty thousand feet of films are unreeled before audiences in the moving picture houses of Newark, N. J., every day. That is figuring on there being sixty shows, and that they use four reels of 1,000 feet each day, giving four afternoon and two evening performances. This is a conservative figure, according to several of the moving picture show proprietors. In some houses, they say, morning shows are given, and these are not included in the estimate given above.

Approximately 30,000 persons attend the shows every day, basing the figures or the estimate that each show has audiences averaging 500 a day. In many houses the audiences will number at least 1,000 for the afternoon and evening performances, while there are places which run below 500. So, taking a general average, the figures of 30,000 a day do not appear to be too high. Most of the houses charge an admission of five cents, although there are several in the residential sections where the fee is ten cents. Taking an average of seven cents, which seems conservative, the amount paid every day for seeing these shows is $2,100. No "performances" are given on Sundays.

At present the moving picture men are interested in a new ordinance passed by the city council regulating the character of buildings in which shows are given. By this measure all "inside" shows will be put out of business. The measure, which was suggested by the department of buildings, is designed to eliminate the picture play houses from buildings used for other purposes.

In sympathy with the building department in this move are the city law department, bureau of combustibles and fire risks, board of health, license department and State Board of Tenement House Supervision. The Motion Picture Exhibitors' Association, which was organized several months ago, is desirous that the ordinance shall become a law, "for," they say, "it will do much to elevate the business."

Martin Singer, the president of the association, told a reporter that in some houses at present the conditions are practically very bad.

American Finishes Father Marquette Story

In addition to the two-reel subject of the "Story of Starved Rock," completed at Starved Rock, Ill., by the party of American "Flying A" players encamped there, a second two-reel has been made dealing with the early life of Father Marquette.

It is no exaggeration to say that handsomer backgrounds have never been seen in motion pictures, inasmuch as the region in and about Starved Rock has always been noted for its marvelous canyons, rapid streams, and remarkable rock formations. The story begins with Father Marquette as a cavalier in France, his love affair with a royal beauty, and his departure for America as a missionary. So little is known of the really astonishing part played by the French priest in discovering the upper Mississippi, his many plans and charts, locating coal beds along the Illinois, his geographical surveys throughout the middle west, his reports to the French crown on the length, depth, and tides of the Great Lakes, that is is believed that this two-reel subject will attract a wide comment among all classes of people. Much of the material used was obtained from the archives of the Chicago Historical Society. The story ends with the death of Father Marquette on his journey home at the Michigan city now bearing his name.

A Word with the Moving Picture Man

By H. Bedford Jones

Copyright, 1912, Selig Polyscope Co.

THE man who enjoys scenery only through picking out the views he knows well is a symbol of our national attitude toward moving pictures, in the abstract. We can cherish the majestic picture of a canyon or stormbound ocean cliff deep down in our souls, but let us mention it aloud and it becomes geology. Even the fairies have lost their charm, for they, too, are become a blue-and-silver science. In short, people of today are terribly afraid not to know everything, not to attain the dead level of intelligence. And in consequence, they know nothing.

Nothing, that is to say, in a spiritual sense. Ah, wait! Be practical for once, and admit the spiritual side of your business, for it has a spiritual side. Fear nothing from a name; if you prefer, let us say the imaginative sense. Is that better? After all, the structure of this article is based on the one word, "Imagination." If you can find nothing in the word, so much the worse—for you.

The dead level of education holds our school systems helpless. It does not fit itself to the child, but the child must go up or come down to it. His initiative is paralyzed. He is taught not to do things for himself, and consequently when he goes out into the world he has a bitter time of it. He is cut down to facts. Everyone else says "I" for him. His imagination—did ever child lack it?—is reduced to nil. Is its upbuilding too much to ask of you—yes, you?

No, this is not a puerile thing, a silly fancy. Would that it were, for silly fancies and puerile things are the greatest motive forces in the world! The "moving-picture man" is not a philanthropist; he is a business man, and he gives more in order to get more, and the better he gives the better he gets. So do not mistake my motives, friend. I would never dream of appealing to your philanthropy or your benevolence or your civism; Heaven forbid! I would only appeal to your sense of business values, if I can reach it.

It is the aim of the "moving-picture man" to give the people what they want. It is a dangerous experiment for him to tell them what they want, but with a little common sense it can be done. No human being lacks imagination, and because of this a great many human beings are tired of moving pictures which give their imaginations not enough scope. But the fault is with you. People are interested in persons, first of all, and secondly in things. Let us analyze that.

By sheer imaginative force people are attracted to

A Scene from Kosaku's "Across the Broad Pacific." A View of Theatre Street, Yokohama.

pictures about themselves, about people they do not know, and about people they want to know. Next their interest centers in things they can never hope to have, things they want to have, and—other things.

Every week, possibly, you show the "factory to wearer" kind of film, reaching the people themselves. This is educational, in a sense, and it holds the interest. But do you ever run a film showing, for example, an ordinary shoddy-furnished room such as three-fifths of your audiences occupy; showing this room better, more cheaply, and more agreeably furnished by the use of a little refinement; showing, in fact, the evolution from poor to good taste? Impracticable? I refuse to admit it; however, this is but an illustration.

Every week you run the "foreign country" film, and your patrons like it because they are interested in people they do not know. But do you ever run a film showing, for example, the sharp contrasts for better or worse between our own habits or customs or institutions and those of other lands? Do you ever drive home into the minds of your audiences just where they could gain and improve? That would hold a strong element of appeal; and I refuse to admit that it is impracticable.

You do, however, treat your patrons liberally enough about the people they want to know. A friend in the business was lamenting the other day that the patrons of his theater were not of higher caliber, and must be given coarse, hand-me-down work instead of the delicate finesse, subtle treatment and unacted acting that is the height of art. This is a common complaint, but the remedy is very simple. If your patrons are good enough for you, you must give them the best as you see it. If they are not good enough for you, if you are not enough of a judge to see what they like, play upon it, lead it gradually higher and higher in new levels of delight, you have no business to be serving the public. Besides, there is quite as much education in watching others learning as in learning oneself.

Things people can never hope to attain have a deadly fascination for us all. The crown jewels, for example. But to make the crown jewels an element of personal appeal is a harder thing. They reach the imagination of themselves; how are you going to make them help, strengthen, uplift that imagination? It is not enough to appeal to this quality of the mind. All pictures do that in some degree. You must lift it higher, ennoble it. For instance, give a woman an intense passion for those crown jewels, which she can never hope to have. That passion must be ennobled. How? Perhaps by giving her the choice between the jewels and her child, or in a hundred other ways. The similar passion which lies more or less dormant throughout your audience is ennobled with hers, for their imagination is strengthened a hundredfold by the human interest of the theme.

Scene from American's "White Treachery."

As to things people want to have, which it is possible for them to have, that is too obvious to mention. "Other things" group all that lies outside my rough classification; do you still think the whole subject is a visionary nothing?

I am not restricting the scope, mind. The moving picture, for still another example, must be depended on to do all that the school has not yet evolved into doing; or rather, all that the school has evolved out of doing. Every primitive custom centers around one Original Human Idea; with the growth of civilization that idea is surrounded by custom, rule and precedent; in course of time the idea is stifled out and only the walls, additions and accretions remain. Education started with the idea of widening the minds of men, of teaching them self-dependence, of "leading out," as the word itself implies. Instead of this, it has grown to cramp and confine them into narrow channels of thought; they must use this or

that book, they must learn so much and no more—and so on. I am not quarreling with the boards of education; I am simply showing how the walls remain and the original human idea is dying or dead within.

Now, that "leading out" idea is the very embodiment of the moving picture. Suppose our schools were turned into moving-picture theaters, with regular hours for attendance, shows, questions, and the like. You have finally replaced the o. h. i. within the shell of its accretion! And why not? There is nothing in the school books that the pictures cannot show to much better advantage, from the battle of Lexington to the gambols of a microcosm. Would it be so horrible a thing to have the children—and perhaps not children alone!—come to an illustrated lecture each morning instead of to lesson books? As a final, clinching argument, let me state that it is already being done.

The business world, to shift the viewpoint, would be greatly indebted to the influence of imagination, if it dared. There is the same principle of the o. h. i. worked out. Business started as a barter. People got rid of what they did not want for what they did want. It continued in force, gradually becoming built about with walls, until it was changed to the idea of giving people as little as possible for their money. Of late that idea has lost strength, and the principle of fair dealing has prevailed. But when every display window gives place to a film show in the evening, displaying how and where and by whom the goods inside were manufactured, the original human idea will have been re-established—by you. It is a daring proposal, I confess; two out of every three business houses would not countenance it, because it demands that their goods have quality as well as quantity. But it will inevitably come. Such a thing would enthrall the imagination of the people, whom you, my friend, serve. It would educate them, lead them up and out, and in the end refine them.

You object that all this might hurt your theater business, but that is hardly tenable. Business and pleasure are distinct. The day of the cheap show, the coarse "comic," the terrific melodrama, is passing faster than any of us realize. The pendulum cannot but swing back. As your films reach a higher level the appreciation of your audiences will rise with it. Your theater will cease to be an educational center, and will revert to its original human idea of amusement. You see how we cannot get away from the o. h. i.?

Last and best of all will be the reaction on yourself. Today the people pay you to amuse them, to teach them, to carry them to other lands. Tomorrow they will be paying you simply to amuse them. Today you are responsible for your own distinct burden of amusement and for the state's burden of education. When you are responsible for your own share and no more, you will give better service and achieve better results. Every public servant receives a financial and a spiritual payment, and you are no exception, my friend!

Do you realize this responsibility of yours? It must bring its spiritual payment, according to the way you meet and bear it. The more you give, the more you get, remember! The artist of the smaller type selects subjects with ready-made beauty and puts them on canvas; he of the larger type does not, for he can make any subject beautiful with the beauty that is in him. You are the artist my friend; the public is the subject of your choosing. How will you handle it?

Scene from American's "Wm. Lung's Strategy."

Miss Kathlyn Williams, leading woman of the Selig Polyscope Co.'s Chicago studio, won a beautiful ladies' watch and chatelane by her prowess at golf recently.

Cattle Punchers Given Luncheon

It was quite a social event, that stag luncheon C. E. Reeves gave to the Selig players, August 22, at Canon City, Colorado.

All the cattle punchers came and brought their appetites and wide Stetsons. C. E. Reeves formed the receiving line and greeted the arrivals with a "How'dy, boys—Fall to!" And they did, from the propped-up tail-board of the chuck wagon, where second helpings could be had for the taking, and—the taking being good—everybody had enough to eat.

The coffee steamed appetizingly fragrant from tin cups held at perilous angles by the guests who sat cross-legged on the grass, enjoying the contents of tin plates and seeming as perfectly at home as though sitting cross-legged, guarding their coffee and manipulating a knife and fork, all at one and the same time were the most casual of events for all present.

In the picture that was taken at the final round of

That Lunch of Reeves.

coffee, Mr. Reeves, the host and ranch owner, is the man in the back-ground with the high Stetson, dark shirt and chaps. An unobtrusive man is Mr. Reeves, but one who is making good in some important roles produced by the Selig Company.

If Messrs. Duncan, Cuneo and Rosselli are your favorite Selig western actors, you'll have no trouble at all in locating them. As for the "champion bronco-buster," he's there with a wide grin and both hands busy.

"The Cattle Rustlers," under the direction of Marshall Stedman, was the production in which the "punchers" were showing at the time of Mr. Reeve's luncheon. Though no ladies were expected at the latter event, Miss Stedman put in an appearance in time to add to the scenery in the picture.

A great little pink tea, that of Mr. Reeves'!

Catholic Federation in Pictures

The moving pictures of the great parade of the American Federation of Catholic Societies, held recently at Louisville, Ky., were taken for Alfred D. Oldham & Co., by the Industrial Moving Picture Company of Chicago. For one week, beginning September 15, the pictures will be shown at the Orpheum in Louisville, and then will be sent throughout the United States. The film shows 2,100 feet of detailed views. The first picture shows one of Col. John H. Whallen, the chief marshal of the parade, and the man who devised and organized it.

Pictures of the papal delegate, the Most Rev. John Bonzano, and Bishop O'Donaghue follow, and the reviewing stand in front of the cathedral is shown, with a striking picture of Archbishop Messmer of Milwaukee.

Chief Hollow Horn Bear, the Indian representative in the Federation, is shown riding along with "Charlie White-Moon," who, later, died at his home just as his picture was being shown to the censor board.

Moving Pictures in Honduras

There are no moving-picture shows in Ceiba now (March, 1912), says Vice Consul Kenneth Stuart Patton, Ceiba, Honduras. There was such a show several months ago, but the enterprise failed on account of the inability to secure film exchanges and suitable quarters and because of the quality of the machine operated.

It might be feasible to bring a traveling motion-picture show to Ceiba, provided a change of program could be effected at every performance, or at least very frequently, and a suitable hall secured. At the present time there is such a hall, and a Spanish vaudeville company is showing there. It will probably remain only a short while. The best season of the year to start such a venture would be from March until August, these months being the time in which the fruit trade is at its liveliest and when the natives have more money to spend. Truxillo and Puerto Cortes are the only other towns on this coast that would be capable of supporting such an enterprise.

One could ascertain the cost of bringing the necessary paraphernalia here by consulting either the United Fruit Company or Vaccaro Bros. & Co., both of New Orleans. These companies run the only steamers between Ceiba and the United States. If the initial expense is heavy, it would not be advisable to undertake the risk. Vaccaro has a small electric plant here for his offices and shops, and might be willing to supply electric power if such be feasible.

Admission might be placed at 10 and 20 cents. It would probably be impracticable to give more than four or five performances a week, and these should be at night, inasmuch as the population is a busy one.

In case any American firm try the venture, it would be well to bring along films and take pictures of trips up the beautiful tropical streams that run from the mountains to the coast through wonderful forests.

Approves Chicago Censor System

The Chicago system of censoring motion picture films has been approved by Miss Anna L. Donahue, chairman of the civics committee of the Minneapolis Grade Teachers' Association. Miss Donahue made a special study of the subject while she was attending the N. E. A. convention. On her return to Minneapolis she said that Chicago has an ordinance governing the type of moving pictures which it is permitted to show there and that its censors are appointed as an adjunct of the city police department. She found their judgment on pictures excellent on all subjects except pictures supposed to have an educational value. Miss Donahue learned from the theater men that the Chicago censors strictly enforced the ordinance against the exhibition of objectionable pictures, while she said they declared New York City was not so particular.

Current Educational Releases

Creation of C. Cole Phillips.—Comet. The artist, C. Cole Phillips, will take the observer with him into his studio and there work on his famous "Fadeaway Girl" creation.

Chemical Action.—Eclipse. Showing the marvelous phenomena of the action of acid upon metals.

Picturesque Sardinia, Italy (colored).—Cines. A bird's eye view of the town of Cogligari, with its beautiful harbor, the film brings before our eyes such picturesque places as the ramparts of St. Remy, the piazza of Coperta, the gate of Christina and St. Pancrazia's tower.

Glimpses of St. Petersburg.—Eclipse. An interesting visit to the capital city of Russia, showing a panorama of the whole city, views of fine buildings, such as the winter palace of the Czar, St. Isaac's cathedral, the statue of Peter the Great, Alexander Memorial cathedral, and many picturesque sights of street life.

Scenes in Somerset, England.—Eclipse. A beautiful travel subject showing scenes along the River Exe; views in and about Bath, a town founded by the Romans; and the ruins of Glastonbury abbey, which is said to have been built in the year 146 A. D.

Modern Naples.—Cines. Charming scenic views of the harbor, the Via Caracciolo, St. Fernando square, the gallery of Umberio the First, the stock exchange and the university.

Winter Sports at St. Moritz, Switzerland.—Eclipse. St. Moritz is known all over the world as a splendid winter resort. The film shows some marvelous tobogganing and ski-jumping, and skillful exhibitions of skiing by horse, and several exciting games of hocky and curling on the ice.

Through Saskatchewan on the Canadian Northern Railway.—Eclipse. Saskatchewan covers an extensive area in the southwestern part of Canada. You are taken on a delightful railroad journey, during which you obtain an excellent view of the country.

Making Silk Hats.—Eclipse. One of the leading factories in London. The various operations include body making, shaping, lining and finishing.

Microscopical Curiosities.—Eclipse. Presenting in a greatly magnified form, many small creatures, such as cheese mites, the flea, the ground beetle, the dragon fly, and others, which have been protographed under a powerful microscope.

A Scene from Essanay's "An Indian Sunbeam."

Scenes Along the Salerno Coast, Italy.—Cines. An extremely interesting travelogue subject giving a magnificent bird's-eye view of the town of Salerno and showing points of interest along the coast.

From Lauterbrunnen to Murren, Switzerland.—Eclipse. A delightful journey across the Bernese Alps, by funicular railway, at an altitude of 7,000 feet.

Small Game at the Zoo.—Eclipse. Introducing many of the smaller inhabitants of the zoological gardens.

Picturesque Scenes in Padua, Italy.—Cines. Showing life and buildings in this pretty Italian city.

A Day in the German Navy.—Eclipse. A visit to one of the Kaiser's great white fleets of fighting ships, showing the daily routine of the crew on board, signal practice, close views of the big guns, an inspection by several naval dignitaries, and numerous inspiring sights of the entire fleet gaily bedecked with flags and pennants.

New Plymouth, New Zealand.—Eclipse. The west coast of the northern island of New Zealand. The town slopes down to the ocean front and has a background of forest-clad mountains.

Pulp Mills in the Province of Quebec.—Eclipse. The manufacture of paper is one of the great industries of Canada. Huge forests are being ground into pulp to meet the constantly increasing demand for paper. The film gives a thorough inspection of one of the principal mills in the district, showing how logs are driven down the river and transported to the mills, the huge pipe line and dam, and the various steps in the transformation of pulp into finished paper.

Bergen, Norway.—Eclipse. Bergen is the second city of importance in Norway and contains many sights of unusual interest to tourists. The film shows a birds-eye view of the harbor and fortress, scenes in and about the town, and concludes with a glorious picture of Lofetus, one of Norway's noted waterfalls.

From Sion to Champery, Switzerland.—Eclipse. The fortress of Valere, the "Marmettes" stone, and many interesting sights are shown on the trip between these two picturesque Swiss towns.

The French Army in Action.—Eclipse. An impressive military subject, showing several regiments of the French army "on the defensive," "defending the bridge," "bringing forward the artillery," and in many other exciting maneuvers.

Studies of Fish Life.—Eclipse. An instructive film depicting many of the lower forms of fish life, such as pipe fish, sea urchin, pectern, pollack, swimming crabs, lug worms, brittle stars, the octopus, and many others.

Carthage and Sidi-bu-Said (Northern Africa).—Cines. Beautiful and interesting views of a journey from Carthage to Tunis. Many quaint sights are shown, including Arabian cemetery, Roman amphitheater, the cathedral, Punic grave, St. Louis' chapel, Roman theater, Sidi-bu-Said and Bay of Tunis.

Motor Boat Races, Burnham-on-Crouch, England.—Eclipse. Wonderful high speed boats in hair-raising contests. They skim the waters, propelled by powerful motors, and attain a marvelous speed. It is difficult to find a more thrilling contest than a motor boat race.

Venice, Italy.—Cines. A travel film of interesting sights of this beautiful city on canals, such as the Paglia, and Rialto bridges, the celebrated St. Mark's square, the Franchetti palace, the Grand canal and moonlight effects on the lagoon.

Amalfi, Italy, and Surroundings.—Cines. Located on the Gulf of Salerno, not far from Naples, Amalfi is one of the most picturesque towns of all Italy.

Rome on the Tiber (colored).—Cines. A pleasing scenic showing many of the famous bridges which span the Tiber.

Traditional Customs in Southern Italy.—Cines. With the greatest zeal and solemnity, the villagers of Laino give their annual representation of the trial and death of Christ, attracting great crowds of people from the neighboring countryside. All the incidents are enacted in the midst of beautiful mountain scenery.

A Gun Factory.—Cines. The Armstrong works at Pozzuoli, near Naples, Italy, where the giant engines of war are manufactured. The whole process is shown, including the melting of the steel in the furnaces, boring, lathing, rifling, and the transportation of the finished product to the cars.

Messina as it is Today.—Cines. A series of scenes showing the progress made in the rebuilding of Messina, where the terrible earthquake created such devastation. The views of the principal ruins, the fine harbor, the work of rebuilding, and the first tram cars in new Messina are shown.

The Great Water Beetle.—Kinemacolor. A picture taken under the surface of the water shows small water beetles of a brownish color and about two inches long destroying venomous snakes. The beetles attach themselves to the body of a snake, their object being to get to the head and throat. The snake tries to hide itself in the moss and sea-weed, but the beetle continues its attack until the snake finally ceases to fight.

Hatching Chickens.—Kinemacolor. Showing the gradual hatching of eggs in an electric incubator; the strength of the tiny chicks as they pack and break their way out of the hard shell, finally emerging in their fluffy coat of down. The warmth of color in the various little chickens is clearly shown.

To Teach Gospel By Films

To spread the gospel by means of moving pictures is one of the objects of the "In His Name Society," incorporated by Mrs. Addie Voorhees of New York, Miss Laura V. McGee of Trenton and Mrs. Emma Van Buskirk and Mrs. Virginia Cobb of Jersey City.

The society is formed for the moral and mental improvement of men and women by teaching them moral and religious lessons by means of moving pictures, lectures, dramas and musical compositions.

On the Outside Looking In

By the Goat Man

IT is quiet about town. Reminds me of the calm before a storm. It is hot and sultry; portending change. Both weather conditions. But this is a film magazine. I have to mention it from time to time, lest you forget. It is quiet, for the most part, all over the country. Carl Laemmle and Sam Hutchinson are back from Europe, and Bill Swanson has possession of the fort in Ynez Canyon, but that's about all the excitement. Laemmle got a horseshoe of roses and a feed when he returned, and Sam Hutchinson got a hurry-up assignment to finish the American plant. He also got into the September heat. So, then, you'll agree it is quiet—just like the calm before a storm. But why the storm? Well, I can't express myself clearly, which must be understood without the telling, but this big increase in the licensed program sounds like the rumble of trouble in the direction of the horizon. It may be that I'm mistaken. I hope I am, but I'm sure that there are plenty of films to go around without all these extra releases.

* * *

It is a marvelous business, this film game, where a lot of men and women work like mad to entertain millions of people every day. A thousand feet of film used to be considered the tenth wonder of the world, but now it is a common commodity of commerce. Did it ever

Bessie Eyton, Appearing in Selig Films.
Copyright, 1912, Selig Polyscope Co.

occur to you that three full reels of negative film would be enough to entertain the film fans of the day, providing, of course, that each theater could have three of the positive prints? Mercy, what a business—what a dream of a factory that would be! But instead of three a day, we are being treated to fifteen brand new ones every morning and the choice of a hundred thousand others that have done service somewhere before; features galore; free-lance releases by the score; importations and a variety of other programs that spring from nowhere to meet the demands of the moment. I will always believe that fewer films from many makers would be better than many films from fewer makers. I may be wrong.

* * *

I was once the superintendent of a big auxiliary publishing house; a ready-print concern whose business

William Duncan, Appearing in Selig Films.
Copyright, 1912, Selig Polyscope Co.

it was to supply "patent insides" to country editors. We printed part of his newspaper in a metropolitan city and he printed the rest of it in his country town. When we supplied two or more newspapers in a town or county, we had to vary the program. Our work in the auxiliary house was pretty much like the film business. Our scheme of rendering service wasn't unlike the modern film exchange. So you may deduce from this small hint that my experience included practice that has helped in my education as a film man. But the auxiliary house didn't go crazy about its problem. It made no effort to hog it all. If you will follow the history and evolution of the ready-print business you may discover the uselessness of trying to kick out a thousand feet of film every few minutes. A quality film house will beat the quantity film house every time. Exhibitors want good stuff for bigger theaters. They are not keen to have little competitive theaters next door to take their full quota of supply from the program that offers the most

for the money. More film subjects means trouble. It is quiet now.

* * *

You remember how Big Bill Sweeney attempted usurpation of my title a little while ago, and how gracefully he removed his tattered halo and handed it back to me? Well, that's all in the record, so we'll let it pass. But now I have a self-elected deputy goat—signature properly attested and beautifully engrossed. He is Big Billy Horne of the "Place with the Gold Pillars." Some class to the deputy goat! It came about in the simplest sort of way. I get piles of letters asking me all kinds of questions and I sometimes get stuck. I'm not like my old friend, Frank Richardson. When I don't know,

Harry Benham Jean Darnell
Appearing in Thanhouser Films.

I don't make pretensions! Well, along came a letter from a Miss in Mississippi, I think it was, who wanted me to tell her about the people of Mars, and I threw up my hands. I remembered that Billy Horne knew all about the planets and stars, so I gave him the assignment. And Billy delivered the goods, bless his heart. In telling me about it, he says: "I don't mind being the Deputy Goat once in awhile, but letters as a steady diet must pall even on a Goat. He must long for a tin can or an old hoop skirt to punctuate the monotony." In which my friend Horne is mistaken. There is no monotony in being the Goat. Four weeks ago Motography carried 16 pages of advertising. We had a square meal with bubbles. Look at 'er now. We are back in our patch of sand burrs and they taste good.

* * *

The trouble lies in our inability to sit in every man's office all the time. John Byrnes wires me that Jerry Kennedy wasn't in his Broadway office on Monday. He was probably at the Metropolitan Museum of Art, inspecting the etchings. Frank Dyer wasn't in Orange, and Streyckmans was fussing around like an old hen in a new nest. He had only hung up his hat when Byrnes blew in. Streyck hadn't warmed up. Brandt writes me that since the president got back, he's got to be shown—something we've known from four years actual experience—and when Carl Laemmle has a new look around, we'll probably whoop it up for him, but not before. Laemmle says he was born in Wisconsin. He's a Missourian. Well, anyhow, we're making a film magazine with the available stuff at our disposal. When film heads all realize how far in we've got, it will be pleasanter sailing and we'll have a bigger book. Meantime, don't forget we have a deputy out on the coast.

* * *

They have formed a Screen Club in New York. The honorary membership committee will do honor to itself when it includes the press. Or will the bum actors be barred?

* * *

J. R. Freuler is running around over the country inspecting the property of the Mutual Film Corporation. He wants to see some of the stuff his company has been buying. Local managers will have new welcome rugs for their smiling general manager when he blows in.

* * *

Mutt—not the Bud Fisher one—lives in Vernon Day's apartment, Chicago. At least it lived there until Day dragged it into court to satisfy his angry tenants. The Mutt I am talking about is a parrot—one that talked too much. For full details, get the scenario from Day. He fairly loves grief.

* * *

John Miller of the Glamour Theater, this man's town, isn't a scientific fisherman. He uses a reel to land a baby blue gill. He says he wouldn't feel at home unless he had a reel along. I'll bet Babe Farnham'll miss the joke.

* * *

And Jim Hoff actually got married. McQuade is in deep mourning.

* * *

The cub reporter who covered the exhibits at the late convention in Chicago for this great moral and religious bi-weekly, failed to find Pop Daniels and his waterproof duck. Pop put in his holler, but when he discovered that the same cub failed to locate the goat in the room adjoining the duck, he concluded that it wasn't a barn-yard scribe and passed it up.

* * *

Stunt for Pathe's weekly, Gaumont's weekly or Animated weekly. Rush camera men and papier mache fish and have Ben Beadell cast for 'em. Ben wears a big harness; carries a tremendous pole and casts a waterproof line (eleven cents a yard). It is a reel act for a real film reel. No one does it just like Ben does.

* * *

John Rock and the Missus have returned from New

James Couze Mignon Anderson
Appearing in Thanhouser Films.

York, where they saw Papa Rock and the place that will turn 'em out six a week for the trade and six a week for storage. And this isn't a knock, either. Maybe you don't know that these big fellows are making twice as many as they release. Think it over and slip me the answer.

* * *

John Bunny as Pickwick. Well, what about it? Pickwick as John Bunny, that's all. Incidentally, I thought Bunny was Vitagraph's funny man. He seems to be after Spedon's job, the way he grabs the front

pages in the newspapers. Gee, I wish the Vitagraph would come along in. Bunny would make a great front cover!

* * *

I have before me a booklet entitled "Education and Entertainment by Motion Pictures," a catalogue issued by the educational department of the General Film Company. It isn't a very pretentious book, but in it are classified film subjects that may be arranged in programs under these several headings: General Works, Philosophy, Religion, Sociology, Philology, Natural Science, Useful Arts, Fine Arts, Literature and History. I fairly love this little book. For four years I have watched for and seen many of the films that now come back to me in this newest scheme of film leasing. I have talked with professors, lecturers, wardens of penal institutions, matrons of settlement houses, ministers and various other citizens who were anxious to know where and when these film subjects might be obtained. I have, on many occasions, endeavored to locate the subsequent exhibiting place of a film that had proven so interesting to me that I had wanted my friends to see it. You know the answer. An encore never brought back the second appearance of a film. When it fades from the screen it fades from the face of the earth, so far as you and I are concerned. But through this new scheme, the good ones are coming back. I wonder who will grab the chance now presented to open the staying quality show house in each community. It will take some money. It will require the courage of new blood to tackle this new phase of exhibiting, but the man who starts now will be showing films as long as films are to be shown. The catalogue of General Film Company doesn't enthuse, but it says: "We are constantly receiving new pictures and will be pleased to supply you with supplements up to date." All that is required to make a big book of bully stuff is to search the vaults. They are groaning under the load. Let 'em out. They'll come back!

* * *

The National League is humming along. Big doings in Minnesota last week. Blow-out in Texas next month. Pretty soon we will have the whole country. I want every League vice-president to send me his photograph and some dope that will get him publicity in the League's *best* paper.

Scene from American's "Their Hero Son"

Ban Placed on Fight Films

Prize fight moving pictures became a thing of the past in the United States when the house passed a senate bill prohibiting the transportation of such moving picture films between the various states and territories or from foreign countries. Heavy fines for violation of the proposed law are fixed by the bill.

The president, said to be in complete sympathy with the legislation, is expected to affix his signature to the measure. Southern members of congress were especially interested in the proposed law because of the race feeling stirred up by the exhibition of the Jeffries-Johnson moving pictures in their section of the country.

Senator Simmons of North Carolina and Representative Sims of Tennessee pressed the bill in the senate and house.

Plans are being made by the Prison Commission to have moving picture shows in the chapel at the Frankfort, Ky., penitentiary on Sunday afternoons during the winter. It is believed that the morals of the men may be improved by showing them the proper kind of pictures. The state will buy a moving picture machine and the selection of pictures to be displayed will be left to the warden.

Fire Prevention in Germany and France

The police regulations of the city of Berlin regarding the fire-prevention measures to be taken in theaters and other places where moving-pictures are exhibited are exceedingly strict and carefully enforced, says Consul General A. M. Thackara, Berlin.

According to the police regulations of September 30, 1907, the booth in which the projector is installed must be made of either sheet iron or sheet steel and the sides and floor lined with asbestos at least one-third of a centimeter (0.13 inch) thick. New police regulations are in course of preparation. I am informed unofficially that under the new provisions the booth must be constructed with double sheet iron or sheet steel walls, with an intervening air space. In no case would booths constructed of angle iron and covered with asbestos boards be permitted in this district.

A translation of the more important paragraphs of the 1907 Berlin police regulations for moving-picture theaters follows:

Section 1. Whenever moving pictures are exhibited in theaters, assembly rooms, stores, tents, or other public places, and inflammable films are used, electric or calcium light must be employed for purposes of illumination. Gas for the production of a calcium light must either be taken from the city gas mains or made in a safe generating apparatus which complies with the law.

Sec. 2. The electric or calcium lamp must be placed in a sheet-iron or sheet-steel booth, of which the bottom and sides are lined with asbestos. So far as will not interfere with the operation of the apparatus, the air holes in the booth must be covered on the inside with wire gauze or similar material, so that lamp sparks may not escape.

Sec. 3. All electrical apparatus must be mounted on tables of uninflammable material, and must be provided with safety hoods of fireproof insulating material.

Sec. 4. When a limelight is used, only the so-called safety lamps, in which the gas mixture is effected just before ignition, or a mixture burner, in which the gas mixture is effected inside the burner, may be employed. With mixture burners a safety device of wire gauze or some similar contrivance must be so arranged as to prevent a back draft of the flame into the mixture chamber. There must also be metallic attachments on the saturator and on the mixture chamber, to which the safety device is fastened and to which the pipes (india-rubber hose) must be firmly attached. Oxygen may be stored only in steel cylinders or other metal containers. The use of rubber sacks is prohibited.

Sec. 5. When ether-benzine or gasoline limelight is used (for plants in places which can not obtain illuminating gas), the ether-benzine or gasoline fluid serving to feed the flame must be kept outside the lamp booth in a receptacle which complies with the law. This receptacle (saturator) must be connected with the oxygen cylinder by good and well attached rubber hose. The saturator must contain porous substances to absorb the volatile ether or gasoline. The saturator may be filled only in a room separate from that in which the production of the moving picture is to take place, and only by daylight or by the light of a non-explosive artificial light. Ether-benzine or gasoline calcium lights may never be used in which the saturator is united with the burner or is attached to the inside of the lamp booth. The supply of ether, benzine, or gasoline must not be stored within the theater. The quantity kept within the theater may not exceed 2 kilos (4.4 pounds). It must be kept in a metal receptacle made safe against rust and the openings in which are provided with safety devices to prevent back drafts.

Sec. 6. The intense heat and light rays which pass through the lens must be shut out or weakened by safety shutters as soon as the film stops unwinding.

Sec. 7. The portion of the film which is at any moment between the light and the lens must be so isolated from the remainder of the film that, should it ignite by reason of the intense light rays passing through it, the fire will not extend to those portions of the film which have already passed by the film or are yet to pass.

Sec. 8. The film must be unrolled from a metal drum which is completely closed except for the exit opening for the film, and this opening must be so narrow that the entry of a flame is impossible.

Sec. 9. The apparatus, the lamp booth, and the lamps may not be used until they are tested under the inspection of a representative of the fire department or other competent judge, and are declared to be free from objection.

Sec. 10. The apparatus must be so set that no inflammable or flimsy stuff (paper and the like) is immediately over it. A non-inflammable cover must be kept beside the apparatus, to throw over it in case of fire; also a basin of water and a fire extinguisher.

Sec. 11. The supply of films not actually in use must be kept in closed metal receptacles.

Sec. 12. Smoking is prohibited in the apparatus booth and in the vicinity of the films. If the apparatus booth is hung with curtains, these must be of a material not easily set on fire.

Sec. 13. The apparatus may be operated only by one who, after proving himself competent, has been licensed by the police. When electric or calcium light is used he must be well informed as to the handling of the same.

Sec. 14. In the case of productions in theaters or halls which hold more than 500 persons, if the operation of the apparatus and the lighting of the theater are not done by the same man, a signal device must be placed beside the apparatus in order that the man in charge of the house lighting may be apprised of an existing fire or other trouble and turn on the lights in the theater.

Sec. 15. The apparatus must be so set up that the public can not come within reach of it. A safe exit must be provided for the operator of the apparatus; for the spectators there must be a sufficiently broad exit on the opposite side of the house from the apparatus.

Sec. 16. Exceptions to the above regulations may be made in cases in which other examined and approved special provisions are taken for safety. Special instructions given to owners of moving-picture shows must be observed in like manner as the contents of this order.

Motion Pictures of Teeth

Moving pictures illustrating the various stages in tooth decay probably will be among the exhibits at the exhibition on health, which will be held in Washington in September in connection with the fifteenth international congress on hygiene and demography. Motion pictures will emphasize the importance of a clean mouth.

These pictures, a number of charts and photographs, and actual dental specimens will be a part of an exhibit to be held in connection with the annual meeting in Washington, September 10-13, of the National Dental Association, the National Mouth Hygiene Association and the oral hygiene committee of the District of Columbia Dental Society. Immediately after these meetings adjourn, the exhibit will be moved to the exhibition building on the Mall, near the Washington Monument, where about 1,000 square feet of floor space will be assigned to it as a part of the exhibition on health.

Columbus and His Discovery

The English newspapers print a report from Madrid to the effect that some ledgers discovered at Palos, Spain, contain interesting information on the cost of discovering America by Columbus. The sum total for which America was discovered amounted to $7,000, or 38,000 pesetas. This was distributed as follows: 14,000 pesetas for armament; 2,000 pesetas for personal expenses of Columbus and his officers and crew; 22,000 for general expenses during the eight months for which the voyage lasted. The sum of $7,000 in 1492 represented $70,000 in 1912.

It is interesting to note that the cost of discovering America amounted ot only $20,000 more than the cost of the Selig Columbus films, which, according to the makers, was $50,000. In other words, it costs nearly as much to exploit a discovery as to make the discovery itself.

A Remarkable Wild Animal Study

Selig's "Kings of the Forest"

IT'S a story of quaint, Quaker-like Boers in the heart of the Transvaal in Africa.

John Kruge and his wife, an old-fashioned couple, played by Frank Richardson and Anna Dodge, have an only daughter, Sona. As Sona, Betty Harte is most lovable not only in the eyes of her sweetheart, Fritz Kransmitt (Thomas Santschi), but also in those of an old friend of the family, John Vogel, whose role of faithful friend is portrayed by Roy Watson.

When John Vogel learns of the love of Sona for Fritz, he gives her up to the younger man. Then follow the wedding and the young couple's leaving the Kruge home, to make a little nest of their own in a distant part of the Transvaal. The last good-byes are said, the ox-like animal hitched to the white canvas-topped wagon is given a slap of the reins, and the young couple are on their way to their new home.

In the little thatched cottage, made from cane-brakes and jungle weeds, there is much happiness. Fritz is an industrious farmer and Sona is busy with her housework and day-dreams.

Then the day-dreams come true. Fritz is permitted to see his tiny daughter and solemnly enters the room where little Miss Iona lies curled into a ball on the pillow beside her mother. It seems a sacrilege to Fritz to kiss the tiny thing, but after drawing his shirt sleeve several times across his lips, he finally dares.

At the age of three, Iona is a curly-headed, laughing youngster, whom "Baby" Lillian Wade makes the film-seers love.

One day a visitor approaches the door of the jungle cottage. It is John Vogel. He has not seen Sona since her marriage, and greets her with fatherly affection. Fritz, just coming in from work, sees the greeting and misinterprets it. He refuses to listen to John Vogel, throws Sona from him and returns in a jealous rage to the hay field. John Vogel follows him to again explain. Sona, wounded by the distrust of her husband, decides to take Iona and leave.

Safe at Home.

The King of the Forest.

She hitches their one animal to the clumsy wagon, takes a rifle and some extra clothing, and leaves. John prevails on Fritz to return to the house, and when they do it is deserted. In terror of what may happen to Sona and Iona in the jungle, they take their guns and start in pursuit.

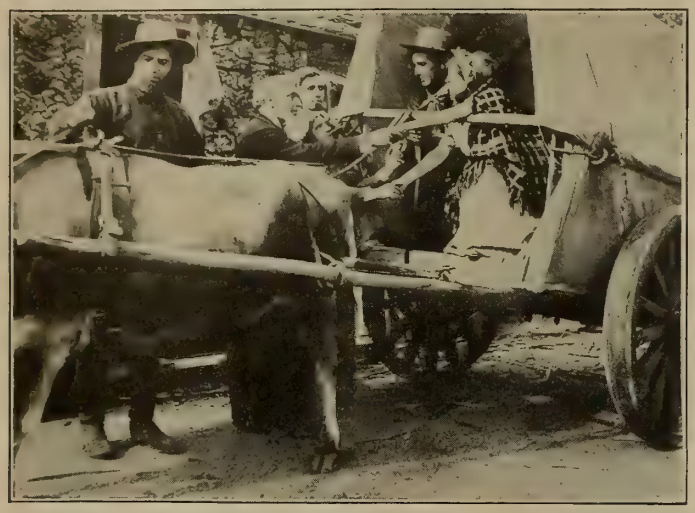
At intervals glimpses are had of a panther stealthily seeking water; of the king of beasts pressing back the jungle grasses, in his search for prey; of the lion's lair in the rocks where cubs tumble and roll over their mother in play.

At nightfall Sona and her baby, still safe, come to a cleared space where they decide to spend the night. Sona kills a calf which she had tied to the back of the wagon, and, having eaten, she and Iona fall asleep in the wagon.

Sona is wakened by the approach of some animal.

She sees a lion pick up the calf from the rocks and make away with it. She follows him and fires three times, but he gets away.

While Sona is gone, Iona awakes in fear. She leaves the wagon and hides herself in the old trunk in which Sona had put their clothing. Curling up in it, she falls asleep. She has just concealed herself when the lioness and her cubs come into the open and jump into the wagon. The approach of Sona scares them away, and she thinks they have taken Iona with them.



The Wedding Equipage.

John and Fritz, attracted by the shots, find Sona and search wildly for the baby. They give up finally and prepare to return home. Grasping the old trunk, they swing it into the wagon. The jolt awakes Iona, who raises the lid and looks sleepily about. And the reunited little group is a happy one.

You'll like "Kings of the Forest." Nobody as yet, though, knows when the release date will be.

Photographing Under Water

Photographs of otters, and of water birds of various kinds have recently been obtained with a moving-picture camera by Dr. Francis Ward, of Ipswich, Scotland, according to *Popular Mechanics*. In order to get the pictures and remain unobserved by the animals, Dr. Ward built a concrete tank fitted with a window and mounted his camera in an underground room behind the aperture.

Among the pictures obtained are those of an otter engaged in a fish hunt, herons, penguins, black-backed gull and a water hen. The penguin was observed as a fisher, the photographs disclosing clearly how the bird uses his wings as oars both on the surface and while under water. The air bubbles in the feathers of the water hen convert it into a mirror in which are reflected the colors of its surroundings. The fish are seen swimming around the legs of the heron, which piece of carelessness enables the bird to gain a square meal without undue exertion.

Sacramento Censor Board

An ordinance was introduced in the meeting of the board of trustees, Sacramento, Cal., providing for a board of censors of moving picture shows and exhibitions of all kinds. The proposed board of censors will have power under the ordinance to suppress all shows that in their opinion, are injurious to public morals.

Wiring Moving Picture Theaters

It seems that there is a disposition on the part of some of the owners of moving-picture theaters in England to adopt the use of small electric generators driven by means of oil, gas or gasoline engines as a source of power. *The Electrical Times* thinks that this tendency, which is unfortunate both for the owners of theaters and for the central stations, may be due in a measure to the fact that ordinary lighting rates are sometimes charged for power consumed in the operation of the lantern arc. It is stated that storage batteries have been employed to make it possible for the theater to keep off of the central station lines during hours of peak load.

The practice of throwing the lantern arc directly on the circuit, with only a resistance in series with it to reduce the voltage, is deplored in the paper referred to, and the use of the motor-generator set is suggested. The arrangement proposed is such that the arc may be operated either from this set or thrown on the line directly, at will.

Motion Pictures of Reclamation Work

As part of the movement to give publicity through motion pictures to all important works carried on by the government, a series of pictures have been recently made of the work on the Engle Dam, at Elephant Butte, New Mexico, says *Popular Mechanics*, which is part of the Rio Grande reclamation project.

Of all the motion pictures taken, probably the most interesting are the series photographed from a basket suspended from a cableway across the Rio Grande. The operator, with his camera in operation, was lowered into the foundation pit at the west bank of the river, and then, with the basket raised 400 feet above the bottom of the pit, took pictures while three heavy blasts were fired. The basket was then moved over the river and lowered almost to the surface of the water, during which descent the camera was turned through a complete circle so that the views would take in the entire work. The pictures will be exhibited generally in America and Europe.

Indianapolis Local Established

Indianapolis Local No. 1, Motion Picture Exhibitors' League, met recently at the Denison Hotel and adopted a constitution and by-laws and decided to establish permanent headquarters in room 410 Saks building. This league will meet there each Tuesday afternoon.

The officers of the local league are: President, John A. Victor; first vice-president, F. W. Sanders; second vice-president, M. M. Miller; secretary, E. J. Addy; treasurer, Dr. J. M. Rhoades; business agent, Dr. Rhoades; grievance committee, Dr. Rhoades, E. C. Arganbright and M. M. Miller; arbitration committee, Richard Staub, Frank Green and S. D. Kopf; state secretary and press agent, F. J. Rembusch.

Tacoma Race Films

The wide publicity which Tacoma, Wash., has received through the recent road races seems rather to increase as the Festo becomes a memory of the past. Moving pictures depicting the races are being shown all over the United States under the heading of "Historical Events of the Day." At Los Angeles they were shown at three different picture houses, while patrons in Boston, Philadelphia and Chicago all have had an opportunity recently of watching the thrilling events of the meeting on the Montamara track.

Photoplays From Essanay's

Some Coming Features

BEGINNING Wednesday, September 25, the Essanay Company announces a fifth weekly film. The constantly increasing demand for Essanay photoplays is the best reason for supplying it, therefore look for the new Indian Head releases each Wednesday. The new date will be filled with selections from comedies, melodramas and Essanay's famous western productions.

Essanay's bookings for the last two weeks in September reveal an unusual number of fine productions.

"Neptune's Daughter," released September 17, is a remarkable dramatic subject, unusual in plot, portrayal and scenic beauty, and features Martha Russell in one of her greatest character-studies, also Francis X. Bushman in a forceful portrayal. The plot is unique.

Walking along the rocky seashore with his sweetheart, Fleming, an artist, hears a weird musical sound coming from the water below and pauses to listen. Ruth's scarf blows away and Fleming clambers down to get it. Frightened by his approach, Undine, a beautiful mermaid who has been sunning herself on the rocks, slips out of sight into the waves, but not before Fleming catches sight of her and follows her course through the surf with astonishment and admiration. Determined to meet her he returns early next morning and finds her on the rocks. Wooing with all the fire of a passionate soul he secures her promise to assume mortal form and wed him. Father Neptune, summoned from the deep, warns Undine that if she assumes mortal form she can return to her old life no more. At dawn the artist returns, finds Undine as a beautiful young girl and they are married by the parish priest. Tiring of her eccentricities during the honeymoon, Fleming begins to long for his old sweetheart and one morning, in a fit of rage, he leaves her. Broken hearted, Undine Calls upon Father Neptune to take her back into the bosom of the deep. Next morning the artist, regretting his desertion of the beautiful mermaid, is hastening along the beach when he comes upon her dead body cast up by the waves of which she is no longer a part. In a wild burst of grief Fleming throws himself beside her, then the scene slowly fades and the artist sits up with a start as he realizes it has all been a dream.

Miss Russell's portrayal of Undine is one of the finest things she has ever done. Francis X. Bushman renders one of his characteristic gripping studies as the artist, Harry Cashman is splendid in the role of Father Neptune, Ruth Stonehouse plays the sweetheart charmingly and William Walters is Father McCabe, the priest. The production is one that will undoubtedly live long in the minds of all who see it.

On September 19 "The Mixed Sample Trunks" will

A Scene from Essanay's "The Voice of Conscience."

A Scene from Essanay's "The Adventure of the Button."

go out on its humorous way. It is a tale of two salesmen who get their sample trunks mixed in the hotel. One is traveling for a surgical instrument concern and his trunk contains a dismembered dummy. The other fellow finds the dummy and, having read in the paper of a horrible murder committed in that very hotel, believes he has found the remains and will be suspected. Consequently he escapes from the place, only to be pursued by the other salesman with a cop. After a long chase he is captured and the mystery is cleared up when the dummy is revealed and explained. Howard Missimer and John Steppling are at their best as the two salesmen.

"The Love Test," released on September 20, is a clean-cut, sparkling comedy with a snappy plot of two young people who are informed they have to marry each other in order to inherit an immense fortune. In order to get out of it the girl poses as her maid, but when the young man arrives she regrets her step as he is highly attractive. The real maid's action disgust him and he leaves in a huff saying he has been suddenly taken ill. Not wishing him to escape the girl hastens to his home. Having seen her coming the man, with the aid of three pals, stretches out on the bed, they whiten his face, strew the bed with flowers and announce to the girl he is dead. In her grief she reveals her true identity and faints when the man revives quickly and ardently woos her. Consequently matters are righted to the satisfaction of all. E. H. Calvert, Lily Branscombe and Eleanor Blanchard are featured in this funny one.

"Alkali Ike's Pants," released September 21, is one of the biggest comedy-riots of this famous western series. Remember "Alkali Ike's Auto" and "Alkali Plays the Devil?" Well, here's one funnier still. The story goes that Coyote Simpson and "Alkali" both love the buxom Soffie. Coyote has a nice long mustache that Soffie objects to and orders him to trim it down. Before he starts in Coyote shows Alkali and Mustang Pete a lovely valentine he is going to present Soffie. Of course they steal it while he is shaving his mustache and substitute a hideous caricature. Consequently when Coyote calls on Soffie with his trimmed mustache and valentine she is about to embrace him when she discovers the caricature and drives him from the house under an avalanche of everything she can lay her hands to. A few evenings later "Alkali" has invited Soffie to the town dance, and is industriously ironing his pants when the boys discover him through the window and, at the first opportunity hook his pants through the window with a stick. Very much negligee, "Alkali" chases around looking for his nether garment, and finally tries to steal a pair from a convenient clothesline, but is loaded with buckshot from the gun of the irate house lady. In desperation he dons his chaps, which fail to cover his exposed anatomy, and is leading Soffie proudly into town when he runs across the boys holding up his long-lost pants. In the wrangle that ensues "Alkali" is left in the lurch by Soffie, who goes on to the dance with Coyote and Mustang, while "Alkali" wraps his pants about him and strides home cussing everything in general. Au-

gustus Carney has never been funnier than in this roaring production, and the comic possibilities can be well imagined from this brief description.

"Across the Broad Pacific," released September 24, opens the last week in September, and is a wonderfully attractive camera-trip through the great cities of Japan and China revealing many extraordinary wonders in customs and industries.

"The Adventure of the Button" is the initial release of Essanay's new weekly date on September 25, and is a thoroughly pleasing and laughable comedy-drama with a novel plot. Caught in a downpour of rain Hobbs purchases a raincoat, only to have his wife discover that one of the buttons is missing. Meanwhile, a thief robs the clothing store and the only clue is a button torn from his raincoat in getting out of the window. The storekeeper offers a reward for his capture and shows the button in the window. Mrs. Hobbs sees it and believes her husband is mixed up in the affair. Young Sherlock, a detective, is put on the case, meets Hobbs on the street before his apartment and attempts to arrest him. Thinking him crazy, Hobbs shoves him aside and goes in. Having seen this from the window Mrs. Hobbs fears for hubby's safety and, when he enters, she locks him in the bedroom and struggles with a bill collector whom she takes for a sleuth. Matters are finally straightened out when the trail of the real thief is taken up and he is captured by Mrs. Hobbs in a unique way after many complications. Howard Missimer, Eleanor Blanchard, John Steppling, Billy Mason and Charles Hitchcock have the principal roles.

"A Little Louder, Please!" released September 26, is still another dandy comedy with Howard Missimer, John Steppling, Eleanor Blanchard, Lily Branscombe, E. H. Calvert and Frank Dayton in splendid roles.

On Friday, September 27, Essanay releases a powerful melodrama entitled "The Voice of Conscience." The story is gripping and the portrayal is magnificent. Frank Craig, a man of wealth, starts on a hunting trip with William Sherman, his daughter's sweetheart. Meanwhile Jack Tenny, an old friend of Craig's, also starts into the woods for game. One morning as Sherman is getting water from the brook, Tenny appears at the camp, meets Craig and proudly shows him some game. Craig now accidently stumbles and falls heavily on the knife that Tenny is using to prepare the game, sustaining a mortal wound. Tenny discovers he is dead and flees from the scene in terror. Returning, Sherman finds Craig's dead body, is suspected of murder by the sheriff who arrives on the ground, is arrested and taken to town for trial. Tortured by his guilty conscience Tenny attends each day of the trial at court, and suffers agonies as the attorney for the prosecution weaves the net tighter about Sherman. Morgan, Tenny's roommate, now unconsciously starts a chain of circumstances that bring about Tenny's confession. Cutting himself while shaving, Morgan uses one of Tenny's handkerchiefs to stop the flow of blood. Tenny discovers the fabric and becomes terror-stricken, more so when he finds the knife with which Craig was killed on his table after having thrown it away. Morgan has found it and placed it there. Morgan now buys a weird drawing depicting Conscience

A Scene from Essanay's "The Mixed Sample Trunks."

rising from the grave of a victim and confronting the murderer. On seeing this Tenny rushes from the room and bursts into court just as Sherman is convicted. Gasping out a confession of the affair Tenny dies in the arms of the sheriff, a victim of conscience. Harry Mainhall portrays the role of Tenny with powerful dramatic intensity, Francis X. Bushman is strong and vital as Sherman, William Walters plays Craig, Harry Cashman the sheriff, Bryant Washburn is Morgan, the roommate; Martha Russell the sweetheart, and Helen Dunbar her mother.

"An Indian Sunbeam," released September 28, is a powerful western drama staged in the heart of the hill country by that master of film-craft, G. M. Anderson, and is a fitting climax for the end of the month.

The Essanay Company announces the completion of the massive three-reel production of "Robert of Sicily," a dramatization of Longfellow's wonderful poem. Essanay's adaptation promises to be unquestionably a masterpiece, surpassing anything of American manufacture in point of production, stupendous scenic setting and novelty.

"Alkali Ike" is in Chicago! He blew in the other day from the West with a six-shooter dangling from each hip and got the reception of his life. "Alkali" is sure some popular. He is featured in some cracking comedies now in course of production at the big Essanay Chicago studio, and they are said to be bigger and better and funnier than anything he has yet done.

Pictures of the Abernathy "Kids"

San Francisco residents greeted the Abernathy "Kids" when they rode their horses up Market street at the noon hour in order that moving pictures of the exposition city might be taken for presentation on their world's lecture tour. The diminutive riders attracted marked attention.

Escorted by mounted police officers and preceded by an automobile driven by Colonel Abernathy, father of the boys, in which was a moving-picture machine and operator, and heralded by the exposition's trumpeter, the youngsters trotted up the main thoroughfare.

In the absence of Mayor Rolph, whom the boys expected to meet and shake hands with, as they did with Mayor Gaynor in New York after their memorable ride across the continent, Secretary Edward Rainey greeted the boys in front of the city hall.

Moving pictures were taken of Market street and other leading thoroughfares. Pictures will be taken of the crowds at the music stand and the ocean beach. The boys rode their horses into the surf and pictures were taken of the Cliff House and Sutro Heights. They will tell the world about the wonderful show that is to be held in San Francisco three years hence.

The Abernathy boys are proteges of former President Roosevelt and have moving pictures of themselves shaking hands with the hero of San Juan hill. Both are expert horsemen and clever marksmen. They have been trained by their father, who was a former United States marshal in Oklahoma. The younger of the pair is less than three feet in height, but he rides with the skill of a cowboy.

Mr. Harry Cohen has returned to the Chicago Studios of the Selig Polyscope Co. from his trip through New Mexico and Oklahoma, where he went to secure several thousand feet of typical western pictures. He was accompanied by Edward Linden, Camera Man. The negatives secured by Mr. Cohen will be utilized in some future western release of the Selig Company.

Interesting to the Ladies

In one scene of a picture entitled "The Substitute's Model," staged during the month of August by Director Hobart Bosworth, of the Selig Los Angeles studio, gowns and hats to the value of $3,500 were worn by the female characters appearing. These were not stage costumes, but brand new imported creations in advanced styles. The picture in question depicted the story of a shop girl's life and her devotion to her sick little sister. One of the scenes is laid in the display parlor of a great department store during the annual fashion show, and to bring the effect "up to the minute," arrangements were made by Manager McGee, of the Los Angeles studio, with the principal merchants of the city, whereby the latter furnished twenty of the living models which they had in training for the great Fall Fashion Show, and the pick of the imported gowns and hats to be shown during the fashion show season. The effect of these creations all massed in one scene, both on the models and the principals in the photoplay, was gorgeous beyond description, and will no doubt bring many exclamations of delight from the feminine portions of picture theater audiences when the reel is exhibited. "The Substitute Model" will be released on September 16.

Myrtle Stedman at the Top of the Royal Gorge.

Stomach is Shown By Pictures

Regular moving pictures of the stomach of human beings and animals, in the process of digestion, have recently been exhibited in Germany, and it is believed that it will not be very long before such pictures will be exhibited to all medical students as a part of their course of training.

Experiments were made first on cats, according to a Berlin exchange. By adding a little subnitrate of bismuth, a harmless powder, to the foods of the felines, the contents of the stomach became visible to X-ray apparatus. By taking X-ray photographs in rapid succession it became possible to secure a moving picture showing the exact motions the stomach goes through when digesting a meal.

It is believed that a careful study of this subject will throw much new light on the digestive processes and aid in the treatment of disease.

Pictures in Summer Schools

The motion picture is proving its value as an educational asset at the summer school of the South, held in Knoxville, Tenn. This is the largest summer school in the country, and has an enrollment of 2,500, mostly teachers and instructors. Only educational and travel pictures are being shown, and Dr. Brown Ayers, president, is very enthusiastic over the power of the motion picture to instruct as well as to interest. Two reels are being shown every night.

Motography's Gallery of Picture Players

G. M. Anderson is director and leading man of the Essanay western stock company, now operating at Niles, California. He has won fame wherever motion pictures are shown for his "Broncho Billy" character-creation and the origination of the great "Alkali Ike Western Comedy Series." Mr. Anderson's name is a household word throughout two hemispheres. Having been identified with the film business almost from its first conception, he is a master of many of its intricacies. His ability to direct and play leading roles in his own productions stamps him as a genius of photoplay craft. "Broncho Billy's Last Hold-up," "Broncho Billy's Escapade," and "Broncho Billy for Sheriff" are splendid examples featuring his work. Everybody knows Anderson and admires his absolute naturalness when playing before the camera. He specializes on western subjects, but is good in any line of photoplay work.

Miss Lily Branscombe, one of the most widely known, popular and versatile leading ladies of Essanay's eastern stock company, has had years of experience and thorough training on the legitimate stage that have taken her almost around the globe. At the age of thirteen, Miss Branscombe joined George Rignold, the English actor, and played a wide range of Shakespearean roles throughout Australia and the English provinces. Coming to America with Maggie Moore she signed under the management of J. C. Williamson, then joined T. B. Frawley and played in "Secret Service," "The Only Way," and many other productions. An oriental tour followed with one of Frawley's companies, ending in South Africa. Returning to America Miss Branscombe played for two seasons in Belasco productions, following which she was leading lady of many noted stock organizations.

Miss Beverly Bayne is one of the beautiful leading ladies of Essanay's eastern stock company, whose work in a number of recent productions has won the praise of both press and public. Miss Bayne is a striking photographic subject and a firm believer in all forms of outdoor exercise. She is an expert horsewoman and can be seen any fine morning cantering along the Lake Shore Drive on her spirited mount, preparatory for the day's work before the camera in the big Essanay studio. Miss Bayne is a Chicago girl, and one of her favorite hobbies is sketching and water-color work, at which she is an adept. Her unusual beauty and ability to portray a wide range of characters have gained for her a host of admirers in the film world, and she has played leading roles in such recent productions as "The Understudy," "The New Church Organ," "The Old Wedding Dress," "An Adamless Eden," "The Return of Becky," and "The Hermit."

Francis X. Bushman, leading man of Essanay's eastern stock company, is a handsome chap, and has had wide experience in all branches of theatrical work on the legitimate stage. He is adept in the art of make-up, and his remarkable versatility in portraying character has won him instant recognition from the most critical of critics and keen observers. Bushman is an all-around athlete and an expert wrestler, boxer, swimmer, horseman and swordsman. He is seen in some very fine roles in such recent productions as "White Roses," "The Butterfly Net," "The Understudy," "Her Hour of Triumph," "The New Church Organ," "The Magic Wand," and "Twilight," a recent dramatic release. His face is familiar to all patrons of the picture show. Personally he has a very wide circle of acquaintances, with whom he is extremely popular for his many natural charms of manner and his capacity for friendship.

Ad Wolgast and the Selig Kangaroo

Ad Wolgast, lightweight champion pugilist of the world, met his match at the hands of a Selig actor the other day. At least, it looked so, for Wolgast, in a boxing contest with Charlie, the famous Selig boxing Kangaroo, let the Australian knock him clean through the ropes.

It all happened at the Selig wild animal farm in Los Angeles. Ad and Charlie were matched for a "go" before the moving picture camera, and a mighty spirited contest it proved. Charlie is a wonder with the gloves, and those who were privileged to see the bout, proclaimed it one of the best ever. After the contest, Ad viewed all the wonders of the Selig farm. He fell in love with a cute little African lion cub, one of twenty-one born on the farm since January, and so there was nothing for Big Otto to do but present the embryo man eater to the world's champion.

Later Wolgast visited the alligator farm, where he was presented with a live alligator; and then a call was made at the ostrich farm. Here an effort was made to present the pugilist with a full-grown male ostrich, but he refused the rooster with many thanks, with "Too much is enough." Every act of Wolgast's tour of the jungle was recorded by the Selig camera, and this reel promises to be one of the most entertaining releases of the season.

New Stunt for Kinemacolor

In passing it may be worth the time to state that moving pictures are on the rise. From the nickel theater of a few years ago to a feature in a Broadway production is a long step, and a good step, and a step upward. This was the step made by a Kinemacolor picture in Charles Frohman's production of "The Girl From Montmartre," with Richard Carle and Hattie Williams, at the Criterion Theater, New York. The true-to-nature colored picture came as a surprise, and it was quick to get an enthusiastic reception.

Miss Williams exclaims, "Any one who loves me, can try to find me," and runs off the stage. The lights go out, and the moving picture continues the story. Pursued through the woods by Mr. Carle, they enact a comedy scene, and finally she is overtaken by the tenor. As the tenor begins his song, the picture disappears, lights are on, and there they are in the woods just as Kinemacolor had left them. In an interview just before the production of the play, Mr. Frohman said he had "discovered something new under the sun." This seems to be the case, and what is more—the audience was quick to discover that which Frohman had discovered.

Fire Films Exhibit

George Kennedy, state shop and factory inspector, is planning to begin a crusade throughout the state for better fire protection in factories.

He has secured a series of moving picture films from the factory inspection department of New Jersey, showing fire drills and work on fire escapes in manufacturing plants in that state, which he will exhibit in many of the factory towns in this state.

"I would like to have a law passed," said Mr. Kennedy yesterday, "making the regular holding of fire drills compulsory in every shop, factory and big department store in the state. I fear this is impossible, but I intend to keep at the employers until I convince them of the need of such drills and of more adequate fire protection equipment, including ample fire escapes."

New Use for Pictures

A new use for moving pictures has been discovered by the French army. At a recent shooting practice, a big, specially prepared screen was set up at one end of the parade ground. At the other end, some hundreds of yards away, stood a company of soldiers with rifles.

At a given signal, cinematograph operators projected on the screen an extended moving view representing a regiment of riflemen creeping forward in open order over broken country, projecting themselves behind trees and rocks from an enemy's fire. When the advancing figures on the screen reached a point where they assumed the size of real men seen at a hundred yards, these phantom soldiers suddenly sprang into full view and seemed to charge furiously upon their living opponents.

At this moment came the order to fire. The real soldiers took aim, kneeling or lying down, and received the charge with a steady fusilade.

The effects of their fire were, of course, perfectly recorded on the screen. The results as showing range, accuracy, speed, etc., are said to have been in the highest degree successful.

Winnipeg Health Board Orders Pictures

The board of control of Winnipeg, Man., has decided to go into the moving picture business for the benefit of the city health department. On the recommendation of the health committee, the board has decided to buy a number of standard "health" films, which are now so widely used for the purpose of instructing the general public on health matters. Alderman Munroe, chairman of the health committee, has succeeded in getting the controller to order three films as a start toward public ownership of moving pictures. The three are standard and have been used with great success in many cities. They are named "Summer Babies," "The Fly Pest" and "The Awakening of John Bond," the latter being a most impressive lesson on the treatment of tuberculosis and methods of prevention. The intention is to get the moving picture theaters of the city to run the films at intervals, also to arrange for special exhibitions in a number of the city churches. City Electrician Cambridge will be asked to make the arrangements.

New Nature Color Process

A new process for taking motion pictures of objects in their natural colors, it is reported, has just been patented by a wealthy New Yorker by the name of Arturo Hernandez-Mejia, who has already begun the equipment of a plant for turning out the films.

The main item of advantage in the new process is its extreme simplicity, especially in the taking and exhibition of the films. No specially equipped projection apparatus is necessary. When Mr. Hernandez has finished a film, it can be run off in any theater now equipped to show the black and white films without any additional lighting apparatus, or anything different from what is used for the black and white films.

The new process is called the Cinecolorgraph, and the company just formed for exploiting it is the Colorgraph Company of America. Mr. Hernandez is making his temporary office in the Forty-fifth Street Exchange building, New York.

A moving picture film, "The Charge of the Light Brigade," the scenario of which is being written in Cheyenne, is to be produced on the government reservation at Fort D. A. Russell.

Gaumont Speaking Pictures

How They Operate

JOHANNES WULLER, one of the greatest physiologists of the last century, when considering the time factor in nervous processes, was so impressed with the inherent difficulties of the question, that he said, "We shall probably never attain the power of measuring the velocity of nervous action, for we have no opportunity of comparing its propagation through immense space as we have in the case of light." As is often the case, when the forecast is darkest light is near. As it has in the case of determining the velocity of a nervous impulse by Helmholtz so it has in the synchronization of the kinematograph and phonograph. The question of synchronization of a camera and a talking machine is a problem that attracted the attention of Edison himself from the time of his invention of the kinetoscope, an instrument, however, in which only one person at a time could see the moving picture.

It is not enough to have a perfect synchronism between the phonograph and the kinematograph—between the talking machine and the camera. The vocal sounds of one or more speakers must be registered at a distance of several yards from the phonograph. To do this without altering the purity and intensity of the sounds emitted is no easy problem. Obviously the phonograph and kinematograph must be placed in the same electrical circuit. Experience has sown that the phonograph must control the action of both instruments. In July, 1901, the Gaumont Company obtained the first patent for such an arrangement.

The problem is how to obtain *at the same time* records from a kinematograph and from a phonograph, gramophone, or talking machine, and, having obtained these, how can they be reproduced and presented *simultaneously*, the one record to the eye and the other to the ear, so that a large audience—even six thousand in number—shall be able to see and hear that all marches in unison and produces an illusion so complete as almost to represent real life.

In the ordinary speaking and moving pictures which have been presented hitherto, the actor or singer has just to speak or sing into a phonograph placed close to his mouth, whereby a record is obtained. This is reproduced on an appropriate machine, and when he hears the sounds he makes as best he can the appropriate sounds, movements, and gestures while the kinematograph records. There is no question of *simultaneous recording and reproduction* of the double record. Consequently, the result

*Abstract of a Paper Read By Prof. William Stirling at Royal Institu- London England.

A Scene from Essanay's "A Little Louder, Please."

is not satisfactory. By means of the combination of a camera, a talking machine, and a megaphone, the combination being termed by M. Gaumont the chronophone, large scenes as well as the effects of a full chorus are obtained at one and the same operation.

At first sight it might seem as if the problem of producing *simultaneously* combined pictorial and audible records was a comparatively simple one. It is, however, far from being so. We may lay down the following conditions:

(1) Absolute synchronism between the phonograph and the kinematograph both in recording and reproducing the result.

(2) Registration of sound by the phonograph at a sufficient distance at the same time as the registration of the pictures on the moving film, without the phonograph being in the field of the kinematograph.

(3) The amplification of the sound so that a large audience can hear the sound and observe the exact correlation between the movements of the speakers, or actors, or singers, and the audible sounds as regards pitch, loudness, and quality of the vocal or other sounds.

It has been calculated that in a record on an ordinary 12-inch disk of a gramophone the length of its sinusoidal sound line or spiral groove—counting 100 grooves to the inch from the center to the circumference of the disk—is about 240 yards, or 720 feet. If, however, the ripples made by the vibrating stylus as the disk revolves under it at the rate of 32 inches per second be added, it brings up the total length of the sound line—in the reproduction of a sound record lasting from three to four minutes—to, it may be, 500 yards, or 1,500 feet. The disk makes about 76 revolutions per minute, or an average rate of each revolution in 0.8 second.

In order to produce what M. Gaumont has called "filmparlants," or speaking kinematograph films, two motors of identical pattern actuated from the same source, and of approximately the same power, are used for driving the phonograph and the kinematograph. A rheostat introduced into the circuit enables the operator to vary at will the velocity of the motors, even when they are in action.

Experience has shown that the best results are obtained by first setting in action the dynamos and the phonograph. The kinematograph is not engaged until a given moment. This can be arranged by placing a clutch between the kinematograph and its motor. The automatic engagement apparatus is controlled by a lever connected with the armature of an electromagnet, which is actuated at a given moment which corresponds with a definitely determined position of the needle in one of the grooves of the disk of the phonograph, which is of the gramaphone type.

If, however, by any chance there is a discord, however small, even a fraction of a second, between the emission of the sound by the talking machine and the movement of the lips of the speakers, there is a special arrangement, called the "differential," by means of which any want of accord between the phonograph and camera can be immediately rectified. The differential gearing, which is placed on the shaft between the kinematograph and its motor, and is actuated by means of a special small motor, is provided with a reversing commutator which enables the operator to control the speed of the kinematograph, either hastening or slowing its movements. The speed of the phonograph remains constant, so that all correction in speed, in order to synchronize the two machines, is done by accelerating or retarding the speed of projection by means of the kinematograph. By means of the differential any accidental displacement of the phonograph needle during the projection can instantly be rectified.

In order that the operator may be in close proximity to the phonograph, and to enable him to make sure that everything works well and to regulate the apparatus, he has before him a rectangular box called "Chef d'Orchestre," but which is practically a "control board," fitted with a voltmeter which acts as a speed indicator, a frequency meter which gives exactly the angular velocity at each instant of the phonograph, a starting gear with a series of resistances, whereby the phonograph is set in motion, and a two-way commutator in connection with the differential motor.

A New Censor Plan

Federal censorship of moving picture films is advocated by George A. Walters, secretary of the police department of Detroit, Mich. Mr. Walters advocates the taking of the censorship out of the hands of the police departments of the various cities and placing it in the hands of the government. He contends:

"It is out of the question to have officers inspect these films at all of the show places scattered about the different cities. And yet that is the only means of inspection some cities have, while there are also many municipalities where there is no inspection whatever."

New Company Launched

A new feature film company, operating under the name of the Dudley Amusement Company, is about to market the newest of feature films in which Frederick Warde is to play the leading part, the subject being a Shakespearian one.

The company is headed by M. B. Dudley, a well-known amusement man, who returns to the business after a six years' absence, during which time he engaged in the mining business.

The headquarters of the Dudley company are in Room 412, of the Fitzgerald building, New York.

Motion Pictures Nerve Cure

Mrs. Johanna Goldbach, of St. Mark's avenue, Rockville Centre, is the champion "moving picture show patron" on Long Island. She is very fond of these silent plays and had taken to them, primarily, to get rid of a nervous complaint to which she was subject. The pictures have entirely cured her, but she attends now out of her fondness for the plays, irrespective of present good health.

Universal Gets Big Features

J. D. Tippett is manager of a company that is making big strides in acquiring features in large quantities—the Universal Features Company. It is a branch of the Eclair Film Company, which handles the Sarah Bernhardt productions. The newest acquisition, though, is the Sherlock Holmes series, made under the personal supervision of A. Conan Doyle.

Not Purchasing Scenarios

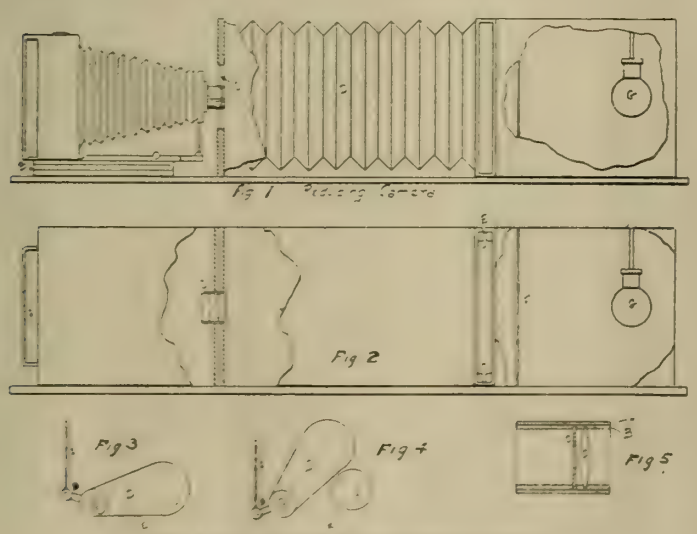
Though the Gaumont company of Flushing, L. I., does not purchase or require any scenarios, as it does not take pictures in this country, it is favored with any number of picture stories from the pens of American writers. It seeks to avoid this particular evidence of popularity.

Lantern Slide Making

By T. Stanley Curtis*

IN the preceding instalment of this series† the necessary appliances for making slides by the contact method were described. The present article will offer some suggestions on the construction of a few useful adjuncts to the printing-room when slides are to be made by the reduction method, which possesses many advantages over the simple contact printing. The developing, washing, and fixing systems will also receive due attention in the present instalment.

As the author pointed out in a former article, the reduction process for slide-printing is a somewhat expensive one, and its use is limited to the better class of work, such as high-grade lecture slides, etc. As an aid to good composition, when working with a miscellaneous collection of negatives, such as those taken on a rather hurried tour, where the best point of view could not always be chosen, the reducing camera will prove invaluable. With the assistance of this useful adjunct, it is possible to pick out the most interesting portions of any given negative and to eliminate the undesirable parts from the slide. For this reason, the author invariably uses a 4 by 5 camera for all slide negatives, as this size enables one to make good slides by either contact or reduction. The trifling waste is amply paid for by the latitude which the larger size of negative gives. It is, of course, undeniable that a slide made by reduction from a larger negative shows wonderful detail and sharpness, but at the same time it is an open question as to whether or not it is desirable to carry a heavy and very bulky view-camera around



Figs. 1 to 5. Details of the Reducing Camera.

the country for the sake of getting large negatives of good quality, when a smaller folding camera, with a good lens, will show such pleasing results. From the foregoing, the importance of having some form of reducing apparatus at one's disposal will be appreciated no matter what the size of the camera may be.

In principle, the reducing camera is identical with the familiar enlarging camera. Various forms have been described from time to time, but the one illustrated in Fig. 1 has given the author the greatest of satisfaction. The range of adjustments is very wide, and the apparatus is easily constructed. The various parts of the camera are mounted on a board, some four or five feet in length. The lamp *G* furnishes illumination, which is diffused by the ground glass *F* set a few inches from the negative holder *E*. To the other side of the negative holder is fastened the end of a bellows, which may be constructed of paper as per instructions given for the stereopticon bellows in an early article of this series. The forward end of the bellows is carried by the board, which is arranged to move backward or forward as required. An inexpensive plate-camera is to be fitted with a long draw

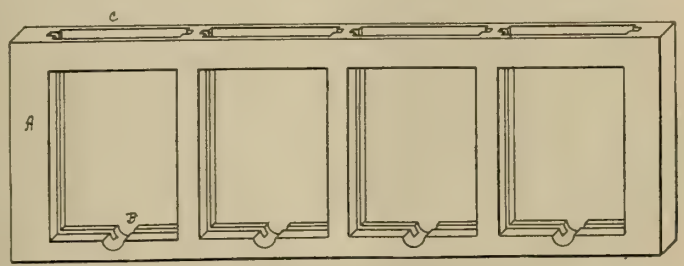


Fig. 6. Arrangement of Developing Table.

bellows and a simple T. B. I. shutter, after which it is placed in position, as shown in the drawing. The lens barrel passes through a piece of black cloth, not necessarily light-tight, in the bellows support. This will permit the camera to be raised or lowered as may be necessary.

Kits may be made to take negatives of various sizes to meet the requirements of the user and the bellows arrangement will enable the worker to make any ratio of reduction he desires.

The use of artificial light is most strongly advised in connection with this work. Daylight varies so greatly that it is practically impossible to use it without considerable waste of time and materials in order to obtain uniform results. For this purpose, the Nernst electric lamp is without a peer in the opinion of many, and in the author's opinion it surpasses the arc, which is inclined to be just a trifle unsteady and which certainly gives a greater candle-power of light than is necessary. Next to the Nernst comes the tungsten, and in places where electric current is not available, the inverted gas lamp may be used with excellent results. The upright Welsbach light is unsatisfactory for many reasons, and it certainly has no points to recommend it in preference to the inverted type. If the source of illumination is placed far enough to the rear of the ground glass, the light will be evenly distributed over its entire surface and no condenser will be necessary. It may be well to remark here that the reducing camera does not require as great an intensity of illumination as the enlarging apparatus, for quite obvious reasons.

A simple fixed-focus reducer is shown in Fig. 2, and this device will be found useful where reductions are to be made from but one size of negative. No latitude is afforded in the way of picking the scenes, as in the case of the type shown in Fig. 1, however, and practically the only redeeming features of the camera are its low cost and ease of construction. The lens may be a simple double convex, such as is used in an ordinary reading glass. It will be necessary to stop such a lens down considerably to obtain sharpness on the slide. The camera

*From American Photography.
†See Motography for November, 1911, page 217.

consists essentially of a long cardboard box, the dimensions of which will be dependent upon the size of the negative from which the slide is to be made. This type of camera is so familiar to most users of enlarging apparatus that the author will not describe the construction in detail. For those who wish detailed information on the subject, the author refers to the complete little handbook, "How to Make Enlargements," which may be purchased for the sum of ten cents from the publishers of *American Photography*, Boston. This book contains the table of enlargement ratios for lenses of different foci, and a complete description of a fixed focus enlarger is given in the concluding chapter. The unexposed slide-plate is carried in an ordinary plate-holder and is placed in the receptacle *A*, Fig. 2. The negative slides between the strips *H*, *H*, in the drawing.

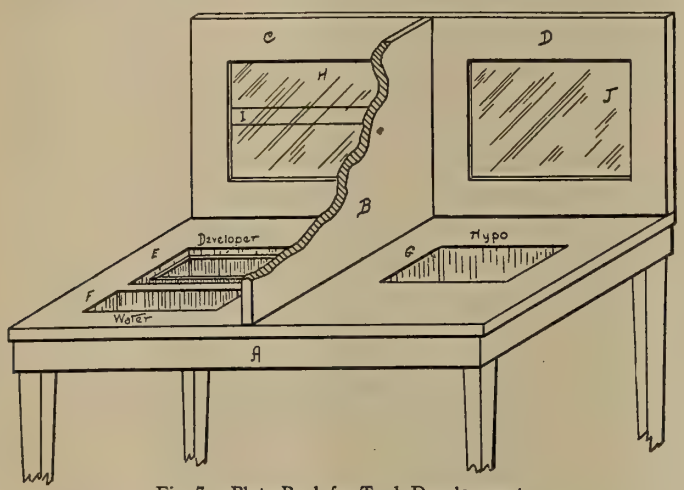

Fig. 7. Plate Rack for Tank Development.

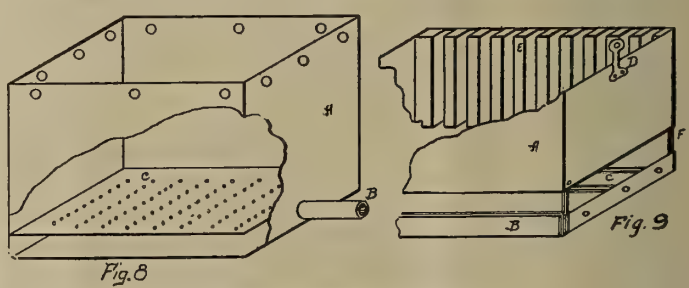
In a camera of this type it is necessary to use some form of shutter to cap the lens when using any form of light other than the electric incandescent which may be quickly turned on and off. The drawings, Figs. 3 and 4, offer suggestions for a simple and very effective shutter, which may be controlled from outside the box. The pear-shaped shutter of sheet metal is blackened with a dead black paint and is pivoted on a screw at *C*. The washer *C* may be soldered to the metal of the shutter. A rod, *A*, is pivoted to a projection of the shutter, and serves to uncover the lens by a pressure from without the camera box. The stop *E* prevents the shutter falling down past the lens.

Figure 5 shows a method of mounting a simple lens, and its diaphragm. Two mailing tubes are arranged to fit tightly one within the other, and the diaphragm is merely a washer of needle-paper placed in position as shown in the drawing.

The arrangement of the developing room will depend somewhat upon the individual. It is time well spent, however, to arrange the various accessories in a systematic order, and the suggestions offered herewith may prove useful to this end. It is highly desirable that the developer be kept at a constant temperature, regardless of the temperature of the dark room. It is equally desirable to have the developer, water, and hypo so disposed that they are readily accessible without danger of mixing one with the other. The developing light is also an important point to consider.

The arrangement shown in Fig. 6 has been used with great success, and its convenience will be appreciated if work is to be done in quantity. The table should be firm and of generous dimensions. The back-board carries two windows, which are fitted with sheets of clear glass. Between two pieces of glass is placed the orange paper—a single thickness in *J*, which is the hypo side, and a double thickness in *H*, the developing side. A narrow slot in *H* has but one thickness of paper, and a stronger light is afforded at this place for the examination of a nearly developed slide. Incidentally it might be said that the ordinary form of ruby lamp is of very little use for this purpose, as it is desirable to examine the slide by transmitted light during development. Lamps are placed in hoods well in back of the windows, so as to diffuse the light over the entire surface. As lantern slides are ordinarily made with a considerably slower emulsion than negative stock, it is possible to use a much stronger light in the dark room. A wooden partition divides the developing from the fixing side of the table, and serves the double purpose of acting as a shield for the light from the the hypo side and to prevent hypo being spattered into the developer.

Development may be done in trays or in a tank. Of the two, the latter is to be preferred. The tank may be a wooden one, which has been well boiled in paraffin wax, and it should fit into a larger tank made integral with the table top. The larger tank is to hold water for keeping the temperature of the developer constant. If work is to be done on a large scale, a circulation of water should be provided, but for short periods of use; the temperature can be controlled by merely placing small lumps of ice in the outer tank at certain intervals. Immediately in front of the developing compartment a second tank is placed for the rinsing water to be placed in. The hypo tank may well be lead-lined, and fitted with an opening in the bottom into which a leaden plug is placed.



Figs. 8 and 9. Details of Washing Box.

An iron or brass stop-cock will corrode within a few days so badly that it cannot be opened if used on the hypo tank. The developing and water tanks should also be provided with suitable means for draining, and they should be thoroughly washed after use with clean water.

Development in the tank necessitates some sort of holder for the slides for economy of time. The rack shown in Fig. 7 is easily constructed of wood, and its convenience is readily seen. The grooves on either side of the slide receptacle keep the emulsion of the plate intact, and indeed it is never necessary to touch the emulsion in any of the operations. This holder should be boiled in wax before using for the first time. A number of holders may be constructed and placed in the developer at the same time. The advantage of this method over the ordinary one of placing the slides side by side in a rack will be appreciated when one comes to examine the slides during development.

The washing apparatus should receive some attention. It is imperative that slides should be most thoroughly washed if they are to be durable. Fig. 8 illustrates a tank which has many good points. The false bottom is perforated with small holes in even rows, as

suggested in the drawing, and the result is that the water is forced up uniformly between the plates. An ordinary negative washer may be fitted with such a bottom by any handy man. The rack for holding the slides may be of the usual type shown in Fig. 9, but the sheet-metal bottom should be displaced by a few rods, so that the water may have an unrestricted passage to the slides. This rack is also used in the hypo bath immediately after the slides have been developed and rinsed. The plates are transferred from the wooden developing frames to the rack shown in Fig. 9, placed in the hypo until fixed, and then the same rack transferred to the washing tank. By means of the handles *D*, Fig. 9, the worker may make the transfer without once placing his fingers in the hypo, an

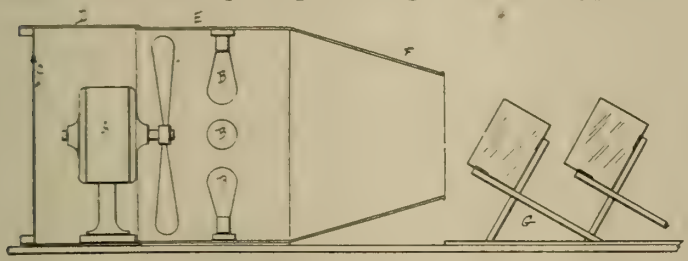


Fig. 10. Mechanical Drier for Slides.

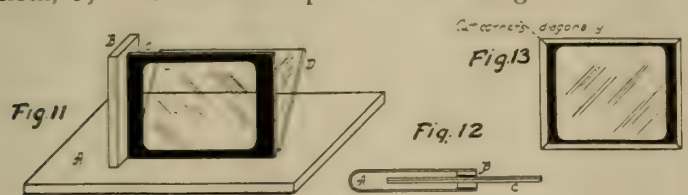
advantage not to be slighted when one man has to do both developing and fixing. If the precaution is taken to leave a generous space between slides in the rack, the disappearance of the silver on the slides may be noted without taking a single one from the rack.

The question of drying quickly and effectively is rendered easier of solution by the use of a device to force a current of heated air over the surface of the plates. If the slides are to be tinted, it is advisable to avoid most of the drying and hardening agents which are so useful in connection with paper prints and negatives. This is particularly true in the case of water-color tinting of the slides. Under these circumstances, the mechanical drier is an acquisition. The device illustrated in Fig. 10 is readily constructed of materials to be found in any house which is wired for electric lights. The fan chamber, *E*, is cylindrical in shape, and a cone of tin is fitted to its end. Four sixteen-candle-power incandescent lamps serve as the heating element, and it is surprising what an amount of heat they will develop. The chamber for the motor may be of wood,—a wooden box of sufficient size will do. The open end is covered with a piece of cheesecloth, *C*, which serves to prevent dust being drawn into



Figs. 11 to 13. Details of Mounting Accessories.

the heater. In use, a current of dry, clean air is forced from the mouth of the cone, and the plates placed in negative racks before this opening are dried in a remarkably short period of time.

The last accessories to be described in this article will be those shown in Figs. 11 and 12. The former is merely a base of wood to which has been fastened an upright piece of the same material. This latter should be truly perpendicular to the base. This device will be found useful in mounting slides and, by its aid, the paper masks may be uniformly placed in all slides,—a condition seldom found in commercial slides of the present day. Figure 12 suggests a holder for the slide and cover glass before binding. This holder consists of a piece of heavy spring bent double and having its ends fitted with pieces of cork to press the slide and glass together. Figure 13 shows the proper method of binding a slide. If the binder is run around the slide in a continuous piece and the corners merely folded in, the paper is sure to come loose at the corner and to catch in the slide-carrier at a critical moment. It is but a moment's work to run a sharp knife blade diagonally across the corners, as shown, and to see that the binder is actually stuck down to the glass at this point.

American Gets Some Odd Pictures

Kerrigan fans who have watched and admired the big "cowboy" as he appears in "Flying A" productions would have found food for reflection in the result of an experience which befell the picture last week. Kerrigan, in company of R. D. Armstrong and one of the cowboys, went to visit a genuine dyed-in-the-wool ranch lying in a remote region off Santa Barbara, Cal. They found cowboys of the old school, the kind that have made countless feet of motion pictures and numberless volumes of books. Kerrigan began his experience by nearly shooting his foot off with a Colt that did not have blank cartridges in it. The company, upon asking for rooms, were told that there were about eighteen thousand acres in the ranch and that they were welcome. They shot a deer and dined on real jerky, and had numerous other experiencess befitting real cowboys. When the party returned they had taken three thousand feet of pictures. The ranch in question lies two days' ride from railroads or other civilization, and is one of the few old fashioned ranches still extant in the west.

Two-Reel Andrew Jackson Story

The Starved Rock party of "Flying A" players have just completed a two-reel subject on the interesting theme of Andrew Jackson. The pictures are historically accurate and dealing with so commanding a figure as Andrew Jackson are certain of appreciation.

The schoolboy has been given much consideration in the layout of the scenario. For instance, that famous duel between Andrew Jackson and "Dead Shot Dickinson" is faithfully portrayed, as per Eggleston's History of the United States and the valuable treatise written by William Allen White. Students will remember the boast made by Dickinson to shoot Jackson through the button which covered Jackson's heart, and the latter's crafty stratagem in moving the button some distance to the left.

The Battle of New Orleans is also portrayed despite much discouragement in obtaining the proper military costumes of the period. The last final charge of the English on the mud-wall fortifications is as fine a bit of action as ever was seen in spectacular military productions.

Search Lights for Picture Taking

Among the many remarkable features of Essanay's coming three-reel production of "Robert of Sicily," a dramatization of Longfellow's beautiful poem laid in the latter part of the fifteenth century, are scenes taken of some exquisite and massive sets by night, using a powerful battery of searchlights. This is a new experiment, and has proven highly successful, as the test-pieces of film run off in Essanay's private exhibition room at the big plant reveal photographic marvels unusual in unique lighting schemes.

Testing Kinematograph Films

THE great development of the kinematograph industry in France and the excellence of French films are largely due to the application of systematic tests, which are very often neglected in Germany and other countries, says Dr. Gustave Bouwitt in *Zeitschrift fuer Angewandte Chemice.*

Most of the celluloid films used in ordinary photography are sliced or planed from celluloid blocks and are consequently hard and dry from the beginning. Kinematograph films, on the contrary, are made by pouring a celluloid solution upon a moving base in a continuously operating machine, and they acquire the necessary solidity by a process of slow drying.

If this process is not carried far enough the film continues to dry and shrink during use and soon becomes torn and worthless. Undried or imperfectly dried films made by this method also show a tendency to curl toward the "dry" side (i. e., the side which is not in contact with the temporary base) in the machine. Such films do not lie flat in the gate of the projecting lantern and their curvature produces distortion in the picture and causes the film to wear out more rapidly. Sensitized kinematograph films are sometimes injured by electric sparks produced by reeling the film too tightly in a moist condition or in a damp atmosphere.

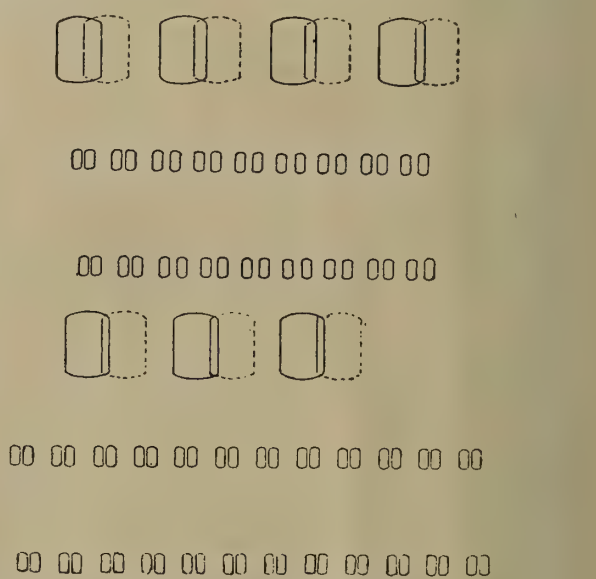
What are the requirements which should be satisfied by a good kinematograph film? In the first place, the film should be both flexible and hard enough to be used for 1,000 to 1,500 projections. The gelatine coating should remain firmly attached to the celluloid without having its photographic properties affected by the latter even after long keeping. The celluloid foundation should not change in form or dimensions in the dry or wet state, the film should show no dust or other impurities under 200-fold magnification, and its surface should not be easily affected by scratches or other mechanical injuries.

The photographic emulsion of a negative film should be very sensitive and free from fog. The latter quality is likewise necessary in the positive film, which should be capable of yielding fine-grained black pictures, rich in contrast.

The testing should include, in the first place, the dimensions of the film. The total thickness, inclusive of the emulsion, should be from 0.11 to 0.16 millimeter (0.004 to 0.006 inch), the width 34.8 to 35.0 millimeters (1.37 to 1.38 inch). The height of the picture was fixed at either three-fourths or four-fifths the width, by the International Congress held in Paris in 1900. Hence the height of the picture should be about 18 millimeters (0.7 inch) and its width 24 millimeters (0.95 inch), leaving 5.5 millimeters (0.22 inch) for the perforations on each side. The interval between consecutive pictures is 1 millimeter (0.04 inch). Accuracy in the width of the film is particularly important, because too wide a film will stick in the gate, the width of which is 35.1 millimeter (1.382 inch), or will pass through it by jerks, while too narrow a film will produce unsteadiness by lateral oscillations.

The shrinkage, due to gradual evaporation of cellulose solvents from an imperfectly dried film, should not exceed 1.25 per cent in six months, and is determined by measuring the length of a strip of film at regular intervals during that period. Another cause of variation in the length of a gelatine-coated film, in the moist state, is found in the hygroscopic properties of the gelatine and also of the foundation when the latter has been subjected to a process of saponification for the purpose of making the coating adhere firmly. The foundation itself, especially if it is composed of acetyl-cellulose, is not always waterproof. The amount of stretching due to these causes is determined by attaching a weight of 200 grammes (about 7 ounces) to one end of a strip of film and suspending the strip by the other end in water. The increase produced by six hours' immersion should not exceed 1.25 per cent.

Other changes caused by water are studied by soaking the film and carefully examining it. In addition to celluloid and acetyl-cellulose, various other substances, including viscose, formyl-cellulose and hardened gelatine, are sometimes employed as the material of film foundations. As these films are not waterproof they are coated, on both sides, with celluloid or acetyl-cellulose, but water



Tests of Kinematograph Films for Regularity of Perforation. The Upper Diagram Indicates Poor, the Lower One Good Perforation.

can still be absorbed at the unprotected edges and perforations, causing swelling and deformation.

The tensile strength and extensibility of a film are measured by the usual methods. The strength ranges from 5 to 7 kilogrammes per square millimeter (7,000 to 10,000 pounds per square inch) for a film of 0.1 millimeter (0.004 inch) thick. The extensibility varies from 10 to 15 per cent. The flexibility is measured by a machine which bends the film in opposite directions alternately.

The film should also be tested in the conditions of practical use. For this purpose an endless band of film is run through the kinematograph at a known speed for a measured interval of time, so that the number of times it has passed through the machine can be computed. A good celluloid film should suffer little damage from 1,000 or 1,500 passages.

The gelatine coating of a good kinematographic film adheres so firmly that it cannot be detached, even partially, by pinching, pulling or rubbing.

The inflammability is tested by exposing a motionless film, in the gate of the kinematograph, to the rays of the projecting lantern. If the film is blank it should not

be affected except when the point of the conical beam strikes it, and even then only a pin-hole should be burned through it. A motionless pictured film melts in the gate, but it should not take fire.

The most important condition for perfect projection is absolute accuracy in perforation, which brings each picture precisely to the same place in the gate. Each side of each picture has four perforations, 2.6 millimeters (0.103 inch) wide, 1.7 millimeter (0.067 inch) high, and 4.75 millimeter (0.187 inch) apart. The distance between corresponding perforations, and consequently between the centers, of successive pictures should be carefully measured. The normal distance is 19 millimeters (0.784 inch), but all projecting machines will work with a distance of 18.75 millimeters (0.738 inch). In order to allow for shrinking the distance is actually made a little greater (19.05 to 19.1 millimeters) in positive films.

This important distance can be measured to 0.1 millimeter by means of a millimeter scale, provided with a vernier, and can be determined, less accurately, by measuring, with an ordinary rule, the distance between the upper edges of the first and forty-first perforations, and dividing the result by 10.

The regularity of the perforation is also essential for flawless projection. It is tested by laying one end of the film on the other and seeing if the perforations coincide throughout the length tested, which should be as great as possible. A more accurate test can be made with the aid of a special apparatus, in which enlarged images of the perforations overlap, more or less uniformly, as the accompanying diagram indicates.

Films are tested in the factory for fog, electric effects and dust, by developing and projecting specimens taken before and after perforation. The uniformity of the sensitive coating and its freedom from air bubbles are determined by developing to a grey tone a purposely fogged film. Scratches in the coating or the foundation are revealed by similar tests. The sensitiveness and gradation of tone are determined in the usual way with the sensitometer and photometer.

Of Interest to the Trade

Opera Chairs for European Shows

Consul S. M. Taylor, Nottingham, England, says there are no firms in Nottingham acting as agents for theater chairs, but for this purpose American firms might correspond with the furniture dealers whose names and addresses are obtainable from the Bureau of Manufactures. From inquiries as to the opportunities for such chairs, the situation appears to be:

As soon as moving pictures began to be housed in theaters of their own, firms for the manufacture of their furnishings were established. There are now about a dozen of these, situated in London, Liverpool, Manchester, and Birmingham. When a new picture theater is decided upon, the architect or builder writes for estimates to the several firms, and naturally selects the lowest bid. Competition is very keen and prices are cut to a fine point.

An indication of British prices, which may be of value in estimating conditions of the local trade, follows: Folding birch chair, 95 cents each; garden or exhibition chair, folding iron frame, varnished lath seat and back, 54 cents each; seats or chairs to be attached to floor in rows, 15-inch centers, 12½ inches deep, solid wood stained any color, polished backs 5½ inches, painted iron standards, 95 cents each; same, with seat and back with upholstered center, finished banding and brass studs, covered American leather cloth, $1.21 each; seats or chairs to be attached to floor in rows, 16 to 18 inch centers, 5-inch stuff-over back, seat 14 inches deep, well upholstered, 3 to 5 inches thick, covered in good quality Utrecht velvet or railway rep, $1.82 each.

The best method of reaching the local trade is to deal through a wholesale distributing agency in London, Liverpool, or Manchester, which would act as a center for the British trade generally. It is doubtful whether it would be found profitable to establish an agency in the city, as the amount of business to be done here in the future is likely to be limited, the community being already well supplied and almost oversupplied with moving-picture shows.

Prices of British-made theater chairs are very low, according to Consul General John L. Griffiths, London, England, and when the seating of a hall is installed under contract prices in the aggregate rule slightly lower. It is thought that the public generally prefers upholstered or leather (usually imitation) covered chairs, and that steel chairs would not be popular. So far as cinematograph theaters and ordinary theaters and halls are concerned, it would appear that the present local demand is fully supplied; in fact, in many districts they are already so numerous that the margin of profit is frequently at a minimum, and, being already fitted, the introduction of new chairs in place of those already in use would not commend itself to the owners.

Present prospects for the Spanish importation of opera chairs and general seating supplies for theaters and other places of amusement are not encouraging so far as the Valencia district is concerned, says Consul Robert Frazer, Jr., Valencia, Spain.

With the sole exception of trial samples of office furniture and barbers' chairs, no furniture of any kind has been imported during the past eight years. Valencia is one of the most important centers of Spain for the manufacture of chairs and miscellaneous furniture; and although the greater part of the lumber used by furniture factories is imported, the employment of modern machinery and abundance of labor at a low wage scale contribute to cheapen the cost of production, while the very high tariff on imported furniture effectively excludes foreign competition.

Plain wooden chairs without moldings or ornamentation pay a duty of $13.51 per 100 kilos (220.46 pounds), which is equivalent to an ad valorem duty of about 40 per cent, as the value on which the tariff schedule was based was $33.80 per 100 kilos. Chairs, the wood of which is turned or with mouldings attached, pay $28.95 per 100 kilos, and chairs upholstered with leather, silk, or silk mixtures pay duty at the rate of $33.80 per 100 kilos, the estimated cost of production on which this last-named tariff was framed being $96.50 per 100 kilos.

The few sample chairs and pieces of office furniture imported from America serve only as models for imitation, and an important factory recently established at Barcelona is turning out exclusively Ameri-

can designs, which are reproduced with marked fidelity in form and appearance.

The chairs most in demand here are of plain wood, seated with stamped veneers, or rushes and sedges grown on the borders of the marshes and rice fields near this city, and cost only 50 cents per chair complete. These chairs are piled in thousands during the long summer in the public parks, open-air theaters, churches, etc., and are hired at the rate of 1 to 5 cents per hour or performance, according to the importance of the festivity or celebration.

There are no importing merchants or jobbers in foreign furniture in Valencia, and all firms engaged in the furniture trade appear to take it for granted that there is no possibility of competing with home products at present.

The ruling factor in the sale of chairs for amusement halls in Japan is cheapness, says Consul General Thomas Sammons, Yokohama, Japan, and although quality and durability are desirable features, the cost of the home-made article is so low and so adapted to the present needs of the people that little encouragement can be held out as yet for the sale of Western equipment. Of the four classes into which the seats of amusement halls in Japan are divided, only two, the "special" first and the first class are provided with chairs, the greater majority of seats included in the third and second classes being merely rude wooden benches.

Lists of moving-picture theaters or other pertinent names that accompanied the foregoing and other consular reports may be had upon application to the Bureau of Manufactures, Washington.

To Increase Universal Releases

On October 1 the Universal Film Manufacturing Company will increase its number of releases from twenty to twenty-eight reels per week. There will be four releases every day. The new releases are to be made largely by new stock campanies, hired by the Universal. Two of these extra eight releases, however, are to be made by the St. Louis Motion Picture Company, which manufactures the Shamrock brand. The Universal Company has recently acquired the agency for Shamrock films, and will make the two releases a week a part of their regular program. Six new releases will be made under three new names, produced by three new companies, hired by the Universal Company, and put to work either in some of the studios in and around New York, or sent to California to join the Nestor and Imp forces there. The Universal has also obtained the American rights to Ambrosio films, which it will hereafter release.

Demonstrate for School Board

A demonstration of the practicability of motion pictures for the study of geography, history, art and botany, was given in the rooms of the board of education at Los Angeles, Cal., last week. R. G. Hafford of the Edison company gave the demonstration and following the inspection, J. H. Francis, superintendent of schools, said: "I am strongly in favor of the innovation of the motion picture machine. I believe the motion pictures are fine things and it will be an aid in entertaining and educating students of all ages."

M. C. Bettinger, assistant superintendent, and J. B. Monlux, deputy superintendent, also expressed their approval of the innovation.

Thanhouser's "Undine"

It all happened in the days when knights were brave and fairies and spirits danced in the moonlight. There was a beautiful lady—the Lady Bertalda—who offered the favor of a bow to the suitor who would go unattended through a magic forest. Lord Huldbrand made the journey, but during it he met a water-nymph, Undine,

The Water Sprites.

whom he loved and married, thereby giving her a soul.

The Lady Bertalda and her father came to visit Lord Huldbrand, who was a kinsman, and again Huldbrand fell under the charm of Bertalda, and began to neglect his wife. While rowing one day, Huldbrand was especially attentive to Bertalda, and Undine, that they might be freed of her, leaped overboard to her death, as they supposed.

Then Huldbrand and Bertalda planned to marry. At the wedding festival a white-shrouded woman

The Wedding of Undine.

entered, and all recognized Undine. She enfolded Huldbrand in her embrace and he died. Undine followed the funeral procession to the grave, then fell beside the tomb and faded from sight, and in her place appeared a silvery brook.

Because it realizes the great possibilities of moving pictures in educational work, the Education Department of Moscow, Russia, has applied to the municipal council for $6,000 to be used for providing pictures in the elementary day schools.

Edison's "The Charge of the Light Brigade."

"The Charge of the Light Brigade"

"The Charge of the Light Brigade" has again been made—but this time in motion pictures. The Edison company is giving it to the public with the following cast:

Captain Morris.....Benjamin Wilson
Captain Nolan.....Richard Neill
Lord Raglan, Commander-in-Chief of the British forces.. .....James Gordon
Lord Lucan.....Charles Sutton

Lord Raglan's aides and the entire body of cavalry comprising the Light Brigade.

The historical event is recorded in the annals of time on October 25 in the year 1854, at the hour of ten o'clock, on the bloodstained field of Balaklava, where England strewed for over a mile the life blood. It was only eighteen minutes from the moment Lord Cardigan gave the command, "Forward the Light Brigade," that this torn, bloody, battlestained, broken and shattered regiment, the pride of England's army, came back from the valley of death. All that was left of the six hundred, only one hundred and ninety-nine, answered the roll call.

Some one had blundered.
Theirs not to make reply,
Theirs not to reason why,
Theirs but to do and die:
Into the valley of death
Rode the six hundred.

The picture, which will be released October 11, was made at Cheyenne, Wyo., under the able direction of J. S. Dawley. About 800 United States cavalrymen and their trained mounts were used. During the "charge" Dick Neill, as Captain Nolan, fell from his horse and broke his arm.

The Encampment.

Motography Publication Dates

Since MOTOGRAPHY has changed its publication date from the first day of each month to every other week, there has been more or less confusion regarding the time when advertiser's copy should be in our hands. This table will supply the information:

Publication Date	Closing Date
September 28	September 23
October 12	October 7
October 26	October 21
November 9	November 4
November 23	November 18
December 7	December 2
December 21	December 16

J. Searle Dawley, Edison Director.

Coming Cines and Eclipse Films

George Kleine announces for release Tuesday, September 17, an unusually interesting three-subject reel dealing with topical, industrial and scenic subjects. In "Traditional Customs in Southern Italy" we are given closer views of the peculiar religious ceremonials indulged in by the peasantry, which are not only entertaining in their oddity, but highly instructive as well. The second subject on this reel treats of a matter we are more or less familiar with, but only at a distance. Few of us have not seen the great cannons and modern engines of destruction, but very few of us have ever enjoyed the privilege of seeing the monster guns in the process of making. In the subject, "A Gun Factory," we are taken through the famous Armstrong works at Pozzuoli, near Naples, Italy, and the various operations from the melting pot to the transportation of the finished articles are clearly and interestingly shown. A very beautiful series of views of "Amalfi, Italy, and Surroundings" has been added to complete the reel, and a magnificent panorama seldom equaled is spread before our eyes.

An Eclipse comedy and a scenic form the split reel release for Wednesday, September 18. "A Country Holiday" describes the adventures of three lively young men who fall in love at the same time with an actress who is passing her vacation on a farm and whose sense of humor permits her to have great fun at the expense of her ardent wooers. The scenic subject on the same reel pictures "New Plymouth, New Zealand," in a very pleasing manner.

As interesting and romantic as the general history of France is to the world at large, there is no period which thrills and fascinates us more than the epoch-making days of the Revolution, and that particular time so fittingly called "The Reign of Terror." Robespierre's brief captaincy of the poor, horror-ridden ship of state will be remembered through the ages as a dark page in French history. An incident which occurred during those days of plotting, conspiracy, mock-trials and wholesale beheading is interestingly portrayed in the Cines film, "Betrayed for Love," to be released Saturday, September 21. Amelia Cattaneo and Anthony Novelli are seen in the leading roles, and, ably supported by a large company, they enact in realistic manner an absorbing and thrilling story.

Selig Films Shows Exhibitors as Actors

Thursday, September 19, the Selig Polyscope Company will release "Into the Genuine." The great scene of this picture represents the dramatic closing hours in the wheat pit board of trade. In making this scene, in the neighborhood of one thousand motion picture exhibitors were used for the parts of brokers. This scene was made on the afternoon of August 14 during the national convention of the Motion Picture Exhibitors' League of America. Some fifteen hundred convention visitors were guests of the Selig company on this afternoon, and when the visitors were invited to become actors in a Selig production they entered into the spirit of the thing with a vim and the result was most realistic.

The Selig company has received many requests from exhibitors for permission to exhibit the picture that was taken showing members and friends of the Motion Picture Exhibitors' League entering the Selig plant on the afternoon of August 14 during the convention. This picture was rushed through in record time and shown at Orchestra hall the same evening. Exhibitors desirous of securing this subject should get in touch with their exchanges.

Finish Picture-Taking at Starved Rock

Break camp and take to the trail!

The trail led back to Chicago and brought into that city in the first hot days of September, the sixty and more players of the American Film Company. And with them came all of fifty-seven varieties of tan, thousands of feet of films, and the knowledge that the six weeks encampment at Starved Rock had been perfectly successful, both in the way of taking pictures and having a good time as a general accompaniment. The camp, named "Hutchinson" for the company's president, was the visiting place for neighboring residents and sight-seeing parties. It was a hospitable camp, and entertained more than one lodge and convention. Governor Deneen and other notables sojourning at the Rock were welcomed as, were also official visitors, among whom were the Cook County Press Association and the Illinois Senate Committee on the deep-waterway-to-the-gulf problem.

Pathe Offices Moved

Pathé Frérès on September 6 moved their offices from 41 West Twenty-fifth street, New York, to their new office building at 1 Congress street, Jersey City, N. J.

It was found that the New York office was inadequate for handling the ever increasing volume of business, and this led to the erection of a new building. The new offices are in a handsome structure which was built with the accommodation of a motion picture business as an object. It is situated adjacent to the Pathé studio, and this convenient location, together with the perfect appointments of the new building, will make the new home of Pathé Frérès ideal for their purposes.

Miss Williams Entertains Slum Children

Miss Kathlyn Williams, the beautiful and talented leading woman of the Selig Polyscope Company's Chicago studio, acted as fairy godmother to a party of some two hundred children last week, when she gave the slum kiddies a theater party at the Steavenson theater, Evanston avenue and Irving Park boulevard, Chicago. The children were those who took part in the recent tuberculosis pictures at the Selig studios, and were recruited from the Hull House district, Chicago's most congested foreign quarter. Miss Williams has for some time been very much interested in Chicago's social settlement work.

Warden Tynen Plays in Selig Picture

In the Selig release of September 6, entitled "Circumstantial Evidence," Warden Thomas Tynen of the Colorado State Penitentiary plays a prominent part. The warden is one of the best known men in the west and his appearance in a motion picture will be looked forward to with a great deal of interest by his numerous friends. Warden Tynen is the man who instituted the now famous honor system among the convicts in his charge. The picture in question is exceptionally interesting in that it shows many scenes which were taken in and around the penitentiary grounds.

Steel Plate Mill Pictures

Motion pictures showing the methods of reducing raw material to the finished, hammered sheet steel, and tin plate, will be exhibited in the Detroit Museum of Art. A descriptive lecture will accompany the pictures, which are shown by the Follansbee Brothers company of Pittsburg. The methods of reduction are those of that company.

Brevities of the Business

PERSONAL NOTES.

Edwin Roskamp of New York, who was with the Imp Film Company as factory laboratory manager for three years, has left that company and organized the Commercial Motion Picture Company, with offices in the Forty-fifth street Exchange building. The handling of industrial films and the taking of motion pictures for private parties is the special work of the new concern.

Benjamin N. Judell, better known to the film world as "Benny," has given up the position of booking agent with the Western Film Exchange and has opened a film exchange in Minneapolis, Minn., for the Mutual Film Corporation. Mr. Judell's connection with the Western Film Exchange at Milwaukee has been since the latter's organizing. There he was associated with J. R. Freuler, general manager of the Mutual Film Exchange and one of the "men who do things" in the film world.

Arthur D. Hotaling and Wilbert Melville, directors for the Lubin Company, have gone south and southwest, respectively, a troupe of thirty players being assigned to each. Cuba, return by way of New Orleans and the Mississippi river, is the Hotaling itinerary, while that of Mr. Melville and party includes the important cities, reservations and garrisons of Arizona. The equipment of each party comprises a Pullman standard sleeping coach, a day coach and a 70-foot baggage car containing a big outfit of scenery, and the probable necessary props and furniture.

J. G. Brammall, who has been with the Majestic Motion Picture Company for the last year, has been engaged by David Miles to play important parts with the Kinemacolor Company. He will go to the coast about October 1 with Mr. Miles and his other players.

Miss Anna Nillson, one of Kalem's popular leading ladies, has been absent from the New York studio for several weeks, having undergone an operation for appendicitis. She is rapidly recovering and will soon resume her work.

Signor Carlo Sciamengo, the head of the Itala Company of Torino, Italy, has been in this country for the last month negotiating for an agency of Itala films, since the agreement with the New York Motion Picture Company has expired. Harry R. Raver, secretary and general manager of the Film Supply Company, has made arrangements whereby he will become sole agent for this brand in the United States. The new deal, Mr. Raver declares, will in nowise affect his present association, and very shortly he expects to establish a New York office.

R. V. Spencer, scenario editor of the Bison at San Diego, Cal., will take a six-weeks' vacation in the East soon.

Elizabeth Marbury announces from Paris that she has just been appointed sole agent and director for the United States and Canada of the New Gervais Courtellemont process of photography in colors. This method has been an enormous success in Paris the past few months where it is regarded as almost revolutionary in its fidelity to nature and in its educational and social application.

Loew purchased the New York state rights of Bernhardt in "Queen Elizabeth" from the Famous Players' Film Company. It is claimed Loew paid $25,000 for the privilege, although A. Zukor, president of the Film Company, is financially interested in the Loew circuit.

Hardee Kirkland, who until recently has been identified with David Belasco and his productions, has joined the Selig Polyscope Company's forces as a producer. His first picture will soon be released under the title of "The Voice of Warning."

Albert W. Hale has been appointed a director for the Thanhouser Company.

Jay Hunt, moving picture director and burlesque "magnate," has finished his Western Wheel show, Queens of the Follies Bergere, and sent it out on the burlesque circuits. Upon doing this, Mr. Hunt rejoined the Thanhouser Company as producer, from which post he had been absent for a month while putting on his Wheel attraction.

E. B. Cridler, by a deal which was closed on August 21, became the owner of the Heckman theater, at Dansville, N. Y., which, after remodeling, will be operated as a motion picture house exclusively until the regular theatrical season begins. First-class road attractions will then be seen at this house. The purchase price of this theater was approximately $20,000, and a considerable amount will also be expended in the remodeling.

Sam H. McFarlane, formerly representative with Nixon & Zimmerman, and also with Cohan & Harris, has quit the theatrical business for motion pictures. He is now general manager of the Crown Feature Film Company.

Miss Gene Gauntier, who paid a hurried visit to her home in Kansas City, has returned to Ireland to take up her work as leading lady and authoress for the Kalem Company under the direction of Sidney Olcott.

Otis Turner is the director of the new Bison Company in California, thanks to the Universal Film Company, which removed him from the directorship of the Imp brand films to give him the newly created position. "Because he is one of the best of the Universal directors," is the reason given. In his new field Mr. Turner will carry on the work of producing two pictures a week.

William H. Swanson, who is attending to the Universal interests in California, recently hired a large outfit of horses and Indians, and secured the picture rights to a large strip of land, which is said to be well suited to the taking of wild west pictures.

James Kirkwood, who some months ago left the Reliance Company, where he had held the position of director, was engaged to take Mr. Turner's place at the Imp studio.

Joseph Hopp, of the Standard Film Exchange, Chicago, and others, invaded Milwaukee September 2, and opened an exchange, which handles the Universal brand of moving pictures. Until then Milwaukee was controlled, from the independent standpoint, by the Mutual Film Corporation, which operates the Western Film Exchange there.

F. McMillen, who manages the Theater Supply Company, has the growth of that company to his credit. The concern, though but one year old, has progressed so rapidly that a larger home had to be found for it. Mr. McMillen is an experienced film man and accords his success to his policy of operating along lines that mean most to the exhibitor.

S. S. Hutchinson is home again. He has brought back with him to the presidency of the American Film Manufacturing Company, in Chicago, a healthy and much evident coat of tan and any amount of optimism, due to Europe's friendliness to American films.

F. B. Thompson, the man who has charge of the manufacture of Edison's home projector, visited the office of Motography last week. Mr. Thompson has just had a pleasant two months on the Pacific coast by way of a vacation.

Mrs. William Todd, of the Essanay western stock company, had a birthday last week and her husband, who is also an Essanay-ist, invited a number of friends to help celebrate the occasion. Augustus Carney, famed as "Alkali Ike," was present and Frederick Church, Arthur Mackley, Victor Potel and G. M. Anderson, better known as "Broncho Billy," added to the fun of the evening. Mrs. Todd received many beautiful gifts.

E. L. Barker, the Kinemacolor Company's advertising manager, is touring the west to spread the fame of Kinemacolor pictures.

William Evans, a camera operator with the Essanay western stock company, is back from his trip through Japan, China and the Philippines. He brought with him some wonderful pictures, one set of which will be released September 24, and another in early October. "Across the Pacific" and "China and the Chinese" are the names of the respective series.

David Miles will take a troupe of Kinemacolor company players shortly to the company's new studio at Los Angeles, where Mr. Miles will direct the staging of comedies and dramas which will be Kinemacolored. Mr. Miles and his troupe will come from the company's main studio at Whitestone, L. I.

E. Mandelbaum has resigned from the presidency of the Atlas Amusement Company and has retired from the concern. He disposed of his holdings in the company to the secretary, A. L. Freedman, and the treasurer, A. Newman, and will devote himself exclusively to the interests of the Lake Shore Film and Supply Company and the F. and E. Film Company of Cleveland, of which concern he is manager.

A. H. Sawyer has completed his trip to Boston and New England, where he succeeded in arousing much interest in the Kinemacolor pictures.

Miss Myrtle Stedman, leading woman of the Selig Company now at Canon City, Colo., has sung many times for the prisoners in the Colorado state penitentiary. Last week an acknowledgement of the pleasure her voice has given, was made in the way of the presentation to her of a hand-carved, inlaid table made by one of the convicts who received permission to tender his gift in person. The work on the table occupied

months of his time. Miss Stedman is proud of her gift, and will ship it to her Chicago home.

Hardee Kirkland is the latest addition to the Selig staff of producers. He has had much experience in stage managing, having spent two recent years with David Belasco and his various productions and done an amount of staging for Liebler company. His first Selig picture will be released shortly. It is called, "The Voice of Warning."

J. B. Clymer has succeeded A. K. Greenland as advertising manager of the Gaumont Company.

ROLL OF THE STATES.

CALIFORNIA.

The Starland Theater, on Fraser's Million Dollar Pier, Ocean Park, which has long been conceded to be the most elaborate, up-to-date and best equipped motion picture and vaudeville theater on the Pacific coast, has been purchased by the Globe Amusement Company and in the future will be known as Globe Theater No. 6. J. M. Boland, the former owner, will be retained as resident manager. In acquiring this theater the Globe Amusement Company received a valuable asset. In pursuance of its policy of rapid expansion the Globe Amusement Company is not only building 15 high-class theaters with a large seating capacity, but is absorbing houses already in operation that have a large enough seating capacity and located in residential districts where they are surrounded by a sufficient population to pack them several times nightly.

Moving pictures are the latest innovation for the diversion of soldiers at Fort Winfield Scott, San Francisco.

The building of a new picture theater is among the near probabilities for Huntington Beach and a location on Main street has already been tentatively selected as its site. It is proposed to make the new building modern and attractive.

A moving picture theater will be built on Tulare street, Tulare.

DELAWARE.

The moving picture theater at Rehoboth Beach, owned by H. S. Newman, was destroyed by fire at a loss of $4,000.

Wilmington's moving picture parlor is again proving its popularity after having been closed for the summer.

DISTRICT OF COLUMBIA.

The Senate has passed the House bill putting motion pictures under the distinct protection of the copyright laws of the United States. Instead of providing for a fine for each picture which infringes another, the bill provides that in case of an innocent infringement the total damages shall not exceed $100.

ILLINOIS.

The Aleazar Amusement Company has been incorporated at Chicago, with a capital stock of $50,000, by W. M. Bennett, W. B. Bennett and Fred M. Outhouse.

The Nickelodeon, at Kewanee, will be opened by Basil Argeropolis. Work has been begun on cleaning out the theater, which has not been occupied for some time and which will probably not be ready for occupancy until the first or middle of October. A new picture machine and other fixtures for the place will be installed. The interior and exterior of the building will be repainted and other necessary repairs made.

At Champaign the remodeled moving picture theater, formerly known as the Crystal and now under the same management as the Lyric, has been formally opened. A force of painters, carpenters, electricians, etc., have transformed the place. The seating capacity is 275. The floor has been inclined, so that every spectator may see every movement on the screen. The big skylight in the center will be opened in the evenings and closed for the afternoon matinees with a covering of dark glass.

A permit was granted to Pratt & Rawson to conduct a moving picture show in the Star Theater, at Belvidere.

Dwight—A. L. Orr, manager of the Opera House, has purchased a new moving picture machine which has all the latest improvements, and now the pictures will be much plainer, steadier and easier on the eyes than the former machine produced.

An airdome will be erected at Galena and Adam streets, Freeport.

A new moving picture machine is to be added to the equipment of the Decatur high school this fall.

W. C. Meilanson, owner of the Empire Theater at Morris, sold it to C. E. Welshans of Streator.

IOWA.

Danbury is to have a new opera house, plans for which are now being made.

The Grand Theater, at Sioux City, has been opened to the public.

A new motion picture and vaudeville house has been opened at Cherokee.

R. G. Warrington and Emil Wangler have leased the Kiron Hall, at Ida Grove, and have installed a moving picture machine.

Work on the new moving picture theater, being erected by William Neiswenter, at Shanandoah, is progressing rapidly and will be ready for opening about Oct. 1. Mr. Neiswenter offers a prize of five dollars to the person selecting the best and shortest name for his new theater.

A theater, to cost $25,000, will be erected on East Main street, Marshalltown.

The motion picture theater at Logan has been purchased by George Erven, who will operate the same.

Cantril now has a motion picture theater, one having been opened there recently by Mr. and Mrs. Prosser of Bloomfield and Editor and Mrs. Carr of Pulaski.

Hubbard, Johnson and Company have purchased the motion picture theater at Rockford formerly operated by G. W. Dawson.

A new motion picture theater will be opened at Fort Dodge by the Princess Amusement Company about September 1 which will be under the management of R. Fobes.

Plans have been prepared for a motion picture theater which will be erected on First avenue, Cedar Rapids, in the near future.

The Iowa Theater, a moving picture house located at 324 West Second street, Davenport, has been sold by its owner, J. H. Blanchard, to Oscar Wernentin.

The new theater to be opened in the Carter building, on upper Central avenue, in Fort Dodge, will be known as the Majestic, which name had the lead in the recent contest. Not only will those who suggested the name be awarded with a number of free tickets to the theater, but all those who submitted names will be sent tickets, according to the announcement of Russel Fobes, manager. Mr. Fobes says the United Amusement Company, which will operate this new amusement house, is bending every effort to have the opening September 16. Independent films, brand new, are to be featured at the new theater. There will be a change of bill every night and matinees will be given every afternoon. Admission will be five cents except on "feature days," Wednesday and Saturday, when feature films of exceptional merit will be shown. The company will employ an orchestra and a singer to assist in making the shows attractive. The Powers machine will be used at the Majestic. The latest thing in concave screens has also been purchased. The theater will seat five hundred. The new theater company is building its own lobby and intends to spare no money to make it attractive in every way.

KANSAS.

Sam Worl is planning to open up a moving picture theater at Renfrow.

A new moving picture theater, known as the Gem, at 522 Kansas avenue, Topeka, has been opened to the public.

The Palace Theater at Hutchinson has re-opened after being dark for several weeks. G. H. Heist, manager, has provided an extra treat for the theater's patrons in the way of a six-piece orchestra and a soloist.

The New Odeon motion picture theater at Cottonwood Falls has been leased by Messrs. Carl Wooten and Joseph Clever.

The Novelty, Elite, Pastime, Colonial, Maple and Yale, motion picture theaters of Wichita, are planning to organize under the name of the Wichita Association of Exhibitors. The purpose of the organization is for protection against the possibility of two theaters showing the same film at the same time. Among those interested are Wm. Barrie, Jr., of the Marple; E. G. Olson, of the Pastime; Mr. Willis, of the Novelty; Ford Wright, of the Elite; Mr. Freese of the Yale and C. T. Cunningham, of the Colonial.

Lew Nathanson, manager of the Best and Cozy motion picture theaters, Topeka, have taken over the Victor Film Advertising Company. The new company will be located at 718 Kansas avenue, Topeka, and the name of the firm will be changed to the Best Film Manufacturing Company. James Calvin, formerly with the Pathe American Company, will be camera man for the new company. He will take Kansas scenes and events especially and will also make a specialty of advertising motion pictures.

The motion picture theaters in Wichita will be asked to bear the expense of the special election to be called for setting the question of Sunday moving picture shows. The city commissioner has decided to ask the theaters for expense money.

KENTUCKY.

Work has already begun on a handsome moving picture theater to be erected on East Ninth street, near Main, Louisville, by the Rex Amusement Company, recently incorporated by a number of prominent local business men. The new house will

be devoted to pictures exclusively and will be ready to open to the public in the early fall.

The Hippodrome Theater is the name of the new motion picture house to be erected at Fifth and Walnut streets, Louisville by George A. Epstein and Adolph Fernsterwall.

MARYLAND.

To cost $1,500, a one-story moving picture parlor will shortly be erected at 911 West Thirty-sixth street, Baltimore, by C. A. Hicks.

Messrs. Pierce and Scheck, architects of Baltimore, are preparing plans for a motion picture theater and at an early date a handsome structure of this nature will be erected in the western section of the city, on West Baltimore street, in about the 1500 block, property for this purpose having already been acquired.

According to the Manufacturers' Record, of Baltimore, the Bijou Company, Greensboro, N. C., C. C. Collins, manager, would like to correspond with decorators relative to scenery and decoration for moving picture theater.

MASSACHUSETTS.

James Bloomberg is having erected a two-story brick and stone theater and office building at 241 to 249 Broadway, Chelsea. It is 52 by 120 feet in area, and will cost about $15,000.

The Columbia Theater will be opened at North Adams in the near future.

MISSOURI.

The Glory Theater has opened on South Troost avenue. It is conducted by N. P. Ladd and is said to be the most beautiful moving picture house in Kansas City.

MONTANA.

T. C. Penny, formerly proprietor of the Orpheum at Havre, will open a motion picture theater at Williston, N. D.

NEBRASKA.

Hereafter the amusements in Fairbury will be in charge of C. W. Bartlett, he having bought the Majestic Theater and closed a deal for a long time lease on the Steel opera house. Motion pictures will still be shown at both places every week day night, the only exception being on the occasion of the appearance of road shows at the opera house. Mr. Bartlett has introduced an innovation in operating his two motion picture shows, whereby he makes it possible for a patron to see both shows for fifteen cents. On visiting either show the patron will be presented with a coupon which is good for five cents upon presentation at the box office of the other and he says it doesn't have to be presented the same night it is issued, but will be good at any time.

An organization to be known as the American Hippodrome Company formed by O. T. Crawford, proprietor of King's Theater, St. Louis, and E. L. Johnson and B. G. Bilz, of Omaha, has leased the American Theater at Omaha which will be operated as a moving picture and stock house. The firm will also erect a new house which will be devoted to vaudeville. The name of the American Theater will be changed to the Amreican Hippodrome.

NEW JERSEY.

The offices of the Pathe Freres Company are located in new quarters at the corner of Patterson Plank road and Congress street, Jersey City. The new site is adjoining the Pathe studio. The new location is planned to bring about closer cooperation between office and factory. The old office, at 41 West 25th street, New York, has been abandoned entirely.

A new motion picture theater will be erected at 128 Hamburg Place, Newark, by the Ironbound Amusement Company at a cost of $5,000.

The Ridge Theater Company of Cleveland has been incorporated with a capital stock of $15,000 by George D. Nenes, Charles Michaleke, Emil Goebel, Joseph Pokorney, Otto Pokorney and Christ Koblenzer.

Huss Brothers, proprietors of the motion picture theater at 306 West Fifth avenue, Cincinnati, have been making extensive improvements in their house which has added greatly to its attractiveness.

The "Roma" is the name of a new motion picture theater to be opened on Belmont street, Bellarie, in the near future.

The immediate erection of a new theater is planned for Canton.

Sherman W. and Benjamin Potterf will erect a new moving picture theater at the corner of Third and Williams street, Dayton.

John Skeeles, contractor, has torn down the Buckins property on South Market street in Canton, and a new theater will be erected on the site. On the first floor will be business rooms and lobby.

OKLAHOMA.

With over thirty motion picture houses in Oklahoma and adjacent states on its lists, the Tulsa Film and Supply Company has been opened for business. It will be located at Third and Main streets, Tulsa. The capital stock is $10,000 and William Smith of Tulsa is president and sole owner. Mr. Smith also owns the Cozy theater in that city.

The new Jackson moving picture theater at Stillwater is nearing completion.

PENNSYLVANIA.

Plans are being made for the erection of a theater in Philadelphia on the site of Plaza, at Broad and Porter streets. William Miller is the owner.

George R. Comer, formerly of Red Wing, will open a moving picture theater at Alexandria.

Plans are being made for a theater to be erected at Chester, on the east side of New Market street, just north of Sixth street. It will be erected for Thomas Hargreaves and Ella Hargreaves.

Irwin & Leighton are estimating on plans, by John Irwon Bright, architect, for the erection of a moving picture theater at 6149-6151 Woodland avenue, Philadelphia, for Charles E. Futcher.

Such surprisingly big dividends are being declared by the leading moving picture theaters on Penn avenue, East End, that a plan is on foot for the erection in East Liberty of a fireproof motion picture theater with a much larger seating capacity than any of the existing ones, which are all remodeled storerooms. While they are arranged and equipped in accordance with city requirements, they are at best only makeshifts. They are packed to the doors nightly, and it is believed a theater building, specially designed and large enough to prevent crowding, would be a paying investment. The men behind the scheme have several locations under consideration, and one will be bought and the theater built if a site can be had at a fair market price. If not, an effort will be made to lease a suitable site for a term long enough to justify the putting up of a first-class building.

Work has been commenced on the reconstruction of the old

Reigel building in Philadelphia, 333 Market street, into a moving picture theater.

Motion picture theaters in Connellsville and elsewhere in Pennsylvania will be inspected by officials of the State Health Department to bring about better sanitary and ventilating conditions. This movement will be strengthened by similar steps on the part of the State Factory Inspection Department, the officials of which will enforce the regulations relating to safety and fire protection. Recent outbreaks of smallpox and other diseases in this section of the state caused the commonwealth's sanitarians and other officials to investigate conditions in motion picture houses in relation to the transmission of disease.

Two moving picture theaters will be erected, one on the east side of Fifty-second street, north of Market street, and the other at Broad and Porter streets, Philadelphia.

A theater will be erected on Liberty avenue, Pittsburg, for Col. Edward Jay Allen.

Haupt & Rentz, contractors, Wyomissing, will build two moving picture theaters in Reading. They received the contract for the Star, to be built for Howard S. Hartman, on South Tenth street near Chestnut, at $4,223, and for the McKentley & Drexel theater at Tenth and Greenwich streets, at $3,367.

Anderson & Houpt, Philadelphia, have prepared for the erection of a new moving picture theater to be erected on Franklin and Clearfield streets.

Architect John I. Bright of Philadelphia, Pa., is preparing plans for a one-story moving picture theater to be erected at Sixty-second street and Woodland avenue for Charles Futcher. The building will be of brick construction, 85x123 feet.

The plot at the northeast corner of Kensington and Allegheny avenues, Philadelphia, Pa., has been purchased by a syndicate, which will erect a large moving picture theater, as well as a row of stores and dwellings. The project will require an outlay in excess of $100,000. The buildings have been designed by Frederick Webber, and the H. C. Rea Company is taking estimates.

Plans have been completed by Anderson & Haupt for a moving picture place, 56 by 65 feet, at Franklin and Clearfield streets, for the Philadelphia Film Exchange.

Frank S. Lawrence has been awarded a contract to renovate and transform the old Commercial Hotel property into one room 33 by 128 feet for a motion picture theater, with a capacity of about 500. The property is owned by Mrs. Jane Winters, who has employed Architect J. E. Adams of Johnstown to draw plans for the improvements. The entire first floor will be lowered to the pavement level and a new marble front, three stories high, will be constructed. There will be two lobbies and dressing rooms, providing vaudeville facilities. The improvements will cost between $15,000 and $20,000.

The first floor front of the Italian Citizens' Club house on Jackson street, Scranton, will be converted into a moving picture theater.

A new moving picture theater will be erected in Philadelphia on the northeast corner of Kensington and Allegheny avenues.

Contracts have been awarded by J. H. Young, proprietor of the Airdome in Greenville, for the erection of a new opera house to be located near the corner of Race and Main streets. Work will be rushed, and it is expected that the building will be completed on or before October 15.

A playhouse, to seat 3,000, will be erected in Pittsburgh, on Penn avenue, which also has a frontage on Sheridan and Center avenues, and is owned by D. B. Moreland. The house will be operated by Harris and Davis, and will most likely be of the continuous vaudeville type.

Wrightsville is to have a new picture theater.

Plans have been prepared for altering the old market building, Twenty-sixth street and Girard avenue, Philadelphia, into a motion picture theater for I. H. Cahan. The building will be equipped with a large auditorium and stage and will have a seating capacity of above 1,700.

The Happyland motion picture theater of Kane has been taken over by J. G. Gillbride, formerly of Titusville, who will make extensive improvements.

Another motion picture theater will be added to the string of amusement places in Reading. Fred Drexel, of 343 North Sixth street, and Allen W. McKently, 911 North Fifth street, are erecting a structure at the southeast corner of Tenth and Greenwich streets, which will be ready to open in the early fall. The house will have a seating capacity of 500. One of the features will be a private balcony for the accommodation of friends of the management and parties. Contract has been awarded to Messrs. Haupt and Rentz, of Wyomissing The new house will be known as The Savoy.

Messrs. Brown and Wolf will open a first class motion picture theater in Ebensburg.

A motion picture theater will be erected in Pittsburg by Colonel Edward J. Allen at a cost of $100,000, which will have a seating capacity of 1,600.

A. Notopolis is erecting a new motion picture theater at 1121 Eleventh avenue, Altoona, which will soon be ready to open to the public.

Motion picture theater proprietors of Philadelphia are somewhat concerned over an opinion recently handed down by the superior court, which holds that all moving picture theaters where vaudeville is run are subject to a state theater tax of $500.

A new motion picture theater is being erected at Gallitzin by Jerome Dawson which will cost $15,000.

SOUTH DAKOTA.

A. P. Blonde, a former printer of Devils Lake, will establish a moving picture theater at New Rockford.

A motion picture theater will be erected at Main street and Fifth avenue, Mtchell, by Martin Alseth.

The Cosmo picture theater, of Winner, R. A. Haskins, proprietor, has been purchased by Messrs. Lakin and Petrick.

A new motion picture theater will be opened on West Fourth street, Madison, by Fred Kurth.

A new motion picture theater is to be added to Toronto's list of amusement places. It will be located in the Amundson building.

TENNESSEE.

A motion picture theater has been opened in the opera house at Brownsville by Henry Sonfeld.

VIRGINIA.

The Film Exchange has been incorporated at Richmond with a capital stock of $2,500,000. The officers are as follows: President, A. E. Watts; treasurer, W. N. Sellsberg; secretary, J. S. Perry; all of Richmond.

TEXAS.

The Bioscope Company has opened offices in Austin and will manufacture picture films and operate a company of actors. It is the intention of the company to utilize the excellent scenic panorama in this section of the state as a background for plays of a western character. Later on a weekly picture service of important happenings in Texas will be installed and the films will be shown in all parts of the world.

The moving picture theater on 1615 Main street, Dallas, was destroyed by fire.

State Fire Marshal S. M. Inglish came to Fort Worth from Austin to inspect the picture shows in Fort Worth before the busy season would open. He and City Fire Marshal Peninger inspected the shows and in some places ordered changes. In most of the shows, however, they found conditions good.

A feature department has been incorporated by the United States Amusement company, with a capital stock of $25,000. The incorporators are W. G. Underwood, C. B. Scott and E. E. Hardwick.

An up-to-date motion picture and vaudeville theater will be erected at West McLellan by Charles Jares.

Messrs. Cliett and Bledsoe will open a motion picture theater in the Ayers building at Houston.

W. D. Nevils, owner of the Palace, Candy and Nickelodeon motion picture theaters, Dallas, has completed arrangements for the erection of the Washington motion picture theater at 1613 Elm street, Dallas. The new house will be supplied with a $10,000 pipe organ. It will be under the management of M. D. Singleton.

Plans have been prepared for a new motion picture theater to be erected on South Main street, Houston, by A. D. Baker, manager of Bakers Airdome. In the winter the house will be devoted to vaudeville.

The Dixie Amusement Company, which operates fifteen moving picture and vaudeville theaters in Texas, is building a $6,000 theater in Taylor. John Fairman of Bryan is in charge of the new theater.

The A. D. Baker Amusement Company is erecting a large airdome and vaudeville building at Lockhart. The building will be 45 feet wide and 84 feet in length and will have every convenience and comfort of an up-to-date opera house. L. H. Neebe has the contract, and the cost will be $4,000.

A moving picture theater near Galveston has been purchased by J. Campbell.

VERMONT.

A motion picture theater will be opened in the Miner building, Brattleboro, by Mrs. Emma Farrington.

The Mountain Park Casino, of Roanoke, has added motion pictures to its program.

UTAH.

Brigham City is to have a new theater. The building is being erected on the south side of Forest street between Main and First West streets. The new structure is to be 176 feet deep and 50 feet wide, with a 50-foot stage. The stage will be so arranged as to accommodate the largest scenery now in use by traveling troupes. The auditorium will seat about 800 people, and there will be several boxes at the side in front of the stage. The Princess will be the name of the new theater, and when completed Mr. Bowring will lease the playhouse to a Mr. J. B. Ashton of Provo. Such a theater has long been needed at Brigham.

WASHINGTON.

The Dream Theater at Anacortes has changed hands, having been taken over by J. D. Rice, who will continue to operate it after giving the house a thorough renovation. Mrs. Collins, who has been identified with theatrical work, will have charge of the orchestra.

The Rex is a new motion picture theater which has opened its doors on Washington street and Riverside avenue, Spokane, having seating capacity of 500.

WEST VIRGINIA.

After being thoroughly renovated, the old Star theater at Wheeling will be reopened as a motion picture house.

A new motion picture house will be opened at Wheeling by Messrs. Chambers and Wade.

The Worwood Amusement Company awarded the contract to Andrew Hart for the construction of a $10,000 theater building in South Warwood. The amusement company several weeks ago purchased two building lots, one 40 by 120 feet and the other 30 by 120 feet, from the Loveland Improvement Company for $5,000. The contracts call for work to be commenced on the building at once and to be ready for occupancy by September 15. It will be of three stories and is to contain a public auditorium of a seating capacity of 500.

A new motion picture theater is being elected at Charleston by the Consolidated Amusement Company which will have a seating capacity of 1,200 when completed and will cost $40,000. The house will be a handsome one and thoroughly equipped with every modern convenience.

The Hippodrome, a handsome motion picture house, was recently opened at Charleston under the management of Stanley A. Platt, who has spared no expense to make it attractive and complete in every detail for the comfort and pleasure of his patrons.

The National Theater Company has been incorporated at Wheeling with a capital stock of $12,000 to operate motion picture theaters. The incorporators are C. H. Landgren, W. D. Platt, W. D. Johnstone and A. H. Martin.

The new Rex theater was recently opened in Martins Ferry under the direction of the Atheneum Amusement Company of Wheeling. The theater was formerly known as the Star, but it has been completely remodeled and the name changed.

The Elite, one of the most up-to-date and beautiful, if not the most beautiful, of the picture theaters of the state, was recently opened at Elm Grove by the E. P. King Motion Picture Company, who operates a chain of houses throughout Ohio and other states.

The Prindle building on Fourth avenue, near the corner of Ninth street, Huntington, has been leased by the Colonial Amusement Company of Charleston, who will conduct a high grade motion picture theater there. C. B. Cablish of Charleston, secretary of the company, has the matter in charge.

WISCONSIN.

The Bijou theater at Marinette will discontinue vaudeville and install motion pictures.

It is rumored that the Shuberts will erect a $25,000 theater at 174 Third street, Milwaukee.

Messrs. Sherwood and McWilliams will conduct a motion picture theater in the Majestic theater at Madison.

John Maurer, State street and College avenue, Appleton, will convert his building into a motion picture theater, which will be ready to open to the public in the near future. Mr. Maurer has been in business in Appleton for a number of years and his friends believe he will be successful in his new venture.

Plans for a board of censors, composed of five members, to pass upon all films were perfected at the closing session of the Wisconsin Motion Picture Exhibitors' league recently held in Milwaukee. The league elected the following delegates to the national convention: Roy Cummings, Madison; Neil Duffy, Appleton; W. Weisfeldt, Plymouth; alternates, Mrs. F. S. McNamara, Milwaukee; W. E. Smith, Fond Du Lac, and Jacob Moelke, Stoughton. B. K. Fischer was elected executive secretary.

Saxe Brothers, of Milwaukee, owners of the Crystal, Alhambra and numerous motion picture houses, have secured a lease on the Star theater, Third and Wells street, that city, and will convert it into a home for a permanent stock company to be known as the Saxe Stock company. Extensive alterations will be made both on the exterior and interior of the house and when completed it will be one of the best stock houses in the country. About $25,000 will be spent in remodeling. The acquisition of this theater makes the Saxe Brothers the largest theater owners in the city as they now control three down-town houses.

WISCONSIN.

A brick picture theater and business building will be built for the Park Realty Company at Milwaukee. The building will be four stories high, covering a ground space 100 by 110 feet. The theater end will be 50 by 110 feet.

The Gem picture house has reopened in Racine under new management. C. J. Schmidt, of Elgin, Ill., is in charge.

At River Falls a new Citizens' opera house is being erected and at Prairie Du Sac moving pictures are being shown in the Tabor opera house by Garrison and Booth of Baraboo.

The Bijou Theater at Racine, operated by Frank W. Jenks, will hereafter be conducted as an exclusive motion picture house, no more vaudeville being given.

The Bijou motion picture theater of Grand Rapids has been purchased by Arthur Le Fewein, who will operate the place.

The Bijou Theater Company of La Crosse has been incorporated by Manuel Rosenstein nad others, with a capital stock of $5 000.

The Lyric theater in Minneapolis, Minn., which has been playing road attractions for several years, has been leased by the Saxe Bros.' Amusement Enterprise, of Milwaukee, which is so well and favorably known, and will be operated as a moving picture theater. The deal is reported to have involved approximately $30,000. The house has been leased for seven years for moving picture purposes. The Saxe Brothers will make renovations and exterior improvements to the amount of $10,000 before opening it. When completed, the house will have a seating capacity of 1,800 and will be the second largest picture theater in the country. A $5,000 pipe organ will be installled. This firm makes a specialty of high-grade houses and high-grade entertainments, which accounts for their success. Thomas Saxe is secretary of the company, whish has many other enterprises in Minneapolis, among them being seven restaurants and the Elgin hotel.

The Atlas motion pciture theater has been opened at Kilbourn.

A motion picture theater will be erected at Lincoln and Twenty-third avenues, Milwaukee, by Frank Rogowski at a cost of $8,000.

The Orpheum theater at Eau Claire has been purchased by A. R. Wood. A motion picture theater will be carried at Albany by Frank Christopher.

Plans have been prepared for a motion picture theater to be erected at Layton boulevard and Lincoln avenue, Milwaukee, by H. C. Hansel at a cost of $8,500.

The Scenic theater at Edgerton has been purchased by Aspinwall and Kincaid of Fort Atkinson.

The Scenic theater at Waupun has been taken over by H. J. Boettcher, who will make it a model house of its kind.

Messrs. Wasmuth and Boutin are the new proprietors of the Princess Moving Picture theater at Rayfield, Mr. Boutin having taken over the interest of I. G. Larson, the other partner.

F. W. Christopher will conduct a motion picture theater in the Albany Opera house.

The Lyric motion picture theater has been opened at Guttenburg under the management of H. S. Fenicell.

H. E. Wright has leased the Opera house at East Troy and will open a motion picture theater therein.

C. S. Sullivan, owner of the Royal theater at Escanaba, has purchased the Cozy theater at Marinette and intends to make it one of the best houses in the state.

WYOMING.

At Douglas the opera house has opened as the Unique. It aims to have a moving picture show each evening until after the advance of the theater season, when theatrical troupes will entertain nightly.

Thomas Kerby, the veteran proprietor of amusement enterprises in Sheridan, is again the proprietor of a motion picture theater, a deal having been closed whereby he and Bart Bethurem have become the owners of the Pastime in this city and will conduct it as a place of high grade entertainment.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

POSTING TITLES.

ONLY a few years ago the picture theater posting its program in front was the exception rather than the rule. It was customary, in fact, to take the attitude that if the patron wanted to know what was being run, he could pay a nickel and find out. As the average patron did not know one maker's trademark from another, and rarely paid any attention to titles anyway, this policy did not much matter.

But conditions changed. They were bound to change, and the subject formed the basis of many an editorial in *The Nickelodeon*, the predecessor of MOTOGRAPHY. From mere curiosity, indifferent to names and brands, public interest developed rapidly to the "fan" stage, wherein not only makers and titles, but characters and players became objects of solicitation. Today the enterprising exhibitor displays to the public all the information at his disposal, and only the village store-show ventures to run without announcing titles at least.

It is interesting, therefore, to note that Cleveland, Ohio, has passed within the last few weeks an ordinance making the posting of correct titles compulsory. The provisions of the ordinance are as follows:

Section 1. That it shall be the duty of the proprietor, operator or manager of every theater or other place of amusement in the city of Cleveland open to the public and in which motion pictures are produced, to exhibit on a bill board placed in front of the building or other structure in which such show is given and such motion pictures are exhibited the title to the pictures which are being shown within, which title shall be full enough to describe in general terms the nature and character of the picture or pictures to be shown. No such proprietor, operator or manager shall place, maintain or allow to be placed or maintained in front of or in connection with any such theater or other place of public amusement any sign, picture or other announcement which in any manner misstates or misrepresents the picture or other amusements which are being shown in said place, or which announces a picture or other form of amusement or entertainment which is not at the time such announcement is displayed being shown and exhibited in said theater or other place of amusement.

Sec. 2. Any person being such proprietor, agent, or manager of any theater or other place of amusement in the city of Cleveland, open to the public, failing to comply with the provisions of this section shall on conviction thereof be fined not less than ten dollars nor more than fifty dollars and the costs of the prosecution, and each day that any such theater or other place of amusement is operated without the exhibition of such a statement of the title of the pictures being shown, or that a sign is displayed which in any manner misrepresents the amusement being offered or announces amusements which are not at the time being offered, shall be a separate offense.

It is probable that the new law caused not a ripple in Cleveland exhibiting circles. The conditions are being met—have been met for some time as a matter of course and good business. Nevertheless, the law is a good one; not so much for requiring the posting of titles as for requiring that the title shall be right. We can recall more than one theater in this city and others where a poster displayed in the lobby did not necessarily indicate that the corresponding picture was being projected in-

side. After discovering this condition by personal experience, we are moved to the belief that it is worse than the old practice of posting no titles at all. To a man interested in seeing a certain film, whether for the picture subject itself or because he admires some player or players who he knows appears in it, nothing is more exasperating than to sit through a program which promises that particular film and does not deliver it. Generally the theater loses a customer.

So we think the Cleveland law is a good one because, if any Cleveland exhibitor is shortsighted enough to disregard its requirements for his own sake, he may be led into more successful paths by the fear of the law.

Any law which makes conditions more pleasing to your patrons is a good law.

THE LEAGUE AND LOCAL CONDITIONS.

OUR old friend, Billy Horne, he of the Place with the Gold Pillars in Los Angeles, tells us the delegation from his city did not join the league organized at the San Francisco convention. "In fact," he says, "we are the insurgents."

Horne and his fellow delegates left the convention with the feeling that the San Francisco exhibitors are a fine lot of fellows, who left nothing undone to make their stay a pleasant one; and that in all matters of general welfare, San Francisco can count on Los Angeles' help to the last man. But conditions in the two cities are different. Los Angeles may be peculiar from a motion picture viewpoint; but even so, it cannot be alone in its idiosyncrasies. There must be other cities in the country whose requirements are different from the common average, and whose operations cannot be governed by common rules.

San Francisco exhibitors want a daily change of program, such as we, of the eastern half, are accustomed to. Furthermore, there are many of them, it is reported, who want to offer a big program for a nickel. And in Los Angeles they do not believe in the daily change. Horne and his friends get along very nicely indeed, with changes once or twice a week. They believe, too, that the nickel already buys too much show. Three reels, they think, is ample.

As to the length of program which is suitable for the five-cent admission, the National League has already expressed itself. Three reels is enough. In our own opinion, two reels is plenty. The nickel, as a piece of money, is insignificant. There is no particular reason why, of all merchants, the motion picture exhibitor should deliver the greatest over-value for it. And we cannot believe that any wide-awake exhibitor will differ with us on this score. The only motive men have for giving excess value is fear of competition—and the League is correcting that.

But the matter of change of program is something else again, as Abe Potash says. It is not a question of competition; it is purely a question of local condition. Where the public interest can be cultivated to a point where a fair proportion of the patrons will attend every day, or at least several days a week, it may readily be calculated that a daily change of program will be good business. Where the fixed habit of the neighborhood, however, is to attend its picture shows only once a week, each patron in turn probably passing word on to his neighbor when the show is particularly interesting, and so inducing further attendance, it is folly to change every day. That is something the League cannot regulate—nor is it trying to do so. There are some things which every exhibitor must decide for himself.

Los Angeles needs a local, and Billy Horne is the man to organize it. If conditions are peculiar in the city of bungalows its exhibitors might not be entirely content with mere membership in the state league. But a local they certainly should have.

THE FIGHT PICTURE LAW.

THE passage some weeks ago of a law to prohibit the shipment from one state to another of motion picture films of prize fights occasioned considerable adverse criticism. The effect of the new law is just beginning to be felt, and it is now seen that it is a blow at pugilism and not at pictures.

Ardent defenders of the motion picture err in taking up arms against all laws calculated to curtail the total number of possible subjects for film exploitation. The motion picture is a common carrier. In itself it has no power for good or evil. It is only the subject of which a picture is taken that is admirable or offensive.

To refuse to sanction the use of prize fight pictures is a severe setback to pugilism. And that is the only quarter in which any real harm is done. For the films there are subjects world without end that are better in every way than prize fighting.

Almost every red-blooded man loves to see a fight, even though by training and habit he has learned to deny it. But even those who openly admire the prize ring must admit that better sentiment is all against it—and that feeling is constantly gaining ground.

So it is just as well that there will be no more fight pictures.

TAKE ANYONE YOU LIKE.

"If any one snaps your picture and wants to throw it on the screen in a moving picture theater you have no redress," says Police Prosecutor Poulson.

The problem arose for the first time when Mrs. Rebecca Rogovin, 2549 E. 47th street, Chicago, Ill., complained to the prosecutor that her picture is being displayed in the U. S. theater, Woodland avenue and E. 37th street, and asked that it be stopped.

"Look at that," Rogovin shouted to his wife as they sat in the theater on Monday night, "If that is not your picture I don't know my wife."

Before Mrs. Rogovin got a good glimpse of the figure on the screen it vanished. They stayed for another performance. Mrs. Rogovin then remembered being snapped while on Woodland avenue, near her home, several weeks ago.

At a conference held at the Mathewson Street Church, Boston, preliminary to the eight-day session of the Men and Religious Forward Movement, William Chandler Smith of that city suggested that every church and Y. M. C. A. should include a motion picture machine in its entertainment outfit. He expressed the belief that it would increase the attendance.

News comes from the Philippine Islands that a series of pictures, demonstrating the advantages of good sanitary conditions, which had been shown to the natives, resulted in a marked increase in cleanliness and interest in the hygiene of the home. One more example of the superiority of ocular demonstration over any other form of teaching.

A Beautiful Canadian Theater

By Mabel Condon

TRIPS to Starland are quite the popular diversion in Winnipeg, Canada. For "Starland" is the name of a photo-play theater that, judged by the quality of the attractions it offers, is on a plane not a whit below that of the lighted-way planet for which it is named.

General favoritism, which Starland has courted, has come to it by virtue of its "nothing but the best" policy. From lobby to fire-proof curtain, everything is as it should be, and there is nothing better in the way of theater appointments than those which go toward making the Starland one of Canada's most beautiful theaters. For so it is unanimously accorded.

The Starland began its service to the public on May 3, 1911. A monster audience was well cared for, and the admiration the playhouse received then, it still retains. Winter and summer, it plays to capacity houses, which means the attendance of seven hundred and fifty. Its main floor and balcony seats are priced at ten cents, and those of the several boxes at twenty-five.

The exterior of the building is ornate and throws into the night the light of thousands of electric bulbs. The management realizes that light, and lots of it, is a necessary advertisement, and makes for the beauty of any playhouse; hence a night view of Starland is a dazzling one.

Winnipeg's Starland Picture Theater.

But past the tiled lobby, and within the theater itself, the lighting is subdued; hundreds of little ornamental globes cast colored reflections on seats, walls and ceiling. Deep warm rose and rich bronze are in elaborate evidence in tapestries and wall panels and the boxes are of these colors, mingled in a decorative design seen no place but at the Starland.

Flower baskets, suspended from the ceiling and the lower part of the balcony, trail soft-toned flowers and luxuriant vines in mid-air, thus giving to the theater the engaging appearance of a summer-dome.

But the biggest attraction of all, perhaps, is the quality of entertainment which Starland patrons are always sure of being given. Any but the best of picture plays would be a desecration to so perfectly planned a home for amusement; so the best is always the rule.

Here there is none of the now-you-see-me-and-now-you-don't pictures that no more gives a hint of the story to be unfolded than it is snatched from the screen. Nor do the films tear along at the rate of a motorcycle in a cross-country race, giving the observers the impression that they—the films—have an appointment at the picture-house in the next block and are already late, and leave them with nerve-strained, tired eyes.

On the contrary, the projection at the Starland is the best possible. Motiographs are the machines used. Poor picture presentation makes for dissatisfied observers, while clear, well-timed films, that neither jump nor lag, mean bright, pleased patrons and well-filled houses.

The Starland management has aimed to give its people, first and foremost, clear, restful films. To carry out this aim it has had a specially prepared screen made which has guaranteed that the pictures are as they should be, not as an inferior screen or inferior machines would show them. The Starland screen measures sixteen by twenty-one and one-half feet.

Music is a special feature of each program. J. P. Humphreys, violinist, directs the orchestra, which comprises four pieces. Then there is "The Starland Girl"—Miss Olive Richards—who renders the popular ballads in spotlight.

Winnipeg's Starland is one of a series of theaters under a management which has many other theaters in neighboring cities. This management operates under the name of the "Starland Limited," and also conducts its circuit with the magnetic word "Starland" prefaced.

Under the laws of Manitoba, the "Starland Limited" is licensed to operate in all the Canadian provinces and in the western states. A big territory, but the circuit is surely becoming a milky way in which each of the bright lettered sign boards stands for a "Starland," and that means "the people's choice."

The circuit's sweep of planet-named picture-play theaters is reaching the United States. In fact, sites have already been chosen. St. Paul, Minn., Sioux City, Iowa, and Omaha, Neb., are the cities the Starland Limited has picked, and other cities are soon to be put on the Limited's circuit.

The capital of the Limited company is $500,000, with the prefix "paid up," thus proving itself a perfectly bona fide corporation. Each share is valued at twenty-five dollars, and there are twenty-thousand of them.

Paul Le Marquand is the president of the company, and the other officers, who are also directors, are: E. L. Ledoux, vice-president; Adrian Le Marquand, secretary and treasurer, and W. Ledoux, general manager.

The Starland of Winnipeg is under the direction of Chris Graham, who sees to it that "all is well" at all times at the theater. The lobby is his promenade, where he meets the patrons nightly. His friendship list is a long one and on it Starland sightseers figure conspicuously. Mr. Graham is one of the many wise picture-show managers who realize that a patron's pleasant acquaintance with "the head man" makes his picture play house seem like home to that patron. It is but another link which binds him more surely to the amusement place of his choice.

Nobody could possibly mistake any other theater or place, no matter how brightly illuminated, for Starland, because it has a "name-plate," one letter above the other, and the whole extending high above the theater building and descending just below the entrance arch, that tells all who read that "Starland" is right there.

And naturally the reader goes no further, but turns into the inviting lobby and thence enters the finest home of photo-plays of which the city of Winnipeg boasts.

British Film Men Handicapped

British film makers have not the same facilities as foreign and American film-makers for reproducing scenes at popular resorts. Requests sent to the office of works are said to be invariably refused, and British manufactures contend that many impediments are placed in their way, which goes far to explain why so many foreign scenes are shown in the cinematograph theaters in England today. English dramas are, however, shortly to be seen, depicting English rural life, and these plays, moreover, are stated to be of a cheerful and wholesome nature.

Scene from Kleine-Cines Subject, "Trifle Not with Love."

California's First Annual Convention

IN San Francisco, September 17, 18 and 19, the Motion Picture Exhibitors' League of California held its first annual convention. The convention hall in the Kohler and Chase building, 26 O'Farrell street, was the scene of the opening session at ten o'clock Tuesday morning, with President Charles Rothschild in the chair; Rev. Dr. Raider offered a short prayer, after which the opening address was delivered by Mayor James Rolph, Jr., of San Francisco, who said:

Gentlemen of the M. P. E. L. of California:—I feel proud to come here and address you this morning. I am in sympathy with your movement—a movement to better the conditions, raise the standard of quality and insist on good, wholesome pictures. We have a board of censorship and very seldom do I hear of a reel being rejected. I live out here in the Mission, and know what the industry is; why, there are three shows to the block in some places out there! The Mission is full of them, and when our children get lost, or we can't find them, all we have to do is go to the moving picture show and there we are sure to find them.

I am in sympathy with the movement and all the encouragement in the world should be given to you gentlemen. I hope the visitors will look over our great, brand new city and see what we have accomplished in the short space of time that we have been at this work. Go out to Harbor View and see what we are doing there. See the fair site. We will have a modern city built there in 1915; remember the state of California has subscribed $5,000,000 toward this fair. The Japanese are going to select their fair site tomorrow, and their government is going to spend $1,000,000 in a building which is to be permanent and will stand after the fair is over.

I believe in the uplift and moral growth of the moving picture business, and let me extend to you an invitation to meet here again in 1915 and see what we have accomplished by that time.

In brief, well chosen words, President Rothschild responded to the mayor's address, and extended to him the thanks of the convention for his welcome. The election of a temporary board of officers was the first business of the meeting, and all the old officers were unanimously re-elected. They are: Charles Rothschild, president; A. R. Oberle, vice-president; Max Shirpser, treasurer; W. A. Cory, recording secretary; M. K. Herzog, financial secretary; W. P. Wobber, W. Macauley, L. Marks, Dan Riordan and F. R. Smith, directors. The convention committee was composed of Joseph A. Huff, Sol Lesser, Charles Maio, W. A. Corey and W. P. Wobber.

President Rothschild then addressed the meeting as follows:

Before proceeding with the regular business of the convention, I desire to express my sincere gratification at the goodly attendance, the earnestness manifested and the many expressions of good feeling that have reached my ears. We are all to be congratulated upon the splendid showing that is being made here today. This has been made possible by the earnest, arduous and unselfish labors of the enthusiastic and faithful members of the San Francisco Local and by your loyal co-operation. The various committees appointed by the chair about two months ago have been working strenuously to make this convention a success and our organization all that we could expect it to be.

A short time ago the exhibitors of San Francisco were strangers to each other and strangers to each other's methods and policies. Today we are all acquainted; thanks to our meetings, we are all acquainted and have a friendly and neighborly feeling even though near competitors. This is at it should be and best results can only be obtained by frequent exchanges of ideas and improved methods.

It is the desire of this convention that every exhibitor, whether a member or not, be permitted freely to air his views, to give his ideas as to what could or should be done to improve and elevate our business. It is an indisputable fact that through organization and consultation much can and will be done to elevate and improve the business.

It is also an indisputable fact that the combined investments of the exhibitors are greater than the combined investments of the manufacturers and exchanges—they through organization control the business, while the control should be with us.

The National and State leagues will in time correct many of the glaring evils and deficiencies that now exist. We must in order to succeed work shoulder to shoulder, put aside petty differences and labor for the general good. The ultimate result, the success or failure of our mission, rests entirely with us. By proper management and devotion to our cause we can not fail. Every member of our association from Syskiyou to San Diego shall and will be benefited.

We must be patient and not expect every abuse to be corrected at once. Remember that Rome was not built in a day. When we build we must do it right and upon a solid foundation, and after we begin our structure to proceed along correct lines, that we will not have to undo what we have done. Eventually success must crown our efforts.

Many changes must be made in the methods of transacting our business from the manufacturing down to the handling of the public in our theaters. We should transact our business with the public in a dignified, business-like manner and not permit them to leave our places with the idea that we have taken their money and given nothing in return. Our competitive ideas and desires to obtain from the public the ultimate nickle is to blame for much of our unpopularity. We should refrain from misleading, sensational, and vulgar advertising. We should put our business on a higher plane by refusing to exhibit indecent, sensational or criminal subjects.

If we proceed along these lines and labor for the perpetuation of our business it will not be long before the guns of our enemies will be effectually spiked, and we will have the unanimous support and approval of all right thinking people.

Luncheon was offered the visitors Tuesday noon at the Portola-Louvre cafe.

Wednesday was taken up with an excursion to the Essanay studio, located at Niles, Cal., where Mr.

Anderson was caught unaware. He was speechless when he saw some eight hundred visitors making their way along the dusty road toward the studio. However, he quickly grasped the situation and made ready to proceed with the western drama which was in course of production, by moving all scenery so as to make room for the visitors.

Later they were taken to Farwell, which is up the Niles canyon, and there the drama was finished amid much applause for the great western dramatizer and his able company. Lunch was served in the afternoon. The actors made themselves quickly acquainted, and Mr. Anderson sent the auto to Niles for liquid refreshments. The day was most successful.

In the evening moving pictures of the exhibitors were shown. These were taken by Miles Brothers and Essanay during the three days' convention.

The Los Angeles delegates to San Francisco's meeting were W. T. (Billy) Horne, H. T. Tugwell, R. W. Woodley, H. H. Wellenbrink, M. Stutz and T. C. Jensen. The L. A. delegation, however, did not join the league, holding a difference of opinion on certain points, owing to widely different conditions in the two cities.

The word "movies" came in for considerable condemnation, as well as the too promiscuous use of the term "moving pictures." It is generally recognized that the word "motography" best fits the art-science of motion photography.

Many interesting exhibits were to be seen at the convention, among other things a motion picture projection machine of "ancient" times (the year 1898), which formed a striking contrast to the modern outfit beside it.

The convention closed with a grand banquet at the Swan cafe, opposite the Orpheum theater.

At the banquet the following menu was served:

Rothschild Cocktail

Cream of Chicken a la Oberle

Olives *Salted Almonds*

Striped Bass, Cory Style
Potatoes Shirpser

Sweetbread Saute with Fresh Mushrooms
Herzog Fashion

Stuffed Roasted Squab a la Lesser
Riordon Garden Peas
Hoff Potatoes
Cold Asparagus, Wobber Dressing

Ice Creme de la Marks
Scotch Cookies, McCauley

Demi Tasse

Cresta Blanca Sauterne Souvenir
Cresta Blanca St. Julien Souvenir
Cigars and Cigarettes

Universal Adds Ambrosio

The Ambrosio brand of pictures has joined the Universal army of film-disposers. This brand of pictures is by a renowned Italian maker and is noted for its magnificence, both as to photographic and artistic quality.

Dallas, Texas, Meets October 15

An official call for a state convention to be held in Dallas, Texas, on the 15th and 16th of October at the Chamber of Commerce hall has been issued by President Neff. There will be big doings, automobile rides sightseeing, a banquet, and all the visiting ladies will be entertained by the ladies' committee on entertainment. The film companies of Dallas are going to demonstrate their friendship and good will by taking off their coats and working to make the convention a success. Every exhibitor in the state of Texas is not only invited to attend this convention but is urged to do so as matters vitally effecting his business will be discussed.

The first day will be a social gathering. At 10:30 the convention will be called to order at the Chamber of Commerce hall by National President Neff, an address of welcome given by the mayor of Dallas, a speech by the president of the Chamber of Commerce, and a response by M. A. Neff. Appointment of committees and adjournment to see the beautiful city of Dallas, will be next in order. This convention will bear out the traditional hospitality of the grand old commonwealth of Texas.

The exhibitors who are not in Dallas on the 15th and 16th of October will be like those who did not attend the Chicago convention, sorry that they did not go. This should be one of the greatest state conventions that any state has held. Anthony Xydias, who has been appointed national vice-president for the state of Texas, is working hard to co-operate with every exhibitor to make the Dallas convention an epoch in the history of the state of Texas. The state fair will be held also on the 15th and 16th of October, and there will be big doings.

Players at the New York Ball

The following well-known Vitagraph players have promised A. Coleman, chairman of the Ball Committee, that they will positively attend the second annual entertainment and ball of the Motion Picture Exhibitors' League to be held at Palm Garden on Thursday evening, November 14, 1912:

Florence Turner, Edith Storey, Lillian Walker, Flora Finch, Kate Price, Mrs. Mary Maurice, Adele De Garde, John Bunny, Ralph Incem, Leo Delancey, Van Dyke Brooke, Kenneth Casey, Harry Mayo and other of the Vitagraph players.

Arthur Johnson and several others of the Lubin Company will appear.

The grand march will be led by Maurice Costello and Florence Lawrence.

Cincinnati to Have Outing

Cincinnati Local No. 12 of the Motion Picture Exhibitors' League of America met September 16 at the Sinton hotel and all the committees reported.

Every committee is working hard to make the outing on the 5th, which is to be held at the Zoo, the largest ever held in Cincinnati. The slides announcing the outing are being applauded in every theater belonging to the League and thousands of tickets were given out Saturday and Sunday. Every member of the League reports a big increase in business.

The Cincinnati Zoo is one of the finest and largest in the world and the exhibitors of Cincinnati expect to pack it to its limit and then see if they cannot find space for a few more to stand. Congressman Cox, gubernatorial candidate for Ohio, will be present and Mayor Hunt of Cincinnati will deliver an address. M. A. Neff will in-

troduce the speakers. Letters have been written to President Taft, ex-President Roosevelt and Governor Wilson inviting them to attend. This will be the largest outing ever given in Southern Ohio by any political party or fraternal order.

Cincinnati Local has rented the Zoo for October 5 and will have full charge, a member of the League will be stationed at the gate and the League will also have ticket sellers and all those who did not receive tickets from the members of the League will be charged the regular admission, which is 25 cents. When the motion pictures are taken two of the largest snakes in the world will be fed, and in fact all the animals will be rehearsed and ready for the picture.

Los Angeles Has Local "Weekly"

Although motion picture theaters are provided by several companies with sets of motion pictures showing the important and sensational happenings of each week in all parts of the country, Los Angeles is the first city in which the experiment of a strictly local "weekly," as such pictures are called, has been attempted.

The first weekly number was issued the latter part of June, and the experiment is being watched with interest by motion picture concerns. The Los Angeles company inaugurating the local weekly made arrangements with the newspapers of that city to receive immediate notice of every news story "breaking" within 100 miles, and two motion picture camera operators were placed on duty to cover daily assignments

The Screen Club Flourishes

Credit for the birth of the Screen Club, a social organization identified exclusively with the moving picture field, is given to King Baggot, Calder Johnstone, William Robert Daly, Frank Powell, Owen Moore, Dell Henderson and Edward Dillon.

The membership will include all actors, directors, authors, managers and photoplay journalists interested in the motion picture industry.

At the club's most recent meeting, about 150 representative motion picture men were present, including many actors, directors, managers, authors, and newspaper men, with a few camera men. It was an enthusiastic gathering, and one which was strikingly harmonious in every respect. Speeches were made by King Baggot, the originator of the club; John Bunny, the distinguished comedian and character actor of the Vitagraph Company; Alfred H. Saunders, Charles Kent, of the Vitagraph Company; Harry R. Raver, general manager of the Film Supply Company of America; Maurice Costello, of the Vitagraph Company; Herbert Prior, of the Majestic Company; Lawrence McGill, of the Republic Film Company, and Calder Johnstone.

The response to the call for individual subscriptions to be applied to the individual initiation fee and dues, later to be decided upon, was quite remarkable, the new club already having in its treasury, under the care of Frank Powell, a fund amounting to several hundred dollars.

On the Outside Looking In

By the Goat Man

IF it would only come down out of the clouds—this film business—there would be reason to believe we were getting on. Were the truth known, there is more lack of harmony among the dominating interests right now than there has ever been before. There is a tendency to hold together, but the "dog eat dog" spirit exists and it is apt

Miss Josephine Scotti, Appearing in Kleine-Cines Films.

to develop some nasty complications. There are too many conditions crowding in upon the combinations. The best efforts to pacify the clamors fall flat. Maybe a publisher hears more of this sort of thing than the manufacturer hears. Or, it is just possible the manufacturer hears without heeding. At any rate, I'm on record as predicting a storm. The storm is internal, thus far. It hasn't broken loose, but when it does, the cyclone cellar will be the only safe retreat. At this moment the licensed crowd have raised the program six complete reels per week. The row over the buffalo is more furious than ever. Brandt and Bedding and Stryckmans are making up their house organs in the same print shop and using the same brand of vitriol in their fountain pens. If it is tending to make the films better it doesn't show on the screens and after all that's the only place to see a motion picture.

Then there is that other faction—the maverick. The newest rumble says that Zuckor and Frohman and Kennedy and Waters and a bunch of others with nothing but money and a full knowledge of the game, have bought a great, abandoned armory in the vicinity of Twenty-third cross-town and are altering the building to conform with modern studio requirements. It is alleged that all the big theatrical stars on both hemispheres are under contract with this new combination and that the product will seek the open market, or rather, that the open market will seek the product. This conforms with my notion that a film as is a film will find places to be shown and people to see it, regardless of plans that are set up against it. In other and simpler words, if Herb Miles can do it, so can others.

* * *

Here is an example: J. T. Chynoweth is the pastor of the First Congregational church at Racine, Wisconsin. They show films in the chapel, Friday nights, provided a suitable subject can be had! I sprung the G. F. Co. catalogue on the reverend gentleman, when he called at my office, but he threw up his hands. It offered him nothing. He couldn't afford the rental; he was too remote from the place where a film might be procured; he couldn't possibly pay thirteen cents a foot for films and own them outright; he was too busy to form his own circuit and take care of his problem on a regular show basis. He must do the best with what is offered. Being a one-nighter, the seven-a-week customer was taken care of first. He told me that churches in Milwaukee wanted to show films to their congregations and exhibitors up there rammed an ordinance through that put the ban on the venture. Of course, this is quite another story, but exhibitors should know by this time that films in the church, once a week, would help their business more than anything that has ever been attempted. The point I care to make is this: You must be an exhibitor, ready to take and pay for all the films your traffic will bear, before you get service from a film exchange.

* * *

I am intensely interested in these new house organs —the *Universal*-Bedding and the *Mutual*-Streyckmans.

Flo La Badie. William Garwood.
Appearing in Thanhouser Films.

I know it is fun to spend your own money in your own way, but why film manufacturers imagine they must also do a publishing business is one too many for me. Once upon a time, J. A. Berst, (I wonder what J. A. stands for), started a little paper with a big name. It was the house organ for the rooster brand. He went to Pop Rock and asked for an eagle advertisement and Pop said to him: "Give me half ownership and I'll give you a

page." Berst was game—he's played it all his life—so he slapped Pop on the back and replied: "You're on." Well, the old *Film Index* had quite a career after that. It was the rat hole for lots and lots of money. It sang the praises of the film because it had to. The force who put the *Index* together were paid to put it together. After a while, the licensed manufacturers got tired of publishing and went back to making films. I remember *Film Fancies, Film Facts, Film Reports, The Implet* and others that are smouldering in baby graves with no marks of any kind. They were lovely children, to read their virtues in their incompleted files, but they are off in the potter's field now and no thought follows them. We now have the *Universal Weekly* and the *Mutual Observer*—two specimens of job printing from a single shop and they both blow the same kind of a horn, viz: "Ours is the hottest program on earth." These papers cost a lot of money. They are sent out free. That's postage. They are sent promiscuously. That's paper. They are supplied generously. That's printing. The three p's—printing, paper and postage are the chief factors in publishing. The payroll is incidental. Engraving cuts some ice, but it is neglible when considered in the scheme of bigger things. So we have the house organs. They have this bad effect on the trade journal. Surfeited with free stuff, the exhibitor subscribes to the legitimate paper reluctantly. He gets the bulletins, heralds, press sheets, posters and punk in every mail. He knows all about the paper film before he sees the celluloid. That is the one reason why film synopses are taboo in these pages. The absence of film reviews is accounted for because they are usually a biased opinion at best and what's the use, anyway? The film has been made before anybody has seen it and it is crammed down the exhibitor's neck whether he wants it or not. The review doesn't put anybody wise. If the business would ever come down out of the clouds, we'll fit in, but otherwise we have only to mark time.

* * *

I am told that the Universal crowd is getting on. It has met several pay days—those first of the month dividend days when Carl and Mark and Pat and Joe and Bill and Dave put on their best suits and get an extra close,

Justice D. Barnes.

Marguerite Snow.

Appearing in Thanhouser Films.

reuglar groom's shave, and amble down to 1 Union Square to see if Henkel has the money. And Henkel has! It won't be long before the worst creditor will fawn to get back into the good graces of this crowd. It is whispered that Ed Porter has gone with Jerry Kennedy to pick out a cut glass loving cup or something, but what matters a single producer? I do wish that Laemmle would send out some postcards asking the exhibitor what he thinks of MOTOGRAPHY by this time. They tell me Carl is holding down the lid on all expenditures except the Weekly—not Aubrey's—and he can't be broken of the habit. Carl told me I'd have to wait two years before he could see me. I've waited four, which leads me to believe that I used to be a lot of trouble to J. Stern. Well, Brandt tells me he'll help; Engle has sworn by me as often as he's sworn at me; Powers will lie down and roll over if I ask him to; Swanson is too far away to remember anything about it—which leads me right into a Swanson yarn. You know Bill is some regular cat when it comes to the nine lives thing. It was reported around

Lorenzo Lupi, Appearing in Kleine-Cines Films.

Chicago four years ago that he couldn't survive the winter. The doctors told him he'd have to give up cigarettes and go out to Colorado and die or some such stuff. Bill paid the doctor and the consulting physician and the con. specialist and started in to smoke himself into a premature grave. It was about the time when they were crowding him hard. He got mad. He called everything by its real name and then started after 'em with his neck bowed and his ears lying back. Look at him now. They tell me he's the best insurance risk on the coast. But as I was saying, maybe you'll see some of Brandt's dope in here when the game gets down out of the clouds.

* * *

If I can read the signs Gaumont is doing some heavy-brow thinking itself.

* * *

Then there's the Film Supply with Raver and his lumbago. I always thought that Harry lived too far out to depend on a car that he drove himself. I'll bet he missed a culvert! At any rate, I have sung the praise of the Film Supply. I like the bunch and the pen they

made for the goat and the room they made for their love feasts. But I never knew just why the Film Supply. It is a clearing house, alright, but if I can see through a hole in the fence the business of the F. S. might just as well be auxiliary to 60 Wall. If it blows around that way some day I'll help myself to the brand in the lower drawer—the Class A customers' box. I'm such a rotten prophet, I dare venture any guess.

* * *

You didn't know that Frank Dyer was in Chicago about a month ago—come now, did you? Dyer doesn't get out here very often and they put rubber tires on his train and slip him in in the middle of the night, when he does come. I've forgotten the exact date, but it was in those perilous times when Spoor and Selig and Kleine were dodging the summons server. But none of these gentlemen dodged Dyer. The conferences were behind closed doors. The doors were locked and the key holes were plugged. The transoms and windows were shut and the fans were running on full speed. It was no place for Willis! But something was pulled off or put on during those Dyer days in Chicago and the oldest man in the business hasn't ventured to file a guess. Which emphasizes the significance of the concluding sentence in nearly every letter, "We will advertise in MOTOGRAPHY when any change is made in our present policy." The "interests" figure that we are running this publication for the joy of it. They almost forget that every time we get a hundred dollars from the news-dealer it means 2,000 people have each bought a copy and that every hundred dollars we get from exhibitors means that a new class of fifty members are eating our dope raw. If it wasn't for this subscription money, our hope would perish. We know we are getting in. The manufacturer—the real support of a trade paper—is making it as hard for us as he can, but a goat can live in a briar patch and like it. That's why he's a goat. If this publication might have the business the motion picture field can give it, we'll all be glad together. Here lies the possibility of the most beautiful and helpful journal in the country. It can't be made with the money of the few while the rest sit back and tell us how it should be done.

* * *

I can't help feeling proud of my deputy goat. He told me about *his* troubles as an exhibitor and how he advertises the "Place with the Gold Pillars." When his program is made up of all lemons, he says: "Rotten show today. Go in and see how bad they *can* make 'em." And to think he can get away with it on that kind of logic! He wears diamonds, at that.

* * *

By the way, the goat has his—I mean I have a diamond, too. But I didn't get it out of the game! You see I've always wanted a diamond and since I brouse around among the bunch that's got 'em, I've felt awfully mean about not having one. So I promised myself I'd get one if I could find it. Are you interested? Very well. Three years ago I was one of twenty men who put up a hundred on the longest kind of a chance. We were to grub-stake a prospector who would go into the mountains and see what he could find for the "syndicate." He came back last week and slipped the trustee $5,000 in full settlement. After slicing up the fund I got my diamond. You see I was the trustee for the bunch and the spark was my drag. And to think that the money all came from Billy Horne's town!

Scene from American's "The Border Detective," October 16. Copyright, 1912, American Film Mfg. Co.

Bellboy Buys Picture Theater

With the savings of a year's employment as bellboy in a local hotel, David Ulmer, fifteen years old, opened a moving picture theater in Covington, La. The youthful owner is manager and ticket-taker and likes the work better than that connected with hopping bells.

Rain-Making Experiments Filmed

By Watterson R. Rothacker
General Manager Industrial Film Mfg. Co., Chicago.

C. W. POST, the "breakfast food king," recently essayed the leading role in a particularly interesting stunt entitled: "Making Rain While the Sun Shines," and, as usual, he "made good;" the moving picture camera caught him in the act.

For approximately two years Mr. Post has been working out his theory and using dynamite for rainmaking. While his efforts in this direction were ridiculed and scoffed at by reputable weather prophets it is a fact that on his immense estate in Texas Mr. Post actually *did* fire dynamite scientifically and this firing *did* result in rain.

Recently Mr. Post announced that he would give a big demonstration at Battle Creek, Michigan. All the newspapers had reporters and photographers on the job, and, of course, representatives of the Animated Weekly and Pathe's Weekly were there ready to put on film the action and result of the experiment.

The experiment was slated for a Tuesday; the day previous the United States Weather Bureau issued the following report: "Present indications favor generally fair weather Tuesday and Wednesday, at Battle Creek, with somewhat high temperature." The night before the actual test the percentage of humidity in the vicinity of Battle Creek showed 74. With these conditions Mr. Post brought out his pet theory and convinced the "show me!" crowd.

Arranged in a series of "battles" 4,500 pounds of sixty per cent dynamite was exploded from firing stations placed every one-eighth mile. The dynamite was laid on the ground in three-pound charges and exploded every five minutes at each one of the firing stations—there were fifteen. After several shots had been fired the humidity was 67 per cent—the next reading of the hydrometer showed 63 per cent and a little later 55 per

Animated Weekly and Pathe Weekly Camera Men in Action.

cent was registered. This decrease in the humidity is explained by Mr. Post, who says: "Similar conditions always occur in these battles for rain, and the present belief is that the tremendous explosions drive columns of air into the upper clouds and carry with them the humid air from the ground. This driving of warm humid air up into the high and cold strata not only adds to the amount of humidity above but tends to form the moisture into drops, much as they form on the outside of a glass of ice water when warm, damp air surrounds it."

The moving picture camera men, through the courtesy of Mr. Post, were stationed at points of vantage. As Mr. Post read the hydrometer and directed the preliminary work, they turned the camera cranks, favored by sunshine and a perfect day. As explosion after explosion rent the air the sky was over-cast and they had to open up their shutters a bit and change exposures to contend with the shifting weather conditions. When the firing ceased a slight precipitation was noticed; then came in-

Animated Weekly Operators Recording Rain-Making Experiments.

termittent showers which continued until it was too dark to make an impression on the film. At 8 o'clock that evening a government rain gauge at Battle Creek showed a rain fall of nearly half an inch—.44 being the exact official report.

The demonstration of the Post rainmaking-with-dynamite theory was comprehensively recorded by the camera operator who was on the job for the Animated Weekly and likewise by the Pathe operator, who secured good results. The scene which showed the actual heavy rainfall was one of the most convincing parts of the subject as filmed for the Animated Weekly.

Mr. Post is a great believer in moving pictures as an advertising and educational force and says that their power to do good advertising satisfies his "there's a reason" sense. Mr. Post intends to use the moving picture along broad lines in his campaign to educate the farmer in his new crop-saving scheme. One thing is certain—in this instance, two things are certain—one is that the film shows that Mr. Post brought rain from the clouds by means of dynamite explosions; the other is, that when he shows this demonstration by means of the moving pictures it will be reproduced to sustain his theory, whereas—at least, so say the skeptics—the next time the clouds may not be so accommodating. Anyway, it was a stunt made doubly novel by motography.

Motion Pictures Educational Aid

The first school in the capital district to appreciate and approve of the educational importance of moving pictures is the St. John Academy of Rensselaer. N. Y., which has just installed a moving picture apparatus.

Father Glavin of that institution said: "There is hardly a branch of study in which we will not be able to use the moving picture machine, the value of which in science has already been proven. But it is not our intention to compete with the regular moving picture theater."

Scene from Essanay's "The Shotgun Ranchman."

Church Gives Picture Show

In the heart of the Ghetto district, or what is known as Chicago's "melting pot," a campaign for the education of the children of the poor and immigrant classes has been begun by theh Holy Family church. And the campaign is one of motion pictures. The neighborhood which is that of Blue Island avenue and Twelfth street, has a large number of picture shows of the melodrama variety. It is to fight the effects of these show houses that the Young Men's Sodality Hall has been given over to the weekly pastime of motion pictures. On the night the picture hall had its opening, one side of the street showed bright lights and gaudy posters of a half dozen moving picture theaters, advertising "The Prison on the Cliff, a sensational melodrama"; "Not Like Other Girls," "Two Gayboys, or Browbeaten Husbands Rebel," and other similar attractions. On the other side, in the quiet and dimly lighted Sodality Hall, were scenes of foreign lands, Chicago scenes, humorous and harmless dramas were portrayed under the direction of Father Thomas Nolan of the Holy Family church, who introduced moving pictures as a spiritual aid to the parochial school children of his parish last year.

The entertainment is meant as an off-set to the present forms and it was greeted with a large attendance.

This year Father Nolan has widened the scope of his work to include all residents of the neighborhood, regardless of creed.

"We intend to give the people an entertainment which will not keep the children up past bedtime and will not instill wrong ideas into their minds," said Father Nolan. "Our show will operate every Tuesday night. Residents of the neighborhood who have vocal and instrumental talent have been invited to entertain. At present we are charging no admission, but later we will charge adults 5 cents."

At the neighborhood picture theaters the proprietors expressed ignorance of any wrong.

"The people want sensational matter and we give it to them," said the proprietor of one theater.

"Lots of children come, and we keep open as late as we can attract then to our show. We don't see anything wrong in it."

By-Law to Affect Exhibitors

To compel all moving picture shows in Windsor, Mich., to pay a license fee of $100 a year and to bar all children under 15 years from attending shows, is the purpose of a by-law introduced at the Windsor city council by Ald. Aaron Meretsky. The alderman wanted time to consider it and put it over for two weeks.

In connection with the proposal to license moving picture shows Windsor negroes were much in evidence at the council meeting. They were there in support of a petition to the council to "remove the humiliation caused by the discrimination against negro citizens of Windsor" and calling on the council to right "this injustice now imposed by the management of local theaters," said injustice being in reserving a particular section of the theater for negro patrons.

Battle Scenes from the Orient

Cines War Pictures

A CINES military drama containing real incidents of the Italian-Turkish war is "On the Firing Line," which George Kleine will release November 5. The struggle between the Italian and Turkish forces is still being carried on with no immediate signs of abatement, notwithstanding the attitude of the world to arrange a settlement. As can readily be understood, a struggle of this kind is replete with incidents which make excellent plots for dramas such as "On the Firing Line," and which are rendered still more interesting and realistic by the fact that many of the scenes in the film are actual happenings, showing real soldiers in active warfare.

The story begins in the home of Colonel Sandor, an officer in the Italian army, spending a pleasant leave of absence in the bosom of his family, which consists of his wife and little daughter Claretta. His visit is short lived, however, for almost immediately he is ordered to make preparations to join his regiment in Tripoli. With his usual promptness he instructs his faithful servant, Louis, to get everything in readiness for the departure.

Louis begs to accompany the colonel and his earnest pleading soon wins the officer's consent. The faithful servant is delighted; his only regret being to part from little Claretta, of whom he is very fond. The child comforts him, however, by commissioning him to look after her father and to bring him back safely.

After bidding a fond farewell to the family, the colonel and Louis start on their journey. We are treated to many inspiring sights of huge crowds of people cheering the soldiers as they march through the streets to the wharves where they are to be loaded into great transports, which, under the protection of several war ships are to carry them to Tripoli. The sight of these immense vessels with their funnels belching forth huge streams of black smoke and their general menacing appearance is very impressive indeed and indicates the serious aspect of the conflict which is now going on.

The next scenes show the arrival at the camp in Tripoli, with the excitement during the disembarkation of the troops, the erection of tents, and the general preparation for active campaigning.

Although proving a brave and efficient orderly, the faithful Louis becomes the butt of the regiment for his constant reading of a letter which Claretta has given him, with the instructions "to take care of father and see that the Turks do not hurt him." This letter with a medallion which his little mistress presented to him before leaving home, are his most sacred possessions to be kept from any eyes but his own.

It is not long before the regiment is in the heat of

Scene from Kleine-Cines War Drama "On the Firing Line."

Scene from Kleine-Cines Drama, "Trailing the Counterfeiters."

combat. The Turks first assume the offensive and, approaching under cover, furiously attack the camp, pouring in volley after volley which create a veritable hailstorm of bullets falling in among the Italians. This, with the enemy's superior force of numbers, appears somewhat disastrous for the regiment at first and the colonel is in grave doubt as to the outcome; but fortunately the timely arrival of reinforcements alters the situation. The regiment soon recovers from its surprise, and, obeying the orders of its brave colonel repels the Turkish forces with great slaughter and breaking their line puts the foremost of them to rout. Then, forming themselves, they make a valiant charge across the fields carrying all before them, resulting in a glorious victory.

After the battle Colonel Sandor is highly congratulated upon his able generalship and in turn rewards Louis with a medal of honor, for he realizes the fellow showed remarkable bravery and even saved his life in one instance.

Soon afterward the colonel and his servant return home and receive a warm welcome from the family. Claretta has a special welcome for Louis who so bravely carried out her instructions and brought her father back safely and the two "chums" have a happy reunion. Louis proudly displays before her admiring eyes the medal bestowed upon him for bravery, but gallantly asserts that he does not prize it half so much as the medal given him by Claretta.

The many battle scenes in the film are very thrilling indeed; the charges of the infantry and cavalry across the fields will bring people to their feet. Newspaper reports indicate that the war will last but about two months longer; but the fighting between armies of the two opposing countries as shown in the film does not lend much encouragement toward the belief that an amicable settlement will be reached soon.

Another thrilling Cines to be released October 12 is "Trailing the Counterfeiters." As the title will suggest, this film is replete with exciting incidents throughout. There is nothing more interesting in book or play than a clever detective story which depicts a contest of brains and daring between fearless preservers and desperate breakers of the law. The younger spectators are held spellbound, and the older people are not far behind in manifesting their appreciation.

Many of the characters are exceptionally well taken; Mr. A. Novelli as the detective handles the part in his usual capable manner, and Miss Cattaneo makes a charming but fiery spirited heroine in the role of the farmer's daughter. She displays her dramatic powers very convincingly, especially in the last scenes.

Current Educational Releases

Olympic Games.—Edison. International games held by the Y. M. C. A. of Pittsburg. The spectator is inspired with an interest in these healthy sports.

Along the River Nile.—Kalem. Natives cut and load sugar-cane in primitive fashion; earn three piasters a day carrying huge bags of soft coal on their heads; at the old ferry which is hundreds of years old. Arabs work on the Temple of Karnak and convert palm-leaves and stems into beautiful basket designs. The sand and gravel mills are an interesting sight.

A Trip Through Belgium.—Eclipse. Scenes from Brussels, Bruges, Liege and Ostend are shown, also an exhibition of shrimp-fishing on horse-back.

The Island of Malta.—Cines. Lying fifty miles south of Sicily, Malta, is an important naval base for the British Empire. The town of Valetta with its splendid harbor, great underground store-houses for grain, the governor's palace and other interesting sights are shown.

Making Briar Pipes.—Eclipse. The entire process, weighing, cutting and sorting of the briar, which is cut from the stumps in Corsica and shipped to St. Claude, France, to be manufactured is shown, together with turning of the bowl and stem, scraping out the bowl, polishing and packing.

Ascoli Piceno (Southern Italy).—Cines. Showing the famous lime quarries in operation and views of the aqueduct, cemetery and bridge of Cecco De Ascoli.

Artistic Glass Work.—Cines. Glass blowing by expert workmen who make the most delicate and beautiful designs in vases, dishes and every variety of ornament.

In the Ossau Valley.—Eclipse. A bull-ring where the fierce animals are being trained for fighting and glimpses of landscapes and places of interest in the valley of the Pyrenees are shown.

A Glimpse of Sicily.—Cines. A trip up Mount Pellegrino, from which panoramic views of the city of Palermo and the bay are had.

Glimpses of Bermuda.—Edison. Hamilton harbor with an occasional man-of-war; a lilly field with thousands of Easter lillies in bloom; a panorama of the three hundred and sixty-five islands that compose Bermuda; a deep sea-diver coming up from under a sunken

Selig's "Life and Habits of Winnebago Indians," etc.

wreck and lastly the bottom of the ocean, bright with vari-colored flowers and alive with fish.

A Fresh-Air Romance.—Edison. In which the advantage of fresh air and sunshine in a sick-room is shown in contrast to the old-time method of eliminating both. By the former means, the life of a beautiful girl is saved by a young doctor whose methods are those of the new school. His father, also a doctor, is opposed to these methods, but is made to see that they are the best.

Harvesting Alfalfa in New Mexico.—Selig. A subject dealing instructively with the great agricultural industry in the southwest.

Cashmere.—Edison. Showing the chief health resort of India, and which of all India, excels in beauty and antiquity. The picture tells the story in superb photography, under the Oriental skies where cascades, wild and roaring, plunge hundreds of feet and far below continue downward on their journey, assuming the merriment of a gentle brook and finally passing into obscurity, are lost behind the base of one of the mighty snow-crowned Himalayans. Aside from the sumptuous settings of nature, are the homes and everyday contrivances of the people. The industrial activities of the people are the same as others in the Orient, slow and plodding, weaving, spinning and wood carving being the chief occupations of which they are masters.

Ancient Temples of Egypt.—Kalem. Tourists wander about the old temples of Luxor and marvel at the avenue of columns. The trip to Karnak, two miles distant, is made by donkey. A gigantic column, twenty-three feet in circumference, is the wonder sight in the Temple of Karnak, beneath which is the king's secret passage-way. Across the Nile is the ancient town of Thebes, then through the Valley of Death to the Rest-House, where are grotesque skulls of mummies thousands of years old. Back again in Luxor, a quaint Mohammedan procession is witnessed.

How a Brave Man Died.—Cines. Tells a story of Murat, a king of Naples, who attempts to regain his kingdom. He and his followers are attacked and Murat captured and imprisoned in the castle of Pizzo. Then follow a mock trial and the sentence of death. Murat is led to face a file of soldiers with leveled muskets. His last words are, "Aim at my heart," and he dies a brave soldier. The film is instructive for its historical significance.

Life and Customs of the Winnebago Indians.—Selig. Those taking part are members of the tribe which has its largest settlement in the Black River Falls district of Wisconsin. Though essentially "woods" indians, they have taken a keen interest in farming. They still prefer to live in wigwams, although their tribal characteristics incline toward the modern methods. Their standards of morality and education place them among the highest type of modern Indian. The manners, customs, sports and pastimes of the tribe are shown in one scene; they are at their bead-weaving; in another they are making and repairing canoes, and in still another they are seen in their renowned ceremonial dances.

The Usurer's Grip.—Edison. The story of a loan shark's unjust business methods, for which his victim pays in both money and suffering, is well portrayed by Edison players in the film which will be released Oct. 5.

A Curable Disease.—Edison. A young linotype operator contracts the "white plague," but does not know it until he is about to marry when a physician tells him he has no right to marry until he is cured at the Union Printers' Home, Colorado Springs, Colo.

Advertise Road by Pictures

The first moving picture film factory to be started in Texas has been put into operation in the Southern Pacific building in Houston. The new plant is the property of the Sunset-Central lines and will be used by the advertising department of the company. Experienced operators and skilled picture men have been employed to take charge of this new feature.

The Sunset-Central lines is the first system in the United States to start a continuous advertising campaign through the motion picture medium. Pictures of all the industries along the Southern Pacific lines, all the choice scenery and attractive features will be taken and put on some of the best motion picture circuits in the country.

Pictures of the Texas farms, picking cotton in Texas, good roads in Texas, hograising, dairying and everything else of which pictures can be taken will be made and sent broadcast over the country. In making the pictures those in charge are going to be careful in seeing that the advertising feature does not stand out above the picture. Of course, those who see the pictures will be informed that they are Sunset-Central pictures taken in Texas, but care will be taken in eliminating all the flaring, glaring advertising signs.

Pictures of the handsome Southern Pacific locomotives, of the stone ballast and the operation of the block signals of the road will be taken as a feature of instruction to those who see them as well as an advertisement for the road.

The manufacture of moving pictures is a new industry in Texas. The Southern Pacific is the only company in the country maintaining its own picture plant. The equipment has just been installed at a great expense, but the officials of the company feel that both the company and the territory through which the lines operate will soon begin to feel the good results of this phase of advertising.

Photoplay Dinner a Success

As an incentive to have "more good times just like this," the photoplay dinner given on the evening of September 7, at Coney Island, was highly successful. Epes Winthrop Sargent had the affair in charge and the guests, nearly fifty in number, comprised directors, writers, scenario editors, representatives of various motion picture journals and companies.

As Frank E. Woods, chairman, was absent, Charles Seay filled that capacity. The dinner was named a happy thought on the part of Mr. Sargent who was appointed chairman to arrange another such event to be held early in December.

Among the evening's speakers, were: A. D. Hotaling, Lubin comedy director; B. P. Schulberg and Joe Roach of the Universal staff; Louis Reeves Harrison, James Carrol, winner of the Powers contest; Mark Dintenfass, Billy Quirk of the Solax; Harold Shaw, director of Edison films; Philip Long of Kalem; Harry Cikill of Lubin; C. B. Hoadley, "Two Reel" Hall, John Wiley, Edwin August and George Hennessy, of the Vitagraph.

Who's Who in the Film Game

Facts and Fancies About a Man You Know or Ought to Know

THE first thrill of a country lad comes with his red topped boots. It is the day he discovers his spine. He sees things from a course. When motion pictures began to manifest boy who was born in the country has an edge on the fellow who wasn't. He knows what it means to earn a dollar. He got his first one by digging twenty rows of potatoes. A dollar has the meaning of a hundred cents to the man who was a country boy twenty-five years ago. That same boy never forgot his early associates. He learned to take their measure and he never forgot how he did it. When he grew up he made his estimate of men by the same rule.

Charley Hite was born in the country—on a farm near Lancaster, Ohio. His family sprung from those fighting Virginians, who helped in the forming of this country. They knew what Culpepper minute men stood for when they fought under the emblem of the rattlesnake. Virginians in those pioneer days picked out Fairfield county, Ohio, as the place "farther west," and among them were Charley Hite's parents. The Hite family still retains the land that has always been their home. Young Hite tackled the district school with his noon-day lunch and a bean-shooter as the prime factors. He fell heir to "Skinney," because he was built that way. Even with this slight handicap, he learned to like school days, and followed up his graduation from the grades with a three years' academic course in the Ohio Central Normal College. Then he taught school for several years and during his vacations he served as reporter for the local papers. When he gave up teaching he engaged in the mercantile business, at Bremen, but the excitement attending the keeping of a country store got on his nerves and he gave it up. Hite put in four years behind the counter, first in Bremen and then in the county seat of Fairfield county.

You Will Hear from Him Often if You Stick Around.

During these and preceding years, Charlie Hite developed a bug for lyceums, lyceumites, bureaus, courses and causeways. Being of a bashful and retiring disposition he found freedom in the turmoil of the lyceum program. There was more fun in sitting on the back bench at the town hall and listening to the "show" than there was going swimming with the gang. After a time he worked up to the front seats and a little later he became identified with the business end of the Midland Lyceum Bureau. He traveled in the southern states, organizing lyceum courses at so much a course. When motion pictures begun to manifest themselves, Hite had met them more than half way. With a half of one of his good bright eyes he saw a place for motion pictures in the lyceum programs. They would help with the entertainment. That was what they were for and he gave them a welcome.

In 1906, Charlie Hite organized himself into the C. J. Hite Moving Picture Company. He would supply the Midland or any other lyceum with part of their entertainment at so much per part. He found lots of demand for his services. He rapidly outgrew the days when Bill Bryan was the afternoon stunt and Charlie Hite with his pictures was the evening attraction. In the meantime, Hite was garnering up film subjects and other increments that failed to shake off. His collection of reels consisted of scenics, fairy tales and religious subjects—the best that could be had in those days, and it was the most natural thing in the world for Hite to embark in the exchange business, as early as the demand for films came on.

Early in 1908, C. J. Hite gathered up his precious reels and stored them in a vault in the Monadnock Building, Chicago. It was the least pretentious film exchange in the world. You could walk right into it—all the way up to Hite's mean little desk with the rickety drawers. But you would find the whole force there, day or night, and if you wanted some pictures, Hite would get 'em for you. He was the whole force on the day and night shift. There wasn't any go-betweens. You know how long that would last in the film business. Hite got thinner and thinner. He had the address of his home, but he never got that far away from his little old desk. One day he called in the doctor—a physician he had known all his life—and the doctor looked him over. He listened to Hite's proposition and left a big, fat check, instead of a prescription. Now and then you find a smart one. This was Dr. Wilbert Shallenberger, one of Charlie Hite's boyhood chums. He's all tangled up with the film business by now.

This first Chicago film exchange was modest like its owner. It was called the C. J. Hite Company, just like

that, telling nobody what it stood for. After a little time a partition was knocked down to make room. The name was changed to the H. & H. Film Service Company. More people were hired; more money was let in; the place moved down a flight of stairs and across the hall; bang, went a lot of walls; the place strung out on the Federal street side and got bigger and bigger. Hite was too busy to eat. Then DesMoines was taken in and Detroit was added. People began to lose track. One day Hite grabbed some stock in the American Film Manufacturing Company, and the next he bought the Globe, the Royal, and the Union Film Companies and formed the Majestic Film Exchange. After a while, Hite said he was going to New York to look around. He had only been down there a week or two until it was announced that he had bought the Thanhouser Company. Then things got all woozey. The plot thickened and obscured the stage. Since the mist has blown away, Hite's name looms large as a stockholder, a director or an officer; and sometimes all three, in these concerns: Mutual Film Corporation; Film Supply Company of America; American Film Manufacturing Company; Carlton Motion Picture Laboratories; Majestic Manufacturing Company; Thanhouser Company, and Thanhouser Film Company, Ltd., London.

So you will agree that Charlie Hite has been hitting the pace. He is one of the very few film men who recognized the possibilities of outside investors. He is the personal representative of many stockholders in his various enterprises and these stockholders have learned to believe in Hite and his projects. It is far cry from the Slayton and Midland Lyceum circuits to the film game, but it proves that you can play both and win if you play fair.

Charles Jackson Hite is only thirty-seven years young. He married Miss Gertrude Monroe, daughter of Mr. and Mrs. Dr. J. O. Monroe, in 1905, and there is little Elizabeth Marjorie Hite to complete the family. Hite says his only diversion is motion pictures, but that is pardonable. As a matter of truth he's a baseball fan—a Cub rooter, who is trying to switch his affections to Mugsy McGraw. His nearest friends say he's crazy about automobiles, now that he has several to help him cover ground in his activities. Right this minute, he is knitting his brow over Thanhouser classics, without regard to the length. Hite has only started. You will hear from him often, if you stick around.

The Poets of Essanay

Evebelle Prout, of the Essanay Eastern Stock Company, is developing into a formidable rival to Frank Dayton, "heavy" man of the company, in the art of writing poetry. Dayton has always been recognized as somewhat of a genius in turning the various happenings about the big Chicago studio into verse that is both clever and original, but he will have to look to his laurels, for Miss Prout is working hard and has had some extremely classy poems accepted by various publications. One of her latest compositions is a little masterpiece of wit and conception, and concerns the opening of two new photoplay theaters

Scene from Essanay's "Not on the Circus Program."

Motography's Gallery of Picture Players

HARRY C. MYERS' one mission in life, for the last four years, has been to produce thrills. And he has succeeded so well that the Lubin company has presented him with a laurel-leafed halo, in the way of a seal-bedecked contract which names him as leading man. So now, motion picture patrons are apt to find Mr. Myers thrillier than ever—if that were possible. For let it be known that the new leading man is not only a photoplay actor, but a fully qualified acrobat, with a license to do the dare-devil tricks that have never failed to accomplish the proverbial hair-raising effect. More than that, Mr. Myers delights in inventing new thrill producers at the risk of his own neck and the Lubin company's loss. A New Englander, with Capt. Myers of the Revolutionary army, and Corporal Myers of the Civil war, as ancestors, and himself having served in the Spanish-American war, Harry C. is bravery personified.

Harry Myers.

CLARA WILLIAMS is the cowboy girl who makes everybody sit up and take notice, when a Lubin western film is flashed on the screen. Furthermore, she sees to it that the attention of the spectators does not wane, nor that even the most thrill-defying and calloused picture-show "regular," could possibly have any complaint coming on this score. A perfect whirlwind, once she feels the stirrup around her foot, she sets the cowboys a pace that takes her far and away from them. Such a scene in "It Happened in the Hills" makes that film one to be remembered. Though the "crack female rough-rider" of the company, Miss Williams, when not in a cowboy-girl role, has none of the mannerisms of such a character, nor does she affect a style of dress to typify a horse-woman. The Belasco stock companies of the west are acquainted with the work of Miss Williams, who was born at Seattle twenty-three years ago.

Clara Williams.

ADELE LANE, "risen from the ranks." That is a melodramatic but nevertheless true summing-up of her career. She is a new leading lady for the Lubin stock companies—new as a leading lady, but not as to her affiliation with the Lubin people. Miss Lane has earned this most recent of honors; and right regally she carries it, too. This, because, since the age of seven, the stage and stage-work have known Miss Lane almost entirely. Her art first called to her in the role of Little Lord Fontleroy, whom she impersonated for four years. Stock work and road engagements engrossed her for several more years until finally the actress sphere of the motion picture world claimed her, and she made herself at home in the Lubin realm. There, she served her apprenticeship as a juvenile, was promoted to the ingenue class and was graduated from that into the sphere of leading lady.

Adele Lane.

EDWIN AUSTIN is one of the very latest "finds" of the Lubin Company of Philadelphia. His good looks bespeak the pleasing personality which characterizes his film pose work and which has begot him the good will of motion picture patrons. For Mr. Austin comes to the Lubin Company, not unknown by any means, but with a creditable record of late achievements with other big photoplay manufacturers. Of course, he had legitimate stage experience, too. Belasco, Otis Skinner and Mrs. Leslie Carter were among the stars in whose companies he has portrayed important roles, which work took him extensively through England, Australia and other British colonies. The result of his knowledge of stage-craft together with the natural ability to act, which is necessary not only to the legitimate actor but to him of the picture stage as well, has made for the success of the young and good looking Mr. Austin.

Edwin Austin.

Regulation Booth Detailed

Following is the moving picture machine booth requirements for construction and equipment, issued as advisory by the Texas State Insurance Board:

Frame to be constructed of 1½-inch angle, T or channel iron, bolted or riveted together, all sides, top and bottom, and covered with sheet iron (No. 20 to 24 B. & S. gauge, all seams to be double locked (no solder to be used), or cement plaster on metal lath or expanded metal. Booth should be about 6 feet long by 6 feet wide by 6 feet high for one machine (or 6 by 8 for two machines), and should be ventilated from the top and near the center through a metal pipe not less than 10 inches in diameter and run to the outside of the building. An exhaust fan may be placed in this pipe to draw the hot air out of the booth if necessary. Pipe to be securely bolted or riveted to booth, and all joints to be riveted and not soldered. There shall not be more than two windows per machine in booth—one for the operator and one for the machine. Window for machines shall not be more than 6 inches high by 12 inches long, and shall be located and cut after the machine is set up. Operator's window shall not be more than 4 inches wide by 12 inches high. All windows to be provided with gravity or spring hinge doors, which, when closed, shall overlap window openings at least one inch on all sides and arranged to fit properly. Said doors to be held open normally by the use of a fine combustible cord, so arranged that doors may be easily released by hand. There should be only one doorway to booth, to be not over 5½ feet high by 2 feet wide. Door to be made of same material as booth, except where cement plaster is used (in which case a metal-clad door should be provided), and be substantial, and be provided with a strong spring sufficient to keep door closed. Door must fit properly and must be kept closed during every performance, or while machine is being operated or films handled in booth. No other openings permitted.

Machines must be mounted on metal frames or stands and be securely fastened to floor to prevent accidental overturning. Booth must be kept clean and free from inflammable material, such as clothes, wood, boxes, paper and other trash. No apparatus or material of any kind should be kept in booth other than the picture machine and its accessories. All films should be kept in separate metal boxes with close fitting covers, except when in the magazines of the machine or in rewinding magazines.

Suffrage Films

Methods of raising money to keep the head of the Illinois Equal Suffrage association above water were heard at the weekly meeting in the Fine Arts building, Chicago. Suggestions that the women care for their own children, dispensing with nurse girls, contributing their salaries to the cause, as well as a small investment in chloroform to be administered to sleeping husbands, were not seriously considered. Direct donations were indorsed and a proposed plan to lease a motion picture theater for a day was taken under consideration.

Nankivel's Cartoons Immortalized

Edison Trick Pictures

"UNCLE MUN and the Minister" is an Edison comedy guaranteed to dispel the worst kind of a grouch. It is real comedy with a "laugh and grow fat" slogan and is portrayed by the people of the company who best know how and when to inspire merry ha! ha's!

But the feature of the film is the fact that the principal role, that of Uncle Mun, is acted by Fred Nankivel, the cartoonist, who originated the funny character of Uncle Mun in the New York *Herald* and still continues to give him a weekly lease of life in each Sunday issue of that paper.

In the film, "Uncle Mun and the Minister," which story is taken from the Uncle Mun series, Mr. Nankivel makes his first appearance on the screen in that famous characterization. There are other comedians of a like nature to come, as Mr. Nankivel is writing several fun-making scenarios in which he will be the funny man.

The story has its opening in the country studio of Mr. Nankivel. He and little Dot are spending the summer there and the artist is incidentally doing some trick drawing for the amusement of a country friend. For lack of a model, he makes himself up to impersonate the eccentric Uncle Mun of whom he draws a life-size picture from his own reflection in a large mirror. He is interrupted by the abrupt entrance of the excited and frantic minister, who breathlessly tells of a canoe having capsized on the lake thus precipitating his own daughter and her sweetheart to thhe bottom. A crowd of villagers has collected outside the studio and the artist, with the excited crowd at his heels, sets off, on a run, to the rescue.

Fortunately, he has brought his wonderful spy-glass with him, and, by its aid, discerns the young couple at the bottom of the lake quite content in their own isolation. The villagers and minister become more excited than ever and are devoid of any suggestion as to how the rescue of the young couple is to be made. But Uncle Mun solves the problem with the brilliant idea of demolishing the dam with the aid of a huge cannon. The dam is fired into and the water rushes out with great force, leaving the lake drained and the young couple knee-deep in mud. The spectacle of their slowly wading out and reaching dry land, finally, is a ludicrous one.

The waiting spectators on shore eagerly embrace the rescued pair and the minister gives his blessing to them and makes them man and wife, right there. Uncle Mun is quite a hero in the eyes of the throng and is carried on the shoulders of the stout villagers, to his studio.

The trick photography employed throughout the

Scene from Edison's Cartoon-Comedy, "Uncle Mun and the Minister."

film is ridiculously laughable and every movement of Uncle Mun is fun-producing.

With Mr. Nankivel in the cast are Edna Hammel as Dot, William Wadsworth as the minister, Arthur Houseman as the country friend for whom the artist cartoons, Edna Flugarth as the minister's daughter, Harry Beaumont as her sweetheart and Edward O'Connor who creates laughs a'plenty in the role of an ice man.

To Test Air in Theaters

Trouble is in store for somebody, and on this occasion the owners of ill-ventilated theaters and moving-picture shows are to be the victims. Even the name of the apparatus which Dr. Dowling, president of the state board of health of New Orleans, La., has decided to purchase is enough to inspire fear in careless theatrical men.

The exact purpose of the machine is to test air, or rather to gather it in an unobtrusive manner, to fill bottles therewith, and to seal said bottles, ready for the laboratory.

"I will have a man go the rounds of the theaters," said Dr. Dowling, "and he will bring back samples of air during different times of the performance. The machine fits under the coat, and while the play is going on the inspector can work a little pump without, of course, attracting any notice. This pump will fill a bag, from which the air will be put into sealed bottles. In one evening we will be able to get records of several theaters, and then analyze the contents the next day."

To Popularize Rice Through Pictures

Through the efforts of the Southern Rice Growers' Association in furthering the plans of that organization to advertise rice with a view to increasing the consumption of the cereal, the rice industry will be given what will perhaps be the greatest single advertisement that rice has ever received. The association has made a contract with a moving picture concern for displaying in over 4000 moving picture theaters throughout the world for a period of one year, a film which will show every phase of the rice culture, rice planting, cultivation, harvesting, milling, marketing, cooking and eating. The picture company has made all arrangements for making the film, which will cover a period from the present harvesting time through the next planting and growing season, thus making the film complete from the time the seed is placed in the ground until it is placed upon the table in the shape of pudding or any of the thousand and one other foods in which rice forms an essential factor. The moving picture concern estimates that the film will be unfolded before the eyes of upward of 90,000,000 people in all parts of the world in the course of its year's travels. The firm has contracted to release fifty films on the same date.

The film will be made by a government photographer under the direction of C. E. Chambliss, agronomist of the national Department of Agriculture. Mr. Chambliss, who has been conducting an investigation of the rice industry at the Experiment Station at Crowley, is now in Beaumont making final arrangements for the film.

Scene from Essanay's Comedy, "Well Matched."

Photoplays From Essanay's

Some Coming Features

ON Tuesday, October 1, "Ghosts," a beautiful and novel dramatic subject is released by Essanay. The story is quite unusual. Colonel de Valpeau, an aged French gentleman, lives alone with his faithful negro servant Zeno in the old mansion that has passed through generation after generation. Pressed for ready funds the colonel is refused a loan on his hereditary estate, and is threatened with eviction. Zeno now decides upon a plan whereby his master may remain in the great house without his presence being discovered, and shows the colonel a sliding panel in the dining room wall that leads to a small garret inside. The Dixons, wealthy social climbers, now purchase the place, but firmly believe it is haunted when they find the great table has been used for mysterious company during the night and catch sight of the sliding panel closing behind Zeno who is going to his master. They leave in a fright and refuse to complete the purchase, and the mansion is taken by Dr. Trueman, a wealthy physician. One evening as the doctor and his friends are chatting they catch sight of Zeno coming through the panel and force him to disclose the secret. Upon learning of the colonel's identity the doctor writes him a note saying the old estate is his as long as he lives and that his presence is desired that evening. Finding the old fashioned costume of one of his ancestors of the French court in a trunk, the colonel dons it and is presented to the gentlemen in the great dining room. However, the strain of proposing a toast to his king is too much for the aged man and he dies, while the faithful Zeno sobs out his grief across the wasted body. Norman Macdonald renders a splendid portrayal of the old colonel, enhancing the study with numberless eccentricities that characterize the aged, Joseph Allen is very fine in the role of Zeno, Frank Dayton plays Dr. Trueman and the other roles are taken by well-known Essanay favorites.

"Ghosts."

Another forceful dramatic story, true to nature and finely portrayed, is "The Redemption of Slivers," released October 3, showing the regeneration of a common thug under the sweet influence of a simple country lass. Detected in the act of stealing a wealthy woman's scarf from an auto, "Slivers," a thief, escapes from the clutches of a policeman and jumps a moving freight train. Miles out in the country he is found by a burly brakeman, a struggle ensues and "Slivers" is hurled from the car. Cursing his ill luck he applies at a farmhouse for something to eat and meets Alice Prescott, the old farmer's daughter. The sight of her sets him on the right track and he is given work after he proves his ability. The discovery is made one evening that "Slivers" cannot read, but the former thief secures a grammar and, in the quiet stable at night, he pores over the book until he delights Alice with his self-taught knowledge. As time passes a gradual bond of affection springs up between Alice and "Slivers," that rapidly develops into love. He makes good on the farm, saves his money and, at last, wins the consent of old Prescott to marry Alice. A few days later Paul Prescott, the old farmer's son, arrives on his vacation, and proves to be none other than the city policeman from whom "Slivers" escaped. The two men come face to face in the orchard and Paul furiously upbraids "Slivers" for attempting to marry his sister. He is about to fell the former thug when "Slivers" brokenly pleads for a chance to prove his complete reformation. Struck by the ring of sincerity in his voice Paul relents, takes him back to the old people, introduces him as an old friend and watches from the doorway as "Slivers" takes Alice to his heart. E. H. Calvert plays "Slivers" with striking sincerity, Beverly Bayne is charming as Alice, Frank Dayton portrays the brother splendidly, Eleanor Blanchard and William Bailey are the old folks and Charles Hitchcock the train brakeman.

"Alkali Ike Stung!" released October 8, is another of this great western comedy series. This time "Alkali" is dissatisfied with his boarding house and, when the buxom Soffie, a two hundred pound widow, arrives in town, buys out Tony's place and nails up a card announcing that it will be opened on the following Tuesday as a first class boarding house, "Alkali" is the first

to see it, rushes back and begins to lay plans for switching at once. The following Tuesday morning "Alkali" is hard at work stuffing everything he possesses into a big barrel. Clothes, chaps, old boots, the flour bin, bottles of good booze and other things too numerous to mention are piled into the barrel while the dust flies in clouds. Meanwhile, the other boys in town, with their belongings on their backs, meet before the door of the new boarding house and clamor for admission. One by one Soffie admits them, and when "Alkali" finally takes leave of his irate landlady and arrives at the new place, he finds all the rooms gone and is refused shelter for the night. Mad as a hornet he hangs around and, after supper, sees Soffie and the boys in the parlor singing. Determined to win her with music he secures his trusty banjo and serenades outside her window, but he gets a pail of water deluged over him for his pains. Wet and mad he tramps back to his old place, but is met by the landlady and thrown out bodily while his things are landed in the rain barrel. Realizing the world is "agin" him, "Alkali" retreats to the sanctity of the stable and, with his saddle for a pillow and a prayer in his heart that the horse won't tramp on him, finds much needed rest at last. Augustus Carney has never been funnier than in this production, and Mrs. William Todd is just as buxom and laughable as ever in her well-known role of Soffie.

Essanay's "Terrible Teddy."

Essanay's "The Redemption of Slivers."

On October 10 Essanay will release a powerful feudal drama of the Kentucky hills entitled "The End of the Feud." This production was staged amidst the wonderful natural scenery of the Wisconsin dells during the recent trip of the Essanay players. The story is unusual. Two feudal clans, the Parkers and Simpsons, have been at war for years in the Kentucky hills, but it is not until Jim Parker, the elder son, returns from college with different ideas that matters are brought to a swift culmination. Jim meets Rose Simpson and it is a case of love at first sight between the two. The days go by and this love ripens into true affection. Dave Simpson discovers the lovers one day and it is only the jamming of his gun that prevents the instant murder of Jim. Dave informs his father and the furious mountaineer hides Rose in a lonely cave in the hills with Dave standing guard over her to prevent her marrying Jim. Jim learns of her whereabouts, narrowly escapes a bullet from Dave's gun, gains access to the cave through a secret passage, overpowers Dave and rides away with Rose to be married. Years later Jim and Rose live in the hills with their pretty baby daughter, Millie. One morning Millie wanders away from her mother and accidently strays into the clearing in which the Simpsons and Parkers are battling each other from behind trees. Seeing

the baby a truce is declared and the discovery is made that Millie is their own flesh and blood. Fondling the little one in their arms the two old feudists glare at each other, but finally Parker declares his willingness to call the feud off and offers his hand. Simpson agrees and hostilities are ended forever in the sweet smile of Millie. Harry Cashman and William Walters play the old feud ists. Martha Russell and Francis X. Bushman have the roles of Rose and Jim respectively and Bryant Washburn is the "heavy" in the role of Dave Simpson. The other parts are splendidly rendered and the entire production is a distinct feature.

Space prevents complete descriptions of the other fine films to be released by Essanay during the first two weeks of October. The new Wednesday fifth weekly release is proving decidedly popular with exhibitors throughout the country, and the coming release dates are being watched with interest. The next MOTOGRAPHY issue will have announcements of Essanay's feature program of photoplays for the last two weeks of October

What Moving Pictures Add to Life

By William Lightfoot Visscher*

IT would take a large book to tell fairly all that is good and true about moving pictures; all that everybody should know. The truth of this statement is widely known and yet the moral is often overlooked. Millions of people simply see the pictures and enjoy them. That is good, but among thinking people, and those who have humanity's welfare at heart, it is not enough.

Every reel of moving pictures that is made for public presentation is passed upon by a national board of judicious persons appointed for that purpose. Their duty is to eliminate any evil that might be wrought through pictures that should not be publicly exhibited, because of the influence that they might exert by pernicious or unwholesome example among the young or immature.

This is carefully done. The fact is shown, in words on the screen, before the pictures are presented, and thus all evil is eliminated before it has an apportunity to work any manner of harm whatever.

Under these circumstances, moving pictures have proven to be an immeasurable blessing in many valuable ways, and injurious in none.

In the first place, the moving pictures afford delightful entertainment at a price of admission so small that anyone can easily afford the very light expense. In all the values of things there is, perhaps, nothing in the world where one gets so much of good for the investment. Aside from the entertainment, the beneficial influences would be difficult of enumeration and description. Among these, however, may be mentioned the edifying, salutary and profitable lessons conveyed to the public, and especially to the young; the morals taught by the exposure of the evils of intemperance, idleness, dishonesty and immorality. These are set forth in well-acted dramas comprehensible to all minds and that hold the attention of the most frivolous, thereby reaching not only the kindly-hearted and thoughtful, but impressing a class that sermons and preachment would repel.

The compass and power of moving picture influence, in this beneficent way, is far beyond computation. It is even beyond full comprehension, when the widespread scope, range and reach is considered, in subject-matter and circulation.

Think of the educational value of the scenic travelogues constantly given, with their intimate views of foreign lands, the habits, costumes, customs, arts and industries of the people. With these, also, wonders of nature, topographical characteristics of interesting regions, the architecture and other handiwork of man, past and present; the world in tabloid, and yet more impressively and closely presented than years of actual travel, at vast expense of time and money could accomplish.

Stirring events of war and other history are visualized and made plain to the observer; scriptural stories, chronicles and classics; great deeds of heroic, patriotic and powerful persons brought directly to the eye and mind, inculcating admiration for brave and

Kathlyn Williams in Max Lillie's Aeroplane.

worthy action and ambition to emulate and profit by noble example; the history of our own country and its vanished romances, especially those relating to the old South and the far West—the first, homogenized and made new; the second, changed from desert and wilderness to homes, and industries and all that exalts and embellishes modern life. Material like this caught with the camera and thrown upon the screen, in life-like proportions, impresses the minds and hearts of the young, and less educated adults, in a remarkable and forceful manner for good, and is fitly entertaining to everybody.

Marvels of photography including tricks of the camera; the stimulation that these evolve toward research into the sciences of light and optics—branches incompletely understood, but much advanced since the advent of the moving picture; the combination of the camera and the microscope in scientific investigations, where it is necessary to obtain instantaneous, accurate and permanent records of what the microscope reveals—especially valuable in studying microorganisms of plant and animal life; these are

added phases of the moving-picture possibilities. Through these a complete and unintermittent record is made of the processes involved in liquifying and vaporizing a solid, by either heat or chemicals, thus giving the scientist an opportunity to study, at his leisure, physical aspects which were before dependent upon his memory—which could not be exact—and upon incomplete observations by the eye, or that depended upon the record of imperfect instruments. All of which advantages may be exhibited to public audiences.

Through the record of the moving-picture film men of today will walk the world for ages hence, as lifelike as though then in actual existence, and future generations will have a living record from which to judge the past, instead of the hearsay, garbled and altogether incomplete and unreliable records of biased historians, or those not entirely possessed of the facts. This opens an almost endless theme as to what might have been had the world possessed the moving picture centuries ago.

Not only the cities, but nearly every village of this and other civilized countries, have moving-picture showhouses that are open every evening, and these are doing more to bring the world to the view of everybody; to familiarize the people with the things that should be known; to easily advance general knowledge in geography, celestial phenomena, science, biography, art and literature, than all other methods combined. It is the greatest and most thorough of object-teaching methods and it is all readily at the eye and mind of high or humble, and at the very hours of leisure, when soul and body seek recreation.

The physiological principle involved in the work of the moving picture machine is that a definite interval is requisite to achieve a nerve impression, and however quick this impression may be, time is required for the perception to vanish. The plainest illustration of this is that a blow upon the body will produce a sensation of pain that may last for minutes, hours, or days.

Taken altogether, the moving picture is so valuable to human life, as an entertainer and educator, that it should be cultivated and promoted by all classes of those who wish to learn, and those who seek to teach that which is beneficial and worth while. It is the realization of teacher and student on a level. It is a boon beyond the conception of value.

"Monte Cristo" to Be Released in October

The Selig Polyscope Company reports that the three-reel "Monte Cristo" will, in all probability, be released October 14. Exhibitors throughout the country have been anxiously awaiting announcements of the release date on this extraordinary subject. A most complete advertising and publicity campaign is being prepared for the use of exhibitors who show this excellent feature. A great deal has been said and written lately about the story and its visualization.

American Film Manufacturing Company's Western Stock Company in front of the studio at Santa Barbara, Cal. On horseback, left to right, are George Reynard, D. O. Ulrich, Day Woodman, Pete Morrison, Smith Willson, Carl Morrison and C. R. Morrison. Standing, left to right, are Warren Kerrigan, Pauline Bush, George Periolat, Jessaline Van Trump, Jack Richardson and Baby Morrison, Louise Lister, Marshall Nielan, Walter Kerrigan, Allan Dwan (Producer), R. F. Overbaugh, R. D. Armstrong and Sid Baldridge.

Of Interest to the Trade

American Installs Lighting System

The laboratories and studios of the progressive American Film Company are being equipped with what is known as the best light equipment extant. The studio has a series of lights furnishing an aggregate of one hundred thousand candle power. This is particularly designed to enable them to produce special lighting effects, which will be eminent in some of the forthcoming releases. They employ a large motor-generator to convert the alternating current into a direct current and the feed terminals outside of the building together with the accoutrements inside the premises give the appearance of quite a power plant. The laboratories are equipped with lighting system for general requirements, of course, but in addition, the printing room is furnished with a series of storage batteries furnishing a steady and unwavering light that is largely accountable for the even lighting so noticeable in the work. These storage batteries are automatically recharged so that no time is lost nor the regular process of work interferred with. The expense of the lighting equipment is, as one can readily imagine, considerable and is justified only by the company's desire to furnish the best possible results.

Scene from American's "The New Cowpuncher," October 17. Copyright, 1912, American Film Mfg. Co.

The rapid growth of the American Film Manufacturing Company is accountable for the addition of a new six cylinder, sixty horse power, seven passenger touring

car, to aid in transporting the eastern stock company to various locations for exterior settings. This will materially facilitate the work of the eastern producer. The cars of the company will soon make a respectable parade.

The Motion Picture Arc Lamp

Methods of supplying moving picture machines with energy in a form suitable for the operation of projection arc lamps were discussed in connection with the "Question Box" at the recent Joplin convention of the Missouri Electric Association. Replying to the question, "In justice to both consumer and power company what requirements should the company make in regard to voltage-reducing apparatus for moving picture machines, especially with reference to power factor?" one correspondent pointed out that the electric company's first duty is to educate the customer concerning the operation, advantages and disadvantages of the various methods of voltage reduction, after which the selection should rest with him. The central station desires, of course, to give customers the best service at the least cost, but if they are not willing to follow its advice, poor policy would be displayed in requiring the use of any one form of voltage-reducing apparatus.

In general there are four ways of handling a moving picture arc lamp from the ordinary alternating current distribution system. A transformer stepping down to 50 volts or 80 volts can be used to furnish alternating current for the arc, but such an arc is unsatisfactory, consuming large current; the arc also tends to wander, thus changing the focus of the lamp, and, moreover, has an objectionable color and is noisy. A motor-generator may be employed to furnish direct current at suitable voltage for the arc, but here both efficiency and power-factor are low and the consumption correspondingly disproportionate to the service. Mercury-arc rectifiers have been used quite largely, on account of their superior efficiency and fair power-factor, as well as the satisfactory character of their operation. The green light from the tube also has an advertising value if installed in front of the theater. These tubes are subject to breakage, however, adding a source of expense and annoyance from the necessity of renewals. The single-phase rotary converter is one of the most recent developments for supplying moving picture machines. Its efficiency is high, while its power-factor is adjustable from unity at full-load to 80 per cent leading at no-load. The converter can also be used as a power motor, if desired, and when not employed for furnishing direct current to the arc may drive a fan for blowing or drawing the dead air out of the auditorium during intermissions. This auxiliary application secures the central station the additional advantage of an improved load-factor.

1500 Feet Thanhouser Story

What is perhaps the first 1500 feet independent film ever issued is found on the Thanhouser release scheduled for Tuesday, October 8, under the title "Miss Robinson Crusoe." Heretofore regular release features have always completely filled one or two or more reels, according to the particular subject, and no maker has been known to stop mid-way in a reel, as in the case of the present Thanhouser subject. On this, Mr. Thanhouser says:

"It was a matter of being artistic. The market is supposed to want feature stories that occupy full reels. But the producer turned in over sixteen hundred feet, all 'live' stuff. With titles and 'padding' the picture could have been stretched to cover full two reels, but I decided to use the 'live' stuff as it stood. With 'cut-outs' there were fifteen hundred feet of it. So we stopped the story there. Then we chopped a thousand foot negative showing specimens from the N. Y. Zoological park down to

five hundred feet, added it to the No. 2 Reel, and so supplied the missing length of film.

"It seems too bad that a producer must sell a story in a given length. It means too short films or too long films; it means the padding evil. It would be splendid if the manufacturers would make up their minds to let a story run along naturally, to not only start right, but stop right. The story-action would be helped a lot, and if good stories are the salvation of the business we may all yet get around to natural length subjects."

Essanay Not to Make Baseball Pictures

George K. Spoor, president of the Essanay Film Manufacturing Company, Chicago, states that Essanay will not negotiate for the privilege to make pictures of the baseball World's Championship Series this year. He gave as his reason that the price asked for the privilege was excessive and in his opinion baseball had been very much overdone in picture theaters during the past summer. "There is nothing new to take in the baseball game," said Mr. Spoor, "and each season's picture is more or less a repetition of the season before, and there is a doubt in my mind that the pictures would be profitable to the exhibitors. They certainly would not be to the manufacturer at the cost necessary for their making."

Panama Site of Picture Shows

Consul General Alban G. Snyder reports that during the last week in August two new moving picture shows were opened in Panama City—the Teatro Variedades, originally built for a variety theater, and the Amador Theater. This business has shown a considerable growth in the last year, but it is thought that the field is now well covered. All films and machines used are imported from the United States.

Fight Films Not to Travel

The law against interests transportation of moving picture films of a boxing match has been sustained by the United States court at Portland, Ore., and the defendant in the case was fined $100 for the violation. The films in question were those of the Johnson-Flynn bout at Las Vegas. The defendant paid the fine without any attempt to appeal the case.

In all probability this means that moving pictures will cease to be a factor in boxing circles, as it will seldom be worth while to take pictures when their scope is limited to the state in which the bout occurs and to foreign countries.

On the whole followers of boxing will not regret the passing of the films. Their absence will remove the element of doubt when important matches are made whether the contestants intend to put forth their best efforts or merely to box in a manner that will make the films valuable. Cases are on record where boxers have been accused of allowing their opponents to "stay" a certain length of time for the benefit of the pictures. More than once Jack Johnson has been accused of this practice. He was openly accused of acting in his matches with Stanley Ketchel, Tommy Burns and Jim Jeffries.

Scene from American's "The Promise," October 14. Copyright, 1912, American Film Mfg. Co.

Film Company Formed to Instruct

The Unipa Film Company, closely connected and associated with the Union Pacific, has been organized and given a charter to engage in the manufacture of moving picture films for educational and commercial purposes. The new company is an adjunct of the Union Pacific's educational department, of which D. C. Buell is the head.

The company has a number of moving pictures in use and is preparing to install more. For the present, at least, the films will be used in carrying on extensions of

the Union Pacific's educational work among the employees. The pictures take up all lines of work on the system where motion pictures will tend to make the employees more efficient. At Council Bluffs a series of pictures are being made for the purpose of illustrating the proposition of fuel economy. At other points on the road pictures are being made to show how accidents may be prevented under certain conditions.

For the classes in locomotive engineering, motion pictures of engines and the different parts have been made and at division points and terminals the reels are being shown.

The purpose of the moving picture is to enable men who are taking the educational course to come in more direct contact with subjects in which they are specializing.

Statement from General Film

The demand for the pictures of the General Film Company has been so great within the past few months that it has been necessary for that big organization to add six more releases to its already long list; so that now forty-two pictures each week, or seven a day, are being released. The influx of so many good pictures daily has given the business a very notable increase; the patrons of theaters are better satisfied, and the exhibitors are given an exceptionally large variety of subjects from which to select. Besides these forty-two releases, the General Film Company is continually producing educational and other features of unusual interest.

Probably the theaters using the General Film Company's service were never so popular as they are at the present time because of the great variety of pictures the exhibitors are enabled to flash on the screen. Producers such as Pathe Freres, Edison, Vitagraph, Kalem, Lubin, Selig, Essanay, Melies and Cines, are alert at all times for new ideas and new subjects to satisfy the demands of their service. Besides the regular releases, practically every week some special feature of historical or dramatic value, without peer, is presented for the consideration of the exhibitor.

Denver the Choice of Film Company

Arrangements have been completed to make Denver the headquarters of the Cheyenne Feature Film Company, said to be one of the best equipped moving picture manufacturing concerns producing western scenarios. The company promises to compete favorably in the general motion film market, and also to afford Denver and Colorado worldwide advertising of immense value.

Temporary headquarters have been established at Manhattan Beach, which the company has leased until May 13, 1913. It is the intention to build a developing plant at some favorite site on the outskirts of the city as soon as conditions justify this expansion of the enterprise.

The corporation was organized about two months ago at Cheyenne, Wyo., where it made several reels of the Frontier Days celebration a few weeks ago. A number of films have also been made at Golden, Mt. Morrison and other scenic points near Denver.

Judge Ben B. Lindsey's juvenile court has been chosen as the setting for a three-reel educational picture to be made soon, and Police Commissioner George Creel has been engaged to write the scenario.

The president of the new corporation is Charles Irwin of Cheyenne, whose 25,000-acre ranch has for several years furnished a large proportion of the cowboys, Indians, horses, cattle and Wild West paraphernalia of different kinds for the Frontier days exhibition.

F. J. Carroll of Boston, Mass., is the company's business manager, and the secretary is A. E. Weller of Littleton, Colo. Carroll is in New York City making arrangements for releases. The producer is Otis B. Thayer.

Belasco Buys Kinemacolor Stock

David Belasco has expressed his belief in the future and longevity of the motion picture, by the purchase of a working interest in the Kinemacolor Company. The investment in this stock is said to be in the neighborhood of $750,000.

It is the intention of Belasco in future to devote a goodly portion of his personal attention to the production of stupendous picture stories, which are to be extensively advertised as the creations of "America's foremost legitimate producer."

The personnel of the working staff is being reorganized and an official announcement of its future policies will shortly be made known.

At the present the Kinemacolor company is in active negotiation with the management of a large circuit of vaudeville houses for the allotment of important territorial rights to the company's output, other than its larger productions requiring a series of reels for their presentment.

Players to Talk as Well as Act

E. S. Dinisthorpe of London has another invention which is likely to make the ubiquitous picture show still more popular. For some time past he has been trying to produce plays on a white canvas screen with the aid of a synchroniser, but owing to the buzzing sound accompanying the grinding out of the disks, no distinct success has been made of it, also the stoppage of the film when jumping from record to record has made the dialogue jerky and mechanical.

Mr. Dinisthorpe claims to have overcome every defect with the stentorphone, and at one of the Strand picture theaters a private demonstration was given of a play and several songs, with camera illustrations. A farce was given in which the photographed characters spoke in complete accord with every movement, the singing also being in harmony with melody and motion.

There seems to be a future for the stentorphone, in conjunction with the Dinisthorpe synchroniser.

That Thanhouser Outing

The Thanhouser Company of New Rochelle, N.Y., held its first annual outing on Saturday, September 7, at Bay View Hotel, City Island. There were about two hundred members of the company and their friends present and it was declared by all concerned to be a memorable event. Others of a like nature are looked forward to. Bertram Alder headed the committee in charge and in connection with the outing an athletic programme was arranged. It included a men's bowling contest, a 20-yard dash, a potato race, a dancing prize, and a fat ladies' race. The committee in charge beside Mr. Alder were Charles Corcke and Charles Van Houten. The judges were Frank Zimmerman and John Andren. The motor bus used to convey the party home was so heavily loaded that it was necessary to stop at the foot of each hill, while the men, compelled to walk, assisted the progress, with emphatic verbal accompaniment.

Scene from Selig's "A Motorcycle Adventure," October 8. Copyright, 1912, Selig Polyscope Co.

The Selig People Picnic

Employees of the Selig Polyscope Company—two hundred of them—had a general good time September 7, at Elm Grove, Ill. There was dancing, a baseball game between the regular team and a nine composed of other employees, other games, races and contests, and enough-for-all supper and—the bills were footed by W. N. Selig. Special cars carried the picnic party from the studio to the grove and the event was greatly enjoyed by everybody who attended.

Film Release Number Grows

The month just ended has seen an increase in the number of film releases. The Essanay Company chose September 25 for the debut of a weekly Wednesday release, thus bringing the company's record up to five releases a week.

October first marks the commencement of a twenty-eight reel a week program for the Universal. That means four releases weekly.

"Six a week," is now the pace of the Vitagraph Company. The addition was made September 26, and hereafter, Thursday of every week will be a full-fledged Vitagraph day.

Wednesday, hereafter, will testify to a Selig release. September 25 was the date of the first appearance of this fifth weekly output of the Selig house.

Beginning September 21, the Gaumont Company issued its third regular release in the form of a split reel, the first part consisting of a topical event of the same week as issued, with a scientific, educational, industrial or scenic tail piece. The Gaumont release days are now Tuesday, Thursday and Saturday, not including the Gaumont weekly, which will continue to be released every Wednesday as heretofore.

The Edison company has added Monday to its list of release dates, thus making the weekly output five. September 25 was the date upon which the addition was made.

Pastor Flays Picture Shows

The Rev. W. P. Grant, pastor of the Methodist church of Grass Valley, Nevada county, California, regards the motion picture show as an enemy and a rival to the church. In his annual report to the trustees of the church, he stated that picture shows interfere greatly with the attendance at church. He said "this condition of church work militating against advancement must be fairly considered and met. While this vexing problem confronts all of our churches to a greater or less extent we must continue to fight it, although it is hard to find a remedy. We cannot afford to compete with cheap vaudeville in filling our pews." Inveighing against the practice does not increase the church attendance and the pictures seem to have the upper hand.

The Mexican government recently appropriated a considerable sum for the establishment of free moving picture shows for the benefit of the lower class as a means of keeping them out of drinking places.

Pupils Taught From Motion Pictures

The motion picture will be used in the Minneapolis public schools this fall in teaching history and geography. Board of education members say motion pictures and stereopticon slides will give the pupil a better and more lasting idea of the country or character being studied than books. More than half the schools in the city now have their own stereopticon machines and with a circulating library of slides treating the different countries and historical subjects it is planned to make them a part of the school work at least once a week. To encourage high-class music in the public schools, T. P. Giddings, supervisor of music, is planning to equip every school in the city this year with a phonograph. "It will help greatly in creating enthusiasm for real good music in the school pupils," said Mr. Giddings, "and I think every school in the city should have one." In some of the schools phonographs have been purchased and concerts have been given from time to time, at which only the highest class music has been given.

Picture Shows Rout Saloons

Court officials of Schuylkill have been surprised at the falling off in the number of licenses for the sale of liquor in the county and the board of judges instructed the clerk of the Court of Quarter Sessions to make an investigation.

His report shows that of the 1,200 saloons in Schuylkill only 30 per cent are making money. The other 70 per cent are seriously thinking of giving up the business. Of those who are trying to get out of business 40 per cent blame the decline in profits to the moving-picture theaters.

They say that where the average workingman used to patronize the bar he now takes his nickel and goes along with his family to the motion-picture theaters and that in this way many pennies that were spent for liquor have found their way in this country district to a new source, and the erection of more playhouses indicates that the day of the saloon in these regions is doomed as long as the moving pictures last.

Too Realistic Acting

While producing a western picture recently called the "Pony Express Rider," it was decided that the action of one particular scene should take place in the middle of a turbulent river near the Royal Gorge where the Selig Colorado company is located. William Duncan and Lester Cunio, the two principals concerned in the scene, swam out to mid-stream and began their action. In their efforts to secure realism the men forgot for the moment that they were merely acting and as a result Duncan held Cunio under the water for such a length of time that Cunio was unconscious when finally he came to the surface. A doctor, who happened to be among the onlookers, came to Cunio's assistance and after some work he was revived and removed to his hotel where he was forced to remain for some days as a result of his strenuous work.

New Theater Lighting Ordinance

After January 1, 1913, according to a recently passed ordinance of the City Council of Chicago, every portion of a motion-picture theater in that city, including exits and corridors, must be lighted by electric lamps during all performances and until the entire assemblage has left the premises. The lighting during performances must be such that a person with normal eyesight shall be able to read Snellen's standard test type 40 at a distance of 20 feet and type 30 at a distance of 10 feet. Normal eyesight is taken to mean the ability to read type 20 at a distance of 20 feet in daylight. A card showing types 20, 30 and 40 must be displayed prominently in the corridor of the theater, together with a copy of the ordinance.

Charged With Smuggling Films

The United States Secret Service operatives believe that they have unearthed a big deal in the smuggling of picture films into this country.

At the instance of the Custom House officials, little more than a week ago, four sailors on the American liner, New York, were arrested in New York by the United States Marshal, charged with conspiracy in smuggling in two films valued at $1,000.

George B. Graff, a moving picture man, was also arrested, accused of being involved in the conspiracy. Graff was held in $1,500 bail after arraignment before a United States commissioner in the Federal building. Bail was placed at $250 each for the sailors.

Baby Lions Get Bulldog Mother

One of the most remarkable incidents in the knowledge of animal men occurred at the Selig wild animal farm in Los Angeles. Lobo, one of the lionesses that was born at the Selig plant in Chicago last summer, gave birth to a litter of baby lions. These being her first cubs, she refused to have anything to do with them, and they were in a fair way of being starved to death until Big Otto, the Selig animal expert, hit upon the plan of securing a foster mother for the babies. He advertised extensively for a female of the species but his efforts were in vain. Finally in sheer desperation he secured a pit bull female and gave the baby lions into her keeping. The bulldog mothered the cubs at once and has given the best of attention to her charges ever since their adoption.

Selig Reproduces "Millionaire Cowboy"

One of the most popular film stories that the Selig Polyscope Company ever produced was the well known and long remembered comedy drama of western life entitled "The Millionaire Cowboy." So numerous have been the requests for a new release of this famous subject that the Selig Company recently reproduced the picture upon a far more elaborate scale than the former production. Its release date will be announced in the near future.

Pictures for New York Schools

The motion picture is about to be introduced in the class-rooms of New York City public schools. During the past year it was tried out semi-officially in the assembly halls of several downtown schools. The principals have been very enthusiastic. The motion picture is able to render the greatest assistance in geography and history. Mr. Edison has perfected his miniature moving picture machine, especially suitable for the home and the schoolroom.

The first German school to have a moving picture machine as a regular part of its equipment is in Thuringia. The apparatus will be used mainly in geography and nature study.

Brevities of the Business

PERSONAL NOTES.

Baxter Morton, old in the industry of the motion picture, is dead. A legion of friends mourn his demise, which occurred September 3 at the home of his family at Falls Church, Va. With the Nicholas Power Company almost since its founding, Mr. Morton held many positions of trust, the last being that of general manager. The law was Mr. Morton's first calling, but he gave up his practice to become an active worker in the management of the Power plant, where he assumed all the office details and the interests of his new affiliation. As a patent attorney he had been untiring in getting patents for the company through the patent office at Washington, and after his renunciation of his law practice his efforts in behalf of the newly corporated Powers company made that concern and its various heads glad that Baxter Morton was of and with them. A serious illness which Mr. Morton sustained last November had so telling an effect upon him that active work was out of the question. Death claimed him early in September, thus depriving the world of a man who personified the word "friend."

H. J. Streyckmans, in the service of the Mutual Film Corporation, has a busy work plan outlined. He has organized a publicity department and is editing a paper devoted to the interests of the Mutual. Mr. Streyckmans was formerly advertising manager for the New York Motion Picture Company.

In R. E. Aiken, the Western Import Company, Ltd., of London, England, has gained a managing director of much ability, and the Majestic studios have lost a general manager. Mr. Aiken has set sail for Europe, where the Western Import Company has the European agency for Thanhouser and Broncho films. During his extended stay on the continent he will open a number of new offices.

Bernard M. Corbett is the latest disciple of Jim Hoff, only in the Corbett instance a little advance information has been gleaned as to the time, the place and the girl. For on October 30 the well known Bernard M. will "marry a wife." She's the "best little girl in the world," naturally, and has the liking, respect and best wishes of every exhibitor in New England. She lives in Boston, and that's where the wedding will take place. Miss Violet Chapman, or popularly called "Chappie," is the bride-to-be. Reliable authority gives her birthplace as Rowley, and her age as twenty-two, and the entire New England film world knows that the bright little stenographer for F. J. Howard and the G. F. Company at 564 Washington street, Boston, has been there for the last seven years. As for Bernard M. Corbett—well, everybody knows him as a live-wire representative of the Thomas A. Edison Kinetograph sales department and as a man with a host of friends in the motion picture business in both eastern and western cities. The best of wishes are hereby extended "the Corbetts."

William Simmons, of North Carolina, reputed to be the oldest motion picture man in that state, has spent the past several weeks in New York studying theater construction and equipment and purchasing supplies for his two houses, which are the largest in his state. He proposes to build one or two more within the next few months.

Joe Koster's European trip will cover many weeks and many cities.

Watterson R. Rothacker, general manager of the Industrial Moving Picture Company, Chicago, is receiving the congratulations of his friends on his recovery from the results of what might have been a serious accident. While visiting in Louisville, Ky., he accompanied a friend in trying out a race horse. The spirited animal threw its jockey and took a fence with Rothacker and his friend in the sulky. Rothacker was laid up for a week, but is all right again.

P. Kaufman visited Chicago recently. He heralded the fact that business is fine with the Toronto branch of the Canadian Film Exchange.

B. E. Clements is again back in New York after an extended trip through the west, when he visited his motion picture plant in California. Mr. Clements has extended business interests throughout the west, both in the legitimate and motion picture fields, and he has opened several new offices. He has arranged for the distribution of two western film productions each week, having the agency for several manufacturers in the west.

A new addition to the sales force of the Exhibitors' Advertising Company of Chicago is Mr. Gabe, formerly with the *Moving Picture World*.

Marshall Stedman, manager of the Selig western company, was visited by his father, Captain N. M. Stedman, in September. Lester Cunio, a well known actor of the same company, had his parents as guests at Canon City.

Miss Kathlyn Williams, leading woman of Selig's eastern branch company, had good fishing luck while on her recent vacation in Wisconsin. She is an expert caster and landed one of the largest small mouth black bass ever caught in Wisconsin waters. Her luck in "catchin' 'em" continued the entire week of her stay.

Chief Rising Feather and Chief Woodpecker, Chimallo Indians, are playing leads for the Universal at its western plant.

W. H. Swanson, secretary and manager of the Universal Film Manufacturing Company, is now half owner of the Rex theater in Salt Lake City, Utah. It is said Mr. Swanson paid $70,000 for his new interest.

Al E. Garcia and Mrs. Garcia gave a party at their residence in Edendale, Cal., at which Mr. and Mrs. Philbrooke, Miss Betty Harte and Miss Hazel Harte attended. Everybody had a good time even if they did talk about automobiles all the evening. Miss Harte is considering the purchase of an automobile at an early date.

H. L. Forbes is the new Universal stage director, who has the responsibility of attending to the wants of five companies. He was associated with Henry B. Harris for eight years and with Charles Frohman for six years, which experiences should enable him to withstand the rigors of picture work.

C. E. Kessnick has been given the management of the new branch established by the Mutual Film Corporation at Charlotte, N. C.

Arthur S. Marks is M. B. Dudley's press representative for the Frederick Warde feature pictures.

Alfredo Gandolfi is about ready to return to Turin, Italy, as arrangements have been satisfactorily made regarding the marketing of Ambrosia films. Mr. Gandolfi is president of the Ambrosio Film Company and has appointed M. A. Stevani president of the American Ambrosio Company, with offices at 15 East Twenty-sixth street, New York.

Maurice Costello and Miss Florence Lawrence will lead the grand march at the second annual entertainment and ball of the Motion Picture Exhibitors at the New York Palm Garden, November 14.

Ingvald C. Oes, American representative of the Great Northern Film Company, is back in New York. He brought with him from his European trip a number of Great Northern hand colored films.

John G. Clymer has deserted the staff of the New York *Herald* to act as advertising and publicity man for the Gaumont company.

Jennie Van Buskirk, "publicity man" for the Victor company, is again on the job, after a vacation spent in eastern mountains.

Manager Raver, of the Film Supply Company, has seen to it that the newspaper men will hereafter be well cared for when visiting the projection room of the company on assignment. He has had desks and seats supplied for them and the room now has the appearance of a regular theater.

H. A. Fitzgerald is renewing pleasant acquaintances with the busy film men of New York. Mr. Fitzgerald is president of the Consolidated Film and Supply Company, with exchanges in Atlanta, Dallas and New Orleans.

H. R. Raver has decided that the best distribution of Italia films will be through the Film Supply Company.

Mr. Spencer, of the Imperial Booking Company of Chicago, secured six features for booking in Illinois, Wisconsin, Indiana, Michigan and Iowa, in New York, a week ago.

Victoria Forde is making a success of ingenue roles with the Keystone company at Santa Monica, Cal.

Paul Smith, of the Circle Ranch Film Company, is Director O'Brien's new leading man at Santa Monica, Cal., and is made thoroughly competent by previous affiliations.

Director Ince accompanied Messrs. Bauman and Kessel of New York over the grounds occupied by the Bison company at their studio in Ynez canyon, Cal. Messrs. Bauman and Kessel part owners of the New York Motion Picture Company, are out to California on a tour of inspection. Mr. Fred Balshofer, the local manager, also accompanied them, and from reports entire satisfaction was expressed.

Mae Marsh joined Director Ince's company on the Pacific coast to play the ingenue roles in the vacancy created by Miss Ethel Grandin's resignation. Miss Grandin has been ill for a long time, so decided to take a long needed vacation.

John E. Brennan, of the Kalem western company, refuses to wear a White Rat button in Los Angeles again. Said he was

touched by seven different actors in one block while on a visit to the city.

Hal Reid, while engaged in a dueling scene with George Field on the Pacific coast was stabbed in the hand. The rapier pierced clear through his hand, necessitating the putting of five stitches in it.

Lem B. Parker, who directed in Chicago for the Selig company, is at the Pacific coast branch directing a company.

W. D. Emerson, a well known producer, recently with the American Film Manufacturing Company, is now with the Atlas Film Manufacturing Company.

Charlie Kessel, Keystone and Broncho brand booster, is more than pleased with the welcome which the two brands are receiving.

Edward Roskamp and his new company, the Commercial Motion Pictures Company, are well launched on the road to achievement and popularity. He is specializing in industrial and novelty films, and is not a bit sorry that he decided to take up a line of work all his own.

Herbert Brenon, besides directing films for the Imp company, is finding time to hustle in the interests of the Screen Club.

Moe Streimer, of the Theater Film Supply Company, has managed to get the better of a severe attack of pleurisy and is again busy with the company's affairs.

Miss Lucile Cox, a south side society girl of Chicago, is a new addition to the Selig staff of Chicago plant players.

C. K. Seery spent several days in New York recently, in the interests of the Majestic Film Service of Chicago, of which concern he is manager.

Carl Winterhoff has cast his lot with the Selig company and is acting in Hardee Kirkland's company.

Miss Virginia Perry and DeForrest F. Dawley have been engaged to play leads with the Vitagraph company. Mr. Dawley is an experienced director.

Harry Raver has had an attack of lumbago, but is now back at his office.

Ingvald Coes is another picture man to return from Europe. Quite content to get back, too.

Messrs. Amer of Columbus, Mandelbaum of Cleveland, and Blackman of Detroit, all representing branches of the Mutual Film Corporation in those cities, were interested visitors recently at the new factory and studio of the American Film Manufacturing Company.

Henry McRae will return to his native state, California, within a few weeks. He will go to the Edendale studio of the Selig company, where he will join the production department. He has been connected with the Selig Chicago plant for some time, but will be glad to return to the Pacific coast, where he is widely known.

Miss Fay Brierly and little Leonide Watson are two of the clever children players with the Universal company. Miss Fay is seven years old and Miss Leonide is hardly that. Roy and Mrs. Watson (Jane Keckly), who are with Mr. Montgomery's company, are Leonide's parents. As Menie in Rip Van Winkle, which role was Leonide's first real part, she insisted upon showing Rip her new garters.

George Greenbaum, representing the Vitascope Company of Berlin, has opened offices in the Exchange building, New York, and announces the company's product to be released through the General Film Publicity and Sales Company.

Thomas Nast, assistant to W. N. Selig, has been given the general management of the Selig plant on the Pacific coast. For fourteen years he has been connected with the Selig house and has been superintendent for the Chicago plant for the last several years. Mr. Nash's field of supervision in the west is a big one. The growth of the branch has been so rapid that the Edendale plant and studio comprises one square block, which is enclosed by a mission wall. In Los Angeles there is a wild animal farm of three hundred and twenty acres. The California missions and several large tracts of land are leased for an indefinite length of time and at the Los Angeles studio six producers are kept busy.

Carl Laemmle, president of the Universal, returned from his European trip quite a month earlier than he had intended. He is now in the best of health, his vacation which he took with Mrs. Laemmle and their two children having given him just the change and rest necessary. Carlsbad, Berlin, Paris and London were each visited, and Mr. Laemmle successfully directed his efforts towards the establishment of additional distributing agencies for the Universal films.

Chauncey Herbert, a popular member of the Selig producing staff, has severed his connection with that company in order to accompany his wife on a health trip through the states. Mr. Herbert hopes to return to his production work in about six months.

Miss Kathlyn Williams, leading woman of the Selig Polyscope Company's eastern branch, made several flights in the Wright biplane of Max Lillie, the aviator who has won such prominence during the recent air meet at Chicago. The flights were made before the Selig cameras and are to be used as part of a dramatic aviation story in which Miss Williams and Mr. Lillie play the principal parts. Lillie was engaged especially for this picture. It was Miss Williams' first experience of this nature.

Rich G. Hollaman's European trip was strewn with many successes, so Mr. Hollaman announces. The interests of the Simplex projecting machine was what took him abroad, where he gave demonstrations of the machine and disposed of the six he had taken with him. While in London he closed for the Australian patents to Spencers, Ltd., of Melbourne.

Ray C. Smallwood, camera man of the "101" Bison Company, has become a benedict notwithstanding the assertion made little more than a year ago that he "would not marry the best woman living." However, that was before he met Miss Ethel Grandon, leading woman of the "101" Bison Company, and who has recently changed her name to that of Smallwood.

J. A. Ross, with the British-American Film Company, spent some time in New York during September in the interest of that concern.

Charles E. Nixon, who wrote the scenarios of "The Coming of Columbus," "Daughter of the Confederacy," etc., and adapted Randall Parish's story, "When Wilderness was King," for the Selig Polyscope Company, is now a regular member of the Selig Company's scenario department and will write exclusively for this company in the future. Among the internationally famous authors who are now writing scenarios for the Selig company are Randall Parish, Molly Elliott Sewell, Albert Biglow Paine, Bertrand W. Sinclair, B. M. Bower, Roy Norton, B. M. Ferguson, Capt. Charles King and Marjorie Benton Cook.

Anthony Xydias, who has been appointed national vice-president for the state of Texas, says he intends to make the Dallas convention of October 15 and 16 an epoch in the history of the state of Texas. The exhibitors have caught the spirit of his zeal and are heartily co-operating with him in all his plans.

G. R. Nichols, a Universal director, is hard at work on Wilkie Collins' famous novel, "The Woman in White."

Pearl White is the leading woman of the new brand of Crystal films which the Universal company will begin to release October 6.

Miss Carey L. Hastings, one of Thanhouser's leading ladies, has been released by that company for a short while, to allow of her playing the star role in "Mother" for the stock company of the Prospect theater in New York city.

Miss Myrtle Stedman, of the Selig western company, is prevented from assuming picture roles, for a time, until recovered from injuries received when thrown from her pony into a cactus bush. Miss Stedman was playing in an Indian picture when the accident occurred.

Melvin C. Winstock, of the People's Amusement Company, Portland, Ore., acted as chairman of the Rotary Club's luncheon, which was a recent event at the Portland Commercial Club, and at which "Motion Pictures" was the subject of consideration. "Motion Pictures and Their Advancement" was the particular subject of the principal address, which was made by A. Bernstein.

Barry O'Neil, general director of Lubin's company No. 1, has Harry C. Myers playing leads for him at Cape Elizabeth, on the Maine coast.

E. Frank Campbell, president of the University Film Company of Los Angeles, is contemplating bringing a company of players to stage several Indian dramas in Stoddard's canyon and other retreats in the mountains to the north of Pomona.

Ned Langer, a Chicago theatrical man, has taken over the management of the Neenah theater, Neenah, Wis.

Augustus Carney, of "Alkali Ike" fame, since his recent return from Essanay's western company, has been kept busy portraying feature roles in humorous plays produced at the Argyle street plant.

S. H. McFarlane has resigned the appointment, recently given him, of general manager for the Crown Feature Film Company. His latest venture is the southern company of the Paul J. Rainey African Hunt pictures, for which company he is advance man.

Captain F. Du Quesne, a personal friend of Colonel Roosevelt, and H. A. Spanuth, of the General Film Publicity and Sales Company, have received the permission of the Roosevelt campaign managers to have their camera men accompany the colonel through his western trip.

Charles F. Atkinson, 211 Tremont street, Boston, Mass., is the purchaser, from Fred Niblo, of the latter's nine "Travel Talks," with 1,400 colored slides, 30,000 feet of motion picture

films, and the exclusive right to use Niblo's name with the same. Mr. Atkinson has arranged with W. D. Broadstreet to present the talks in a condensed form as a special educational feature in his scenic temples at Boston, Cambridge, Waltham, Auditorium at Malden, Merrimac Square theater at Lowell, and his two houses at Providence. Beginning September 30 at Malden, Mr. Atkinson will give a travelogue a week, in each of these six cities.

John Bunny has returned from fourteen weeks spent in England, where he posed as Mr. Pickwick and other characters distinctively English. As a result, the Vitagraph company will have some especially interesting films to release soon.

Al Lichtman has been appointed advertising and sales manager of the Famous Players Film Company. His former affiliation was with the Monopole Film Company.

Fred Beck, he of the Special Event Film Company, had several recent busy weeks in Colorado in the interest of the company. He is home now.

Frank C. Egan of Los Angeles, Cal., has arranged with western representatives of New York motion picture magnates to direct, stage and produce from two to six photoplays weekly for a term of three years. Talent from all parts of the country will be engaged, and several foremost actors and actresses will be featured in plays written especially for them. The statement is authorized that one hundred dollars will be paid for high class scenarios and as much as five hundred for feature plays.

Miss Jessalyn Van Trump has been sharing stellar honors lately with Miss Pauline Bush for the Western American Film Company.

Jane Bernudy, the "101" Bison lariat wonder, takes her honors modestly. She gave an exhibition of "rope spinning" recently at a theater in Santa Monica, Cal., and received great praise for the performance.

Leon J. Rubenstein is in Chicago. He used to edit *Film Reports* for the Sales company. Now he is interested in educational film subjects, and is making some of them.

Stanley H. Twist, of Selig, while engaged in overseeing a production, took advantage of an opportunity to ride a hydro-aeroplane, just for the sensation. He got more than one. The hydro turned turtle and Stanley took water for the first time. He's around town same as ever, though.

George K. Spoor, president of the Essanay Film Manufacturing Company, is now in Niles, Cal., the home of Essanay's western company. Business is the object of Mr. Spoor's trip, and he will return within the week.

Fred Balshofer, manager of the Bison company at Edendale, Cal., expects to spend several months in the New York office straightening business matters.

Herbert Bosworth, director of the Selig company at Edendale, Cal., has returned with his troupe from a month's stay at Pine Knot Lodge in Bear Valley, where a series of Indian pictures were taken.

Frank Montgomery is out of the managerial firing line at present, owing to an attack of appendicitis.

Charles C. Inslee is now playing leads for the Nestor Universal Company, directed by Otis Turner, at Hollywood, Cal.

Elmer Berger, an Edendale, Cal., picture actor, is at the Columbia hospital, where he underwent an operation for tonsilitis.

Milton K. Fahrney and Thomas Rickets are directing productions for the Nestor Universal Company at the latter's new plant at Cahuenga Pass, Cal., although the plant is not yet finished.

John Cort, president of the Cort-Kitsee company, gave the initial demonstration of the Chrono-Kinetograph, a speaking-moving-picture device, at St. Timothy Hall, Philadelphia, September 16.

ROLL OF THE STATES.

CALIFORNIA.

W. J. Chatterton will erect a $20,000 theater, and F. J. Greenwood will also erect a $20,000 theater at Tulare.

F. E. Longton, of Los Angeles, will erect a $5,000 theater on the west side of Normandie avenue, between Forty-eighth and Forty-ninth streets.

A San Diego company has opened the first motion picture theater in La Mesa. It is open on Mondays, Wednesdays and Fridays.

The Morovia Opera House, on Myrtle avenue, Morovia, has been leased by W. V. Conklin and Son, of Santa, who are making improvements and will soon open the building as a moving picture theater.

COLORADO.

Declaring that he will give Pueblo the best there is to be had in vaudeville and motion pictures, Nat Darling, of Seattle, Wash., assumed charge of the Pantages theater in Pueblo.

CONNECTICUT.

A contract has been awarded for the erection of a moving picture theater for Gerkin & Seehabel, at 1234 State street, New Haven.

Architect William Schmidt has completed the plans for the proposed business block and the moving picture theater for Spargo and Winter, at Bridgeport.

GEORGIA.

Application for a building permit has been made by J. C. Geiger and A. J. Stebbins for the construction of the proposed new combination vaudeville and moving picture theater on Broughton street, just east of Abercorn, Savannah. No name has been selected for the proposed new theater, but Messrs. Geiger and Stebbins have announced that they will hold a public contest and ask the people of Savannah to choose a name.

ILLINOIS.

H. I. Dalsey, architect, 1122 Throop street, is taking bids on a theater to be built on Irving Park boulevard and Robey street, Chicago.

Bids are being taken on a theater building for C. Rolandsen, owner, on Fullerton avenue, near Kedzie, Chicago.

Hirsch Amusement Company has incorporated at Chicago with a capital of $6,000; Walter J. Spengler, David Lovinson, Eugene F. Kline.

Jacksonville is to have a new theater on Fourth, between Monroe and Adams streets.

C. A. Schulz has taken charge of the opera house at Dallas City. He will run moving pictures.

Biefield, Hersh & Company, 76 West Monroe street, Chicago, is building a new theater at 3723 West Twelfth street.

INDIANA.

Philip Holzman has planned the building of a nickel theater in the rear of two new store buildings, which he will put up at 626 and 628 Main street, Evansville.

IOWA.

I. B. Balluff will open a picture show in East Davenport.

Storm Lake is to have a new theater. It will be called the Princess.

KANSAS.

The Gem theater, Topeka's newest motion picture house, elaborate in appointment and design and gracious in management, has opened to the public. A feature new to the motion picture houses of Topeka is the passing of ice water at frequent intervals. The aim of the management is to give the best to the Gem patrons. The pictures shown are the very latest and best that can be procured and a complete change of program is given every day. The Gem is under the management of Mrs. C. A. McGuigan.

Film companies have increased the price of films and the moving picture show managers of Wichita now charge ten cents admission Saturdays instead of five cents. The higher cost of everything and the desire to take better care of the crowds Saturday are two of the reasons for the increase in price. Managers of the six Wichita moving picture houses are: Novelty, J. C. Willis; Marple, William Barie; Star, Charles McCollister; Colonial, N. H. Spitzer; Yale, Mrs. Mamie Freese, and Elite, Wright Brothers.

MARYLAND.

J. C. Speddon, 1640 Hanover street, is preparing plans for moving picture parlor at 1627 Pennsylvania avenue, Baltimore, to cost $12,000.

MASSACHUSETTS.

It is understood that several large moving picture concerns are desirous of securing the Warren Avenue Baptist Church edifice, in Boston, for a picture house. The announcement that the Warren Avenue Baptist Church would join with the First Baptist Church, at the corner of Clarendon street and Commonwealth avenue, was before the public but a very few days when these representatives picked not only the site but the building itself as the place they desired. In the opinion of at least two of the companies, the building would, with very slight alterations, make an ideal moving picture house.

MICHIGAN.

Gus Cook has bought one of the biggest motion picture and vaudeville houses in St. Joseph.

MISSOURI.

Jarboe, Minnis & Woodlan are making preparations to open up a new moving picture show at Norborne. They now own the Star theater here and another picture show at Brunswick.

MONTANA.

The Orpheum theater, at Helena, has changed hands and is now the property of Julius Mitchke.

NEBRASKA.

John F. Bruhn has purchased a moving picture show in Bloomfield.

NEW JERSEY.

The Scarlett Motion Picture studios have incorporated to manufacture cameras, lenses, etc. Capital, $300,000. Incorporators: E. L. Marple, F. N. Gaskill, C. DeF. Besore, in Camden.

The company which was granted a license by the Montclair council to erect a moving picture theater at Valley road and Bloomfield avenue, that town, has submitted plans of its proposed building to the police committee of council. The theater will have a seating capacity of 1,350 and will be fireproof. The estimated cost of the proposed building is between $50,000 and $60,000.

NEW YORK.

Richard III. Film Company, New York City, has been organized. Capital stock, $10,000; to organize, produce and improve on an elaborate motion picture film of the play, entitled "Richard III. With Frederick Warde in the Title Role." Incorporators, Arthur S. Marks, New York City; Ernest C. Warde, Cecil Magnus, Brooklyn, N. Y.

The Ambrosio American Company, Manhattan, has formed to manufacture motion pictures; capital, $25,000. Incorporators: Ad. Foshay, 21 Park Row, Max Greenberg, 32 West 112th street, both of New York City; and Jos. Weed, 150 Hicks street, Brooklyn.

A theater that will be the smallest in New York is to be built in the yard of two old dwellings at 66 and 68 West Thirty-eighth street. It will accommodate 266 people. The orchestra will hold 98, the balcony 91 and the gallery 77. The stage will be 19 feet wide and 14 feet deep and will be devoted to vaudeville and moving pictures. Although the theater will be three stories high, it will have an area of only 40x37 feet. It will cost $6,000. Entrance will be through the dwellings, which are used as bachelor apartments.

The Whyte-Wheeler Motion Picture Company, Manhattan, has incorporated to manufacture motion picture machinery, etc.; capital, $25,000. Incorporators: Louis J. Rosett, 29 Liberty street; Lily Rosett, 14 West One Hundred and Seventh street, New York City; Allan A. Deutsch, 405 Graham avenue, Brooklyn.

The Louis Becker Company has leased for the Riverside Viaduct Realty Company the plot 75x100 on the north side of One Hundred and Fifty-seventh street, 75 feet west of Amsterdam avenue, New York, for a term of twenty-one years to the Palace Theater, Inc. The owners will build for the lessees a moving picture theater.

The Schyuler, Eighty-second street and Broadway, New York, has reopened with a straight picture show. Bernard Bimberg and Max Plohn run the house.

Warner's Feature Film Company has incorporated at Manhatttan; capital stock, $100,000. Incorporators: Albert Warner, Harry M. Warner, 145 West Forty-fifth street, New York City.

Plans for one of the most pretentious and uniquely appointed picture playhouses in Syracuse are being prepared by Architect E. A. Howard, which will transform the two vacant stores in the Bastable Block at Nos. 107 and 109 South Warren street, into a picture theater. The estimated expense of the installation of a new and elaborate front and a modern seating system is in the neighborhood of $2,000. The new playhouse, which will be known as the Model theater, will have Frederick Bastable as the manager.

W. E. D. Stokes has leased the property at 2631 Broadway, New York, to the Quincy Amusement Company, which will erect a moving picture and vaudeville theater.

Goercke & Company will erect a moving picture theater on the north side of Central avenue and Ninth street, in New York. It has been leased to Essex Amusement Company by Lowy, Benger & Finger Company.

The Universal Photo Play Company, of Manhattan, $10,000, has been incorporated by Frederick M. McClintic, Lebaum M. McClintic, George W. Reiff.

Claude L. Jones will build a picture theater in Driving Park avenue, near Dewey avenue, Rochester. The new house is to be of brick and tile, cost $10,000 with a front elevation of two stories. There are already fifty-one strictly moving picture houses in the city and an inspection of them, which it is expected will occupy a month's time, is now being made by H. M. Hudson, an inspector from the state fire marshal's office.

Edward Clark, of Dunkirk, is planning to build a theater in Olean. The site favored is on Union street.

OHIO.

On Vine street, Cincinnati, just north of Clinton avenue and north of Mulberry street, two motion picture houses will be built.

Architect Andrew R. James has closed bids for a moving picture and vaudeville house for Dr. Edwin Behyner, on Eastern avenue, between Delta and Stanley avenue, Cleveland.

A theater of strictly modern design will be built on the property located 300 feet west of East Fifty-fifth street, on Euclid avenue, almost opposite the Euclid-Penn theater, Cleveland. The property, 100 feet on Euclid avenue, and 268 feet deep, recently was taken under a ninety-nine-year lease by the Euclid-Fifty-fifth Street Company, on a valuation of $1,000 per front foot. The building will be three stories, of brick, concrete and steel. It will have three store rooms on the ground floor and offices above. The theater will have a capacity of 1,500 people.

G. W. Hill & Company, motion picture operators in Cincinnati, will build a theater of the five-cent type on the north side of Liberty street, just east of Baymiller street, from plans to be prepared by Architects Robertson & Fahnestock. It will contain about 600 seats and will cost about $10,000, the dimensions being 50x100 feet. The company is now operating the Liberty, in the same block, but since it conflicts with the building commissioner's office, a new one will be constructed.

PENNSYLVANIA.

Plans are under way for the construction of five new motion picture theaters, four in West Philadelphia, and one in Frankford, and for the reconstruction and enlargement of another in the southern section of the city. This, in conjunction with the large number of such places already in operation all over the city, is regarded as an indication that the popularity of this class of public amusement is on the increase. It is estimated that not far from a quarter of a million dollars will be expended in these ventures, for construction work alone, exclusive of the cost of the sites. Included in the list of new structures are: one 90 feet by 160 feet at Frankford avenue and Margaret street, Frankford, to cost about $100,000; one 89 feet by 109 feet on Fifty-second street, above Market street, to cost about $75,000; one 50 feet by 107 feet, on Chestnut street, west of Thirty-third street; one 60 feet by 100 feet, to be built at Redfield street and Lansdowne avenue, and a fourth at Sixty-second street and Woodland avenue.

Progress on the construction of the big stone addition to the William Penn theater, Sixth and Edgmont avenue, Chester, is rapid.

Harris & Davis have awarded contracts for the erection of a motion picture theater at East Liberty to have a seating capacity of 3,000.

Robert Hamilton will break ground for a new moving picture show on the south side of Lansdowne avenue, west of Redfield street, at Philadelphia.

George H. Chapman will erect a one-story moving picture theater, 44.9 by 85 feet, one the south side of Orthodox street, west of Paul, Frankford, to cost $5,000.

SOUTH CAROLINA.

The Savoy, Jos. B. Wylie's new picture show, has opened and is well patronized. The theater is situated in the old Standard Pharmacy building, and is elegantly furnished.

SOUTH DAKOTA.

Milton Douglas is arranging to install a moving picture show in the Colgrove building, at Faulkston.

C. H. Oldham and Howard Henry will open a picture show in the old Hopkins & Carroll building, in Gregory.

G. D. Smith, proprietor of the Olympia theater, has leased a room at 127 North Phillips avenue, Sioux Falls, until recently occupied by a confectionery store, and will put in a moving picture house. The management will be in the hands of his son.

TENNESSEE.

By means of free moving picture shows in the public parks, Nashville hopes to educate its citizens to combat tuberculosis. Other pictures will be intermingled with those on consumption, in order that interest in the performances may not wane.

TEXAS.

Forest Budd, of Beaumont, has perfected arrangements whereby he will establish a moving picture theater in the apartment of Link building No 2, at Orange.

The Wigwam theater, at El Paso, has been closed and will be enlarged and beautified to make it the most beautiful moving picture theater in the southwest. The Silver Grill restaurant, adjoining it on the east, has also been closed and the two rooms will be converted into one large auditorium for the new Wigwam theater. The upstairs is also to be utilized, making the auditorium of the theater two stories high with room in the rear for a gallery. The new theater will be fireproof, with concrete floor and exits on the alley. Opera chairs will be installed. An indirect system of lighting will be used by which the aisles will be illuminated from below and all of the lights will be planned by the indirect system of illumination.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

Lion Tamer's Revenge

Two Reels

A sensational story in which lions play an important part and cause many a thrill. Love, jealousy and revenge are, of course, the principal ingredients in this splendid drama, the closing scene being wonderful. A jealous lover, with the assistance of a clown—the play being enacted in a circus—lures his rival and his partner, the girl, into the den of lions, and binds them to a post. The woman manages to escape, later to accuse the mu derer, but the lover is mangled to death by the infuriated lions.

OCT. 14 1912

The Count of Monte Cristo

SELIG 3 REELS

A story of the wonderful and tragic adventures of Edmond Dantes, the young Frenchman, who is entrusted with a message to the exiled Napoleon on the island of Elba, forming one of the greatest stories ever written. There are three hundred people in the production; gorgeous costumes; wonderful action and elaborate properties. No stage production of this wonderful play was ever made that can equal Selig's great picture masterpiece.

MOTOR DRIVE MADE SAFE.

MOTOR DRIVE for projection machines has many advantages over hand drive. The uniformity of speed, the absence of that slight but quite perceptible oscillation caused by the down pressure on the crank, make the use of a motor a distinct advance. Hand drive, indeed, is an anachronism in this day of mechanical perfection.

The motor would have superseded the manual method long ago were it not for one seemingly fatal weakness—which, strange to say, is a fault not of the motor or the machine, but of the attending operator—the human equation.

All modern projecting machines are provided with safety shutters—metal shields which are automatically interposed between the light and the film when the crank speed falls below a certain point. Thus should the film stick at the gate or break, the operator would naturally stop cranking and the shield would fall and protect the film at the aperture. So the very act that might create a dangerous condition is made to assure additional safety.

With motor drive, of course, no such advantage exists. When the film sticks or breaks the motor will not stop. On the contrary, relieved of a part of its load, it is apt to accelerate its speed and so prevent the fire-shutter from performing its function at all. If left to itself, the result of such a condition would inevitably prove disastrous; for the concentrated rays of the arc, playing upon the unprotected surface of the film at the aperture, will ignite it in three seconds or less.

This fault would be of no particular moment were there any assurance that the operator had his hand constantly near the electric switch, ready to snap off the current at the first intimation of trouble. It is practically as easy to open a switch as it is to stop turning a crank. But the trouble is that the motor operates the machine in a perfectly satisfactory manner without any attention whatever. This fact the operator discovers immediately and (familiarity breeding contempt) he soon finds it easy to divert his attention to other things. In this he is only human. We would all do the same thing under the circumstances.

The most obvious remedy for this weakness is to provide a spring switch or push button, normally open, which must be held closed by the operator, thus engaging his attention. Unfortunately, it is impossible to make such a device fool-proof. Any spring switch or push button that can be operated by hand can be held closed by hanging a weight upon it, or propping it up with a stick, or wedging it with a bit of wood—or the wire connections themselves may be short-circuited with a piece of metal. Of course, such an action would be more unscrupulous on the part of the operator than mere neglect, since it constitutes a positive act of disobedience instead of a negative. But that eliminates only a portion of the opportunities for trouble.

Sad to relate, there are not a few operators who would not hesitate to gain a little freedom by fastening the switch.

It is a safe axiom that when a demand really exists, some inventor will proceed to supply it. The safeguard for motor drive has already arrived. Moreover, it has the sanction of the National Board of Underwriters and is now in actual service in a picture theater.

This device, on which thoroughly protective patents have already been allowed, has been subjected to the most severe tests and has not failed. It relies on the simple principle of film tension. Should the film either stick or break, a circuit breaker acts instantly to cut off the current from both the motor and the arc. Furthermore, it is impossible to bring the arc into position to throw its rays on the film unless the latter is moving at normal speed through the gate.

In short, the inventor seems to have achieved that mechanical triumph, an automatic motion picture projector. The human operator ceases to be a crank turner and becomes a supervisor—an engineer. He is there to see that everything goes well, to act in emergency, to see that the projection is perfect, to improve the show if possible. And in the meantime the little electric motor is grinding out perfect pictures, rock-steady and smooth as velvet.

Motor drive is bound to succeed hand drive universally. The next issue of Motography will describe the apparatus which has rendered it practicable.

IMAGINATION IN PICTURES.

MARCEL PREVOST, dramatist, in a recent issue of the Paris *Figaro,* replied to a question whether motion pictures are harmful to the legitimate theater by stating that while he likes the pictures, their authors are lacking in imagination. Thus is reopened the old discussion of ways and means to induce the high class author to devote some of his talent, at least, to the picture.

Admitting, for the sake of providing editorial material if for nothing more, that M. Prevost is justified in his criticism, and admitting that dramatists of the legitimate (like M. Prevost) as well as the authors of printed fiction do *not* lack imagination, the solution of the difficulty would seem to lie in persuading these specially happy mortals to contribute an occasional scenario for the silent studio.

Far from us be it to condemn untried any scheme calculated to inspire the picture with imagination. Indeed, this thing of securing scenarios from authors of national fame has been done several times in this country—and excellent pictures they made, too. The question is, were these specially fathered pictures as much better than the ordinary run as the great author's printed story is better than the average? Differently worded, can the great author produce a film story good enough to be immortal, when motion pictures are, generally speaking, of such high mortality?

The best motion picture dramas produced today are reproductions of literary classics. These films do not achieve immortality; they merely further assure the immortality of the original work. Why cannot a photodrama be produced fine enough to live on its own merit—why must the picture always seem to be secondary while literature and the drama continue to furnish the primary motives?

The answer lies in the peculiar requirements of photoplay authorship. The writer of printed fiction is a master of *words.* He revels in artful phrases and unique constructions. He woos immortality not by his plots, but by his clever handling of words—his "style."

When this same author attempts a photoplay, he is shorn of his power. His words—the secret of his success—count for naught.

The photodrama will become truly great, in a specific sense, when it has developed its great men. The photoplay author of fame must be a specialist. And the art is still young—very young.

M. Prevost says the authors lack imagination. Perhaps he forgets that a picture is a very definite, concrete thing. The author of imagination is the one who can stimulate imagination in his audience. The typical photoplay leaves little to the imagination—far less than the drama or the novel. That may be because the people are drama-and-novel trained. They are becoming photoplay trained. Another generation may make the photoplay primary and the drama and novel secondary.

MORE TALKING PICTURES.

Large assemblages have viewed the demonstrations of the Chrono-Kinetograph, a speaking and moving-picture apparatus invented by Isadore Kitsee.

Dr. Kitsee, the inventor and patentee of the Chrono-Kinetograph, made his first attempt to master a device for the development of speaking-moving pictures in the year 1905. In his laboratories in Philadelphia he first produced films in which, through a chemical process, the exact spacing was attained. Later on he used electromagnetic means for this purpose evolving his present device, which may be applied to any of the existing types of projecting machines, synchronizing the same with any existing types of phonograph machines; in other words, given a picture house already equipped with a projecting machine Dr. Kitsee is able to synchronize the same with a phonograph of any type desired, either of his own invention or any of the machines already on the market.

CURFEW AT NINE.

The curfew law has been proclaimed in Rahway, N. J., and as a result moving picture managers are up in arms. All boys and girls must be in the house at 9 o'clock, when the reformatory whistle sounds.

Chief "Dave" Ramsey, formerly a county constable, says he is never out after 9 o'clock and he doesn't want the young of the somnolent city at large after that unseemly hour.

Louis A. Geleng, camera man, has returned from Panama and the Canal Zone, where he has been taking pictures of the "Big Ditch" in two ways. At first views were taken from the platform of a flat car; then Mr. Geleng went up in the air with Aviator Clarence De Giers and took views of the canal and of the cities of Panama and Colon. It is expected that the venture will yield about two reels of interesting pictures which are owned by the Aviation Film Company.

A moving picture plant, the first to be established in the Orient, will be erected in Manila in the near future if the plans of the Oriental Moving Picture Company, recently incorporated, are carried out. The new company intends to establish branches where moving pictures may be shown in nearly every town in the Philippines, besides in the larger cities of China and Japan. Branches in Hongkong and Shanghai have already been planned for.

Opie Read in "The Starbucks"

An American Two-Reel

OPIE READ plays the role of Jasper Starbuck in the picture dramatization of his novel, "The Starbucks," which will be released November 9, by the American Film Manufacturing Company. The story is one of southern hills and is as follows:

Mrs. Mayfield, niece of Judge Elliott, of Nashville, dispirited over the dissolution of her unfortunate marriage, sat moodily in the Elliot home and brooded. Judge Elliot, the one-armed, stern old veteran, found it impossible to console her, and gave it up as a bad job. The judge's son Tom, returning from some recent escapades, and intensely fond of his aunt, suggested the wild idea that she accompany him in search of adventure into the Tennessee mountains but a few miles from Nashville. Mrs. Mayfield's artist soul seized eagerly the prospect of escape from fashionable boredom. So they made all arrangements and some few days later found themselves in the heart of the hills and in the midst of a civilization so primeval and natural that Mrs. Mayfield's delight knew no bounds.

Mrs. Mayfield Meets Jim Starbuck.

They arrived at the home of Jasper Starbuck, a giant mountaineer whose strong but simple nature, quaint philosophy and fearless courage charmed the city folk and furnished a needed balm for the gentle, wounded nature of Mrs. Mayfield. In the days that followed, Tom and Starbuck's daughter, Lou, found love. Jim Starbuck, a country preacher, nephew of Jasper, came to visit at the Starbuck household. Long-legged, awkward, extremely diffident, but possessed of a soul that reveled in the beauty of all nature and also possessed of a quaint, backwoods eloquence and a dauntless physical courage, Jim Starbuck, country preacher, appealed strongly to the imagination of the easy speaking society woman of the city. They were thrown much together and love came, naturally, quite before either realized it. Only big Jasper Starbuck, with his keen eye and whimsical humor, discovered the secrets of both couples.

Adjoining the Starbuck property lived Lije Peters, a bully without being a coward, passionate, unscrupulous, murderous in his likes and dislikes. He wanted Lou Starbuck but the girl spurned him and quickened his smoldering anger to revengeful hate.

Back of the house, Starbuck made whiskey without a government license. His grandfather had done so and so had his father—and so, it might be added, did many of the residents of the Cumberland valley. It was no secret and government officers had long ceased to penetrate the deadly hills for offenders. Lije Peters applied for the position of deputy U. S. marshal. He made many trips to the Starbuck home and threatened old Jasper, demanding his daughter and loans of money.

The appointment came. Lije Peters, with two deputy marshals, wrecked the still. Old Jasper, calmly smoking on the door-step, cleaned and oiled his Winchester. Up the hill he went, threw himself on the grass and pulled an unerring aim on the dastardly heart of Lije Peters. But his old hand trembled, he thought of his daughter Lou who had married Tom Elliot, and his nephew Jim who had married Mrs. Mayfield and the happiness of the two couples who were then on their honeymoon. Jasper also thought of the many men who had fallen beneath the merciless rain of that Winchester—his

old hand trembled, he hurled the rifle from him and went down into the midst of Lije Peters and his marshals.

They took him to the jail at Nashville and locked him up, who never before had known other than boundless freedom, in the cell of a common felon.

Meanwhile, Judge Elliot, of Nashville, wrote his son Tom a good-natured letter congratulating him on his marriage and jokingly remarking that Tom had failed to mention his bride's former name. Also he casually remarked that he must on the morrow try an old soldier named Starbuck for moonshining and that the job was anything but pleasant. This news brought the honeymoon couples post haste to Nashville. Also, poor Mrs. Starbuck was daily becoming more lonesome; so she saddled the horse and struck the pike for Nashville.

Jasper Starbuck was led into Judge Elliot's presence. He knew that Judge Elliot was the father of the boy who had married his daughter but he forebore mention of the fact, preferring to make his plea for freedom on his own ground—that of an old soldier who had given his blood to Uncle Sam and who did not expect Uncle Sam to take his blood just because he, Jasper Starbuck, made whiskey to give his friends. His plea was eloquent—Judge Elliot carried an empty sleeve in his coat and his softest point was touched. He knew a face and the soul that lay back of it and he had not the heart to send the old man to jail. He freed him and old Jasper Starbuck stepping back from the witness stand, saw Lije Peters enter the room. He seized the villain by the throat and only timely aid saved Peters' life. A deputy marshal then stepped up and informed the judge that Lije Peters had made an attempt on Starbuck's life after Starbuck had surrendered to the government. Judge Elliot promptly ordered the arrest of Peters.

Suddenly the door was burst open and Mrs. Starbuck threw herself in Jasper's arms. She was followed immediately by Tom, Mrs. Mayfield, Jim Starbuck, and Lou, and there was rejoicing in the old court-room that had seen so many tragedies under the iron rule of Judge Elliot.

The cast presenting "The Starbucks" comprises:

Jasper Starbuck	Opie Read
Mrs. Jasper Starbuck	Mrs. C. R. Smith
Jim Starbuck, his nephew	Wm. Lee
Lije Peters	C. M. Devere
Judge Elliott	Jean Bonner
Tom Elliott, his son	Wm. Morse
Lou Starbuck	Miss Logan
Mrs. Mayfield, niece of Judge Elliott	Mrs. C. M. Devere
Kitchin	Bob Irving
U. S. Marshal Johnson	Frank Hamilton

Opie Read, in the characterization of Jasper Starbuck, was the "cynosure of admiring eyes," one day recently, when a number of his friends obtained permission to visit the plant of the American Film Company and watch Mr. Read in the portrayal of the chief character of his novel, "The Starbucks." Dr. George F. Butler, head physician of Cook county; Harry Irving Greene, novelist; Frank D. Comerford, former police attorney for Chicago, and Clement Yore, newspaper special writer, were among the party who enjoyed the afternoon at the American studio.

Lige Peters and Jasper Starbuck.

Plan Cinematograph Exhibit

A cinematograph exhibition is to be held at Olympia, London, in March, 1913. Among those actively interested in this exhibition, and assisting in its arrangements, are representatives of the British War Office, the Canadian government and the Queensland government, the head master of Westminster, and the head master of Eton.

It is the intention of the promoters to make the exhibition international in its scope, and manufacturers of every sort of apparatus connected with cinematographs throughout the world will be invited to exhibit their products.

The Motion Picture Exhibitors' League of America

General Headquarters
703 Euclid Ave., Cleveland, Ohio

OFFICERS OF NATIONAL ASSOCIATION.

President, M. A. Neff, Lock Box 15, Cincinnati, O.; Secretary, C. M. Christenson, 703 Euclid Av., Cleveland, O.; Treasurer, J. J. Rieder, Jackson, Mich.; Vice-Presidents, S. E. Morris, Cleveland, O.; Wm. J. Sweeney, Chicago, Ill.; Fred J. Herrington, Pittsburgh, Pa.; B. L. Converse, Owassa, Mich.; H. S. Dickson, Winchester, Ind.; E. W. Waugh, Huntington, W. Va.; Orene Parker, Covington, Ky.; Geo. H. Wiley, Kansas City, Mo.; Chas. Rothschild, San Francisco, Calif.; Sidney Asher, New York, N. Y.; Fulton Brylawski, Washington, D. C.; L. F. Blumenthal, Jersey City, N. J.; H. C. Farley, Montgomery, Ala.; E. V. Richards, Shreveport, La.; F. W. Young, Cedar Rapids, Ia.; W. H. Wassman, Nashville, Tenn.; Anthony J. Xydias, Houston, Tex.; Carl Gregg, Tulsa, Okla.; Paul LeMarquand, Winnipeg, Can.; M. C. Everstein, Jacksonville, Fla.; Geo. Osborn, St. Paul, Minn.

Texas Prospects Look Big

From the number of letters that are coming into Mr. Neff's office, Texas is going to have one of the largest state conventions that has ever been held. Mr. Neff has received eighty-six letters from the exhibitors in Texas, stating that they will attend the Dallas convention, which is to be held on the 15th and 16th of October. E. T. Peter, manager of the Mutual Film Corporation, 1807 Main street, Dallas, has arranged with the Chamber of Commerce to hold the convention in its hall. Ned Depinct of the Texas Film Exchange, 1310 Elm street, Dallas, and Mr. Peter are co-operating and are arranging a splendid entertainment for the visiting exhibitors.

The exhibitors of Dallas held a meeting and elected T. P. Finnegan, manager of the Hippodrome Amusement Company, chairman of the entertainment committee, and he will have charge of all arrangements and will co-operate with the exhibitors of Dallas as well as the film exchanges. From the way Mr. Finnegan has taken hold of matters the exhibitors of Texas can rest assured that they will receive a splendid reception and will be royally entertained.

Letters received from Anthony Xydias, national vice-president from Texas, states that the Texas exhibitors are enthusiastic over the convention and a large convention is expected. Miss Beulah Allred writes that either she or her partner will attend the convention. L. C. Ross, of Catulla, writes that he cannot be there, but that he will send in his initiation fee and application. L. S. Trammell, manager of the Jewell Amusement Company, Houston, will be there. E. C. Thumm, of the Thumm Brothers' Amusement Company, of Del Rio, writes that one of them will be at the convention; they are with the movement and want to do all they can to

Farewell banquet, California Motion Picture Exhibitors' League. Among those present were: G. M. Anderson, Arthur Mackley, Mrs. Arthur Mackley, Fred Church, Victor Potel, Pat Rooney, Frank Pimentel, M. H. Breslreur, H. Todd, Mrs. H. Todd, Wm. Evans, Jesse Robbins, Mrs. Jesse Robbins, Augustus Carney, Jay Hanna, Mrs. Macauley, Edna Sharp, Miss Selvy, Miss Collins, F. S. Gullinford, W. T. Horne, H. H. Willenbreck, Mr. and Mrs. Sutz, T. C. Jensen, Mr. Survoolly, F. J. Chapman, J. F. Carr, F. E. Smith, J. A. Iwurg, A. M. Boudes, C. H. Douglass, P. J. Hanlon, C. C. Shearen, T. E. Barrcon, J. Ray Williams, Harry Sightkacose, Ed. Dauronn, S. J. Greenwood, Gibber & Horton, W. J. Godley, R. N. Berryhill, J. B. Hobson, Jos. J. Wood, B. L. Waite, H. Bunker, Perry Ewers, F. G. Meismer, T. F. Brerdwood, P. A. Tackery, J. A. Date, H. R. Restano, Paul Coounty, F. S. Gullifford, H. P. Wells, J. G. Haitarian, W. A. Rattenbury, O. J. L. Beyers, Chas. Foreman, Hoon Ewnel, John Patto, W. H. Hilts, F. L. Compsen, W. R. Cox, A. K. West, E. K. Robins, Thos. Gibson, C. E. Howard, Mr. Cunningham, Wm. Gardner, Nic. Gurner, R. Koehnake, B. A. Pryor, Wm. Walker, Wm. L. Wethered, F. N. Wade, Walter Fraer, C. L. Mehress, Ed. Kuhnle, Chas. A. Hart, Mark Hanna, W. N. Englehart, Henry Torner, G. K. O. Hary, Cam. Whitthome, John Casanag, Wm. Hant, W. M. H. Rapp, S. N. Spangh, L. V. Bridges, Elmer Tomkins, H. C. Schmidt, C. C. Kauiman, J. N. Gibbs, J. F. Caaz, W. E. McFaul, W. E. McFael, J. Reuquest, J. Weisman, E. B. Whitney, T. A. Smith, L. L. Price, H. B. Smith, F. L. Pittell, Geo. Rog, A. Esdeilondr, S. D. Bromley, W. R. Wing, A. A. Thiel, J. P. Schlaser. From San Francisco: F. R. Macauley, J. A. Patington, Mr. Narser, John Howard, J. Opperman, Harry Froman, A. Marsko, Mr. Michelsel, A. Goldberg, Otto Roehder, S. Arendt, F. Levy, Dan W. Reardon, Frank Carpenter, Max Shirpser, Alfred Kahn, G. F. Lanphear, A. O. T. Kaumter, W. C. Smith, G. A. Stillman, S. H. Levin, Mr. Gorden, Peter Hogg, W. P. Wobber, Ed. H. Wobber, H. Wobber, Chas. R. Greenfield and Chas. F. Maio.

assist. John C. Penn, proprietor of the Picture Palace, McKinney, states that he will be on hand at the convention. B. Orzeck, of Marland, writes that it is possible that he cannot be there, but that he will have his application and initiation fee there as he wants to join the organization. W. R. Fairman, of the Dixie Theater, Byran, states that he will be there and is anxious to assist in the organization. J. J. Hegman, of Temple, is coming. Crawford Thomes, of the Colonial Theater, Post City, writes that he will be there, "Johnnie on the spot." John Morris, Jr., manager of the Airdome Theater, Jackson, states he is very glad to know that we are going to hold a convention and that he will be there, and will do all in his power to make the convention a success.

Messrs. Bell and Engles, of the Gem Picture Palace, 208 Oak street, Palestine, state that the organization is what they want; both gentlemen will be there and will assist in forming a permanent organization. J. C. Clemmons, Imperial Theater Company, Beaumont, writes that he is very much pleased to note that the Texas exhibitors have finally awakened. He is delighted at the enthusiasm manifested and is sure the convention will be a big one, and he will be there to do his part. Messrs. Harrison and Ward, owners of the Royal Theater, Abelene, write that they are heart and soul with the movement and that they will be present at the convention. G. L. Wallace writes that he has been a motion picture exhibitor since 1907; he is interested in fourteen theaters in Western Texas, and it is expected that all fourteen will be represented at Dallas. There are many others from whom letters have been received.

M. A. Neff, president of the Motion Picture Exhibitors' League of America, will leave Cincinnati about the 12th of October, arriving in Dallas on the 14th or early the morning of the 15th, and will be ready to organize the state into a thorough, permanent organization. Mr. Neff has many personal friends in the motion picture business and also in the mercantile business in Texas, as he has been through the state several times as a traveling man. Week by week new states are being added to the organization and by the time the big convention is held in New York City on July 7, 1913, the national president and secretary positively expect every state in the Union to be organized. In the last week letters have been received by the president from Moscow, Russia; Berlin, Germany and Melbourne and Sidney, Australia.

Local No. 2 was organized in Charleston, W. Va., by C. T. Beeching, who was sent to Charleston from the Cincinnati headquarters. Local No. 8 was organized at Springfield, Ohio, September 26.

The Outing of Cincinnati Local

The first outing given by Cincinnati Local No. 2 of the Motion Picture Exhibitors' League of America was a great success. The day opened bright and warm, and as early as eight o'clock the people began pouring into the Zoological Garden. By one o'clock there were ten thousand people in the park. G. W. Peters, representing the Gaumont Company, and Freeman Owens, representing the Universal Animated Weekly, were early on hand taking pictures of scenes and animals at the garden. There was a terrific scuffle of the animals at the Zoo Saturday morning, and Superintndent Sol Stephan was amazed to find lions, bears, monkeys, fowl and serpents in a very undignified struggle to gain possession of a piece of looking glass that had been the property of one of the little monkeys. You see, they were going to have their pictures "took," and even clumsy Zekoe, the hippopotamus, and Brutus, the lion, wanted to fix up their complexions, and the polar bear was anxious to see that his new white fur coat fitted properly.

Soon M. A. Neff, president of the National Motion Picture Exhibitors' League, arrived with a corps of moving picture experts and a crowd of delegates to the outing of the picture men at the Zoo. The animals posed their best as the moving film was reeled off in their faces. The proud and vain creatures enjoyed the prospect of having their handsome forms and faces displayed before millions of people in picture theaters throughout the world. But the lion snarled and made a vicious lunge at the camera man because a horse was marched close by his cage and the odor of horse meat drove the king of the forest into temporary madness.

"That will make a great lion picture," said the camera expert, as he turned the crank, while the lion roared and clawed furiously a few feet away.

The buffaloes were induced to stampede, and their pictures were taken while in motion; and then came a parade of all the animals that wanted to get into the moving picture limelight—elephants, bears, monkeys, snakes and scores of other creatures took part in the strange procession. The Zoo pictures will be a part of a series of Cincinnati moving pictures taken to exploit to the world Cincinnati's good things.

At one o'clock Mr. Neff, chairman of the committee, with John J. Huss, J. B. Glassmeyer, Otto Lightner, Dr. Kolb, F. A. Botts, Henry Levy, Herman Eggers, H. Lehman, N. B. Rogers, and F. L. Emmert, met Hon. Henry T. Hunt, mayor of Cincinnati, Hon. James M. Cox, Democratic candidate for governor of Ohio, A. L. Carford, Bull Moose gubernatorial candidate, Mayor George E. Phillips of Covington, Ky., and Attorney-General Hogan, at the Sinton Hotel and escorted them to the Zoological Garden in automobiles with banners flying.

Upon arrival at the garden, pictures of Mayor Hunt, Mayor Phillips, Hon. James M. Cox and A. L. Garford were taken, then a parade was formed, led by Cincinnati Local No. 2, followed by the representatives of the Boosters' League of Cincinnati (which also represented the Chamber of Commerce), the Boy Scouts, and the animal parade of the Zoo. After the parade was over, Mr. Neff called the meeting to order, and introduced Mayor Hunt, who extended the keys of the city to the visiting exhibitors and friends. While Mayor Hunt's address was very short, it was right to the point, and was loudly applauded by the exhibitors, as he touched upon some points that were vital to their interest, and his attitude was friendly all the way through.

The next speaker, A. L. Garford, talked on the high standard of pictures and the educational benefits to be derived from them. His remarks were well received and he made many friends.

The last speaker, Hon. James M. Cox, was enthusiastically received, as he has attended several conventions of the motion picture exhibitors, is well known, and most of the boys call him "Jimmy" Cox.

Everything went off nicely and everybody was there as expected, with the exception of Pathé's man. G. W. Peters and Freeman Owens of Gaumont and Universal Weekly report that the pictures are fine, and it will only be a short time until they are released. Exhibitors are anxiously waiting to run the films.

Otto Ludeking, local treasurer, was on the job

early in the morning, as he had charge of the gate receipts. Mrs. Shakespeare, his official stenographer, acted as ticket agent. August Carbin was official ticket taker.

After the big outing was over, and the tickets counted, it was found that over ten thousand people had attended the first outing. Charles Beeching and W. C. Kitt had charge of the electrical department, and the spot-lights were a new feature in cabaret. Mr. Beeching's efficient managing of this department was shown by every move that was made by the spot-light and other electrical effects, and the cabaret performance. W. C. Kitt had charge of the entertainment. F. A. Botts was prominent; Harry Brice, who had charge of the program, was very active. Carl Tarvin, who was on the film and slide committee, was the right man in the right place. Those who furnished automobiles were J. S. Glassmeyer, F. L. Emmert, J. B. Rogers, J. J. Ditchen and M. A. Neff. J. J. Huss, president of the Cincinnati Local, furnished the badges and banners for the outing.

J. H. Broomhal, second vice-president of the state organization, was present and a large number of exhibitors from surrounding towns.

The dancing pavilion was crowded at all times.

The headliner of the cabaret in the evening was Miss Frances St. Clair of Detroit, Mich., and ten other high-class vaudeville acts. Alexander's ragtime picture caught the people.

The python crawled around through the grass, not only for the entertainment of the people, but caused great amusement while W. G. Peters and Freeman Owens took moving pictures of it. This was certainly a thriller. Many went home still shaking after seeing this wonderful reptile, which is the largest snake in captivity—twenty-five feet long—and vowed never to take another drink.

Mr. Neff is having 2,100 feet of municipal film made for the city of Cincinnati; also 1,000 feet made for the Zoological Garden. These pictures will show every important scene in Cincinnati and the Zoo in full.

Newark Exhibitors Join League

Essex County Local No. 4, Motion Picture Exhibitors' League of America, was temporarily organized recently in New Jersey, with the election of F. C. Young, as president.

Other temporary officers are: Vice-president, Joseph Stern; treasurer, W. H. Meier; secretary, Charles J. Hausenauer, and state vice-president, Martin Singer. The chairman of the by-laws committee is Isaac Boyland. Addresses were made by State President G. A. Robinson, L. F. Blumenthal and W. S. Martin, state organizer.

M. M. Wear, president for the state of West Virginia visited the national president at his offices for two days on state matters pertaining to West Virginia.

B. H. Karnes, president of Local No. 1, of Huntington, W. Va., visited Mr. Neff's office on important business on the 6th.

Scene from Essanay's "Bringing Father Around."

On the Outside Looking In

By the Goat Man

I WILL never make a successful film man. I can only work eighteen hours a day at best, and a successful film man must do twenty-six hours every day and Sunday. I refuse to work on Sunday—not for religious scruples, you understand—not that, but because I won't. That is one of the reasons why I didn't hang around the lobby of the Sherman House and try to buttonhole Pat Powers and Dave Horsley and Carl Laemmle last Sunday. It was a regular Moose meeting—a forerunner of perpetual peace that is yet far away. When you have to flit men from coast to coast; cart 'em in coveys to the inter-mountain city at the drop of the hat—there is need for more oil on the troubled water. Gosh! it do take oil, don't it, Mabel?

* * *

No one on the outside will ever know why these unannounced meetings. It's nice to realize that Chicago is the central point where exchange men can air their grievances and lean up against the Circassian walnut moulding to the toast, "Here's how," but the exhibitor must stand it. And he does. There is a choice of programs, if you are good at picking, but it is my notion that the choice is getting to be more and more a problem. The line-up will eventually look far enough into the future to grasp the meaning of to-morrow night's show. There is good reason for the shuffling of feet around the hotel corridors if you make your own deductions. In plain words, gentlemen, there are some very rotten films finding reflection on the screens. You can pay off some of your pressing

Nicholas Cogley. Photo Copyright, 1912, Selig Polyscope Co.

Lillian Leighton. Photo Copyright, 1912, Selig Polyscope Co.

obligations by crabbing a few of the subjects; but you can't get away with it if you play the same racket on every release. It is a safer bet to stand off the creditor than it is the customer.

* * *

I thought the music accompaniment for films had passed on, but I see that Kinemacolor is releasing an organ recital in all its splendor!

* * *

Charley Bauman stopped over in town, en route to New York from Los Angeles. He had Ad Kessel in tow and was hunting a shop to buy overcoats. Ad's b. v. d.'s didn't prevent his knees from knocking. He rattled like a run-a-way in a Bison drama.

* * *

Were I to die this very night; bouquets would soon efface the sight and telegrams would then be sent with orders that they go hellbent and thus allay the fearful dent. But I am only partly dead. The blood is rushing to my head. I ask the braves to rally 'round while they stand firmly on their ground and hear me pound and pound and pound. They stand me off for what is due and cheerfully pull others through. The guy who doesn't need their help, gets his while I sit back and yelp and otherwise portray the whelp. They snicker in their snickersnee and holler in their ecstacy. They rub benzine upon their throat and merrily they gloat and gloat, because they have a tranquil goat! A goat who idly stands the gaff while others offer up their laugh. Who gets the kick from leap to leap and decently elects to peep, while other folks are

fast asleep. The worm will turn, in days to come, when this old goat is on the bum and all the rubbish in the lot has filtered through the melting pot—at least it should, as like as not. When Laemmle got far, far away, his boys turned darkness into day. I stood a chance to browse enough in pictures crisp instead of tough and brought back home a lot of stuff. But now he's fastened down the lid and all the boys have safely hid. He runs the dump in Laemmle style; he burns the brightest midnight "ile"; I miss him always by a mile. We used to hear about the Imp. The thing we get today is limp. It doesn't scream and grin and hop or jump or flip or go ker-flop or stew or fly or dive or pop. We used to hear of Champ. and Gem. but who knows what became of them? And Rex and Victor and Eclair are never here or ever there. They're off with Powers on a tear! It may be good to hoard the dough, but what's the use, I'd like to know? You may wax fat on foreign trade, but that's a glory that will fade. At least I think I'd be afraid. You can't parade your Uncle Sam beyond a tinker's tarnel damn, if I'm a guesser with a guess, who guesses more instead of less and guesses right sometimes, I guess. I've heard about Milano's joys; I never knew the Crystal boys; the Bison's in a dreadful stew; the worst Bill Swanson ever knew and Horsley—why, how do ye do? The bunch who struggle day and night and work the press for all its might should take a trouser's hitch and hike and see what's ailing Little Mike. They ought to share and share alike. Suppose you think, if think you can, that this machine has also ran. We're putting sand into the gears, we're doddering on into the years. We're filling space through eyes with *tears!

*All because the Universal Program is for the *Universal Weekly*, and other weaklies.

The new york Screen Club reports over $1,000 in the treasury, including a couple of checks. And they come right out and name the makers of the checks! Aren't they any good? Take it either way you like. I'm like Eva Tanguay, I don't care.

* * *

Listen to this: H. Tipton Steck (first name, Harry) is raising an awning on his face—beautiful face, too. And George K. Spoor, recently returned from the west, was so favorably impressed with the irrigation prospects out there that he is growing alfalfa on his upper lip. Here's the joke: Vernon Day ditched his'n when he saw the competition. Day is wearing one of these fuzzy fall lids and is making a fairly good stab as imitator of a fly cop. But why the lack of team-work?

* * *

Aubrey M. Kennedy and his stick blew into town last week and blew out again. He was headed straight west for Bill Swanson's California job. Bill goes to 1 Union Sq. and Hal Reid succeeds Aubrey. In other words, they keep on stirring the porridge in the Big U crowd, and a lot of the work is done on limited trains. The commercial coin with the V stamped thereon is responsible for a lot of action when you get it going in one direction. Oh, you little five-cent piece; how we do love to coax you!

Scene from "Chiquita, the Dancer." Copyright, 1912, American Film Mfg. Co.

* * *

On his most recent trip from Edendale, Bill Selig was held up in Arizona, where the eating reminded him of the good old days. A waitress shoved him a plate of griddle cakes and waving the syrup pitcher over him asked, "How'll you have it—zig-zag or all in a puddle." Bill, being used to puddles ordered it that way.

* * *

I'm beginning to believe that the human tongue has a

lot of film makers buffaloed. No, dearest, I'm not thinking of bisoned. Here's why. The maker gets his film all ready for its cinch sailing through the selling scheme that swallows it up. The film is his child. He put his money into it. There were no accidents to help the thrills. When it came out it wasn't all that had been hoped for. In the meantime, it had been named; the titles were finished; the publicity man had finished the heralds and kicked the poster fiend out the back door with the still picture—the best in the lot—and the release day was printed in next week's advances. The house organs had told the exhibitor the film was a feature. The exhibitor—that great sight-unseen victim, who gets his from anywhere—booked the film. The first show in his wayside town had only a small audience who were tumbling out into the crisp evening air for a fresh breath of it.

Miss Emelia Cattaneo, Appearing in Kleine-Cines Films.

Zeke, who is on his way to the next performance, asks Zeb, who has just emerged, "How's the show?" And what does Zeb say? One short word, accented on the first syllable. "Rotten," says Zeb. That's the answer. All the effort; the glitter of the poster; the prattle of the house organ; the money of the maker is suddenly undone by the way of the human tongue. It's a gay life. The human tongue was the first advertising medium. When it says, naming a brand, that the pictures are uniformly good, it means that the maker is playing fair. The maker that plays fair is standing behind his name every minute. He is making the best films his money will produce. I am beginning to believe in the makers who plant their advertisements in these pages, because they want everybody to know they are broad enough to contemplate value when they see it. The human tongue must be made to wag the right way.

Dick Nehls is finding time to write on the subject of "Efficiency in Film Salesmanship," which shows that Dick has some convictions of his own that are well worth sharing.

Broncho Billy's Reception

Mr. G. M. Anderson, director of the Essanay Western Stock Company and known the world over for his character creation of "Broncho Billy," recently underwent a most novel experience when he was given public receptions in the photoplay theaters of two towns near Niles, California, where the Essanay Western company is located. The towns were some fifteen miles apart and Mr. Anderson had received letters from the theater managers inviting him to appear before their audiences in person on the same evening. Nothing daunted, Anderson accepted both invitations, was given a rousing reception at the one theater by an immense crowd, jumped into a waiting automobile, drove the fifteen miles in record time, and appeared before the second cheering audience. Both theaters' programs were made up of "Broncho Billy" films entirely, and Mr. Anderson was forced to shake hands with hundreds of his admirers before he could escape to his car and return to Niles.

Pike's Peak Panorama

A grand panoramic moving picture of the entire Pike's Peak region, together with many motion plays, with different scenic attractions for backgrounds, to be exhibited to millions of people all over the world, has been taken.

Moving pictures were taken of a party of tourists "doing" the Garden of the Gods on burros, and in this scene a "little love scene," as the managers put it, was interwoven. Pictures in the Garden of the Gods will be taken and later on many will be laid in the canon, Manitou, Cliff Dwellers' ruins and elsewhere.

A "wild cowboy" ride down North Cheyene canon, in which twenty-five or thirty people took part, was depicted.

Selig Animal Farm Receives Addition

Three carloads of wild cats, jaguars, panthers, baboons, monkeys and other species of wild animal life from the jungles of Mexico and South America reached Los Angeles recently over the Santa Fe railroad. The big shipment of animals was consigned to the Selig Polyscope Company's wild animal farm near Eastlake Park in Los Angeles. This is the most recent of three large shipments of animals that have reached the Selig farm since the first of the year. They will be used in the production of the famous Selig jungle pictures which have proved so popular to photoplay fans.

Montclair's Restrictions

The first moving picture theatre of Montclair, N. J., for which a license has been granted at the rate of $1,000 per annum, the highest fee demanded by any municipality in the United States, will have to conform to unusual regulations. No person under 16 years of age may be admitted to the theater day or night, unless accompanied by an adult; the theater must be fully lighted, the pictures must not flicker, and all pictures will undergo the censorship of the police commission or an official censor.

Motography's Gallery of Picture Players

HOBART BOSWORTH? Breathes there a picture fan with mental vision so impaired that he does not immediately recall Mr. Bosworth in one of his favorite poses? Surely not; for Mr. Bosworth is one of the most photographed men in the gallery of motion picture actors and has played a repertoire of roles that easily puts him among the leaders as regards variety of characterizations. An excellent artist, expert producer, clever actor, able author, and all-around athlete, but briefly sums up Mr. Bosworth's accomplishments. He was born in Marietta, Ohio, about forty years ago. Marietta knew him for but ten years, as he ran away to sea at the end of that time. His natural talents marked him for the stage. For ten years he was a member of the Daley stock company and leading man for Amelia Bingham, Henrietta Crosman and Mrs. Fiske. The Selig Los Angeles studio has claimed him for three years.

Hobart Bosworth.

BETTY HARTE is everybody's favorite. Dainty and pretty, she makes a charming ingenue and alternate leading lady for the western company of the Selig Polyscope Company. She is wonderfully good as a boy and nature seems to have equipped her especially to play the part of a coquette. This characterization has often been given her and she fits into it admirably. Daring, is one of the attributes that qualified her for the lead in a series of wild animal pictures in which she has many thrilling adventures. Lebanon, Pa., was the birthplace of Miss Betty. It was there she received her education in a Quaker boarding school and developed a talent for acting in the school's theatricals. On leaving school, she became a stenographer, later entered a stock company and also appeared in vaudeville. She and her mother moved to California where, after trying a company of her own, she joined Selig's.

Betty Harte.

KATHLYN WILLIAMS, "the unafraid," has made name and fame for herself in the portrayal of daring roles for the Selig company. No characterization has been too fraught with dangers for her to attempt, and the attempt has always developed into fruitful accomplishment. She possesses talent and beauty, a double talisman which has gained her the popular fancy and, together with her daring, has put her in the position of leading woman for the Selig Chicago company. She plays opposite Charles Clary. "Lost in the Jungle," "Captain Kate" and the "Coming of Columbus,' are among her biggest role conquests. Before joining the Selig forces, Miss Williams was with the Biograph company and, for ten years previous, had been on the legitimate stage where she gained much prominence. In her work at the Selig studio, she has made for the success of the company's wild animal dramas.

Kathlyn Williams.

CHARLES CLARY is a much-experienced motion picture actor. The Chicago Selig Polyscope Company, for which he plays leads, is responsible for the assertion and Mr. Clary says so himself. He has played stock on the legitimate stage in Portland, Ore., achieved New York and the Shuberts and roles with Mary Mannering and Mrs. Leslie Carter. Then the motion picture field, in the way of a Selig contract, beckoned him Chicago-ward and here he has been for two years. According to his own statement he has "stripped to a gee string playing Osceola in 'Witch of the Everglades,' swam in the gulf of Mexico" and "waded Florida swamps in civil war pictures." That was just the beginning, but it and all the other roles Mr. Clary has taken have been enjoyable work for him and hours of entertainment for film gazers. The out-of-door exercise appeals to Mr. Clary and this puts legitimate stage work "out of it."

Charles Clary.

German Ministry Approves Use of Pictures

The German Ministry of Education is considering the feasibility of using the cinematograph in certain courses in the curricula of higher educational institutions. During the present vacation period the large manufacturers of cinematograph films were given an opportunity to show to the designated educational authorities films adapted to such purposes.

A well-known philanthropist has donated to the schools of Berlin two fully equipped moving-picture machines. One of these machines is to be used in the Fortbildungs-Institute fur Oberlehrer (Continuation Institutes for Higher Teachers) and the other in the high schools of greater Berlin. Cinematograph films are now available for anatomical, biological, and bacteriological courses.

Scene from "Maidens and Men," November 4. Copyright 1912, American Film Mfg. Co.

Many schools in Germany are equipped with stereoscopes and also lanterns for stereopticon slides. Pictures for such machines are used in connection with courses in the following studies: Geography, mineralogy, zoology, technics, art, and certain courses in literature where pictures of poets and authors are desired.

New York Screen Club Elects Officers

With men of action on its official list and something more than $1,270 in its treasury, the Screen Club of New York, is starting out in life to the accompaniment of pleasant prospects and prophecies for becoming a powerful organization.

The officers chosen at the meeting of September 28 are: President, King Baggot; first vice-president, John Bunny; second vice-president, G. M. Anderson; third vice-president, Arthur Johnson; recording secretary, Harry R. Raver; corresponding secretary, Calder Johnstone, treasurer, C. A. Willat; members of board of directors for two years: William Robert Daly, Lawrence McGill, Herbert Brenon and Victor Smith; members of the board of directors for one year, Tefft Johnson, Pierce Kingsley, Oscar C. Apfel and C. Jay Williams.

A meeting will be held October 26, when a report will be made on permanent quarters. President Baggot appointed a committee on ways and means to take official action regarding this matter. The following are on the committee: King Baggot, ex-officio, John Bunny, Calder Johnstone, Harry R. Raver, C. A. Willat, Herbert Brenon and Oscar C. Apfel. They say that it is likely the clubhouse will be ready in a very few weeks.

All interested are urged to communicate with the corresponding secretary and enroll before the next meeting. The charter initiation fee is $15. The resident annual dues are $12. The non-resident dues are half the latter amount. Checks should be made payable to C. A. Willat, treasurer.

Chicago Screen Club Being Formed

Following the good example set by their brothers in New York recently, a movement has been started in Chicago by those interested in various phases of the moving picture industry toward the formation of a Chicago Screen Club. About eighteen men connected with different branches of the industry met on Wednesday, September 23, and formed themselves into a temporary committee. Organization plans were discussed and arrangements were perfected for a general meeting of all those interested at an early date. Some time this week a call will be issued to all eligibles and at the first regular meeting of those answering the invitation the temporary committee will be dissolved and a permanent organization effected. It is expected that this movement will meet with the hearty indorsement of all Chicago picture men.

"The Lion Tamer's Revenge"

A Cines Feature

IT'S a Cines two-reel film to be released October 21 depicting a story enthralling, grewsome, dealing with fierce love, fierce jealousy, fierce hatred and quick and awful revenge—the Lion Tamer's Revenge. A cage of twenty lions plays an important part and the story, in its unfolding, inspires an interest tense and anxious.

The role of Antoneo, the lion tamer, is taken by Alfred Schneider. Miss Marcella Meier is Cleo, his assistant and sweetheart. Anthony Novelli is Lieutenant Alexander, who falls in love with Cleo, and Charles Maestro is the clown who spies upon Cleo and Alexander.

The story begins with the evening performance at the circus. It is time for the lion act. Antoneo and Cleo, attired alike in white tights and short fur-trimmed velvet coats, drive twenty lions into the iron-barred arena and there put them through paces that bring them the applause of the spectators. The dangerous act over, the trainer and his assistant bow themselves from the circus ring. A bouquet is tossed to Cleo; it is from Alexander, and

Antoneo and the Lions.

instantly jealousy and hatred transform the smiling face of Antoneo into one of anger. Cleo looks him her reassurance and he is pacified.

Alone in her dressing room, Cleo buries her face in the flowers. Alexander is announced; he tells Cleo he loves her, and she, regardless of Antoneo's anger, acknowledges the return of his affection. Antoneo makes an abrupt entrance and the lovers convert a fervent embrace into a courtly bow and Alexander leaves. Alone with Cleo, the trainer seizes her roughly and as he warns her, "If you love another man, beware!" throws her from him into a chair where she sinks, cowering.

Mad with jealousy and distrust, Antoneo tells his troubles to a clown who offers to spy on Cleo. Alexander and Cleo have a secret meeting; the clown follows them, attaching himself to the rear of their auto and keeping close behind them in their walk through the park. When Cleo returns, the circus people are at dinner. She slips into her seat beside Antoneo. The clown enters noisily a few minutes later and signals Antoneo to go outside with him where he tells him of the day's happening. Antoneo returns to the dining room and in a rage publicly quarrels with Cleo, who seeks the protection of the other women of the troupe.

Again it is time for the evening performance. Tumblers finish their fun-making act and Cleo, on a black horse, gives an exhibition of fancy riding. She manages, unseen, to toss a note to where Alexander sits,

Antoneo Enters Unexpectedly.

just without the ring. The message warns him not to come to the circus again as they are watched.

The clown ingratiates himself in Cleo's favor and she entrusts him with a note to Alexander. He takes the note to Antoneo who opens it and reads, "I will wait for you tonight after the performance. You may trust the bearer of this note.—Cleo." Re-sealing the note, Antoneo returns it to the clown who hastens to Alexander's rooms with it. He promises to wait for Alexander that night at the door and conduct him to Cleo.

It is night. The evening performance is over and

The Clown Reports to Antoneo.

Cleo awaits impatiently the summons of the clown who is to let her know of Alexander's arrival. The clown appears at her dressing room door and Cleo snatches a wrap and follows him. As she emerges from the doorway she is seized by Antoneo and the clown who carry her struggling and gagged to the iron-barred arena where

they mount her on a pedestal and bind her to a circus pole. Placing a wooden screen in front of her they leave her there.

The clown returns to the door where Alexander is awaiting him. He conducts him past the lion cage and into the arena. Alexander shows his surprise at being taken there and attempts to follow the clown out, but the latter slams the iron door and he is a prisoner. Mystified, he looks around and sees the wooden screen, behind which he finds Cleo.

The grated door connecting the lion cage with the arena swings open. The trainer urges the lions forward. Slowly and stealthily they emerge. Desperately, Alexander is untying Cleo's bonds. He jumps from the pedestal and the lions see him. With a bound they reach the pedestal, to which he has returned. He leaps to the arena and for a brief instant struggles with one of the animals. He is their prey. Cleo, her bonds untied, escapes.

In the morning, the lion tamer drives the lions back into their cage and then sends for the police. His defense is, "Lieutenant Alexander foolishly walked into the lions' cage and I could not save him." He conducts the officials

Alexander and Cleo in the Lion's Den.

into the arena where the entire troupe has assembled around the sheet-covered remains. A boot, a cap and coat, lying nearby, are grewsome evidence of the horrible happening. Cleo hides her face on the shoulder of one of the women.

The clown and the trainer testify as to the accidental death of Alexander. The officers are satisfied with the explanation and reach to raise the sheet. Cleo jumps up to prevent them, and, facing Antoneo, declares his statement is a lie and that it was he who lured Alexander to his death. Antoneo springs at her, but is restrained by the officers who take him away as their prisoner, to meet the punishment for his diabolic revenge.

Statistics Show Film Export Great

Fifteen thousand miles of motion-picture films were exported from the United States in the last fiscal year, while nearly 3,000 miles were imported. The exact length of the motion-picture films exported in the year ending June 30, 1912, according to the United States Division of Statistics, was 80,035,302 feet, valued at $6,815,060; the exact length of the motion-picture films imported was 14,274,768 feet of "positives," valued at $825,083, exclusive of other films and plates valued at $179,130, of which the quantity is not stated. A comparison of the exports in 1912 with those of preceding years is impracticable, since 1912 was the first fiscal year in which the quantity of motion-picture films exported (measured in feet) was recorded in the statistical returns to the Department of Commerce and Labor. The fact, however, that photographic goods, of which motion-picture films form apparently about 75 per cent of the total, amounted to nearly 10 million dollars' value in the exports of 1912, against a little over 7 million in 1911 and 4¾ million in 1910, suggests a very rapid growth in the exportation of motion-picture films. On the import side the growth is much less strongly marked, the figures being for "positives" 14¼ million feet in 1912, against 11¾ million in 1911.

A large proportion of the motion-picture films now used in the various parts of the world are manufactured in the United States. About two-thirds of those exported go in the "unexposed" form, ready for use in taking pictures in those parts of the world to which sent. The other one-third is in the completed state, having been utilized in the United States in making finished motion-picture films ready for use in placing illustrations upon the screen. Of the importations, practically all are "exposed" films, views taken in other parts of the world for use in the United States.

Pictures Have Wide Influence

A striking illustration of the influence of the ubiquitous cinematograph is reported by the American consulate at Belgrade. American fashions have recently become very popluar with the young men of that city; there is an unprecedented demand at the local shops for hats, boots, and other wearing apparel similar to that in vogue in the United States; and the American style of hair cutting has come into favor. These innovations are unmistakably the result of the exhibition of moving pictures of American origin. The obvious moral of all this, as the consul points out, is that the cinematograph might be used to great advantage in advertising all kinds of American products. For instance, pictures of American agricultural machinery in operation would probably create a great demand for the thing itself. This plan offers an economical substitute for the actual exhibition of American products in commercial museums and the like.

Railroad Coach as Picture Theater

A special car equipped with motion picture apparatus for the entertainment of the passengers is the very latest in the way of train accommodations. The car is run by the Pittsburg, Harmony, Butler and Newcastle Electric Railway. It is not run regularly but is used for the accommodation of special parties by whom it is chartered for a special run. The car had once been badly damaged and, as repairs were being made on it, the superintendent had a picture machine installed in the rear platform with a small bench upon which the operator stands. The arc light from the trolley supplies the power, which, though it varies with the amount consumed by the car, causes no noticeable flicker. For the exhibition of the pictures, an opaque screen is lowered back of the motorman, the electric lights in the car are turned out and the curtains drawn. A miniature theater is the result.

Edwin August, Not Austin

Motography's Gallery of Motion Picture Players in the issue of September 28, used the name Edwin Austin instead of Edwin August. The latter is correct. The error was unfortunate, but this brilliant Lubin player is so well known that little harm was done by the misreading of the printer's copy. Our apologies to Mr. August, however.

Current Educational Releases

Bee Culture.—Kinemacolor. Depicting the handling and care of honeybees. Thousands of bees swarm in the picture. The eggs and larvae are shown, as well as the section of the comb where the bees are hatching from the larvae out of the sealed cells. The queen bee, being fed by the workers, is an interesting sight, as well as thousands of bees working on the comb, and storing up honey. Men shown gathering the honey from the hives, with unprotected hands, is a revelation to the majority.

Picturesque Scenes on the Potomac River.—Kinemacolor. The beautiful green banks of the Potomac river, with its many interesting and historical locations, and quaint old red brick buildings, are introduced in this picture. Leaving Washington on the famous old Potomac river excursion boats, approach is made to the War College with its magnificent grounds and buildings. Sailing further down the river, old Fort Washington is viewed. As the steamer slowly approaches Mount Vernon, the home of the first president of the United States is seen. On the way to the great falls, the camera catches a glimpse of some little pickaninnies stealthily playing the much forbidden game of "craps," while sheltered in the green branches of a nearby tree; a little outcast with his brother is devouring a huge red watermelon. The picture closes with the wonderful Falls of the Potomac.

Dantes and the Abbe in the Dungeon. From Selig's "Monte Cristo."

The Supposed Body of the Abbe is Cast into the Sea. From Selig's "Monte Cristo."

Roosevelt Film.—Pathe. The picture with Sagamore Hill for a background gives one an intimate insight into the habits of the man, who, in spite of the fact that he is one of the busiest men in the country, finds time for life in the open country. Members of the Roosevelt family are also introduced in the course of the film.

The Old Clock on the Stairs.—Eclair. Henry W. Longfellow's poem familiar to all children as well as to grown-ups. A pretty portrayal of the characters Longfellow created.

Swat the Fly.—Powers. This is one of the most interesting short subjects that has ever been offered in moving pictures. It shows the life of the common pest, which is one of the greatest carriers of disease that we have to contend with. The life of the fly is shown from birth up to the time that millions of them are killed by the children working for prizes, which are being offered by various city governments.

Life in Caucasia.—Gaumont. Shows interesting scenes and traits connected with the people of this part of the world.

A Tulip Study.—Kinemacolor. An exhaustive study of the flower which is one of the first to bloom in the summer gardens.

The Evolution and Life of a Silk Worm.—Pathe. A little worm which weaves the finest fabric known. The manner in which it does its work is clearly set forth by means of excellent photography and beautiful coloring.

Specimens from New York Zoological Garden.—Thanhouser. This picture takes in the famous collections of American Bison, Zebra, Secretary Birds, Rhinoceros, Walrus Flip, Giraffe, Musk-Ox, Pigmy Hippo and other rare animals that have made "Bronx Zoo" a byword for the unusual throughout the world.

Thru Derbyshire Dales.—Eclipse. Picturesque and delightful series of views, typical of English rural life and of what may be seen on a jaunt through the romantic and historic Derbyshire Dales of England.

A Roman's Conversion.—Eclipse. As the title suggests, laid in the period of the early days of Christianity and depicts with vividness and realism the sufferings of the early martyrs and their oppression by the luxurious pleasure-loving and mythological god-worshipping Romans. It is valuable for its historic significance.

Around Constantinople.—Eclair. An animated panorama of those picturesque and antiquated views that abound around the Turkish capitol. Entertaining and educational; a beautiful trip taken without the wear and tear and burden necessary for the long journey to these lands.

Urge Adoption of Pictures in Schools

To secure the presentation of approved moving pictures in the public schools of the larger cities, a determined movement will be launched under the direction of the state woman's and children's department of St. Paul, Minn.

That such a departure from present school curricu-

Scene from "One, Two, Three," or "The Story of a Wager," October 28. Copyright 1912, American Film Mfg. Co.

Among the Mountains of Calabria.—Eclipse. A film of three hundred and fifty feet of beautiful and unusual scenery.

Experiments With Liquid Air.—Pathe. An instructive treatise on the subject and of much value to students.

Submarine Fauna.—Pathe. Showing the growth of beautiful vegetation on the ocean's bed.

The Rubber Industry in Malaysia.—Pathe. The pictures are colored and give a variety of views of the interesting stages of the rubber industry. A study of the native of Malaysia is made at the same time.

Through China.—Eclair. A number of highly instructive and immensely interesting views of a peculiar country and still more singular people. The world's newest republic, beautifully pictured by a staff of high-class cinematic photographers.

lums will be an economic as well as an educational advancement will be urged by the head of the department who is Mrs. Perry Starkweather. Reports recently gathered from the schools of Minneapolis, St. Paul and Duluth on how much money was spent weekly by students for moving picture shows, showed the figure of $83,000.

It will be urged that moving picture apparatus could be installed in the schools of the three cities and operated at a much smaller figure and assure the children, as well as their parents, beneficial entertainment. If efforts to get school boards to take the initiative fail, it is planned to ask the legislature to pass a bill providing that in cities of the first class moving pictures approved by a board of censors shall be included in the school work.

"There is no question of the importance of moving pictures on the mental development of the child," said Mrs. Starkweather. "The moving picture is the most vivid method of story telling for children."

Sans Grease Paint and Wig

by Mabel Condon

Warren Kerrigan.

K-E double R-I, G-A-N spells Popularity!"

And it's Warren Kerrigan that knows it. Why shouldn't he? It's told him in every mail delivery that goes to the western studio of the American Film Manufacturing Company, and by the time Mr. Kerrigan has replied to the writers of the various missives and sent boxes of candy to more than half of them, the fact that he is a matinee idol must be pretty well impressed upon his mind.

O yes, Mr. Kerrigan answers all the gush notes sent him and there was a time when he sent a box of candy with every carefully worded little reply. Ordinary politeness, according to Mr. Kerrigan's interpretation of the term, prompted the former recognition; but the fact of his being a southerner made necessary a more material expression of thanks—hence the candy. But so great in numbers have the letters become that candy donations are limited, and Mr. Kerrigan's inborn sense of politeness is still suffering from the jar administered when he not only had to put a check upon sweet-meat offerings, but went so far as to procure a stenographer to help him answer his mail instead of staying up nights and doing it all himself.

Mr. Kerrigan is not a girl-enthusiast, either. This information developed in an interview with Mr. Kerrigan a few days ago, in the offices of the American Film Manufacturing Company at 155 North Clark street. It was a long-distance interview, R. R. Nehls acting as chief medium assisted at intervals by Omer Doud and William Lee, both of whom appeared from nowhere, seemingly, at the magical name of "Kerrigan," the last named gentlemen keeping the discreet distance of Santa Barbara, California.

Mr. Doud was quite willing to testify to the wholeheartedness of Mr. Kerrigan and the wholly impersonal spirit in which he sends replies and candy to the gush-note writers. More than that, Mr. Doud has never read such conventional yet charming notes. "Their fineness," he contended, as he sauntered back and forth in front of Mr. Nehls' paper-strewn desk, "is due to the fineness of the man." Nobody questioned the fact. "Yes, sir!" and his saunter quickened to a pace. "Kerrigan's an aristocrat and it's his Kentucky gallantry that makes him so nice to the writers of all the love letters he gets!"

"He has a twin brother," put in Mr. Lee as he rested on the back of the chair nearest the door. "He's redheaded."

Mr. Nehls put a timid hand to his own abundance of sunny locks and felt of his mustache, which quite matches his hair.

"He's the greatest home boy you ever saw—" but that was as far as Mr. Lee got for three incredulous people interrupted with the exclamation, "Boy!" whereupon Mr. Lee removed himself from the back of the chair and declared Mr. Kerrigan to be but 23 years old. Mr. Lee's audience, while far from doubting his word, insinuated that Mr. Kerrigan surely was at least 29.

Right here, it looked as though the long distance interview was going to fizzle out, as Mr. Kerrigan couldn't shout his age from Santa Barbara and Mr. Doud, as representative of the trio, refused to accept 23 as authoritative. However, Mr. Lee's memory came to the rescue and obligingly supplied the information that it was two years ago that Mr. Kerrigan was 23 and peace again reigned in Mr. Nehls' sanctum sanctorum.

"He's just crazy about his mother and brother and sister," Mr. Lee resumed. "His sister plays in musical comedy and Warren used to appear in dramatic productions with his brother-in-law, Clay Clement; then, after Clement died, Warren played the lead in 'Brown of Harvard' for two seasons, before coming to us."

"And he's been with us two years," Mr. Nehls vouchsafed, as Mr. Lee departed as quietly as he had come and Mr. Doud was called away to the telephone. "He played in Chicago for six months then he was sent out with our western company. He's a dandy horseman, though we didn't know just how good he was when we picked him to play leads in western pictures. In fact, we were rather afraid the cowboys would 'show him up.' But they couldn't, for he was as good a rider as any of them, and now he's a crackerjack.

"He's a fine actor all right," and Mr. Nehls fixed his gaze upon the latest picture of Mr. Kerrigan, which he had unearthed from the last drawer of his desk to be ransacked. Mr. Kerrigan returned the gaze with a quizical expression on his more than good looking countenance and Mr. Nehls continued, "He used to be known as the 'Gibson man.' And to think that, until I got Kerrigan's word for it, I was of the opinion that he was a Hoosier!"

And Mr. Nehls seemed to feel so badly either about his mistake in thinking Mr. Kerrigan a Hoosier or Mr. Kerrigan's mistake in not being one, that he was left in peace to think it over.

About that Hydroaeroplane Mishap

For the past two weeks, the Chicago branch of the Selig Motion Picture Company has been busily engaged in the production of an aviation picture that promises to be thrilling. Miss Kathlyn Williams, the always popular leading woman of the Selig Company and Max Lillie and Beckwith Havens, well known aviators, are the principal players in the unique subject. During the recent Chicago air meet at Cicero park, Miss Williams made several flights in the biplane of Lillie, as his passenger. These scenes were all recorded by the Selig cameras as part of the picture. After the Cicero meet, the aviators moved their machines down to Grant park on the lake front of Chicago, for the hydroaeroplane meet. Beckwith Havens was engaged by the Selig Company to complete the scenes required for the picture. Henry McRae, one of the Selig producers, and Stanly Twist, of the

business department, were supervising the production. Everything went well until the last day of the meet. Miss Williams made several successful flights with Havens in his hydroaeroplane in front of the cameras without mishap. On Sunday, the last day of the meet, the producers prepared to secure the climax scene, in which Miss Williams, adrift in a disabled motorboat, far out at sea, is rescued from her perilous position by Havens in his hydroaeroplane. When all preparations had been completed and the event was about to be enacted, McRae and Twist were told by the Aero Club officials that they would have to wait until Havens had completed all of the events in which he was entered, before they could produce the required scene. Only one event remained to be completed and Havens was the only one entered in it. This was the grand prize trophy event. In order to win it, the aviator was required to circle the mile crib eight times, carrying with him a passenger. When Havens began to look around for the necessary passenger to accompany him, there was none to be found. Nobody seemed anxious to take a chance in such a race. As the afternoon light was fading rapidly and the picture had to be completed before dusk that day, Mr. Twist volunteered his services, in order to secure Havens for the remaining scenes in motion pictures. Dressing himself in aviator clothes, Twist climbed into the passenger's seat and they were off for the trophy race. Several rounds were made without mishap and many thousands of people were excitedly watching the manouvers of the air craft, when suddenly those on shore saw the nose of Haven's pontoon strike the water and the machine turned a complete summersault on the lake surface. Twist was thrown through the air for about fifteen feet before he struck the water. Havens clung to the wrecked machine, but Twist started to swim the half mile between himself and shore, not taking into consideration the fact that his heavy boots and clothing would soon weight him down. After proceeding about fifty yards he began to feel exhausted and would undoubtedly have met with a more serious fate, if Miss Williams, who had been waiting in the motor boat outside the crib breakwater, and who had been a witness to the accident, had not had the presence of mind to put on full speed and race to the rescue of the sinking man. When Twist was rescued by Miss Williams, he was on the point of exhaustion but outside of a severe chill and a few bruises, he suffered no ill effects. A funny coincidence connected with the affair is the fact that Twist, who is also press agent of the Selig Company, had planned a unique press story in connection with the event. While the originally planned press stunt was brought to a sudden end by the accident, the amount of space that the Selig company secured in the daily papers throughout the country, more than made up for the experience that the players underwent. Another hydroaeroplane was secured the next day and the picture was finished.

Baroness Plays at Picture Show

Baroness von Groyss, friend of Mrs. Jackson Gouraud, is now entertaining the residents of the Bronx with operatic selections on the piano at the Eldorado, a moving picture house, at Freeman street and the Southern boulevard, New York.

The baroness declared she tired of society affairs and thought she would continue to play in moving picture houses in New York. She asserts she is doing this sort of work for educational purposes. Late in 1910 the baroness endeavored to rent a house in Fordham for the accommodation of sixty Igorrotes she had promised to bring from the Philippines and educate in New York, but she failed because the residents of that section drew the color line on the so-called savages.

Photoplays From Essanay's

Some Coming Features

OCTOBER'S last two weeks will bring forth some of the finest dramatic subjects ever put out over the Indian Head trade mark. On October 25, "Sunshine," one of the greatest examples of double-exposure ever released, reveals a feature production finer than Essanay's famous "Out of the Night." In plot, point of production, interpretation and photography, this photoplay is distinctly a masterpiece. The story is enthralling.

Ruth Stonehouse and Harry Mainhall in "Sunshine."

In the quiet of his library good Father O'Brien is reading in the morning paper that Joe Roberts, a condemned murderer who is to die on the morrow, is still silent regarding the motive of his crime. Slowly the old priest searches the pages of his baptismal record, and smiles sadly as he finds he took Joe and his pretty sister Sunshine into the church when they were babies. Visiting Joe in his cell, Father O'Brien finally prevails upon him to tell the story of his crime. Down on his knees before his old friend Joe recounts his life story, and we see him as a young lad promising to care always for Sunshine upon the death of their mother. As the years go by he toils bravely for her, and she comes to meet him each evening, while his fellow workers watch with envious eyes. Then one night Sunshine does not come and Joe hastens home in an anguish of fear, only to find a note on the table from her saying she has gone away to be married and wear diamonds and fine clothes. With his heart snapping in his bosom, Joe sets out on a desperate search for his lost sister. The months pass and still he haunts the dives and saloons but without success. Then one day he is crossing a bridge when he sees a ragged, desolate girl about to plunge into the black waters. It is Sunshine. In the quiet of their little sitting room the poor girl reveals the cause of her misery—a photograph of her betrayer. Crazed with thoughts of revenge Joe watches for the man, and one day tracks him to his apartment, and when they lead Joe away he exults over the fact that the dead scoundrel will never steal another girl's smile. Returning home next day, Father O'Brien sorrowfully enters these records in his book: "Joe Roberts, died August 13, 1912. Sunshine Roberts, entered convent August 13, 1912." The page of both lives is closed forever.

Ruth Stonehouse, in the role of Sunshine, renders a splendid portrayal of the miserable girl, enhancing the short-lived character with a wealth of charming eccentricity that overcomes the sordidness of it all. Harry Mainhall gives a powerful study of Joe Roberts that stands out as one of the finest pieces of dramatic work of the month. Harry Cashman is dominating and altogether excellent as Father O'Brien, and Bryant Washburn handles the "heavy" role well. The ensemble is perfect. "Sunshine" will long be remembered by the photoplay loving public.

On October 17, "The Snare," a gripping dramatic story entwined about the experiences of a girl detective, is released. Tom Ransom, a fugitive from justice, is pursued to the cottage of his aged mother and arrested. Pleading with his mother to believe in his innocence, Ransom is led away. He manages to escape from his captors and the matter is laid before Dayton, a captain of police. Among the articles taken from Ransom is a letter from his sweetheart, saying she has never seen his mother, and a small photograph. Deciding on a plan, Dayton sends for Mary Clement, a clever girl detective, gives her the details of the case and orders her to trap Ransom by gaining access to his mother's cottage through posing as Tom's sweetheart. Mary does so, is charmed with the sweet simplicity of the old lady and learns to love her dearly. An intercepted letter tells her that Tom is expected that evening, and, disgusted with her trickery, she resolves to give him a fair chance to escape. Before her plan is put in action Tom enters and discovers Mary's deception. Furiously he is denouncing her when his mother enters, and he is forced to keep the truth from her. A few moments later the station agent enters with a telegram for Mary. It is from Dayton, advising that the real culprit has been captured, and to drop the case against Ransom. With a prayer of thanksgiving

Beverly Bayne, Lily Branscombe and William Bailey in "The Snare."

Mary explains she must return to the city at once on an urgent matter, kisses Tom's mother goodby, holds out her hand to him, he presses it with a look of deep understanding, then she fades from their lives forever. Beverly Bayne gives a splendid portrayal of the girl detective, William Bailey is forceful and effective as Tom Ransom, Lily Branscombe is sweetly pathetic as his aged mother, and Frank Dayton plays the captain of police. The other roles are well handled by capable players.

"The Warning Hand," released October 18, is a startling dramatic subject, featuring Francis X. Bushman in a powerful emotional role. Jack Wayne, a dissolute young fellow, staggers into his home one evening in a state of intoxication, to find his father on his death-bed. Before the aged man dies he warns Jack to beware the hand of evil, and points to a shrouded painting on the wall depicting a jeweled hand suspended from a sword by a chain. Jack is dazed at the sight of the painting and hurries from the room. After the death of his father, young Wayne loses heavily at cards, and one evening is about to appropriate some funds from his mother's private safe, when he is startled to see the shroud fade from the painting and the hand of evil points directly at him. Frightened, he watches the shroud return into place, then staggers from the room in a panic of fear. Several months afterward, he calls one evening upon his sweetheart, Grace, only to discover his rival, Morrell, seated close beside her. In a frenzy of jealous rage, Wayne is about to murder Morrell, when suddenly a ghostly hand appears in the air before him holding a hangman's noose. Recoiling from the apparition, Wayne realizes the folly of such a step, recovers his composure, enters the room and finds Morrell extending an apology to Grace for not having noticed the engagement ring upon her finger. Five years later Wayne has married and is beset with business difficulties. He attempts to secure a loan from a banker, but his securities are worthless. Seizing upon an opportunity, he takes a blank check from the banker's desk, and that night is about to forge it when the warning hand again appears to him and drops ghostly handcuffs upon his wrists. Leaping up wildly, Wayne discovers they have vanished as quickly as they appeared. A moment later he receives a letter offering him a fortune for some mine holdings. The warning hand has proved his salvation.

Francis X. Bushman renders another of his powerful portrayals in the character of the dissolute Wayne, the dominating figure throughout the entire picture, and a dramatic study tremendous in poise and appeal. Lily Branscombe is the sweetheart, Harry Mainhall

Francis X. Bushman in "The Warning Hand."

Scene from "The Ranch Girl's Trial," an Essanay with G. M. Anderson.

plays Morrell, the rival, and Harry Cashman, in an all too brief moment, gives a striking study of the banker. The remainder of the cast is effectively portrayed.

"The Ranch Girl's Trial," released October 26, is a strong, vigorous drama of the Western border country, with G. M. Anderson. The plot is sensational and replete with thrills. Pepita, proprietress of the town dance hall, is loved by Big Moose, an Indian. Jake Harding, a worthless cowpuncher, also pretends to love Pepita in order to get an occasional drink of free whiskey. Big Moose swears to kill Harding, and is only prevented from carrying out his threat by Pepita. A dance is scheduled for the town hall, and pretty Millie Farnum, of the Three 6 ranch, is invited to go by her sweetheart, Dave Price. That afternoon Harding finds Millie alone, asks her to be his partner for the dance, she refuses and he attempts to steal a kiss. Breaking from his arms, the infuriated girl secures a revolver, but is seen by Dave, who questions her and learns the truth. That night, in the crowded dance hall, the old Virginia reel is in full progress when Pepita goes to the barroom for refreshments. A moment later Jake Harding enters and has Pepita in his arms when they are discovered by Big Moose, who kills Harding with Millie's revolver that is lying on the bar. Pepita assists Big Moose to escape, and places Millie's revolver on the floor beside the body. Determining to save himself, Big Moose summons the sheriff, who arrives in time to find Millie standing over the body with the gun in her hand. The innocent girl is brought to trial, and is about to be convicted when Pepita, unable to endure the tortures of her guilty conscience, springs forward and confesses Big Moose's guilt. The old judge is about to dismiss the court when Dave, with Millie in his arms, declares they wish to be married. So the trial ends with a wedding ceremony and all ends happily.

Mr. Anderson gives his usual sturdy and true-to-life portrayal in the role of Dave Price, and his direction of the entire production is masterly. Beth Taylor plays Millie charmingly, Ruth Selby has the cunning of the Mexican senorita in her portrayal of Pepita, and Brinsley Shaw is splendid in the "heavy" role of Jake Harding. The entire production is a feature.

Space prevents descriptions of Essanay's good comedies for the last of October, but a glance at the photographs scattered throughout the present issue of MOTOGRAPHY will reveal their humor. Watch the next issue for important announcements concerning November feature bookings.

Clergymen View "Pilgrim's Progress"

The clergymen of London, England, were given a private view of the film, Bunyan's "Pilgrim's Progress." The Essanay show-rooms was the place of assembling of the guests and it was there the film was viewed. Ambrosio of Turin, is the maker of the "Pilgrim's Progress" picture production, which is one of especial educational merit.

"Put Yourself in His Place"

Thanhouser's two-reel film, "Put Yourself in His Place," from Charles Reed's novel, will be ready for release October 29. The story is an interesting one and is as follows:

Henry Little, an expert maker of fine tools used in wood carving, is forced to ply his trade in secret, because of the active opposition of a number of his follow-workers. While looking around, he finds a deserted church, and decided to make it his headquarters. This church is on the estate of his uncle, Squire Guy Raby, who has been estranged from Little's mother, practically from the time of her marriage.

While working in the church one evening, Grace Garden, a beautiful society girl, with whom Little was hopelessly in love, staggers in, followed by one Frederick Coventry, her wealthy suitor. The couple had been lost in the woods, and were thoroughly exhausted, when they saw the gleam of light from Little's forge. He revives and cares for them and pledges them to secrecy. Grace keeps her word, but Coventry, whose jealousy has been aroused, carries the news to Little's trade rival, and they decide to punish him.

A number of the working men steal into the church one night, but Little, although outnumbered, puts up a gallant fight, using the coals in his forge to defend himself. He is overpowered, however, and his enemies are about to wreak vengeance upon him, when a party from the great hall, headed by Squire Raby, arrives and puts the would be assassins to flight. In his uncle's house, Little is recognized and Raby, his sister, and Little are reconciled. Later, Little goes into business for himself, and Coventry realizes that he has only injured his own suit.

Although now an employer, Little is still involved in trade troubles, and secretly decides to go to America in connection with certain inventions. In his room in the factory, he writes a good-bye letter to Grace and slips out. An hour or so later, the building is blown up by an assassin hired by Coventry and it is generally believed that Little was buried in the ruins. Coventry aids to strengthen this belief by intercepting letters sent by Little to Grace, and as the inventor's trip to America is prolonged, the girl finally yields to the request of her father and consents to marry Coventry, believing Little dead.

The wedding guests have arrived, and the minister is on hand to perform the ceremony. Grace's companion, Jael Dence, happens to see a telegraph boy approaching the house, and despite the vigorous attempts of Coventry's manservant to capture the telegram, she secures it and takes it to her mistress.

Little Uses the Coals of His Forge to Defend Himself.

Scene from Thanhouser's "Put Yourself in His Place."

The message is from Little, telling her of his many unanswered letters and announces that he will soon be with her. The frantic bride-elect attacks Coventry, but others save his worthless life. Little rushes in, embraces the girl of his heart, and the lovers are at last re-united despite the series of plots designed to keep them apart.

Medical Pictures Used by Goverment

One of the most remarkable pictures taken in the history of the industry was recently done in Kinemacolor. It illustrates the different stages and ravages of venereal diseases. Subjects were secured and photographed at the Cincinnati Public Hospital of Cincinnati, Ohio. Dr. Loomis, a member of the faculty at the University of Michigan, superintended the production of these pictures, and bent his every effort to make these films the greatest help known in their efforts to stamp out this plague.

The medical profession and the Y. M. C. A. secretaries have exerted every effort in the past, in their endeavors to warn young men of the curse of this plague. They have soared in the heights of eloquence, exhausted their vocabulary, in their endeavors to warn and instruct the younger generations. They have accomplished a great deal of good. But for one to see these pictures, the plague stricken infants and children, and young men and women suffering from the primary stages up to the last developments patiently waiting relief in death, with sores and eruptions all shown in accurate tints and colors, is a never to be forgotten warning and lesson.

The United States Government has installed a projection machine in the army and navy hospital at Washington, also arranging to exhibit these pictures at all the army posts throughout the country. The pictures proved such an overwhelming success that arrangements are being made to photograph the development of other diseases.

Many attempts have been made in the past to photograph operations and various diseases. These have not proven altogether successful, as red photographs black. Where there was blood or an open sore, the desired effect was lost. These difficulties have been easily overcome where natural colored pictures have been used. These achievements opened up a wonderful field, as the pictures are a revelation. They make it possible to keep a true photographic record of operations, also proving very valuable as a method of demonstrating in the medical schools.

Who's Who in the Film Game

Facts and Fancies About a Woman You Know or Ought to Know

IT has been your privilege to know something of the ups and downs of the film business, you who read the ever recurring numbers of this particular brand of yellow-backed journal, and you will be surprised to know that with it is identified a real, for sure woman. This woman, because she has dared to follow her own pleasure into the mysterious realm of motography, becomes at once more interesting than her sisters who merely contribute toward the making. Madam Alice Blache, president and general manager, director and producer, makes films. Get that; she makes 'em. There isn't any part of the game she doesn't know. She started early, but she lays no claim of being "the oldest man in the business!"

In the preface to "A Prodigal Father," Alexandre Dumas, fils, said: "Of all the various forms of thought, the stage is that which nearest approaches the plastic arts, inasmuch as we cannot work in it, unless we know its material processes; but with this difference—that in the other arts one learns these processes, while in play-writing one guesses them; or to speak more accurately, they are in us to begin with." What a pity Dumas might not have written of motion pictures, instead of the mastery of his father's talent. He adds, in the next sentence—"One can become a painter, a sculptor, a musician, by sheer study—one does not become a dramatic author in this fashion. A caprice of nature makes your eye in such a way that you can see a thing after a particular manner—not absolutely correct, but which must, nevertheless, appear to any other persons that you wish to have so think, the only correct point of view." Here we have a statement, pertinent to the production of motion pictures. There is no more wonderful a personage than the producer of the motion-picture play—the judge of the scenario; the scientist of optics; the skilled artist; the master of perspective. The look; the silence; the gesture; the entrancing atmospheric combinations—the producers of modern films for exhibition purposes "is born—and made"; there can be no mistake about it.

She Has Dared to Follow Her Own Pleasure Into the Mysterious Realm of Motography.

The biography of Madam Alice Blache will be written some day. It might be written in a dozen lines, so simple, so tranquil, so fortunate has been her life, in-so-far as we are to know, judging from a limited knowledge of it. Madame Blache was born in France, inheriting her good looks from her parents, who were accomplished enough to fit their daughter for higher education. She lived in a household of culture, good breeding and healthy fun. She can easily lay claim to all that constitutes a clever woman; full of epigram and humor in conversation. That she combines the requisites of business is best emphasized by her rather extraordinary position as the dominant figure in her factory and studio, engaging in a peculiarly hazardous occupation. One of the notable charms of this exceptional woman is her abundance of balance and common-sense. If she has a temper, it is always under control.

Madame Blache associated with the Gaumont Company in Paris, when it first engaged in film-making. Her ability, demonstrated through the years of service in all departments of the great plant, won for her the full confidence of the officers. When she married Herbert Blache, she came to America as the dutiful wife and counselor of Gaumont's representative in this country. She was quick to see the possibilities of an independent plant, and with her own money, she organized The Solax Company; built the establishment on a plot of ground joining the Gaumont works at Flushing, L. I.; assumed the presidency, gathered about her the talent required and superintended and managed every detail. It was only recently that the concern vacated the old quarters to occupy a larger, more modern place erected at Ft. Lee, N. J.

Most film folks are familiar with the Solax brand. It is identified with the Film Supply Company program and with new and modern facilities behind it, combined with the fitness of Madame Blache, a still better product will follow.

It is unnecessary to give the lady's age—this is not a biography. The family bible is across the ocean, but don't you recall that there was a little Blache who came to live at Flushing, last summer, and can you imagine that with Papa as president of the Film Supply, and Mamma as the president of Solax, the Baby will grow up and not file his application for a license with the Patents Company?

Madame Blache has very little patience with the film censors. She is French and believes in realism. She

argues that the public should be the judge. No one knows better than she, that pantomine is beset with plenty of troubles at best and that censorship of realistic scenes adds to the producer's burden. Her foreign training and the knowledge of what would "go" abroad has been the innocent cause of an occasional shock when she tried to bring home a strong moral lesson. But at that, cleverness and a record of meeting every situation face to face, has made the Madame great and that the Solax guiding star is a woman seems to be lost in the hurly-burly of business.

Speaking Motion Pictures a Reality

Synchronism of motion and sound has at last been accomplished after many years of endeavor by Dr. Isadore Kitsee, inventor of many valuable electrical appliances, among which are the central telephone system, now used in all telephone exchanges, and several phonographic attachments. Dr. Kitsee has perfected a simple device by which speaking-moving pictures have become a fact. A demonstration through the medium of the Cort-Kitsee Company, of which John Cort, theatrical manager, is president, has been given by Dr. Kitsee.

This synchronization is accomplished by electro-magnetic means, and the horn of the phonograph is situated directly back of the screen, the projecting device being placed in the rear of the hall, after the usual method. In taking the pictures the sensitive film and the phonograph record are made simultaneously. Dr. Kitsee claims for his latest invention that it may be applied to any of the existing types of projecting machines; in other words, that its use will synchronize any phonograph and any projecting machine.

Children to Have Own Theater

At the Kinemacolor projecting room, in New York, a very interesting little pictureplay was exhibited for the benefit of the press. This play, which was shown in two reels and entitled "Other People's Children," is one of a series of children's plays that are to be presented at the Children's Theater, which is already in preparation on the roof of the Century Theater. When this is ready the children will have "no kick coming," for there they can go and be entertained as children should be.

The Kinemacolor pictures are to be a feature of this little theater, which will be a boon to children and mothers as well.

Ticket Scheme Called Lottery

Samuel Germanski, proprietor of moving picture shows in Bridesburg and Manayunk, Pa., was convicted for operating an illegal lottery. Judge Martin allowed the defendant to enter $600 bail pending a motion for a new trial.

Germanski's scheme was to give out prize checks with admission tickets, entitling the bearer to a chance on a lot at Pine Beach. Witnesses to the number of a dozen said that they had been notified that they each won a prize lot and that they paid Germanski $7.50 as expenses for conveyancing. According to the witnesses they have been unable to locate their newly acquired properties.

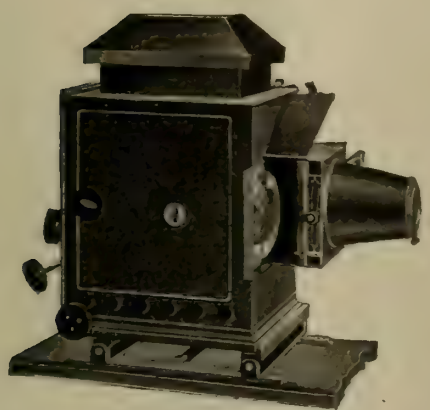
Scene from "The Fisherman's Luck," Essanay.

Of Interest to the Trade

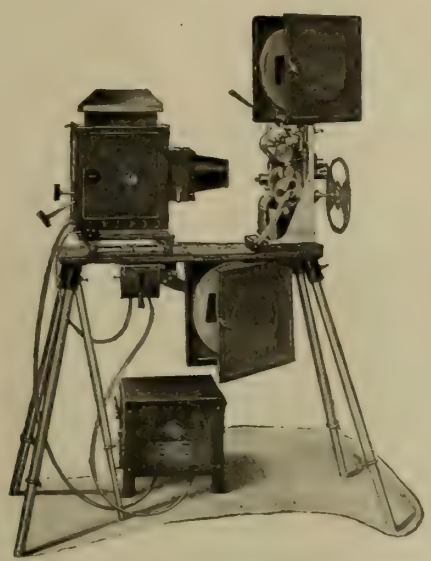
The Edison Kinetoscope

Ever since the invention of the moving picture machine the Edison laboratories have been working ceaselessly to obtain that which is essential to every Kinetoscope—absolute reliability. It was not a question of building a machine that would project good pictures, for that was comparatively easy, but the problem was to produce a machine that would stand the ceaseless wear and tear of daily use, the awful grind that develops weaknesses in projectors which are less substantially built.

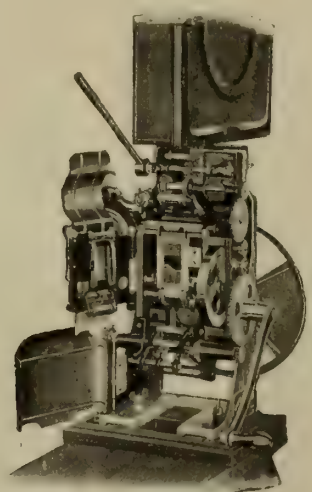
For that reason the Edison Kinetoscope has been constructed with hardened steel shafts and bearings throughout, providing the strongest possible guarantee against wear. The same care which prompted the use of hardened steel in shafts and bearings is manifested in the use of exceptionally high grade lenses and in the selection of all material used in the construction of the Edison.



View of the Lamp House.



Edison Projecting Machine.



The Edison Motion Head.

Since an unsteady machine could not, of course, project steady pictures, the Edison is mounted upon five legs, four of which are exceptionally heavy, having a diameter of one and one-quarter inches. With this firm base upon which to stand it is inevitable that a machine, equipped with a mechanism which is in every particular thoroughly up-to-date, should give a picture that is absolutely steady. The chain take-up assures a perfectly uniform feed and prevents the film from slipping, thus doubly assuring faultless projection.

"Monte Cristo" Released October 14

The House of Selig, famous for its three-reel features, has definitely announced Monday, October 14, as the release date on the longed for and much heralded masterpiece, "Monte Cristo." The three-reel production of this sensational story bids fair to outrival anything this ambitious company has yet accomplished in the way of adapting great novels and plays to the intricate requirements of the photoplay screen. The release will be handled exclusively by the General Film Company. The Selig publicity department is preparing an elaborate assortment of publicity aids for the use of exhibitors showing this film. For over half a century, the name of "Monte Cristo" has been a household word with theater goers the world over, and no play or novel of any age ever had a wider patronage or larger sale than this famous creation from the wonderful brain of Alexander Dumas. Success has been the lot of every legitimate producer who has attempted a revival of the play, and now, for the first time in the history of Motography, the Selig Company has produced the story in picture form. To say the least, the picture production far excels any former attempts by producers of the legitimate stage and a great treat is in store for those who exhibit this film.

Kleine's Cines and Eclipse Films

Two first-class dramas and a split reel containing a comedy and scenic subject make up George Kleine's program of releases for the week ending October 19. For the regular Tuesday release "The Adventure of the Scarecrow" furnishes an unique story which offers excellent opportunity for a successful photoplay. As the title suggests, a scarecrow figures very prominently. The film is replete with exciting dramatic situations, describing the waylaying of a farmer by two bold highwaymen and the final capture of the culprits on the part of the police by a clever ruse involving the scarecrow. The principal roles are taken by Charles Cattaneo, Maurice Anverso, and Carlo Moltini. The latter does especially fine work as the chief of police.

For the Wednesday offering "The Missing Locket" makes a very acceptable film. It shows clearly how a trifling caprice upon the part of a child can lead to grave consequences if not prevented in time. The gradual development of the story from the perfectly harmless to the "near tragedy" is very cleverly brought about as is also the change in the character of the husband from the loving, kindly father to the revengeful, infuriated demon.

The Saturday split reel, comprising "An Abbreviated Honeymoon" and "Among the Mountains of Calabria" furnishes a diverting and interesting subject. The comedy is full of action and is filled with many humorous situations. The story deals with a pair of "newly weds"

who are anticipating a delightful honeymoon; but sad to relate, their trip proves decidedly brief and ends disastrously. The character of the groom is taken by the well-known Cines comedian, George Gambardelli, who, as usual, gets into all sorts of trouble, but comes out triumphantly after all. The film is a good one and will provoke many laughs.

The travel subject is well photographed and will be appreciated by all those that enjoy beautiful scenery and desire to increase their knowledge of other countries.

Hydroaeroplane Expert with Selig

Beckwith Havens, famous exponent of hydroaeroplaning, will shortly be seen in an aviation picture to be released by the Selig Polyscope Company. The picture will be called "A Hydroaeroplane Romance," and is said

Beckwith Havens.

to be one of the most unique and sensational pictures yet made. Besides playing one of the leading parts, Mr. Havens will be seen in several thrilling flights, in some of which, as part of the story, he carries as a passenger, Miss Kathlyn Williams, the Selig leading woman. Miss Williams was the first woman to attempt flights in hydros. During the recent Chicago aviation meet Mr. Havens, with Stanly H. Twist, of the Selig Company, as a passenger, met with a disastrous accident, which might have proved fatal, but for a timely rescue by Miss Williams.

A branch office has been opened in Louisville, Ky., by the Central Film Service Company and hereafter Louisville will be the shipping center for that exchange. The offices of the branch are in the Tyler building, rooms 302 to 305 and a line of supplies as well as a large number of reels will be kept there.

House built by F. J. Grandon, one of the Lubin directors, to be burned down for a photoplay. The people in the picture are the members of the company who played the roles of the rescuers and rescued. The house was a heap of ashes in less than 30 minutes. The scene was taken on Siegmund Lubin's Betzwood estate.

Mutual Considers Increase of Output

The Mutual Film Corporation announces its willingness to put out seven additional reels at no very distant date. At present, its weekly program comprises twenty-one reels but owing to the submission of a number of films from new companies and of foreign feature subjects, a weekly release of twenty-eight reels is being considered.

Selig Wild Animal Players

The illustration depicts a scene in one corner of the Selig wild animal farm at Los Angeles, Cal. The photograph was taken recently during the production of Selig's latest and greatest wild animal masterpiece, "Kings of the Forest," which is scheduled for release some place around the tenth of November. The Selig wild animal farm comprises over 350 acres, entirely enclosed by a huge wall. The farm is situated in one of the most beautiful suburbs of Los Angeles and is recognized as one of the show places of the western metropolis. Starting with a half dozen lions, three camels, an elephant and two bears, Mr. Selig has added and added to his menagerie until he now possesses one of the largest collections of wild animals in the world. The grounds of the animal farm are very beautiful and contain a wide variety of virgin scenery. A

The Selig Lions.

lake of good dimensions is located on the grounds and some of the animals are allowed to swim in its cooling waters.

The Nicholas Power Company

There can be offered no more striking evidence of the rapid growth of the moving picture business, than a brief history of the Nicholas Power Company, widely known as the manufacturer of Power's Cameragraph.

Starting—at the very inception of the moving picture business fifteen years ago—in very modest quarters at 115 Nassau street, with a small factory at 20 Jacob street, New York, Nicholas Power, himself an expert mechanic and inventor of many years' experience, has from the first given his undivided attention to the machine which so worthily bears his name.

Power's Cameragraph has passed through the various evolutions incident to the progress of the business, always keeping abreast of the times; and, with each model, taking a step forward.

In speaking of progress one must produce proofs to back up the claim.

About February 1, 1912, the Nicholas Power Company moved into the present factory, claimed to be the largest manufacturing moving picture machines in the world; occupying over 21,000 square feet and employing over 200 men. Possessed of every improvement known to modern mechanical science, with machines which register to within one ten-thousandth of an inch, with every convenience at hand for turning out the product perfectly and quickly, it was though that facilities were adequate for years to come. Yet on September 14—less than eight months after occupancy—the concern found it necessary to acquire over 7,000 square feet additional, making a total of over 28,000 square feet, and to establish a night shift of ninety men.

The company is now nearly two weeks behind on delivery. It may be interesting to note that it delivered April 3, 1912, machine No. 5000. July 13, No. 6000 was shipped and before this is off the press the company will have passed the 7000 mark—2000 machines in less than six months.

These seem to be ample proofs of good business with this concern.

Publicity Aids on "Monte Cristo"

The Selig Polyscope Company publicity department has, for some time past, been preparing an assortment of advertising matter for exhibitors' use in connection with their campaigns of Selig's latest three-reel feature, "Monte Cristo," to be released October 14. An excellent series of lithographs depicting various scenes from the thrilling romance are now ready for shipment. There are two different styles of eight sheet posters, two different styles of three sheets and two different styles of one sheet. This is the largest assortment of paper that the Selig Polyscope Company has yet put out on a feature picture. A very tasty two-color herald has been prepared and is now being sold to exhibitors, who are already busily engaged with their advance advertising on this release. A most artistic series of ready prepared advertising cuts in one, two and three column widths is another feature of the firm's activity in giving exhibitors every possible aid to make their shows successful. Cuts in all sizes and screens for use in newspapers, and on heralds, etc., is still another phase of this campaign. A press sheet containing several ready-to-clip newspaper stories on the production in question, will be given to exhibitors gratis.

In the production of "The Count of Monte Cristo," the Selig Polyscope Company continues to accentuate its progressive policy as a leader. The undying romance of Alexander Dumas has been variously considered and esteemed by critics, connoisseurs and commentators; but it has held a high place in the minds of a world of readers for three generations. It is a lamentable fact that many of the treasures of fiction are not readily trans-

Scene from "Chiquita, the Dancer," October 30. Copyright 1912, American Film Mfg. Co.

muted with original force and absorbing interest by the camera, particularly if they have not been carefully considered and revised with a view to sustaining the quality of illusion in suspended interest and in swift vivid dramatic pace—conforming with the grace and vital value of the unities so essential to correct dramatic construction. Even favorite plays have sometimes been strangely devitalized by the accurate and pitiless eye of the camera; so that the choice selection of a great work so admirably adapted as "Monte Cristo" needs no apology or explanations, as it will speak for itself in no uncertain fashion.

There may be some facts concerning this masterpiece of fiction worth recalling at this time as peculiarly pertinent and interesting. Dumas, the elder, like some of his famous protagonists in the literary line, diverged for the plans laid out for his life work as a notary's clerk by dropping the notarial seal at every opportunity to seek and bask in the far more congenial atmosphere of the theater. He was the intimate of the great actor, Talma, and drank in the formulas of play-wrighting from Frederick Soulie. His tragedy of "Christine" and his historical play "Henri III," made him his first fortune, but they were dwarfed by the latter success of "The Count of Monte Cristo."

The romance has been called "The Nineteenth Century Arabian Nights," and like his "Three Guardsmen" series has much of his own romantic personality woven in its fascinating fabric—for Edmund Dantes is the ideal Dumas.

"The Life of Christ" Film Completed

To the Kalem company goes the credit for putting the world's greatest subject in motion pictures. "The Life of Christ," complete as the Bible gives it, is reproduced with reverent accuracy. The saintly Mary and watchful, protecting Joseph, together with the three wise men, the doctors in the temple, the throngs to whom Jesus preached, Pilate and the mob calling for the blood of the Savior, Lazarus raised from the dead, and the final scoffing, jeering multitude that witnessed the death on the Cross—all are portrayed amidst the original scenes, with the atmosphere of reality and sanctity that makes the film a masterpiece. The company that made the production has set sail for home after spending nearly a year abroad.

Film Advertising in India

As indicating the progressiveness of an American typewriter company, attention is called to copies of literature sent out by its Calcutta branch regarding a moving-picture machine film prepared for it by Pathe. The film has created a considerable amount of interest in Calcutta, and will probably be used in other parts of India. It forms one of a series of films of commerce and industries, and the typewriter company is making the most of its opportunity in giving publicity to the appearance of the film by writing letters to the different mercantile firms and government offices in Calcutta and sending tickets of admission to all firms who are their customers.

Scene from Essanay's "The Outlaw's Sacrifice."

To Add "101 Ranch Wild West"

The New York Motion Picture Company, will enlarge its possessions the last of October, by the accession of the "101 Ranch Wild West." With the Indians it now has, the oxen, and cowboys, in addition to the ones now with the 101 Ranch Company on the road, the company expects to have approximately 100 Indians, 200 cowboys, 250 head of horses, 36 oxen, about 30 performing horses and also the renowned horse, Snowball, stage coaches, prairie schooners and about 16 real Indian tepees.

The Western company includes Mack Sennett, as director; Mabel Normand, Ford Sterling, Fred Mace and Harry Lehrmann, formerly with the Biograph, who are posing for the Keystone brand of pictures.

The concern announces that all future 101 Bison will be either two thousand or three thousand feet subjects, as they are more in demand by the exhibitor than the one-reel subjects. It is the expectation of the company that about the first of November it will be able to release one 101 Bison and one Broncho feature every week in a variety of subjects, Civil War, historic, Indian military, straight military, pioneer, early days of the West and cowboy pictures.

Camp of Iroquois Indians Pose

A camp of fifty Iroquois Indians is situated in the heart of the Canadian woods, three miles above the Indian village of Caughnawaga. The Indians, resplendent in the garb typical of their race, will pose constantly, for the next three months, for the camera men of the British-American Film Company. The style of picture which will be taken will be different from the average film. Instead of imaginary conflicts between settlers and Indians, the British-American Film Company plans to depict the great battles of Canadian history, and is taking the greatest care that the pictures shall be historically correct. To Joe Whiteagle has been deputed the task of "beating up" the Indians, and of rehearsing them in their parts. Whiteagle, himself, is a native of Caughnawaga, where he is known as Joseph Monich, and is a pure Iroquois Indian. For the past eight years, however, he has been engaged in the production of films in New York, and is an expert in the posing of Indians. Over fifty Indians have been engaged by him, and are busy rehearsing a representation of the "Battle of Lake Champlain."

Employees Pay Tribute to Laemmle

When Carl Laemmle stepped from the Olympic, on his return from Europe, he was greeted by a delegation from the Imp studio and factory. The sentiment of cooperation and good-fellowship which has always marked the progress of the Imp was beautifully evidenced by a floral tribute given by the various employees of the Imp. When Mr. Laemmle walked into the reception room of the Universal Film Manufacturing Company, a smile spread over his face as he gazed upon the monster floral horseshoe which stood upon the table. For many years he has closely knitted the ties between his employees and himself, and there is no man who stands higher in the estimation of the men under him than this genius of the film industry. A brief message of good-will and wishes for prosperity was attached to the tribute.

Motiograph 1913 Model Supersedes 1912

There appears to be some misunderstanding as to the new and old models of the Motograph motion-picture machine.

The 1913 model Motiograph was placed upon the market August 17, 1912. Upon that date, also, the manufacture of the 1912 model Motiograph was discontinued. The 1912 model, therefore, is no longer on the market. With the appearance of the company's advance supplement describing the 1913 model, all previous price lists and catalogs were made void.

The Enterprise Optical Manufacturing Company, however, continues to furnish repair parts for all previous models of the Motiograph, asking only that the purchaser of such parts supply the serial number of the machine for which they are intended.

Advise Chaperons for Picture Shows

That a chaperon be appointed for each motion picture theater in Richmond, Va., was a resolution passed recently by representatives of various women's leagues of the city. If the resolution is passed by the council, it will mean that Richmond will be credited with starting something new in municipal guardianship.

The meeting of Richmond's representative club women, was an initial step toward the formation of a permanent organization to combat the so-called "juvenile vice wave," in that city. A number of resolutions were passed which are to be presented to the different women's organizations of the city and reported back to the committee responsible for them.

But the most original resolution was that which had to do with the idea of appointing chaperons for the picture shows.

Motography Publication Dates

Since MOTOGRAPHY has changed its publication date from the first day of each month to every other week, there has been more or less confusion regarding the time when advertiser's copy should be in our hands. This table will supply the information:

Publication Date	Closing Date
October 26	October 21
November 9	November 4
November 23	November 18
December 7	December 2
December 21	December 16

(Independent.)

MONDAY: Imp, Nestor, Champion.
TUESDAY: Gem, Bison, Eclair.
WEDNESDAY: Powers, Nestor, Animated Weekly.
THURSDAY: Rex, Imp, Eclair.
FRIDAY: Victor, Powers, Nestor.
SATURDAY: Bison, Imp, Milano.
SUNDAY: Eclair, Rex.

Brevities of the Business

PERSONAL NOTES.

Henry J. Brock, President of the Kinemacolor Company of America, has returned from England where he spent the past six weeks. He reports great strides taken in the production of Kinemacolor, and that he has several new features coming over.

John Stepling is again at work in the Essanay studio after divers journeyings elsewhere.

Frank Powell has resigned his directorship at the Powers studio and will devote himself, for a time, to perfecting a number of scenarios.

Martha Russell is preparing for a tour of the southwest in the interest of the Essanay company. She will appear at the various cities in connection with films in which she has been featured and will give a talk on the manufacture of motion pictures and will give the personal side of the players' experiences.

William C. Dowlan is a new Universal man. He is with Director Fahrney of the Nestor studio in California and resigned the position of leading man with the Belasco stock company at San Francisco for the motion picture field.

J. V. Richie has the entire personal charge of the Carleton Motion Picture Company on his shoulders.

Robert M. Foot has been put in charge of the New York office of the Animex Company, a new concern which has studios in San Diego, Cal.

J. D. Tippett is sponsor for the Animated Advertising Association, to manufacture and market original advertising films.

Arthur S. Marks is making the Richard the Third films known everywhere, through his advertising and publicity efforts.

Harry Solter of the Victor company has been on a late but enjoyable vacation.

A. Egan has been given charge of the Italia offices, which are located in the Mecca building, New York.

George H. Wiley of Kansas City, president of the Motion Picture Exhibitors' League of Missouri, called a recent meeting of the members of the association in Springfield. The league put the ban on the establishment of any more motion picture theaters in Springfield, as that city has sufficient.

A. C. Pegg of the Animated Film Company is putting Binghampton, N. Y., and its exposition week, in films to be shown throughout the country.

Hoyt G. Morrow, who was a pioneer operator in the film game, is now manager of the Montgomery Amusement Company in Atlanta, Ga.

Don Miguel Balleste, proprietor of the Grand Hotel Imperial at Bocas Del Toro, Republic of Panama, will provide the city of Bocas Del Toro with its first motion picture theater. He paid a visit to New Orleans, La., where he purchased a complete outfit for his theater, which will seat four hundred.

Arthur D. Hoatling visited Tampa, Florida, in the interest of the Lubin company, to investigate conditions with a view to having the Lubin people make Tampa the headquarters, for the winter, of one of their troupes.

William J. Flynn was elected president of St. Louis Local No. 3 of the Motion Picture Exhibitors' League of America. The St. Louis local was organized by 50 owners of motion picture theaters.

John H. Kelley, of the Thomas A. Edison company, visited Cheyenne, Wyoming, recently to interest the local school board in the new twenty-pound motion picture machine that is especially adaptable for schoolroom use.

T. P. Finnegan, president, and P. G. Cameron, secretary and treasurer of the Motion Picture Exhibitors' League of Texas, are actively interested in making the mid-October convention in Dallas especially successful. They are supported by the following Dallas exhibitors: W. O. Jorgenson, E. J. Hoffman, W. D. Nevills, F. O. Dalton, P. Aronoff, E. W. Copley and Roy Dalton.

Elliott R. Credon of Elmhurst appears among the directors of the Standard Motion Picture Theater Company of New York City, chartered with the Secretary of State, with a capital of $300,000.

Ivan Watson has received instructions from the Gaumont Company, for whom he has been working at Rocky Ford, Colorado, for some time, to prepare for a trip around the world for the purpose of providing the company with a number of foreign scenic films.

H. W. Nixon, president and general manager of the Globe Amusement Company, is rapidly completing half a dozen leases for motion picture theaters in the suburbs of Los Angeles. The fifteen houses which will be erected for the company will represent an investment of almost $1,000,000.

Otis B. Thayer is completing the production, "Judge Lindsey and the Juvenile Court," for the Cheyenne Feature Film Company, in Denver. He intends the subject shall be his masterpiece.

Winnie Baldwin is a new member of the Bison company. She is making good under Tom Ince's management.

Theo Binkly is now playing ingenue roles with the Circle Ranch Film Company at Santa Monica, Cal.

Miss Besserer entertained the Selig "500" club recently, at her home in Edendale, Cal. First prize was won by the guest of honor, Mrs. Gerstad. Others who played were, Miss Hernandez, Miss Hart, Miss Botherton, Miss Hayward and Miss Astor.

Ethel Martelle, a motion picture actress at Santa Monica, Cal., has given up film acting for that of legitimate.

M. Neilan severed connections with the American Film Company at Santa Barbara, Cal., Oct. 5.

Mrs. Gretchen Lederer is now playing leads for the Circle Ranch Company, at Santa Monica, Cal.

Henry Lehman, formerly of the Pathe Company, has deserted New York for Edendale, Cal., where he is assistant director to Mack Sennett of the New Keystone Film Company.

William H. Swanson, general manager of the Universal, has returned to New York after two months spent at Hollywood, Cal.

Chester Byers, a champion roper with the "101" Bison Company, is seriously ill with an attack of blood poisoning. He is in a hospital in Louisville, Ky.

Robert Grey takes to the Universal studio at Hollywood, Cal., experience with Essanay, Selig and other film companies.

George Field has left the Universal Company at Hollywood, Cal., to play leads with the stock company at the Boston theater at Long Beach, Cal.

Anna Schaeffer has completed her three weeks visit with her mother in St. Louis, Mo., and has resumed her duties at the Santa Monica studio of the Vitagraph Company.

Al Garcia of the Selig Polyscope Company at Edendale, Cal., is responsible for the movement being made to organize a baseball league to include every picture company and studio in Southern California. An eight team league will result, comprising the Seligs, Bisons, Kalem's two companies, Pathes, Keystone, Americans and Nestor Universal. Four games will be played on Sunday and there is much enthusiasm expressed as to the venture by both the men and women picture players.

W. Hanson Durham has gone to Los Angeles from Belfast, Me., to begin his duties as scenario editor of the Los Angeles branch of the Vitagraph Company.

Hazel Buckman has left the legitimate stage to join the Bison forces at the Santa Monica studio of that company.

Ray West has been appointed assistant director of the Nestor Company at Santa Monica.

Little Miss Mildred Harris is attending school at a convent in Santa Monica, Cal. Mildred is the leading juvenile actress for the Bison Company and will act in films after school hours.

Carl Michelfelder, he of the Michelfelder chain of theaters in New England cities, out of fifteen applicants was the only one who has succeeded in securing a license for the erection of a theater in Montclair, N. J. This city has repeatedly refused to allow the building of a motion picture theater within its boundaries notwithstanding the pleadings to the contrary of Frank L. Deyer and Horace G. Plimpton, both of the Edison Company, and both exemplary residents of Montclair. How Michelfelder did it is a mystery to the rejected fourteen applicants.

J. V. Ritchey, manager of the producing department of both the Reliance and Majestic studios, is the only man in the motion picture business to extend his supervision over two companies. He is doing it well, too.

Robert Frazer is leaving the Eclair Company to play the title role in "The Millionaire," in a road company.

E. Arnaud, director of Eclair pictures, has gone to France where he will remain for six weeks. The Eclair players and other employees presented him with an Alaskan traveling coat. On returning to New York, he will be accompanied by Mrs. Arnaud who has been in Paris for sometime.

H. A. Spanuth is now sole owner of the General Film Publicity and Sales Company, having bought out his partner, Joseph W. Strouse.

B. P. Schulberg, formerly scenario editor for the Rex company, has joined the Universal Company in the same capacity.

C. J. Seery of the Majestic Film Service Company, is back in Chicago after a busy week spent in New York.

Henry Ott has returned to the Nestor Company and is taking character parts for Director Ricketts.

Frank Montgomery is completing a one thousand foot reel at the Universal's Santa Monica studio, giving the various dances of all the well-known Indian tribes.

Albert W. Hale has left the Thanhouser Company, where he was director, to take up the same line of work with the Majestic Company. Mr. Hale was responsible for such notable Thanhouser productions as "Letters of a Lifetime" and "The Birth of the Lotus Blossom" and takes with him the best wishes of Mr. Thanhouser, Mr. Hite and the entire Thanhouser organization.

Lillian Leighton, the popular character woman of the Selig Polyscope Company's Chicago stock studio, recently proved her versatility by writing several extremely unique scenarios which the Selig Company have accepted for production. Before entering the theatrical business, Miss Leighton was for several years owner and publisher of a morning newspaper in Wisconsin. Her experience in this work is proving of the utmost value to her now. The first scenario from the pen of Miss Leighton has been produced by the Selig Company under the direction of Hardee Kirkland, and will be released October 24. It is called "The Awakening," and Miss Leighton herself plays the principal character.

W. N. Selig, president of the Selig Polyscope Company, has returned to Chicago from a prolonged business trip to his western studios. While in Los Angeles, Mr. Selig made preparations to establish several separate stock companies in the Edendale studios. He plans to have a separate company for each producer's individual use. Each company is to be fully equipped and under the direct charge of the producer selecting the players. As there are now five working producers at the Los Angeles studios, it follows that there will undoubtedly be five complete stock companies at this studio alone. If the experiment works out well Mr. Selig may decide to place the same system in effect at the Chicago and Colorado studios.

William Duncan, leading man of the Selig Colorado company, has for some time past been driving an automobile in order to get used to it. In a film soon to be released at the Colorado headquarters, Duncan will have to drive this car over the top of a cliff which stands some thousand feet in height. Every precaution is being taken to insure the success of the scene and it is expected that this will prove to be one of the most thrilling sensations of recent years. The story will, in all probability, be called "The Sheriff's Son" and will be produced by Marshall Stedman.

Lester Cunio, now stationed in Colorado with that branch of the Selig Polyscope Company, proved his abilities as a hunter last week when he brought in an enormous buck deer after a half day's hunt in the Royal Gorge region. The open season is now on. Spurred on by Mr. Cunio's success, each member of the Colorado company vows that he or she will shoot two deer or bust before the season is over.

Charles E. Inslee, who recently added his talents to others of the Universal family, is playing leads for Otis Turner.

Director Ford is producing dramas decorated with the Broncho brand and has his company encamped at Santa Monica canyon. Mr. Ford was formerly with the New York Motion Picture Company.

Hal Reid has severed his connection with the photoplay reading department of the Universal Film Company and is directing for the Champion.

H. E. Aitken, first vice-president of the Mutual Film Corporation, is expected to return to New York from Europe October 16. His short stay in Europe was imperative owing to his securing the American rights to a number of big features for Mutual patrons.

A. Coleman is a busy man nowadays. As chairman of the entertainment committee of the Motion Picture Exhibitors' League of Greater New York, he feels personally responsible for the arranging of a good time for the many guests expected at the reception and ball scheduled for November 14 at the Palm Garden and is rustling some new features for the event.

R. W. Horne has completed a seven weeks' trip in the interest of the Kleine Optical Company.

Frank L. Hough, Jr., is making Chicago his headquarters for several weeks. He is en route to northern cities and thence to the Pacific coast in the interest of the Thomas A. Edison Company. He is accompanied by his wife.

A. F. Beck is manager of the Universal Film Exchange at St. Louis. The Central Film Service at Indianapolis formerly had his services as manager.

Guy N. Colgate, a Chicago exhibitor, has procured the Illinois state rights from J. Parker Read, Jr., for "The Garden of Allah."

A. M. Kennedy has begun the work of supervising Bison productions in Los Angeles for the Universal Company.

F. L. Lane, of nine years' photoplay house experience in Andalusia, Ala., has sold his three theaters in the south and intends investing in the erection of a modern motion picture theater in the east.

Tony O'Sullivan, director at the Reliance studios, is again to be seen in "Bedelia" roles. He is playing the title part in a new "Bedelia" comedy which he is staging himself.

Mr. and Mrs. Phillip Smalley, after a successful year and a half with the Rex Company, have withdrawn from Rex films, taking with them the best wishes of the management. Mr. Smalley was director and leading man and Mrs. Smalley, known as Miss Lois Weber, was leading woman as well as scenario editor and directress.

William A. Carrol is making good with the Universal where he is earning credit for being a conscientious worker, an excellent rider and all-round man.

Max Linder, leading man for the Pathe Company, will come to America from Paris this winter to be seen in a vaudeville act.

George K. Spoor, president of the Essanay Film Company, is back at his desk after a little run out to Niles, Cal., where business connected with the company's western plant, called him.

Paul Hernaud, manager of the New York Lux Film Company, is in Paris on business which will allow of an early return.

Sylvia Ashton, who weighs only 235 pounds, is one of the Universal Company's latest takers of comedy roles.

Herman Fichtenberg, a share-holder in the Consolidated Film Exchanges of the South, has returned to his home in St. Louis, after a short business stay in Chicago.

Kenean Buel, Kalem's southern company's director, has gone to Jacksonville, Fla., stopping en route at various historical points in preparation for producing Bronson Howard's military story, "Shenandoah."

Gladys Hulette, often seen in Vitagraph and Edison films, is now taking the part of Beth in the dramatization of Louisa M. Olcott's novel, "Little Women."

James L. Magee, manager of the Selig plant at Edendale, Cal., is recovering from the effects of an assault made upon him by E. H. Philbrook, who, it is said, had been discharged by William N. Selig. Philbrook, who had acted as bookkeeper, cameraman and actor, struck Magee and knocked him unconscious, according to Magee, who says there had existed no enmity whatsoever between him and Philbrook. After the assault on Magee, Philbrook called Mr. Selig on an outside telephone and told him he had knocked Magee out. A message, the origin of which is not known, was sent to Magee's mother directly after the happening, informing her of the assault. Fortunately, Mr. Magee's injuries were not serious.

Maxwell S. Bruzzel of Los Angeles, formerly a cameraman for Selig and later the "101" Bison Company, met a tragic death last week in Arizona, while on his wedding journey. The bridal couple were accompanied by Robert Hunt, the bride's father, and were on the way to visit a mining prospect Bruzzel owned. They traveled with a wagon and team. One night, while encamped seventy miles from a town, Bruzzel arose and went for a drink to the canteen in the front of the wagon. Hunt, waking and seeing the object, fired, not knowing it was Bruzzel. The journey to the doctor was made as quickly as possible but the victim of the shot died shortly after his wound had been treated. The widow, who is but seventeen years old, has returned to Los Angeles. Bruzzel was twenty-two years of age and came to Los Angeles from New York two years ago.

Carl Ray, owner of five motion picture houses in Muskegan, Mich., and president of the Michigan Motion Picture Exhibitors' League, has been made president of the newly incorporated People's Theater Company of California, the purpose of which is the building of a large motion picture house, to be fitted with a pipe organ, near Seventh and Hill streets, Los Angeles. The cost will be about $75,000 and the seating capacity 1,000. Lou Somers has been appointed resident manager of the new theater corporation.

Ruth Stonehouse, the youngest leading lady in the world, of motion pictures, will be featured in a dramatic role in "Chains" for Essanay. Miss Stonehouse is a classic dancer as well as an actress.

William Duncan, Selig's western leading man, is practicing auto-driving in preparation for a role to be taken in a play in which his will be the honor of driving a car over the top of a cliff which is several thousand feet high.

Miss Edna Fisher, of the Santa Monica, Cal., motion picture colony, has become the bride of Rollins S. Sturgeon, for whom Miss Fisher was leading lady.

A. F. Mayer, an experienced picture show man, has been put

in charge of the new branch office of the Central Film Service Company at Louisville, Ky.

George K. Spoor returned the past week from Niles, Cal., the home of Essanay's western stock company. Mr. Spoor reports that he enjoyed the trip immensely, and brings back with him splendid plans concerning future activities of G. M. Anderson in some extraordinary western productions.

Farnum T. Fish, the aviator who recently carried an Essanay camera operator in his machine while a moving picture was taken of Chicago's waterfront, is the youngest aviator in the game. Fish is just fifteen years old and is the son of a wealthy Los Angeles physician. He is a pupil of the famous Wright brothers. He and the Essanay camera man were arrested during the recent flights in Chicago for being forced to land in Grant Park because of unfavorable air currents, and considerable space was devoted to the incident in the papers. The Essanay photo-play, snapped from the soaring machine, is a remarkable triumph of photography and novelty, taken under the most trying conditions.

ROLL OF THE STATES.

ARKANSAS.

The Grand theater in Little Rock has just been completed by H. B. Ingram at a cost of about $20,000. Motion pictures will be shown until the beginning of the theatrical season.

CALIFORNIA.

The new Alameda theater of Oakland is rapidly approaching completion. It is being built for the California Amusement Company and will be completed within six weeks.

An open-air amphitheater, to seat 2,000 persons, will be constructed soon at Ganesha Park, Pomona.

A one-story, three room motion picture theater, to cost $5,000, will be erected at 147 Santa Barbara avenue, Los Angeles, by Fred Edmion.

DELAWARE.

Bevan Jordan, representing the Empire Amusement Company, signed a five-year lease on the Avenue Theater at Delaware avenue and Tatnall street, Wilmington.

GEORGIA.

A building permit was issued to J. Maril for the conversion of the structure he is building on Broughton near Abercorn street, into a theater.

A contract has been let to C. P. and E. A. Weber of Cincinnati for the erection of a new theater building at Savannah for the Montgomery Amusement Company.

IDAHO.

The Brand photo-play theater at Boise has been sold to Mrs. Cora B. Allen, of Grangeville. The theater will be remodelled and made up-to-date in every way.

The new theater building of William Burford, a moving picture house, has been formally opened at Lewiston. The structure cost about $25,000.

ILLINOIS.

Marquette Amusement Company, $2,500, moving pictures, has been incorporated in Chicago by Louis Zahler, Morris Schwartz and Arthur Rosenthal.

State Street Theater Company, $6,000, Chicago, has James T. Tank, Jacob D. Poorman, Charles A. Newton as incorporators.

The Indiana Society is planning a supper and moving picture entertainment at the Hotel Sherman, Chicago, Oct. 26. Moving pictures taken during a summer outing at Culver Military Academy will be shown. Among those contributing articles and poems to the souvenir portfolio are Charles W. Fairbanks, Gov. Thomas R. Marshall, George Ade, John T. McCutcheon, William Dudley Foulke, J. M. Studebaker, Gaar Williams, Wilbur D. Nesbit and Father Cavanaugh.

K. Mikelson will build a $7,000 brick theater at 3018 Belmont avenue, Chicago.

W. G. Carnegie, architect, 59 E. Madison street, has awarded the general contract for a theater building to be erected on Michigan avenue near One Hundred and Tenth street, Chicago.

A one-story brick theater building to cost $18,000, will be erected by Fry & Jacobson at 311-23 Montrose boulevard, Chicago.

K. Mikelson will build a $7,000 brick theater at 3018 Belmont avenue, Chicago.

A new picture show-house has been opened at Crystal Lake, by J. Pickett.

Charles Morton has purchased the Colonial theater on North Main street, Bloomington. Guy Strickle who has been managing the house will go to Chicago to take a similar position.

Linderoth & Company, architects, Chicago, have awarded contracts for a theater for Mrs. M. M. Peache, owner. Location 5844 Elizabeth street.

A one-story brick theater will be built at 1640 West Sixty-ninth street, Chicago, by C. Wacker.

A one-story theater and store building, 50x94, is to be built on Fortieth avenue near Harrison street, Chicago, for Rudolph Vacek. It is to be of pressed brick and stucco, have a composition roofing, oak interior finish, hardwood floors, mosaic and tile work.

Wile Brothers, Chicago, will own a two-story store, office and theater building to be erected on Morse avenue near North Clark street and to cost $32,000.

C. B. Burkhardt will convert the old opera house at Homer into a modern playhouse.

A contract has been let for the erection of a new theater on Sixty-third street, Chicago, for the Imperial Theater Company. Cost about $250,000. It will be located on Lexington and Woodlawn avenues.

A contract has been let for the erection of a new theater on Sheridan Road, cost $50,000. Located between Albion and North Shore, Chicago.

Another motion picture house will open in Moline. The Barrymore, redecorated and remodeled, is to take new lease on life, Thomas Keyes of Chicago having entered into a contract which assures the permanency of the enterprise. He has sublet the building from Harry Sodini. A feature which the manager expects to prove a big attraction is the four-piece "lady orchestra," which he has made a distinct part of his two theaters in Chicago.

INDIANA.

The Advance Film Manufacturing Company has incorporated at Jeffersonville; capital stock, $5,000; directors, Michael Switow, Simon Switow, Ernest Carpenter.

Hartford City will have six moving picture theaters during the coming winter, unless competition proves too strong for some.

The moving picture show men are not in a position to question the validity of the ordinance which prohibits children under 14 years old attending the shows unless accompanied by an older person, on the ground that it discriminates against vaudeville houses, Judge Remster of the Marion Circuit Court of Indianapolis has decided.

The Hamilton Amusement Company is building a new moving picture theater at 2116 East Tenth street, which, the company says, will be one of the finest amusement places of its kind in the residence district. It is thought the theater will be ready to open about November 20. It will be a one-story concrete block structure with a stone front and will have steam heat. The seating capacity will be six hundred. Those interested in the company, which was recently incorporated with an authorized capitalization of $10,000, are Charles A. Allen, W. C. Allen and W E. Denoe, the latter having had considerable experience in similar enterprises in the east.

IOWA.

A contract has been let for the erection of a new theater in Des Moines, to be located at the northeast corner of Fifth and Walnut streets.

Leonard Waller will have a new moving picture theater in New London.

KANSAS.

A theater is a feature of a large building that is being put up in Independence by John E. Lewis, proprietor of the Maple Hotel of that city. Independence has at present no adequate amusement place. The Lewis Auditorium, as this new theater is to be called, is in the center of a three-story brick building that extends from Maple avenue to Lexington street, and also fronts on Spring street. The building is the largest in Independence. The theater will be on the ground floor. It will have a seating capacity of one thousand and a stage 24 by 26 feet.

A deal has been consummated at Pittsburg whereby the management of the Palace and Electric theatres is changed. Hal Horton disposed of his interest in the Electric theater to W. H. Daly and Ed. Frazier, and sold an interest in the Palace to his brother, Ernest, who now runs one-half of the show. W. H. Daly has assumed the management of the Electric.

KENTUCKY.

The Advance Film Manufacturing Company has filed articles of incorporation in the office of Frank Spelman, County Recorder at Louisville. The purpose of the corporation is to make, sell and rent motion picture films and to operate theaters in Kentucky and Indiana. The office of the company is in Jeffersonville. The incorporators are Michael Switow, Simon Switow

and Ernest Carpenter, all of Louisville, and the capital stock is $5,000.

The moving pictures of the parade of Catholic societies, which took place during the recent convention of the Federation at Louisville, have been shown at St. Augustine's Hall, on Broadway, below Thirteenth. These are the same pictures that were shown at the Orpheum and received such unqualified praise from Bishop O'Donaghue, that Father Felton, pastor of St. Augustine's, determined to present them at the school hall.

MARYLAND.

An order prohibiting smoking in moving picture theaters was adopted by the Board of Public Safety at Baltimore, and copy of the ordinance has been mailed to the proprietors of all such places of amusement. Building Inspector Stubbs said he had received complaints that smoking was permitted in two of the largest moving picture theaters in the city. He declared that the principal danger was from a panic which might be started from the striking of a match in a darkened theater. "In addition," he added, "there is always the danger of fire from the careless use of a match or the throwing of a lighted cigarette or the stump of a cigar on the floor. It was thought best to stop the practice before we had any serious accidents."

MICHIGAN.

The Temple picture show on East Lawrence avenue, Charlotte, has been sold by Horton Davis to William Wright. Mr. Wright expects to conduct the theater as a five cent attraction, but will change from the trust to independent pictures. Mr. Davis will continue to run the Arcade theater on Main street.

MISSOURI.

Mr. Bruce, owner of the Snow White picture show at Warrensburg, has sold out to the Yale Amusement Company.

Messrs. Minnis, Jarboe & Woodlan, managers of the Star theater in Carrollton, have about concluded arrangements to open a moving picture show in Norborne. In their management of the local picture show they have been most successful and have built up a profitable business by giving only the best pictures. They are also running a similar show at Brunswick.

A contract has been let to John E. Lewis on Maple avenue, Spring and Lexington streets, for the erection of a new opera house in Independence.

NEBRASKA.

The first motion picture show of the Gem Amusement Company, has been opened at Tilden. The company, which has headquarters in Norfolk, has arranged to make the Tilden theater one of the best in the state. Other motion picture shows are to be purchased later.

NEW JERSEY.

A moving picture theater building, 92x118 feet, will be built by the Progressive Investment Company at Bloomfield avenue and Ridge street, Newark. The cost is about $18,000.

NEW YORK.

Alexander G. Bates of Hollis, is among the directors of the Liberty Film Manufacturing Company of New York City, just incorporated with the secretary of state, with a capital of $10,000.

The International Feature Film Company, motion picture film, capital $100,000, has been incorporated by Herbert Miles, 901 W. 110th street; Wm. Steiner, 364 Manhattan avenue, and R. W. Daly, 79 W. 45th street, New York City.

Liberty Film Manufacturing Company, Manhattan, motion pictures, etc., capital $10,000, has formed. Incorporators: Alexander C. Bates, Hollis, Long Island; Henry R. Levine, 67 East 87th street, N. Y. C.; Aaron S. Strauss, 623 Carroll street, Brooklyn.

The American Travel Film Company of New York, has made a series of pictures in and about Schenectady. The film was made for industrial and educational purposes and will be exhibited throughout the United States and Canada, and also rented to the public schools for the purpose of having the children study geography from moving pictures.

An attempt to establish a motion picture theater on Rugby road between Avenues H and I, in the heart of the Oak Crest residential section of Brooklyn, is being vigorously opposed by the Oak Crest Association.

Uptown Holding Company, Manhattan; theaters and moving pictures; capital $20,000. Incorporators: David Goldberg, 110 West 34th street; Maurice Marks, 41 Park Row, Manhattan; William Gildsticker, same.

H. P. Keller, architect and builder, began excavating on October 1 for a moving picture and restaurant building at Main street and Filmore avenue, Buffalo.

A contract has been let for a new theater in Ridgewood, to be located at Green street and Covert avenue, by the Ridgewood Amusement Company.

The contract has been let for a new moving picture theater in Binghamton to cost $15,000.

The Corporation Trust Co., 37 Wall street, reports the following new companies: Standard Motion Picture Theater Company of America, Manhattan, motion picture; capital $500,000. Incorporators, R. Jarlin, M. Lauger, New York City; T. W. Constable, Brooklyn.

A motion picture theater to cost $15,000 will be erected in Binghamton, by a party of Buffalo theatrical promoters. As soon as a satisfactory site is procured, the erection of the theater structure will be begun.

Another moving picture theater is to be built on Broadway, west side, 40.4 feet south of 100th street and will have a frontage of 40.7 feet and a depth of 212.4 feet. It will be one-story high and will be fireproof, being constructed of cast cement and iron. William E. D. Stokes is the owner. The Quincy Amusement Company is the lessee. Henry B. Hertz, architect, has estimated the cost at $35,000.

A contract has been let for the erection of a moving picture theater for John Mason, in Flatbush.

The Oriental Film Producing Company of Manhattan, $10,000, has been incorporated by Edward Margolies, Albert von Tilzer, Isaac Dinkelspiel, 2688 Broadway, New York.

A contract has been let for the erection of the John Cott's New Boston theater, to be located on Columbus avenue, New York.

A contract has been let for the erection of a new theater in Montclair. It will be erected at the corner of Bloomfield avenue and Valley road.

OHIO.

The Exclusive Films Company, Toledo, moving picture films, $10,000, has been incorporated by A. A. Gottschall, Rupert Holland, F. F. Frisder, J. F. Stepp and C. H. Duggan.

A contract has been let for a motion picture theater at the corner of Main and Webster streets, Cincinnati.

A contract has been awarded for the new theater of M. Marcus & Company, to be located on Walnut street, Cincinnati.

The New Liberty Amusement Company, Cincinnati, operating theaters and moving picture exhibitions; capital, $15,000. Incorporators, Philip Schmitt, George W. Hill, W. H. Ford, Fred A. Lamping and Robert Franken.

Two moving picture shows, in the same theater, at the same time and for the one admission are features of the new Oxford theater, Champlain avenue and Ontario street, Cleveland, which opened recently. Manager F. A. Noble announced that his theater is the first of its kind in the country. The auditorium of the theater is divided by a fireproof curtain, making two theaters in one.

"Darkest Cincinnati," the film showing Cincinnati tenement house conditions, taken under the auspices of the Anti-Tuberculosis League, was the basis for a recent Sunday sermon by Rev. Boyd Vincent Edwards, pastor of Christ church. Rev. Mr. Edwards requested Samuel Withrow of the league to furnish him with several hundred heralds, advertising the show, for distribution to his congregation. He told Mr. Withrow that he would urge them to see the film.

A contract has been let for the erection of a moving picture theater in Hyde Park, Cincinnati. It will be located on the north side of Erie avenue.

OKLAHOMA.

Moving pictures of incidents attending the opening of the big fair and exposition at Oklahoma City have been taken and will be sent over the state for exhibition and for advertising Oklahoma City and her great fair.

Arrangements have already been completed for using the films in all of the leading moving picture theaters of the state and in many cities outside of Oklahoma. Another film will also be made early in the spring which will include many places of interest in and around the city.

PENNSYLVANIA.

Boyertown is to have a new theater. It will be erected by William J. Schaeffer, and its dimensions will be 45 by 100 feet, one-story high.

The new theater in Annville will be ready within a few weeks, according to John A. Kramer, formerly of Harrisburg, who is building the motion picture play house.

J. Rose & Son began work on the alteration of the stable at 3323 Chestnut street into a moving picture theater for M. A. Benn. The work, which includes fireproofing and all changes necessary to fit the place up as an auditorium, will cost $10,000.

A contract has been let for extensive alterations on the Pastime theater, on Eleventh avenue, near Fifteenth street, Altoona.

The contract has been let for a new theater to be called the Arcade, in Shenandoah.

The state authorities have approved the plans of the Lyric Amusement Company, of Boyertown, for its building, stating that it is one of the most modern and safest plans for a theater passed upon by the department. The building will be one story, 35 by 100 feet in size and built of brick. It will seat 500. The company is composed of George W. Unger, O. W. Sabold, Newton B. Erb and J. William Schaeffer.

A moving picture house will be erected in Frankford on the south side of Orthodox street, 48 feet west of Paul street, for George H. Chapman. The theater will be 44 feet 9 inches front and rear and 85 feet deep. It will be one story, constructed of brick.

Onyx Motion Picture Theater has opened at Fleetwood. Mr. Kieffer, the proprietor, has spared no efforts to make this an up-to-date place of amusement. He has installed a player-piano and the latest model Edison machine.

SOUTH DAKOTA.

There was exhibited in the lobby of the Idle Hour theater at Aberdeen a new model, 6 A, of the Powers moving picture machine. The machine is called the 1913 model and was exhibited operating just as it does when it throws the pictures upon the screen. It caused considerable comment and was examined by the moving picture fans of the city with considerable interest. The machine is operated by an electric motor and all that the operator has to do is to stand by and see that the power is turned on. Its capacity is 4,000 feet of film or twice that of any former model. It is the first machine of the type to be shipped into South Dakota.

A contract has been let for the erection of a new theater in Aberdeen.

TENNESSEE.

Within the next few weeks one of the handsome moving picture houses in the south will be located in Chattanooga on Market street in the building formerly occupied by Willard Brothers. Walter Wight, of Wight Brothers, is the promoter of the new show house. It will probably be six weeks before the building is remodeled and the first show is put on. All known improvements in the way of ventilation, seating arrangements will be utilized. The mechanical equipment will be the very best and will include a motor generator, which enables the utilization of 500 voltage, which, with the most powerful and perfect lenses obtainable, will afford the clearest and best light possible.

TEXAS..

A. L. Prince of South Carolina has closed a deal with Manager S. P. Colley of the Majestic Theater at Palestine, whereby he will have charge of this handsome playhouse in the future. He is an experienced theatrical man, and says he will make an exclusive motion picture theater out of the new house.

M. L. Levine has let the contract for a brick structure for a moving picture show house at Corsicana. The building is to cost $10,173, and will be located on West Fifth avenue, near the business center of town.

John F. Morris is constructing a brick building on Main street, Dallas, to be used by him as a theatrical and picture show building.

The Mutual Film Corporation, capital $5,000, has been incorporated by J. D. Wheelan, E. T. Porter and C. B. Peterson, at Dallas.

The Kahn and Stanzel opera house at Hallettsville, has been leased to parties from Valasco who will at once install a motion picture show together with vaudeville.

Governor Colquitt made a recent inspection of the penitentiary and convict farms at Huntsville and spent a day at Camp Green, where the women convicts are kept. A motion picture expert accompanied the governor's party, taking pictures of the convicts at work. The films will be preserved among the prison records.

Services illustrated by motion pictures have been conducted at the Starlight Airdome, Brenham, by the Rev. S. W. Thomas of Giddings Memorial Methodist church, assisted by the Rev. M. L. Sheppard of the First Baptist church. The pictures shown were "Cain and Abel" and "The Last Days of Christ." The services have had large attendances.

The Dreamland motion picture theater in Weatherford, was damaged considerably in the recent fire which broke out in the building in which the theater is located.

Mutual Film Corporation of Texas, Dallas, has formed; capital stock, $5,000. Incorporators: J. D. Whelan, E. T. Peter, C. B. Peterson.

W. D. Nevills awarded the contract to Lindsey and Smith, to erect a moving picture house at Dallas.

VIRGINIA.

Mrs. A. E. Thorp will erect a motion picture and vaudeville theater for negroes, at Richmond.

WASHINGTON.

Arrangements have been completed with Ralph R. Earle of New York, chief operator for a motion picture concern, to take a split reel of 2,000 feet of Spokane and vicinity during the Interstate fair.

Ford, Boos and Sherer were awarded the contract for the new Apollo theater, in Janesville.

Managers of moving picture shows in Seattle, have appeared before the license committee of the city council and asked for lower rates. The present fee of $250 is declared exorbitant for some of the smaller houses, and a graduated scale is asked.

Negotiations for the construction of a $25,000 theater building for North Yakima are pending between George T. MacKenzie, of Seattle, representative of Frohman and of Klaw & Erlanger, of New York City, and P. J. Budwalda, representative of the Netherlands American Mortgage bank of Yakima.

The Eatonville Athletic club of Eatonville will install a moving picture show in the new hall. It will install its own electric plant in the hall and run shows twice a week.

WISCONSIN.

Architect John Menger, Jr., is drawing plans for a moving picture theater to be located in Milwaukee on the North side. It is to be one-story high covering a ground area of 32x120 feet. The construction work will cost in excess of $5,000.

George Sedlmayr and W. P. Ortscheid, of Cassville, have purchased a first class picture machine.

S. J. Houver has arranged to open a picture show at 113 East Cook street, Portage.

The Bigon theater, of Oshkosh, has been sold by Timm & Beglin to the Cummings Amusement Company, of Madison.

Rev. Henry Faville, D. D., of Appleton, proposes to give historical and biblical moving pictures under the auspices of the Young Men's Society at the beginning of the regular winter service. He is a successful worker among men.

"I'm The Guy"

(Apologies to G. M. Anderson.)

By Clyde Martin.

When the "Movies" are packed with youngsters
From the front row to the dome
And they're watchin' some husky villain
Steal the ranch girl from her home,
And he hides her in an old hut
Where the poor thing's left to die
And some Spartan hero saves her,
Just believe me, "I'm the Guy."

Then away out in the mountains
Where some miners had hard luck
And would have lost all courage
Were it not for his daughter's pluck,
And some handsome cowboy comes along
As if he dropped down from the sky
And kills fifty or sixty claim jumpers—
Stop your kidding, "I'm the Guy."

When a notice has been posted
That the bandit is at large
And the sheriff asks for deputies
To come over from Red Lodge,
Who is it steals out all alone
Where beasts of the forest cry
And brings Dick Dead Eye back to town?
Just ask me, "I'm the Guy."

When the show shop's full of ladies
Admiring a hero brave
Who several times the week before
Went nobly to his grave;
When they murmur, "Isn't he handsome?"
And watch and wait and sigh
And wonder if the original is real—
Excuse me, "I'm the Guy."

WANTED—To buy all kinds of Cameraphones and Edison Records. Also Cameraphone Films. Al KaDell, Griffin, Ga.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

SELIG 3 REELS

Pictures taken from the famous historical novel by Alexander Dumas. A great production.

VITAGRAPH Oct. 7, 1912 — **AS YOU LIKE IT** — Three Reels

Shakespeare's great play presented by the Vitagraph Company with Rose Coghlan as Rosalind.

Sept. 30, 1912 — **THE MAN HUNT** — Two Reels

A story that always holds interest. This one most vividly told in pictures by the clever Pathe players.

Sept. 16, 1912 CINES'S — **Daughter of The Spy** — Two Reels

Romantic story of Revolutionary days dramatically portrayed, in which Daughter of Spy gives her life in vain attempt to save her Nobleman Lover, betrayed by her father.

Sept. 9, 1912 PATHE'S — **THE BLIGHTED SON** — Four Reels

Story of a son who breaks up his loving family through his wild deeds, undergoes terrible hardships and years after returns home—a man, dramatically told.

August 26, 1912 PATHE'S — **FIRE AT SEA** — Two Reels

Thrilling story of ship afire at sea—All its horrors and heroisms shown in this wonderful picture.

August 19, 1912 VITAGRAPH'S — **RIP VAN WINKLE** — Two Reels

A great film from a great play made famous by the late Joseph Jefferson.

August 12, 1912 CINES'S — **Rameses, King of Egypt** — Two Reels

Romance in the days of the splendor of the Pharaohs

July 29, 1912 PATHE'S — **Don Juan and Charles V** — Two Reels

A wonderful old world story of life at the court of Spain

Colored film

July 22, 1912 KALEM'S — **Siege of Petersburg** — Two Reels

A masterful presentation of the Civil War period

July 15, 1912 VITAGRAPH'S — **The Money Kings** — Three Reels

A vital subject superbly handled by these players

WHAT PROGRESS HAS MEANT.

UNTHINKING exhibitors and those who have newly engaged in the theater business during the last two years are prone to rail against the Motion Picture Patents Company and the General Film Company, but if a little thought was placed on the whole matter a number of benefits would immediately become apparent.

Granted, for the sake of argument, that you personally are dissatisfied with your split of the program; let us defer this discussion until we reach the question logically in sequence.

The first step forward in the chaos of the moving picture industry was the formation of the Motion Picture Patents Company. Those who remember the long drawn out legal fight between the Edison Company and the American Biograph, when hundreds of thousands of dollars were being poured into the legal mills to determine the priority of certain patents will admit that the money thus spent was taken from the business and detracted from the quality of film production turned out. No exhibitor could be certain of building up a patronage on a brand of film, as there was no way he could be certain of obtaining the brand indefinitely or not become subject to costly damage suits as an accessory to patent infringement. It took daring then to line up with one side or the other. Those wishing to show Biograph films had one type of projector taking the wide Biograph sprocket-hole-less film, the Edison Company using the present type of film with sprocket holes covered by its original patent.

The entrance into this mixed-up controversy of Vitagraph, Lubin, Selig and Pathe imported films created a much broader program to choose from, but there was still a shaky feeling to the industry. No great amount of capital for theater purposes could be obtained because there was no security to the business.

While undoubtedly a wise plan for the manufacturers, the formation of the Motion Picture Patents Company was of much greater benefit to the exhibitor himself.

No one unacquainted with the history of business combinations can judge, from the indications now present showing the successful operation of motion picture manufacturing companies not members of the Patents Company, that successful operation could have obtained during the early years of this industry with every manufacturer trying to put the others out of business.

Even the quality of the raw negative was indeterminate. The Eastman Company, although anxious for orders for negative stock, was not willing to provide machinery for turning out a high grade product, with no standardization of product and no means of determining the stability of the business. As a consequence, with the limited experience gained from the photographic field requirements, motion-picture film stock was

Statement of the ownership, management, etc., of MOTOGRAPHY, published bi-weekly, at Chicago, Ill., required by Act of August 24, 1912.

NOTE: This statement is to be made in duplicate, both copies to be delivered by the publisher to the postmaster, who will send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the postoffice.

NAME OF POSTOFFICE ADDRESS

Editor—Paul H. Woodruff, 7025 Yale Ave., Chicago, Ill.

Managing Editor and Business Manager—Ed J. Mock, 6549 Harvard Ave., Chicago, Ill.

Publisher—Electricity Magazine Corporation, 1457-1460 Monadnock Bldg., Chicago, Ill.

Owners: (If a corporation, give names and addresses of stockholders holding 1 per cent or more of total amount of stock.)

Ed. J. Mock, 6549 Harvard Ave., Chicago, Ill.
B. C. Sammons, Blue Island, Ill.
John Crocker, Maroa, Ill.

Known bondholders, mortgagees, and other security holders, holding 1 per cent or more of total amount of bonds, mortgages, or other securities:

There are no bonds, mortgages or other securities outstanding against Motography. Ed J. Mock, *Business Manager.*

Sworn to and subscribed before me this first day of October, 1912.

(SEAL) Leona J. Ekstrom, Notary Public.
(My commission expires August 17, 1914.)

turned out with improvised machinery much the same as the first knit sweaters were turned out by the skeptical stocking manufacturers, high in price and poor in quality as compared with present standards.

The decision reached by both the Edison and Biograph companies to cease their expensive litigation, license each other to operate under the conflicting patents and divert the legal war appropriation to the production of a better film product, was easily the biggest thing done for the exhibitors and the general public up to this time; and followed shortly after by a licensing of Vitagraph, Selig, Pathe, Essanay, Lubin and others, making for a still more solid industry with a recognized standardization of reel footage and the establishment of brands that stood for something, less the harassing fear of patent infringement suits against daring exhibitors.

For the first time raw film stock production became a vital factor and chemistry, science and engineering ability were enabled to play their parts in improving the product. Needless to say, experimentation and scientific research is still going forward to make a better raw negative. To the exhibitors this makes for better projection, a sharper, clearer picture on the screen, with less flicker, more equable light values and a consequent more pleased patronage of his house. To the manufacturer it will make for a quicker negative to handle, ability to take advantage of cloudy and dark days which are at present a tremendous tax on the production cost, less waste of negative and a stronger, clearer picture.

No exhibitor, no matter how strongly he may feel against the arrangement effected by the members of the Motion Picture Patents Company, or for that matter the members of the independent faction, can help but admit that standardization of the various manufacturing methods under this licensing arrangement has improved his program many thousand per cent, and few exhibitors know much of the thousands of dollars the manufacturers are spending monthly devising improvements, little refinements that will go to make a more pleasing film and a more pleased picture show patron. These improvements are not all made with an ultimate gain for their end, except as that gain affects the exhibitor and a resultant larger standing order, but come as a natural result of the pride every manufacturer takes in the product of his factories bearing his name or trade mark. Less attention is paid to the comfort, needs or care of his patrons by the average moving picture theater owner than is paid daily to the niceties of his film product by the manufacturer.

To compare theaters built since the formation of the M. P. P. Co. with the converted stores and shooting galleries which were styled moving picture theaters some years ago will make the most cynical exhibitor admit that organization has accomplished something, has enabled him to make more money, give better shows, fight down newspaper criticism; and when you hear a man bellow about trusts and combinations of capital against him, you can make up your mind that he is a newcomer in the business.

THAT NEW MOTOR DRIVE DEVICE.

AS PROMISED two weeks ago, we are presenting in this issue the description of a recently perfected device for making motor driven projectors safe and fool proof. The details should be clear enough in the article so that no repetition of the description is needed here. It is enough to say that the arrangement is, to all intents and purposes, automatic. It relieves the operator of the purely mechanical duty of turning the crank, but does not leave the irresponsible machine to its own pleasure. In fact, by eliminating the human element it actually increases the factor of safety to practically one hundred per cent. For the machine is always surer than the man. The only problem has been to get the machine.

Granting that the improvement does all that is claimed for it—and it must, or it would not have passed the National Board of Underwriters and the Chicago Electrical Inspection Bureau—it means the adoption of motor drive universally in the course of time.

Many exhibitors do not appreciate the advantages of motor drive. They think of it as merely a relief for the operator—and perhaps they do not see any good reason for relieving him.

But it really means a great deal more than that. We require of our operators that they possess intelligence and experience. We want those qualifications to be at our service in making our shows as nearly perfect as possible. The operator is really the mechanical and electrical engineer, the technical supervisor, of an art that relies wholly for its effects on the sciences of optics and electricity. Yet how can the operator exercise those functions when his attention is wholly engrossed in the turning of a crank?

With a projecting machine of the most improved type, driven by an electric motor, and provided with means for the absolute, automatic safe-guarding of all possible danger points, the operator becomes a vastly more valuable adjunct to the high-efficiency show.

Y. W. C. A. TO USE PICTURES.

The Young Woman's Christian Association has annexed the moving picture machine. The use of the films to convey the association's message of charity, philanthropy, religion and work was commended at a recent conference of Y. W. C. A. secretaries. Miss Lillian Truesdell, general secretary of the St. Paul association, told of the extensive use of picture slides by the St. Louis association. Miss Truesdell recommended the moving pictures as a means of interesting junior Bible students in Bible study, and she told of excellent colored pictures now available representing the life of Christ, Moses, the prophets and apostles. Mrs. Emma F. Byers, Minneapolis, announced that the territorial committee of the Y. W. C. A. would soon have in readiness slides showing scenes in the Holy Land.

Motor Driven Projectors Made Safe

A New Device

WHEN a motion-picture safety device receives the official O. K. of the National Board of Fire Underwriters after months of exhaustive tests, and is subsequently granted a permit to operate by Chicago's Electrical Inspection Bureau, one may feel pretty sure that it is successful. It will surprise some of our readers to learn that one of the projecting machines in the Orpheum theater, on State street, Chicago, is being driven by an electric motor instead of the old-fashioned hand crank. That this can be done in a city which is normally opposed to motor drive is due to a device which has achieved the official approval above indicated.

The reason why so many municipalities have legislated against motor drive for projecting machines is quite obvious. Relieve the operator of the burden of turning the crank, and he is apt to neglect the machine. If he is away from it, and the film sticks or breaks, the motor does not stop. It goes on whirling away, the safety shutter on the machine does not close, and the film catches fire at the gate before he can reach it—for it only takes three seconds of the arc's rays on the stationary film to ignite it.

It is an easy matter, of course, to arrange a spring switch for the motor, the theory being that the operator must hold the switch closed with his hand or foot, thus enforcing his presence. No such spring switch can be made, however, which cannot be kept closed by substituting a weight or a wedge for the hand or foot.

Nevertheless, motor drive is the only satisfactory method of operating a projecting machine—or any other piece of machinery, for that matter. The operator has plenty of intelligence and a thorough knowledge of the art of projection; but he cannot use his brains or his knowledge to advantage while he is handicapped by the necessity of turning a crank. Give him the freedom insured by motor drive, and if he is the right sort he will use his knowledge in improving the show. Make him an engineer instead of an operator, a mechanician instead of a machine, and gradually the whole efficiency of the art will be raised.

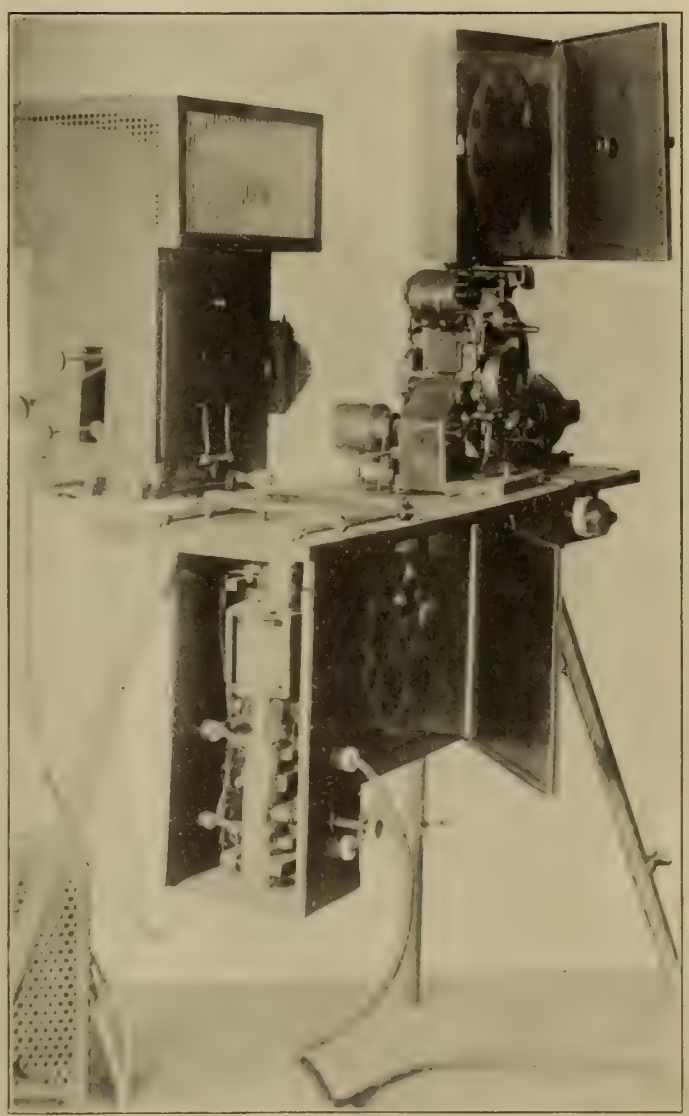
It was a realization of these facts that set Frank H. Foude of the Orpheum theater to work on the problem of a safe, efficient motor drive and protective equipment. That he has succeeded is attested by the approval of the authorities and the enthusiastic support of Manager Samuel L. Levin of the Orpheum.

The features of the device are as follows: If the film stops for any reason whatever, the arc is shut off. If the film breaks, the same thing happens. Unless the film is being properly wound upon the take-up reel, neither the arc nor the motor will operate. It is impossible to turn the rays of the arc upon the film unless the film is moving at a safe rate of speed. In short, if anything happens out of the ordinary the arc goes out instantly and the motor stops.

All this is accomplished without any material change in the projecting machine. Furthermore, the device may be attached or adapted to any type of machine. The additions consist of a governor, seen at the right hand end of the shaft in the photograph, an electrical circuit breaker at the back of the machine, and the special take-up arrangement. At the risk of becoming technical, which is rather difficult to avoid in describing machinery, we will enter into the details of the device.

Referring to Fig. 1, *10* designates the take-up reel which is driven by a belt *11* passed over the pulley *12* and ordinarily over a pulley carried by a shaft journaled in a bearing *13*, driven by the gear *14* of the machine and upon which is keyed the last of the film carrying sprockets.

The invention consists in enlarging the bore of the bearing *13* to receive a bearing forming sleeve *15* in



Appearance of Projecting Machine with New Safety Device.

which the shaft *16* is journaled, said shaft being provided intermediate its length with a film-carrying sprocket *17*, which is secured against rotation on the shaft in any preferred manner.

Journaled upon the sleeve *15* is the gear *18*, which meshes with the gear *14* of the picture machine proper, and also journaled upon this sleeve and secured to the gear *18* so as to revolve therewith, is a pulley *19* over which the drive belt of the take-up reel *10* is passed. It will thus be seen that the take-up reel will be driven directly from the machine in the customary manner, but

that its driving will in no way affect the movement of the film sprocket *17*, other than indirectly through pull exerted upon the film by winding of the film upon the take-up reel.

It will further be seen that as the film is wound upon the take-up reel, the rate at which it is drawn from the machine will constantly increase unless the movement of the film is in some way retarded, and that this increase will result in the taking up of the customary film loop between the intermittent movement of the machine and the take-up reel.

To avoid this and at the same time leave the shaft free to rotate at a slower rate of speed than the gear *18*, is provided the pulley *19* with a spring pressed pawl *30* which engages with a ratchet wheel *21* keyed upon one end of the shaft *16*, said pawl and ratchet being so arranged that in normal condition the pawl is constantly in engagement with the ratchet and therefore locks the shaft *16* against rotation at a higher rate of speed than that at which the gear *18* and pulley *19* revolve, thus maintaining the film loop. At the same time it will be seen that, should the film break between the sprocket *17* and the take-up reel, the shaft *16* will cease rotating, the pawl *20* running idly over the ratchet as the pulley continues to revolve. It will also be seen that, should the film break at any point between the intermittent movement mechanism and the sprocket *17*, the film would be wound until the broken end reached the sprocket, when further rotation of the shaft *16* would cease.

Keyed upon the shaft *16* adjacent the sprocket *17* in a collar *22*, and slidably mounted upon the shaft and in spaced relation to this collar is a sleeve *23* terminating at its outer end in a disk *24*. A plurality of spring arms *25* connect this collar and sleeve and are provided intermediate their length with weights *26* whereby the collar and sleeve together with the weighted spring arms form a centrifugal governor, the construction being such that when the shaft *16* is rotating, the disk *24* is drawn in toward the sprocket *17*, while, when the shaft is station-

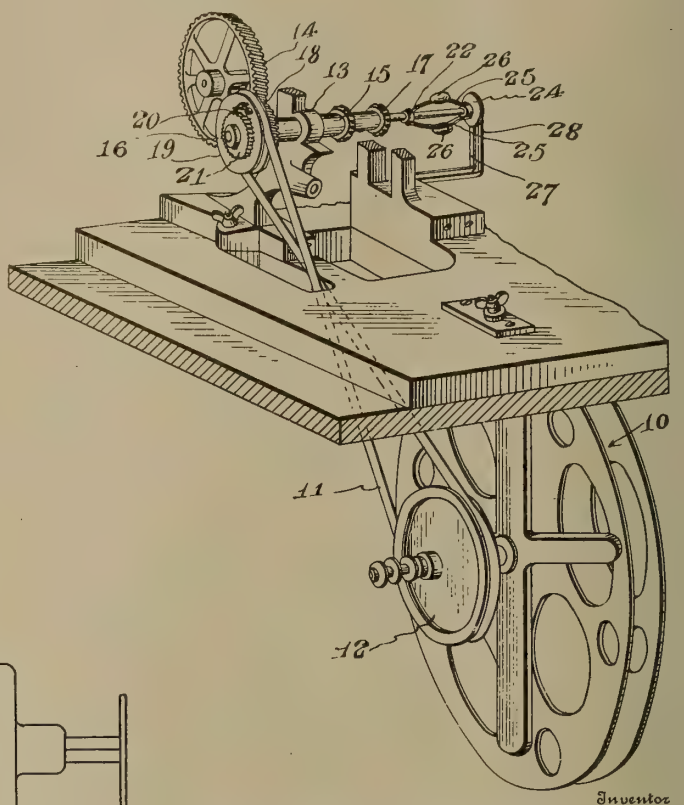


Fig. 1. Diagram of Take-up Arrangement. The Centrifugal Governor shown is not the One Used and Covered by the Patents.

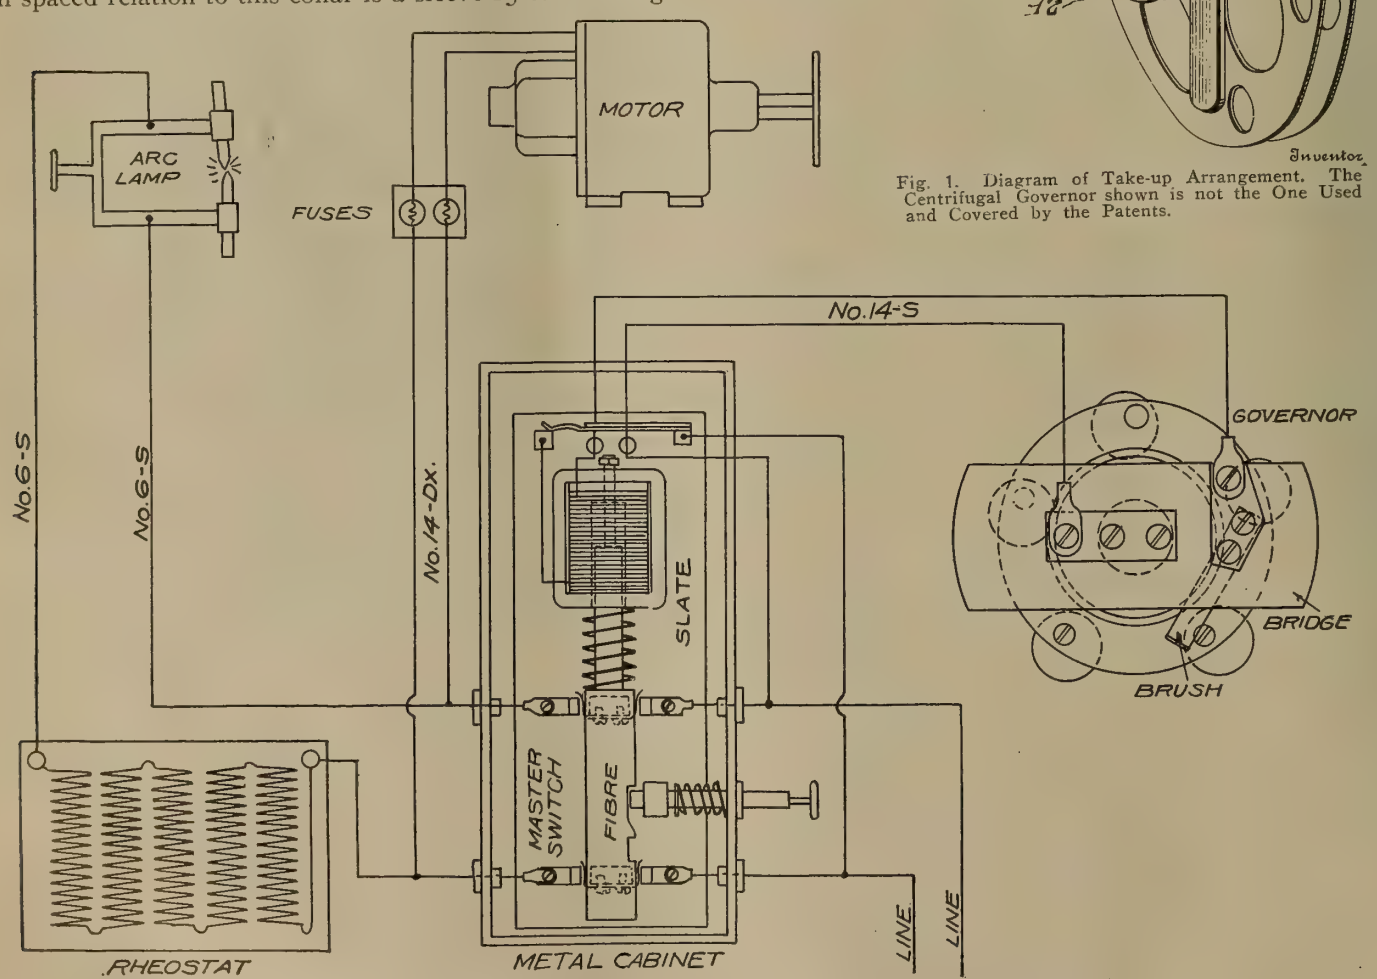

Fig. 2. Wiring Diagram of the Governor and Circuit Breaking Switch in the Motor and Arc Circuit.

ary, the disk engages against spaced contact brushes *27* and *28* which are carried by the frame of the machine and properly insulated therefrom.

The principle of the invention consists in the employment of the mechanism above described as a circuit closer for a circuit adapted when closed to cut off the source of power and light from the machine and so stop the same upon the breaking of the film.

Figure 2 shows the circuit of the arc, motor, governor and circuit breaker by means of which the stopping of the machine and the cutting off of its lights may be accomplished by the closing of a circuit through the solenoid of the circuit breaker.

The double knife switches used are of the usual or any preferred type with the exception of the master switch or circuit breaker, which is provided with a spring catch adapted to be actuated to automatically release and open the switch upon the energizing of an electro magnet. The feed wires are connected to the binding posts of the switch.

From the foregoing description, the operation of the device will be apparent. Presuming the switches closed and the machine in operation, the film is drawn from the machine by the take-up reel over the sprocket *17*, revolving the shaft *16* which is held against too rapid movement as previously described by the engagement of the pawl *20* with the ratchet *21*.

Any breaking of the mechanism of the machine and the take-up reel will then permit the shaft *16* to drop, thus closing the circuit through the circuit closer and the electromagnet, energizing the magnet and so causing it to open the switch *32* and cut off the current to the motor and light, thus preventing further injury to the film.

From the foregoing description it will be apparent that the inventor has provided a simple and effective means for applying a circuit closer of the centrifugal governor type to the conventional form of picture machine without necessitating any marked changes in the structure of the machine itself.

Serious Uses for Moving Pictures

By Arthur R. Ormes*

WITH perhaps twenty thousand motion-picture theaters in the United States alone, patronized by eight million spectators daily, and with new films being produced almost at the rate of one every hour, these in turn being reproduced indefinitely, it may still be confidently said that the era of the moving picture is only at its beginning.

Rapid as has been the growth of interest in motion pictures, and great as has been the improvement, both in the quality of the pictures and the method of their projection, development has been almost entirely along one line, that of reproducing dramatic, or perhaps more often melodramatic, action.

The present indications point to scores of new uses for moving pictures in such ways that within a few years the present output of film producers may have to be increased ten times over in order to meet the popular and special demand. Some of these uses are already realized and have begun to be employed in a small way. Others are not yet even dreamed of. One thing leads to another, nothing succeeds like success, and no man can yet foresee how great a part the moving picture is evidently to play in human life, progress and civilization.

That the motion picture should have in its inception found its most popular application in reproductions of the drama, or in popular parlance, in moving-picture shows, is not to be wondered at. Of all the arts the drama is the most universal in its appeal. To old and young, rich and poor, ignorant and wise, it has a natural and impelling interest. The poor and those of small means constituting so large a share of humanity have, to a considerable extent, had the means of gratifying their love of music, poetry, sculpture, painting and literature through public concerts, libraries, art galleries and museums; but the form of entertainment for which they cared the most had, until the era of the moving picture, been the hardest for them to get on account of the comparatively large investment required to satisfy their dramatic tastes.

With the advent of the motion picture all this has been changed, and the public has not been slow in responding to the opportunity of dramatic entertainment offered at a nominal cost, and in neighborhood theaters so conveniently located that there has been saving of time as well as money for the eager spectator. The general public little realizes the care and skill required in the production of a successful motion picture. A single film may be a thousand feet in length, costing the producer approximately a dollar per foot. When the large number of skilled players, mechanics of all sorts, and the great number of properties required for the production of even the simplest play, are taken into account, not to speak of the further costs of developing, inspecting, reproducing, advertising and selling, it is realized that only through the vastly multiplied use of a particular film can it be placed before the spectator's vision for the customary price of five cents.

Looking toward the newer and still wider uses of the moving picture, these might be roughly classified under the following heads:

Amusement.
Educational.
Commercial.
Advertising.
Propaganda and Social Reform.
Artistic.
Hygienic.
Religious.
Scientific.

This list is suggestive only, rather than final and complete. The different heads here suggested naturally overlap each other in some directions, and are supplementary in others.

Under amusement comes first and foremost dramatic reproduction. While the moving-picture business has developed a special school of actors and actresses who are more skillful in acting before the eye of the camera than their brethren of the legitimate stage, still the latter are not overlooked by the ever alert motion picture producers. Some of the greatest plays at the high-priced theaters are nowadays caught by the lens of the moving-picture ma-

*Chicago Press Club Prize Winning Article, Selig Contest. Copyright, 1912, by Selig Polyscope Company.

chine and reproduced before audiences far greater in size than those who paid to see the living actors. Greater variety than ever before is evident in motion-picture plays, and many new features of an educational nature are being produced. Travel lectures, illustrated almost exclusively with motion pictures, are becoming more numerous and popular.

The educational possibilities of moving pictures are those which promise most in the way of future development. This is likely to be not only through the schools, both public and private, but also through the regular moving-picture theaters, churches, lodges, lyceum bureaus and chautauquas. A beginning has already been made in the use of moving-picture machines in the schools of many cities and towns, sometimes for entertainment purposes along educational lines, and in other instances to supplement the regular teaching in history, literature, geography, ethics, etc. At Farmington, Ill., a municipal moving-picture show using educational films only has been established, and shows a small profit for the town.

For commercial purposes new uses have been and will continue to be found. At several recent business shows manufacturers of heavy machinery used motion pictures to show their machinery in action, thereby saving much cost for freight and depicting operations which it would have been impossible for the machine itself to accomplish within doors.

The advertising and commercial uses of moving pictures run more or less parallel. A great harvesting machinery concern has popularized its product and increased sales by delivering lectures illustrated with moving pictures, showing the manufacture of their different machines, and then other pictures of these machines in operation in the harvest fields. Manufacturers of food products have also taken advantage of the agitation incident to the application of the Pure Food and Drugs Act to show that their output is made under conditions to which a critical public cannot object.

All sorts of propaganda and social reform movements can, and to some extent are being helped forward by means of moving pictures. Recently in Oklahoma City moving pictures showing the uses and application of kindergarten methods have been shown in an effort to bring about the adoption of the kindergarten as a part of the public school system of that city. Following the crusade of the Chicago Tribune against loan sharks, moving pictures showing the evils of the loan-shark business have been widely exhibited, and the use of the motion picture in the hands of social reformers is bound to be more and more potent in bringing about the day of sanitary tenements, pure milk, clean bakeries, etc., in the larger cities.

Painters and sculptors are likely to get new and truer conceptions of the human and animal forms in action, the camera catching much that the eye has failed to see.

The laws of hygiene may be explained more easily through the means of motion pictures than in almost any other way, and necessary truths on which the public health is largely based may be quickly brought to the attention of the rank and file of humanity. Last year the Public Health Department of Chicago utilized the moving-picture theaters in its campaign, the slogan of which was "Swat the Fly!" An Ohio city is teaching its children about the care of their teeth through the instrumentality of carefully prepared motion pictures, and the fight against the White Plague is going to be brought more quickly to a successful issue through the aid of this same modern wonder.

In the realm of religion, churches and religious organizations, some of which at first took an intolerant view of the moving-picture theater, are more and more coming to use moving pictures as an aid in the work they seek to accomplish. Doubters may be convinced of the efficacy of missionary effort in Africa, Asia and other parts of the world through actual moving pictures showing the wonderful results accomplished through the introduction of the spirit and institutions of Christianity. Moving pictures of Biblical scenes are bound to do much toward interesting children and young people in the work of the church.

In the realm of science, pictures showing the actual operation in the building of bridges, dams and other engineering works should be of interest and value. The formation of crystals, the growth of plants, the movements of microscopic animal life, the habits of wild animals and many other phenomena of a like nature, and without end as to number, will be ready to be thrown upon the screen as soon as the possibilities of motion pictures of this character are realized and a demand has been created.

Wet But Working

A little shower doesn't bother the picture maker. The other day a scene was being taken in the Thanhouser open air studio, and the drops began to fall. The studio workers ignored the rain and proceeded to film the interior of an automobile, which is an article around which the story of "Little Girl Next Door," released Friday, November 1, hedges. The picture people were used to wettings during the taking of exterior scenes and but a single umbrella was hoisted—over the photographer. This wasn't so much to protect him as his camera. Cameras are delicate instruments that cannot stand wettings with the fortitude of directors, players and other things about the studio, hence the fairly novel sight here reproduced.

Pictures in the Rain.

Motography's Gallery of Picture Players

WILLIAM WADSWORTH is the "funny man" of many Edison pictures and, reaching far back in the years, is the foundation for the fine character work which has developed in him the power to move people to wholesome mirth. He played with Otis Skinner in his early stardom and with James K. Hackett in "The Prisoner of Zenda." He was in the original production of "Checkers," of "The Resurrection," "The Woman in the Case," "The Kreutzer Sonata," "The Straight Road" and Annie Russell's presentation of "The Stronger Sex." His role of the burglar in "Seven Days," was his last New York appearance, thence by special inducement to the Edison company, and success as a picture play comedian. For comedy is Mr. Wadsworth's forte and he presents it in a variety of character parts that have won for him an enviable reputation as a fun-maker. "It is to laugh," when Wadsworth is in the film.

William Wadsworth.

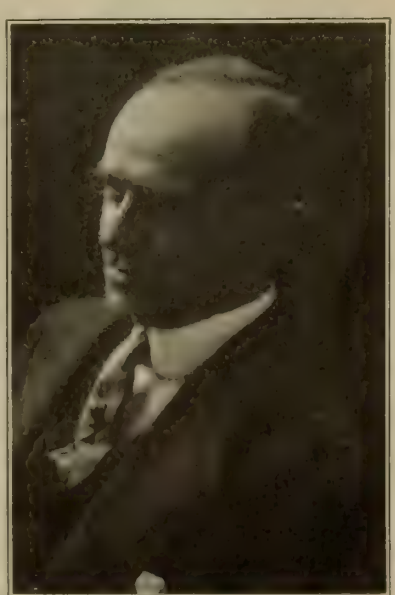
LAURA SAWYER has made friends galore, in the many roles she has taken in Edison films. Her strong personality "gets across," whether seen in drama or comedy. Though she plays both equally well, she is inclined to favor the drama as the term "emotional actress" is one which she especially likes to claim and one which fits her very particularly. The art of facial expression is hers and its subtle varyings, as caught by the camera, makes any work she does complete. Truth and realism are the beacons which have led Miss Sawyer onward and upward and the three form a convincing trio that make for the success of both film and company. Early theatrical experiences paved the way for Miss Sawyer's success as a screen artist. She was with Ada Rehan and she spent several years in the companies of Otis Skinner. "The Battle of Trafalgar" and "The Question Mark" are among her film successes.

Laura Sawyer.

MARY FULLER likes to act and the world in general is glad of it, for it likes to see her at it. She scampers or moves majestically through the film stories marked as Edison's very own, and whether her presentation is that of a coquette or "character," it is bound to be good. While being a coquette is quite a natural process for Mary, character work would seem to call for an older person. But the vivacious Mary has proved that she is "it," too, when it comes to character portrayals. She is alert and active and has the faculty of recognizing humor in whatever guise it assumes. A pretty girl is Mary, but she does not depend on good looks to speed her along the road of popular success. But she does think study a wonderful enlightener and spends much time as a student of photoplay technique. Prettiness plus photoplay knowledge multiplied by vivacity and charm, equals popularity for Mary Fuller.

Mary Fuller.

CHARLES M. SEAY claims not one but many honors. To begin with, he was born in Georgia and when he thought he knew what he wanted to do he studied medicine, but discovered after five years of its acquaintance that it wasn't at all what he was pining for, so he settled the dispute between conscience and desire by going on the stage, which gave three cheers and started him off on a five years' tour of vaudeville circuits. After that it provided him with stock work and the opportunity of appearing with William Faversham and Robert Edeson. With the thinning of Mr. Seay's front hair and the widening of his kindly smile and the horizon of his accomplishments, he made another change. And this time he transferred his talents to the Edison company. That was three years ago; since then, he has pleased many a silent audience, directed films for the Home Kinetoscope and written thirty photoplays.



Charles M. Seay.

In the Fatal Cart. From the Cines-Kleine "A Head for a Head."

Hackley, the Brute

By Opie Read in the Chicago *Press Club Bulletin.*

So often had Hackley been told that he was a brute that had he latterly been offered the courteous appelation of gentleman, he would have been shocked into resentment. But it was Hackley's fault; it is almost always the man's fault, as you of the experienced must know.

Surely it was not Mrs. Hackley's fault, for when her husband won and gave the money to her she pardoned his gambling. But upon his drinking she could not smile. With philosophic intuition she felt that there was nothing in it for her; and often she said "Alonzo, if you could only see yourself drunk I'm sure you'd never drink again," and then the wise woman repeated, "Why shouldn't he see himself in that condition? He shall."

She dialed the time of a souse of perfect abandon, and one evening when he came home there were a number of delighted neighbors to welcome him and there was also a moving picture man to film him.

Then, a few evenings later when forecast said that Hackley would be sober, he was invited, together with the social leaders of the neighborhood, to see himself as others had seen him. Of course, he was deeply humiliated, and while he groaned in ashes his victorious wife beamed upon him a charming reproach and said, "Now, dear, I know you can never drink again. Kiss me."

But among the company there was one who found opportunity, the president of a film corporation, and he said to Hackley: "Most marvelous piece of acting I ever saw. I want you."

And so he paid Hackley a big salary to play drunken shadows, and soon the mortgage on the home was lifted and thrown over the back fence. One night Hackley and his wife sat in a "movie" viewing his latest appearance.

"Dear,' she said, "you don't seem to be so artistic in this one!"

"Because I was sober at the time," he replied; and then with her cheek against his shoulder she said, "Dear you'll have to guard against that," and sweetly she sighed.

Newark Police Enforce Minor Law

At Newark, N. J., strict enforcement of the minor law is demanded by the police commissioners, who have prepared a circular letter to be sent to all the special officers at the various moving picture theaters in the city. The age at which children may attend unaccompanied is 16 years. The circular to the special officers carries with it a sort of penalty for a failure to enforce the law, in that the officer is liable to lose his commission. This action is the result of a request made by Alderman Maurice H. Walsh, who stated that, owing to the limited number of inspectors, the license committee could not handle the work alone.

"We want the law enforced," said the alderman. "Reports have come to us that many children who are under age are permitted to enter some of these theaters, and our work has been criticised."

On the Outside Looking In

By the Goat Man

I SAW an Imp at the Empress theater, Sixty-third and Cottage Grove, last Saturday night. The Empress is a 10-20-30 Sullivan-Considine house, and this Imp was used as a chaser. It should be retained in that capacity, although I would like to see it again. I've seen bad ones, but never anything to compare with this Imp. It was so wretchedly rotten that the audience fairly haw-hawed. Sorry the title was missing or I would name it. At any rate, the old folks had been served with a notice that the homestead was to be taken from them unless they came across with a thousand beans in the jerk of a lamb's tail. Tears followed and the beautiful, young female grandchild (couldn't have been the daughter) was about to sacrifice herself, when enters the vile Simon Legree with the mortgage. Gee, he was a villain alright, alright. There was hair on his teeth. Sure, he'd fix it if he could have Lucy. When the old folks protested, the bad man from Bitter Creek kicked over the table and chairs and snarled loud enough to fetch in the farm hand who had been digging for treasure under the grape arbor. The f. h. would raise the money. He lammed his left breast and hugged the girl in the presence of the guy with the mortgage. Then Lucy went out in the back yard and leaned against the corner of the house to think it over. She got restless waiting for the arch fiend and his gang to get into the picture with a piece of crepe. It was to be a kidnapping—do you get me? But grandpa was wise. He smelled the rat. He was there to knock down five husky street-cleaners and then pose till the villun snapped the trigger on four wet cartridges. Grandpap fell on the third wet one. The gun didn't fire till the fifth, but no matter. Meantime, Bill, the hero, was finding treasure by the gooseberry bush near the orchard fence. He had a ditch-digger's long handled spade and was throwing dirt for the record. Pretty soon, when you couldn't see him for dust, he struck a baby's trunk—a nice new one—filled with bundles of new blotters and sample seed bags all purporting to be the real stuff. He was terribly cool to come into such great wealth and he lugged in the whole exhibit just as the fambly were kneeling down to pray for deliverance or something. With a hero's prerogative he grabbed the mortgage and tore it up. The duck with the black curls helped himself to a pack of cardboard and beat it up stage. Hold your breath, please, for this film isn't through the mill yet—easily 150 feet to come. You remember that the trouble-maker dropped grandpa with his rusty twenty-two on the fifth trial? Well, it seems that grandpa got hurted—shot through the hand, maybe, for he had it all done up in a rag when Bill kissed Lucy in the previous scene, and

"A Heart in Rags," Oct. 30. Copyright, 1912, Selig Polyscope Co.

Waiting for Her Husband. From Eclipse-Kleine, "The Queen of Spades."

now that the mortgage had been cleared away on the records, he was free to prosecute. Mind you, this is a rustic—a real out in the country show. Well, grandpap rushes out and calls a copper, who was passing through the front yard, just under the peach tree at the right of the path. Easiest thing in the whole thousand feet—cop No. 37, N. Y. P. D.—right handy, like that. Doggondest rotten fil-lum (apologies to Fred Herrington) I ever saw. No wonder Elbert Hubbard calls 'em "movies."

* * *

There's always something steeping on the independent hearth; there is no hope of keeping those fellows on the earth. I wonder if you've tumbled to the depth and breadth and range and how they have it jumbled as respecting the exchange. The way the wind is blowing, it's ripping out the keel and there is no way of knowing where you're going to get your reel; for should you make selection, or choose from either brand, you'll meet with some objection and your order will be canned. The Universal had it, or did, as like as not until the Mutual grabbed it, to chuck into its pot, or else the Mutual fellows, tinkering with the winch, or fussing with the bellows gave the Big-U crowd the cinch. You can't tell how it's going, but you know it's on the way and the seed that they are sowing will harvest in a fray. I can't enthuse, my brother, with the scheme as it is mixed; the fire is all a-smother; it really should be fixed for the licensed bunch are resting upon their patent right, while sleuths are now infesting the independent plight. All exhibitors are crying and hoping for a mend, but what's the use of trying—there's going to be no end!

* * *

Won't somebody please steal Bert Adler's shears? Bert is a great cut-up alright, but I don't understand what grudge he holds against his still pictures.

* * *

John Rock killed a pair of fish hawks, on a recent pilgrimage to Kankakee county, and brought them back to Chicago, where he had them stuffed. John has never felt right since the eagle flew off of Montgomery Ward's tower!

* * *

Too bad that the Kay-Bee outfit didn't use a bull instead of a buffalo for their original trade-mark. We have certainly had enough bull on the subject. Everybody won.

* * *

Big Bill Sweeney was in to see me the other day, and after he had been tucked away in the big chair that I have provided for his visits, I noticed that his eyes were tear-stained. Think of Big Bill Sweeney crying! He was sorry that I had made the discovery, but it leaked out that he had been abused. He had blown up for the first time in his life and he was sore at himself. But at that, they were honest tears. I tell you the competition I am having, holding this goat job, is something fierce. Nearly everybody hands it to me all the time. Only once in a while do I get a real joy thrill. The trouble with Bill was the total lack of joy reels. He had been surfeited

with lemons till he was peeved in the body and as a result he exploded. I gave him eight new lessons in the goat business and a cigar out of the Class A customer's humidor and sent him out feeling like a wounded ex-president. By the way, you don't want to forget Big Bill Sweeney when you vote. He's piling up friends.

* * *

Can you beat it? Here comes a lawyer's statement that a certain band of independent film-makers have won their case in court; that they have had "a cash sum of many thousand dollars" turned over to them; that they have recovered "nearly a half million dollars" in stocks and bonds and that they can go right ahead and use certain trade-marked brands till they are black in the face. I wish that I might refer to four pages of advertising in the rear of this book for further harrowing details, but I can't. I wouldn't feel right about it if I could, but I'm not going to tell why—at least, not this time. But then, this lawyer got his for telling me all about it and I am supposed to treat the matter fairly. So I will. Then I find four more advertising pages, elsewhere, that tells me this lawyer-man is just like some other lawyers. His story isn't so. These same pages wind up with "Who Wins?" There are flags fluttering all around and they make me nervous. Somewhere I saw the statement that the crowd that got the hundreds of thousands in cash and stock got nothing but "ten feet of title." Mercy, how perfectly scandalous! I suppose that a good Indian—one who is actually dead, you know, would keep still in a time like this, but I'm not a good Indian. I am all het up. I can't be good. I know that the money that leaks through legal knot-holes might better be spent and spent a whole lot better in improving certain film brands and advertising them in a legitimate way in film papers that are read. There are a lot of men in New York who still think there is only one film paper. Between you and me there is only one that is being *read* and you don't have to jump up to find a copy at that. There is a vast amount of country between New York and Los Angeles, and it isn't exclusively used for railroad purposes. Occasionally you will find a picture theater and a m. p. fan who has heard the story of where the goat gets his.

* * *

To whom it may concern—particularly Calder Johnstone and C. A. Willat and the rest of the members of The Screen Club, Inc., 163 W. 45th street, New York—there ain't no Screen Club in Chicago. You see it was like this: A few of the feeble-minded who were attached to the film business in Chicago, thought they saw something worth emulating in the New York movement. They must have been mistaken, for four attempts to bring the clans together have resulted in a constantly diminishing attendance. In Chicago, we still have our beloved film factions. Everything in filmdom is measured by the almighty dollar. The other film fellow can't make up his mind to play the social game. He doesn't care to slip his feet under the table with you. You must do or be done—there is no other alternative. If Bunny and Baggot lived here they wouldn't, that's all. A Screen Club, or a Film Club, or

Frances X. Bushman, Frank Dayton and John Steppling in "The House of Pride," Essanay

a club in Chicago by any other name, purporting to uplift films, will have to stand on its own merits as a club. If it is found to be a desirable institution after it gets a going, it may find some recruits, but to start it off with a bang, there is nothing doing. There has been some misunderstanding about the functions of The Screen Club, Inc. If it is a specially God-ordained affair, hoping to reach around the world with its privileges at so much per privilege, it is a mistake. Its ambition to tax the Chicago contingent without offering anything more than club privileges when Chicago comes to New York is a joke. I am in sympathy with any effort to improve film conditions. If I am eligible and there are enterprising members of The Screen Club who dare stand as my sponsors, I will take a non-resident membership in that body. If Chicago can organize a similar club it has my application. That is as much as I can do. I am willing to be the commercial goat, but I elect not to stand hitched on a social basis. Personally, I think The Screen Club, Inc., is out of focus. It has too long a throw for good projection.

* * *

Joe Hopp and Jim Plough are speeding to New York on a limited train. Every man in Chicago is wondering why.

* * *

I heard a good exchange man say that he had to take a print the other day and it was "twice as many as I could use." I'm glad I don't have to buy paper on the same basis.

* * *

As a flattering testimonial that the Essanay plant is a slick proposition, Vernon Day fell down in it last week and broke his leg. Slipped on the floor at that. Maybe that's what he got for slicking up his upper lip.

* * *

Sometime I'm going to try for a publicity man's job with a film manufacturer. Believe me, Sarah, those fellows are the smoothest pieces of work that ever happened. And you can put it down in big letters, they all know when they didn't get theirs.

Lillian Russell in Private Motion Pictures

Lillian Russell and her husband, Alexander Moore, the Pittsburg publisher, made their debut as motion picture actors recently in Philadelphia. Mr. Moore says the pictures are for his private use.

As the guests of Siegmund Lubin, Miss Russell and Mr. Moore visited the plant of the Lubin company and were greatly interested in the proceedings. Mr. Moore suggested that he would like to have a moving picture of Miss Russell. The scene was laid in a parlor set. Miss Russell did comedy, tragedy and chorus girl parts as well as just appearing as the "greatest American beauty."

"The Would-be Heir," Nov. 21. Copyright 1912, American Film Mfg. Co.

Mr. Lubin was so pleased with the work of Miss Russell that he offered her a job on the spot. She said that she would consider it. Nearly a thousand feet of film now testify to the ability of Miss Russell. After their visit Mr. and Mrs. Moore left for Pittsburg in their touring car.

The erection of a large studio at Niles, Cal., the home of Essanay's Western stock company, is the latest project being planned by George K. Spoor, president of the Essanay company. Mr. Spoor recently returned from Niles, and reported the location one of the finest in the world for the filming of Western subjects. G. M. Anderson has built some half dozen splendid bungalows that house the players in the midst of a vast natural canyon that stretches away on every side. The new studio will be erected near the present bungalow sites, and will be complete in every detail.

The Texas Convention

DALLAS, TEXAS, was the scene of the first annual convention of the Motion Picture Exhibitors' League of Texas, October 15 and 16. There were 450 exhibitors present, and all were enthusiastic over the league and its ever-present spirit of co-operation. T. P. Finnegan of Dallas, chairman of the committee on arrangements, introduced President M. A. Neff, of the National League. Mr. Neff delivered the following address:

This is a great day for Texas. The actions taken here today establish a record in the motion picture business in your state. The distinguished and progressive motion picture exhibitors are assembled here today in whom all the sentiment of a square deal to all with special privileges to none is manifest. We, as business men, are organizing for the purpose of protecting an industry which is educating and amusing the world. In view of the fact that a large number of exhibitors have come from a long distance is evidence of the great interest taken in our organization and the necessity of co-operation. The thing that we most desire as motion picture exhibitors is a thorough, honest understanding with those with whom we have commercial and other dealings, the most priceless blessing for which we contend and seek is harmony, co-operation and a square deal. We extend a hand of good fellowship to all, asking for nothing only that which rightly belongs to us, co-operating together that all may be benefitted and receive that which we are commercially entitled to. We are all dependent one upon the other, for the things that have caused us so much worry and money heretofore we wish to eliminate, just as we wish to eliminate those injustices which have crept into the business and force themselves upon us as exhibitors, without our consent. We are doing millions of dollars worth of business a year, a great army of people are engaged in our line of business, and as the days go by our trade relations become more entwined with our other relations in the commercial world, binding us closer together, and only through co-operation and organization can we stimulate sentiment in favor of the motion picture and bring about a condition that will be just, honest, fair and profitable to all concerned. There is not only a potential influence of mutual gain to be derived from a thorough organization for ourselves but for every manufacturer, film man and all others with whom we have business relations.

We believe that we are justified in thinking that we are worthy of a commercial place upon the map and we believe that we, as exhibitors, should not be forgotten in the great commercial world: A line of business that employs over 200,000 people directly and indirectly over a half million and does a business of over $500,000,000 a year, should be recognized as a potential factor in the calculations of every state in this Union.

We believe in the uplift of cinematography, we believe that the councils and legislatures of every state should protect our interests the same as other commercial interests; we believe that the scheming politician should not be allowed to interfere with our individual rights; we believe that there should be a censor board created for the protection of the exhibitor, as well as the public. We believe that no man should be employed to operate a motion picture machine unless he is competent; we believe in giving the public every safeguard possible. We believe that every exhibitor should conduct his theater in a pleasant, efficient manner, always looking to the comfort and welfare of the patrons. We urge and demand that all members of our organization conduct their theaters on the highest plane and that where a certificate of membership is hung that it is a guarantee to the public that nothing will be shown suggestive or immoral and that the proprietor is working to place cinematography on the very highest plane.

We desire to have it distinctly understood that our organization takes sides with neither the licensed nor independent film manufacturers or exchanges only in so far as it is to the best interest of our members and the public in general. We also desire to have it understood that we are not organizing for the purpose of co-operating together to the detriment of others who are engaged in our line of business, but for the purpose of creating a healthy sentiment in favor of the greatest and grandest educational business that has ever heretofore been established. While there are some fanatics who do not and will not understand cinematography and the aims and objects of the exhibitor, however, in the near future the light will dawn upon the most skeptical and like others who have heretofore frowned down upon it, they will become strong and staunch friends of the motion picture and our organization.

After Mr. Neff's address was completed he took the chair and called for membership, and the following members were enrolled as they came forward and paid their initiation fee, and they all expressed their desire to assist Texas by joining the league that has shown such ability in the past, and had made such marked progress:

Thomas D. Garner, L. M. Levine, E. O. Kirkland, J. C. Couch, E. J. Lampkin, W. D. Neville, E. S. Sittel, O. O. Benfer, J. M. Lewis, J. H. Snively, Mrs. W. R. Fairman, J. S. Bonner, M. H. Goodman, H. F. Groene, Don E. Lewis, C. M. Watson, William Eppstein, C. M. Blanchette, A. Rashio, J. C. Clemmons, J. I. Pittman, W. S. Wood, Jim B. Wilson, George P. Brown, J. H. Fisher, B. J. Parker, Phillip Rich, L. J. Allen, Ed. Beserer, Dave Goodlet, C. W. Halley, L. S. Trammel, E. N. Mooreman, T. A. Thomas, G. W. Crawford, E. Burkwald, G. L. Wallace, D. O. Reese, W. A. Fairman, J. M. Robb, Maurice Woolfe, Paul Barraco, Moye Wicks, C. E. Morris, William Geibig, H. Mulkey, Charles Kilball, R. F. Cornes, B. C. Bell, M. Englebrecht, J. M. Morris, Jr., Theodore Clemmons, C. A. Gardner, E. R. Russell, R. A. Cunningham, John Cole, R. A. Dalton, P. G. Cameron, W. O. Joergeson, L. J. Locke, T. P. Finnegan, F. W. Peters, J. C. Penn, M. C. Witcher, J. T. Edmondson, O. J. Anderson, E. C. Robinson and F. A. James.

E. V. Richards, Jr., of Shrevesport, La., who is taking a great interest in the league, and who is now president in Louisiana, was appointed by Mr. Neff as temporary secretary. The convention was enthusiastic throughout. The first day's meeting was closed on adjournment to meet on Wednesday the 16th at 1:30 p. m. Immediately after the adjournment the delegates assembled and a picture was taken by the representative of the Universal Animated Weekly. This picture will be a big drawing card throughout Texas, as the exhibitors through the state are very enthusiastic; and while they could not all come to Dallas, they are with the league and the movement to bring about better conditions for the exhibitor

Texas is thoroughly organized, and the effect of the organization will be felt in every part of the country.

After the pictures were taken the delegates were given a sight-seeing automobile ride through the city of Dallas, and to many it was a revelation to see the magnificent buiudings and the well paved streets and fine residences. On returning to the hotels the delegates, film men and newspaper men assembled in the spacious banquet hall at the Oriental Hotel, where a banquet was served.

The spacious dining room was filled to overflowing and everybody had an elegant time. A talented orchestra was engaged by Chairman Finnegan and rendered catchy selections during the repast. James B. Kelly of the Consolidated Film and Supply Company, was chosen as toastmaster, and Mr. Kelly's ability to pick out the right person at the right time for a toast was remarkable. Among those who addressed the large gathering were Tom Finnegan, William Oldknow, William Fairman, Bert Lewis, J. C. Clemmons, J. T. Ezell, B. J. Parker, George Joergeson, Jay Robbins, E. L. Lampkin, Frank Dalton, O. W. Blankenbeckler, Theodore Clemmons, L. J. Locke and N. E. Depinet.

A selected solo was rendered by D. Orville Reese, an address on "Motion Photography," by Miss Martha Russell, and speeches by M. A. Neff, national president M. P. E. L., and Anthony Xydias, national vice-president M. P. E. L. Everything went off smoothly and each and everyone left with the feeling that a great cause had been born in the city of Dallas.

On the second day the convention was called to order by President Neff. The National Cash Register Company's representative asked for a few minutes to make an announcement in regard to a new register machine which is being sold to the exhibitors. Mr. Pyle, husband of Martha Russell, also made an announcement in regard to his posters. The representative of the Universal Film Company announced that the independent manufacturers had come to an agreement and had settled all their difficulties. The convention was then called to order and went into executive session. The following officers were elected:

T. P. Finnegan, national vice-president, Dallas; Maurice Wolf, president, Houston; C. M. Blanchette, first vice-president; L. J. Locke, second vice-president; Moye Wicks, secretary; J. C. Penn, treasurer.

After discussing many subjects the convention adjourned to meet in Houston at the call of the president. The representatives of the independent film exchanges were there at all times and never lost a chance to entertain the visiting exhibitors and make them feel at home and to encourage and assist in making the convention a success.

The members of the two Dallas film exchanges and their representatives were at all times mixed with the delegates and a strong friendly feeling was manifested at all times which will no doubt redound to the great good of the business in general.

On his way home Mr. Neff stopped off at St. Louis to confer with C. M. Christenson, national secretary, and William J. Sweeney of Chicago on matters pertaining to the league. They met at the Planters Hotel.

"His Wedding Eve," Nov. 1. Copyright 1912, Selig Polyscope Co.

The Making of a Great Animal Picture

"Kings of the Forest"

A WOMAN impressed with the horrible, haunting thought that a hungry lion has carried away her child, pursuing the bloody spoor of the savage beast through the tangle of the jungle—that is the keynote of the Selig Polyscope Company's "The Kings of the Forest." The story was told in the September 14th number of MOTOGRAPHY.

The offerings of this enterprising concern in the matter of animal plays have ever been leading and notable, and this latest product, done in the open on its famous California animal park, easily surpasses all predecessors in the animal play line. Only a concern tempered by long experience would dare attempt a production of this nature, so fraught with big risks.

The ordinary plays embracing animals are so palpably artificial that they are seldom convincing—in fact, the bills have a monopoly of the sensation. In "The Kings of the Forest" the case is distinctly different, for

Kings of the Forest.

the province of the bills is quite inadequate to impress the big motive or the thrilling sensation that outdoes ordinary realism.

Naturally the big crux of interest in "The Kings of the Forest" is invested in the lions, the leopards and the great carnivora family that play parts in its vivid and thrilling story. The surroundings of these scenes have been devised and selected with the greatest possible care. There are great expanses of lonely veldt, dense interlacing brakes along the waterways, charming vistas of sunlit glade and peeps of primeval forest, as well as the vast distances of the lonely desert. The play not only has the Cape country atmosphere and environment, but fine sentiment and a strong emotional drift to comport with the big drift of its daring and adventure.

There is a big gripping romance coupled in with excursions into the wild which lead to adventures of the most sensational character with the man-eating lions and leopards that, emboldened by fear, leap from the jungle into the camp of the travelers. Never before has a wild lion been shown attacking and carrying away its victim as it has in this picture. The journey of the animal through the jungle with its prey in its dripping jaws is sufficient to make the bravest quail. Happily, the

The Leopards Make a Killing.

romance works out well, and the tragedy of the lost child is averted.

It has been the enterprise and good fortune of the Selig Polyscope Company to advance the animal play into its highest estate as a product of nature that has never been criticised as a fake. W. N. Selig long ago determined that the good things of moving pictures were the real ones, so that neither time nor expense should be spared to make the accessories of the Selig Polyscope productions rich, natural and impressive. When it came

The Lion and His Prey.

to the matter of introducing wild animals, he was equally careful and exacting, wisely concluding that animals to be truly shown in their best estate should be presented in their actual surroundings rather than the cribbed and cabined conditions of the ordinary menagerie. Through

The King Guarding His Family. An Unusual Pose.

the wise mediumship of "Big Otto" he secured one of the largest menageries in the country and then planted it upon a 300-acre animal farm near Los Angeles, surrounding the various animals of the big family exactly as they were in their wild state.

This procedure gave opportunity for the actors to become familiar with the animals and their habits, so that natural results in acting could obtain. The ordinary firebrand blank cartridge shooting episodes that stir up the lymphatic beasts of the ordinary menagerie cramped in their little cages are far and away from the fine, big results secured by working with animals in the open where the big man-eaters have a chance to stalk, to run and leap, as they do in nature—where the stealthy leopards creep along the shadowy lanes, and the treacherous tigers thread their way through the jungle.

There the elephants, the camels and the zebras graze in the open, while the carnivora are housed in great open dens like those of the famous zoo of Hagenbeck of Hamburg, where all the environments are exactly those of their native haunts. Such surroundings tend to keep the animal and all its instincts like those of nature, instead of being housed up in small cages and fed until they grow lethargic and uninteresting.

The big Selig successes in "Back to the Primitive," "Captain Kate," "Lost in the Jungle," and others of less pretension, have inspired more interest in their release than any polyscopic plays ever produced. The experiences of the past have led to a more daring diversion in "Kings of the Forest," which is said to have reached the acme of sensation, not in the mere exhibit of trained animals, but in their habits as they kill and forage in the jungle.

The story has a big heart throb based upon the mother's love for her child, that is quickened to a tremendous degree through the foray of a man-eating lion that visits the wagon where the lone child is sleeping on the edge of the desert. The idea of a lion stalking its prey is interesting in itself, but the sight of it leaping upon the quarry and dragging it away to its cave is something difficult to describe. This is one of the big episodes in this new wonder from the Selig company.

The great popular animal writer, H. Seton-Thompson, has justly declared "every wild life ends in a tragedy," and it is just this spirit of expectancy, the morbid element of human nature, that prizes the sensations invested in daring and danger of the man-eaters. The life and death acts in the circus are the most highly paid, and the animal trainer is the king of them all for his risk in venturing into the cave of the powerful-pawed lion or the treacherous tiger. The adventurous young mind is ever interested in the tales of the hunter and explorer in the wilds where man has to fight for supremacy.

For the innate love of adventure in the heart of every normal human being is deep, but it only has opportunity to exercise itself in rare and remote emergencies. Very few men have the chance to explore the Rockies or hunt among the great barrens of the Hudson Bay country, and far less to penetrate the primeval forests of South America or follow the big game in the jungles of India or under the scorching sun of equatorial Africa. In a

remarkable way the moving picture has revived the spirit of adventure and given romance a reality in the wild animal picture play.

Nature stories have been well up among the best sellers for the past decade, the public seemingly taking a new interest in animal life just as civilization pines for the wholesome and invigorating romance of the vanished frontier. The writing about animals as individuals has become an interesting phase of fine arts. Everyone can recall Jack London's big-hearted romance, "The Call of the Wild," the thousand and one interesting observations of H. Seton-Thompson, graphically illustrated with his own facile pencil, or, in similar measure, enjoyed the excursions of Charles Livingston Boll on "The Roof of the Jungle." But, interesting as are the dramas and the books, the practical part of the photoplay serves a deeper and more intense interest in making wild animal life very intimate and singularly fascinating.

As it would be impossible to remark the influence that the exposition of wild life has made upon the literature

The Reunion Scene in "Kings of the Forest."

of the decade, so that the lives of the far-away wild animals have taken on an almost human interest through the clever recitals of writers that have studied their habits and revealed them in most fascinating form, so the new brand of enterprise and intrepidity which brings wild animals in their true environment in touch with human beings in photoplays has an influence, educationally, not to be overestimated.

The two-reel "Kings of the Forest" release is scheduled for November 11.

Lubin Explains About "Betzwood"

Articles and notices have appeared in many papers which do not correctly quote Siegmund Lubin's purchase and intentions regarding the future of his recently acquired property of Betzwood. Mr. Lubin says, "I have bought the estate of the late John Betz and am very proud of it. It is a beautiful property and must have cost the former owner at least over a half a million dollars. I can see in it a wonderful advantage to beautify my pictures, and that is the ambition of my life. The manor has a beautiful mansion, conservatory, half a dozen farm houses and other buildings, including stables and paddocks for live stock. I have a water front of nearly two miles on the Schuylkill River with a boat house, ponds for ducks, a deer park and about 500 acres of the most picturesque land in the state of Pennsylvania. I did not buy this property to live on, neither have I any idea of building a factory for manufacturing raw material like celluloid film, but solely to get atmosphere to beautify my moving pictures and have them true to nature. I have already hundreds of workmen building a big gallery and other additions and have given orders for a large number of horses, steers, cows, sheep, pigs, deer, dogs, pigeons, chickens, and shall also acquire an aeroplane of the latest and best make. The demand for moving pictures all over the world has grown big; I think I am safe in estimating that there are 180 reels made every week and still more are demanded. But the exhibitors will have the best. The time of indistinct and flickering pictures has passed and bad stage setting and bad photography will not now be accepted. Acting is also demanded and the best players in the world are not too good for moving pictures. We also must offer good stories and plays and have to retain very excellent writers. I am one of the pioneers of the art and love it, and when I see the entertainment it gives millions of people I am willing to spend many hundred thousand dollars on my property and plant to beautify my films. Not only is my beautiful Betzwood an ideal manor, but it is situated right near Valley Forge, one of the historical spots of America. Here is the spot where Washington camped through the terrible winter to hold the Britishers in check. The beautiful surrounding country is admirably adapted for the work which is my heart's happiness. I am only telling you all this to correct the many mistakes that have appeared in print. I have no idea in moving or giving up my Philadelphia studio. I could not do without it, but Betzwood will be a valuable annex."

In addition to the Pennsylvania railroad depot, which is located on the estate, the Reading railroad has built a station near Betzwood at an approximate cost of $1,000,000, thus supplying ample transportation to the city.

Welch Artist Honors American Cowboy

Visitors to the South Wales Art Academy, at Cardiff, particularly Americans, are much interested in a large and beautiful painting, typifying the American cowboy which was recently accepted and hung upon its walls.

Mounted on a little pinto, so familiar to our Western ranges, against a background of eternal mountains that fade off into the distance with his face turned toward the West, is the figure of a perfect specimen of manhood. The visitor, regardless of his nationality, gazes at the picture with a growing sense of familiarity, a feeling of having known or seen the subject somewhere. Few, however, arrive or even guess at the truth. As a matter of fact, they do know the face and have seen it countless times in motion picture theatres. The painting is a masterpiece of a famous London artist and in looking about for a suitable model for his study, he chanced into a motion picture theatre in London and witnessed a picture by the "Flying A" company, entitled, "The Call of the Open Range." Jack Kerrigan appealed to him as typifying the true cowboy, as he has also appealed and endeared himself to countless thousands throughout the civilized world. The artist lost no time in communicating with Mr. Kerrigan through the London office of the American Film Manufacturing Company. Upon request, Mr. Kerrigan forwarded a photograph of himself which the artist used for his model, the rest of the picture being purely imaginative with the artist, but wonderfully true to life. Today, it hangs in this hall of fame, representing that almost extinct class of men of our Western plains, the American cowboy.

Opie Read Addresses Chicago Press Club

On Tuesday evening, October 15, at a private entertainment given at the Chicago Press Club, Mr. Read spoke in highly commendatory terms regarding "The Starbucks," of which he is the author, and which has been produced in motion pictures by the American Film Manufacturing Company, Mr. Read appearing as Jasper Starbuck. Mr. Read said:

"I wish to say something about the photoplay that is to be presented. On an eminence, the drama stands looking back on a long roadway of production. The moving picture camera stands on the crest of today, ticking off the moments of the present. You will observe in this play that Mr. Doud has prepared his scenario more from the book than from the play that was presented at the Daly Theater some years ago, but I wish to thank those people who worked so devotedly to put these pictures in motion. I never have been associated with more capable or more earnest co-players and I wish to thank them.

" 'The Starbucks' was played a number of times and I never could get an actor to understand that this old man was a typical mountain character—a big, laboring soul, always struggling to conceal his emotions, barely able to control his impulse to kill when aroused to righteous anger, but restrained by love for his family. I wish you to observe that this character is more pathetic than humorous."

Opie Read is like no one else in the world. His very presence lends a strange enchantment to his stories. You may have enjoyed his books or clever character sketches in the solitude of your library; perhaps you have been moved by his plays; perchance you have sat within the sound of his voice and heard from his own lips the quaint tales that originate in his brain, but you do not appreciate his splendid genius until you have witnessed on the screen his wonderful self-composure and natural acting as he impersonates the character of Jasper Starbuck in his own story, "The Starbucks." So realistic that with but little stretch of the imagination you can hear his utterances as you see the action of his expressive countenance, all combining to weave the magic spell that will hold you enthralled—a most wonderful delineator of character and an artist in the interpretation of his own work.

Can you imagine a more perfect delineation of any character than that given by the person whose brain has given birth to it? Opie Read conceived the person of Jasper Starbuck, he lived his life, fought his battles, adjudicated his difficulties and settled his feuds. He plays the part as no one else could—he is inimitable in his subdued rendition, which is conspicuous because it is natural.

Pictures for Institutions

Prisoners at the Cooley farms, the aged at Warrensville and boys at the Hudson farm at Cincinnati, O., will enjoy motion pictures this winter, as Harris R. Cooley, director of charities and corrections, announces that moving picture entertainments will be provided at the city institutions. A moving picture machine, belonging to the park department, will be used. H. W. Stillman, secretary to Director of Public Safety Stage, will be the operator.

Essanay's "The Moving Finger.

Sans Grease Paint and Wig

by Mabel Condon

Beverly Bayne.

"LET'S sit over here on the sofa and put the candy between us and then we can chat all we want," Miss Beverly Bayne suggested, as her dressing-room door shut us in from Augustus Carney, Francis X. Bushman and other Essanay admirers of the pretty Miss Bayne.

"Um-m! Try one like this—it has nuts in it; isn't that nice?"

"'Licious!"

"D'ye know, I just get dreadfully candy hungry," went on the dainty figure in green satin as she viewed a chocolate cream at various angles before sampling it. "A little while ago I felt that I couldn't live another minute unless I had some, so I rushed out to go to the candy shop, and in front of the studio I met one of the men on a horse and right away I said, 'I'm dying for some candy—simply *dying!*' Of course he volunteered to go for it and I let him dash madly away, and—here's the candy!"

After negotiating with a caramel for half a minute, she continued: "Don't you think our room lovely? Four of us share it, and it's the nicest dressing-room in the place. Whenever visitors come to the studio, they are sure to be shown 'the girls'' room."

"See that gas-light green wall covering?" A hint of green was discernable in the half-inch spacings between photographs. "We put that up ourselves, and this, too," and she indicated a rose-bordered drape which ran the distance of the "dresser"—a shelf that extended along two sides of the walls. At equal intervals on the dresser stood four white-framed mirrors and in front of each were make-up creams and powders and things.

"Sometimes this room looks simply awful; that's when we're all getting ready at once, and it makes me shudder to think of coming back to it and hanging things away; but we manage." And Miss Bayne passed the candy and took a piece herself with the remark, "You just ought to taste my divinity fudge; it's delicious. Look just back of you there, in the corner—that's our kitchenette. 'Net' is out, but the kitchen is there, and often, when it rains or is too hot or too cold, we get up a chafing-dish luncheon and have lots of fun over it."

"Yes, and sometimes we just have a soda for lunch," put in a voice whose owner was opening the door.

"Oh, Prouty, dear, come here; I want you to meet some one," and Miss Bayne introduced Miss Evabelle Prout, whose round blue eyes apologized for her round little mouth's speech made before she knew there was "company" in the room.

"Prouty and I are great chums," explained Miss Bayne.

"Yes, 'Beansy' and I go together," added Miss Prout with the cutest little lisp as she settled herself on a low chair in a distant corner and proceeded to wait for whatever might happen.

Miss Bayne is so prettily girlish and young that it was difficult to think of her as a leading lady. When I told her so she laughed and said she wasn't used to the idea herself and then told me that she had never been on the legitimate stage in her life, and that all the stage experience she had had before coming to the Essanay company last February was in private theatricals.

"When I came here and applied for a little place in the company I was scared stiff when Mr. Weber said, after he tried me in a scene, that I was the type he wanted, and got out a contract for me to sign right then. I called mother up first, and she said she was satisfied to have me sign, so I did right away, and I've been wild about the work ever since.

"I have all varieties of roles assigned me, and they try to blow me up every couple of weeks, but I like being so many different people and don't mind the dangerous parts, as I always come out all right. The other day, though—see that mark?—I got my hand burned with acid. You'd think I was trying to show off these twin rings, the way I'm exhibiting that hand, wouldn't you? They belong to Mr. Calvert and I'm acting as a safety vault for them until he's ready."

The door opened and closed with a bang and Miss Ruth Stonehouse was with us. "Girls, I'm in a tearing hurry; I have to be a'wap'in five minutes!" Her waist landed in a chair, her skirt in a heap on the floor. "My short skirt—where *CAN* it be?"

"Never mind, dearie, I'll loan you that little short white one of mine; I know just where it is," volunteered Miss Prout as she hurried over to the side of the room that served as a clothes press with a curtain across it.

"It'll be just the thing for you and—Beverly, do you happen to know where that little short white skirt of mine is? I was sure it was right here, but now—"

"Yes, it's over on this side, dear. No—I'll get it for you; there it is over on your side under that little dress of Ruthie's."

"Oh, so it is; thanks, so much! Here you are, Ruthie, dear."

"It's an eternal scramble for clothes here," sighed Miss Bayne as she resumed her seat on the divan, and then acted as overseer for Miss Stonehouse, who demanded to know if her hair was on straight and if her red waist and brown skirt met at the back. "Nobody'll notice in the picture," consoled Miss Bayne as the garments in question resisted all overtures toward a reconciliation. "There! you're the wappiest looking little 'wap' ever," she complimented as Miss Stonehouse made for the door with the startling remark, "Doesn't make much difference whether I look nice or not, as I have to get down on the floor and be kicked!"

Miss Prout followed in the wake of the "wap," and Miss Bayne resumed her comments on the work of a motion picture actress. For the first time she was really serious as she declared her possession of an ambition, and that the desire to mount higher and higher in her work and to be worthy of the nice things people say about her.

"Maybe you think we get so used to the remarks

about us that we don't mind them; but we do. I love to get criticisms about my work. The good ones are nicest, of course, but the others are acceptable because they help me to do better. Whenever I'm not satisfied with what I do, it makes a little dent here," indicating a curly lock of her brown hair just over her forehead, "and I never make that mistake again.

"In my home town, Minneapolis—though I think of Chicago as my home town now—the manager of one theater there always announces, on 'Bayne' nights, that I used to live in that city, so I have quite a following there," and the pretty eyes lighted up with new pleasure.

In a flash she was off on another subject. "I had the dandiest horseback ride today. Time for it? I make time by getting up early. I paint a lot, too, in my spare moments—maybe I'll paint you a head or something, if you'd care for it! Of course, they do keep us pretty busy here, but, at that, we don't always work every day. We never know, though, until the last minute whether or not we will be needed.

"Sometimes four or five of us sneak off to a matinee downtown, and between the acts we call up as though from the corner and ask if the director is ready for Miss So-and-So yet. When the answer is "No, not yet; but I might need her about four o'clock," we sit and shiver through the rest of the play and call up when it is over, for then we know it's too late to use us, so we go over to Plows and have a soda.

"But there's really no excitement; just the commonplace, ordinary things of life occur and I flit through them like a little butterfly," and she "flitted" a step or two just to show that she meant it.

We were ready to go upstairs when Miss Cassinelli entered with a yellow-tied, brocaded white satin waist, suspended between her thumb and forefinger. The waist was duly admired. Not that Miss Cassinelli liked it; she didn't. It wasn't suited to her complexion, so she was willing to sell it to the first bidder. Accordingly, the waist was left in its tissue-paper wrapping for an early try-on by the four occupants of the prize dressing-room, each of whom, it seemed, had previously expressed a mad longing to become its possessor.

"Oh, Mr. Calvert, here're your rings!" Miss Bayne sang out as we passed that gentleman's dressing-room and then proceeded upstairs—Miss Bayne to join the "bread line" outside the cashier's window and I to catch a loop-bound train, though I had to sprint for it.

Lighting Picture Theaters a Specialty

The Louisville Lighting Company, Louisville, Ky., has been conducting a special campaign to secure the business of motion picture theaters. As a result, it has closed contracts with twenty customers of this class and is furnishing electrical energy both for lighting and for motor service for the fans and ventilators. The motion picture theater managers in Louisville are believers in advertising, and every theater served by the Louisville Lighting Company is prominently featured by an electric sign. The Ideal heater, at Twenty-sixth and Market streets, is the company's latest acquisition

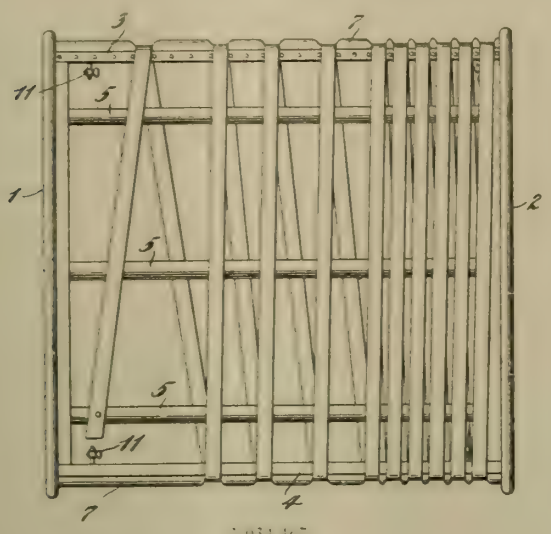
Recent Patents in Motography

By David S. Hulfish

UNITED STATES patent No. 1,034,467. Supporting Frame or Rack for Film or Film-Like Material. Karl Kieser, doctor of philosophy, chemist, citizen of the German Empire, residing at Dusseldorf, Germany. Assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Filed October 24, 1911.

The invention relates to improvements in supporting frames or racks for films. It is well known that



1,034,467.

celluloid film and to a still greater extent non-inflammable films made from acetyl-cellulose have the quality of expanding in contact with water solutions, such as the sensitized emulsion, the developer, the fixing bath, etc., and that on drying they shrink and assume their original length, or may even become smaller. The expansion of celluloid films is generally not great enough to cause disturbances, yet it is advantageous to give a certain elasticity to the developing frames or developing drums, etc., so that they yield a little when the films shrink and dry.

Mr. Kieser provides the developing or drying frames or similar appliances, upon which the film is wound, with tubes filled with air, so that the gradual expansion of the films in watery solutions can be adjusted by compressing air into the tubes, and when the films are drying, the shrinking is taken care of by the elasticity or compressibility of the air tubes.

It is not necessary that means be provided for supplying compressed air to the tubes, nor is it necessary indeed that air-filled tubes be used at all, substitutes being possible and yet falling within the scope of Mr. Kieser's claims. In the illustration, which accompanies this review, there is shown a rack suitable for tank development of motographic films. In this figure the frame is comprised of end pieces *1, 2,* separated by braces *5, 5, 5,* and having the film-carrying frame members *3* and *4*. Upon the members *3* and *4* is placed a highly resilient strip *7*. For the strip *7* Mr. Kieser prefers to use a thin rubber hose filled with air, the hose being connected to the cock *11*. The film when it contracts in drying will pull tight upon the air tube and draw it down as shown in the figure, where the film shows that the tube *7* has been compressed until the film nearly touches the cross bars *3* and *4*. If desired, a portion of the air within the tube may be allowed to escape through the cock *11* and thus the tension upon the film may be reduced.

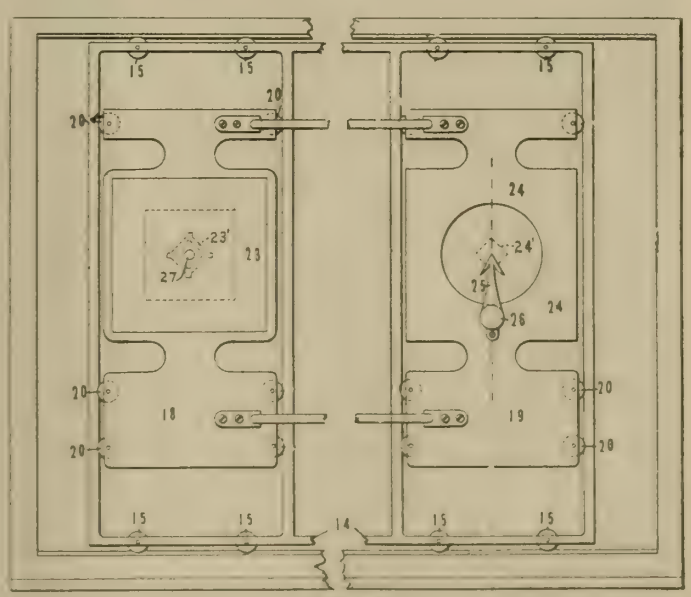
The slats of a developing drum or drying drum may be similarly faced with an air tube.

The cushion upon the bars which carry the films may be of any yielding substance which resists the action of the solutions into which the film is to be immersed, being an air tube or a thin rubber strip, similar to a window squeegee, or even may be made of two slats, of which one is fixed and the other is movable under spring tension when drawn by the shrinking film.

When the carrier is wound with a strip of film which is to be wet subsequently, the film may be wound very tightly so that it compresses the elastic member while dry and will be kept taut by the expansion of the elastic member as the film expands under the influence of the water. When a wet film, as a film just coated with emulsion in the factory or a film developed and washed in the studio, is wound upon a carrier, when it is to be dried, it is wound under but slight tension, and as it dries and shrinks the elastic members yield.

Patent No. 1,034,833. Projecting Apparatus. Arthur G. Previn, New York, N. Y., assignor to Baseballeon, Inc., a corporation of New York. Filed March 7, 1911.

This invention relates to the stereopticon branch of the art of projection. The key to the improvement is the combination of two slides in the same lens field at the same time upon the same screen, one of the slides being fixed and the other being movable or having a movable part upon it. For instance, there may be placed in the slideholder a fixed slide showing a baseball diamond and over this slide may be placed a small movable disk



1,034,833.

representing the baseball. The baseball may be mounted upon a transparent carrier which may be moved as desired. Thus upon the fixed baseball diamond a movable ball may be shown in any position, so that its total movements through the game may be shown by a continuous projection upon the screen before an audience.

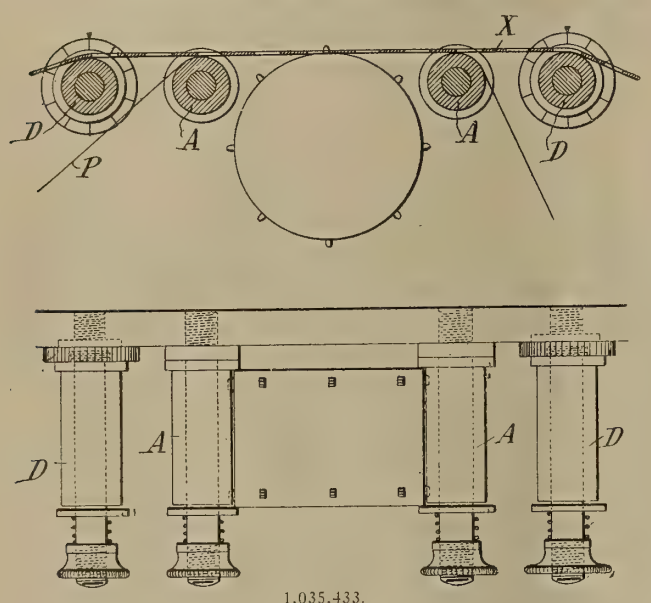
It becomes obvious that the movements of base runners also may be shown at the same time.

The position of the movable index may be determined by a guide chart upon the slideholder outside the projecting lantern.

In the illustration, the part *18* is the part which is in the field of the lens and which is projected upon the screen. The field of the lens is shown at the label *23* and in it is seen the fixed image *23'*. The movable image representing the baseball as shown at *27*. The guide outside the lantern is shown at *19*, with a representation at *24'* corresponding to the fixed slide. The pointer *25*, pivoted at *26*, locates the position of the baseball image *27*, and the pointer and image are so connected by wheeled carriers running in frames that the position of the movable image *27* upon the master image *23'* always corresponds to the position of the tip of the pointer *25* upon the image *24'*.

Patent No. 1,035,433. Apparatus for Coloring Kinematographic Films. Leon Gaumont, Paris, France, assignor to Societe des Establissements Gaumont, Paris, France. Filed July 5, 1910.

In machines for coloring kinematographic films the



1,035,433.

most delicate operation is that of obtaining perfect registration between the stencil and the film. The non-registration of these two bands arises from the following causes: (1) the edges of the bands are not absolutely straight, (2) they are not all of the same width, and (3) finally, and this is the most serious defect, the stencil undergoes contraction which in certain cases amounts to a large fraction of a millimeter. Obviously, in this case, with a lateral support common to the two bands, the images will be correctly superposed on one side but in proportion as they approach the opposite side of the bands the registration will be imperfect, and this to an increasing extent.

In order to diminish the effects resulting from this cause, Mr. Gaumont devises a method of distributing or dividing these defects in taking into account the contractions of the stencil. He produces an exact superposition in the axis of the two bands, the differences being thus located on either side of this axis, so that their value is one-half of what it formerly was; also the exact registration is secured in the center of the picture upon the screen, the aberration being at the edges of the pictures where it will be less noticeable.

This method is applicable only to films and stencils produced from one and the same negative, and in the manufacture of which care has been taken to cause one of the sides to coincide with the same side of this negative.

The sprocket wheel in the figure drives both the stencil and the print to be colored. The print is to be colored is held by flanges of rollers *A* and *A*, while the stencil *X* is held by flanges of rollers *D* and *D*. In this manner, each is held from shifting laterally as they pass together over the sprocket wheel, and their axes may be brought together by shifting one of the pairs of flanged guide rollers.

Pueblo Schools in Line for Pictures

It is probable that Pueblo schools will be equipped with moving picture paraphernalia within the next six months if the plans provided for at the regular meeting of the board recently materialize. The action came as the result of a message received from the Mothers' congress through Superintendent Keating. The board decided favorably regarding the proposed innovation, and appointed Mr. Keating and Mr. Wheeler as a committee of investigation.

"We have been using stereopticon views in the schools for many years," said Superintendent Keating. "A regular exchange system exists, by means of which the expense of obtaining new views is reduced to a minimum. But the time has come, in the estimation of the members of the board, when the magic lantern bears the same relation to the moving picture as the old stage coach to a modern Pullman."

The motion picture, as it is proposed to have them installed, will be purely of an educational and cultural character. If the expense is found to be fairly reasonable by the investigating committee, a projector and screen will be installed in the gymnasium of the old Central high school as an experiment. Later more equipment will be added, until all the larger schools of the city are provided. The committee will put in the next week or two corresponding with school heads of other cities where the system is already in operation, to learn what success is being experienced.

Thanhouser's "Star of Bethlehem"

Announcement that a special passenger coach was added to the 8:32 morning express train from New York to New Rochelle on the New York, New Haven & Hartford Railroad for several mornings last week brought out that the Thanhouser Company was staging the most pretentious picture in their history. Fully 200 extra players were engaged in New York City for the film, which will cost more to produce than even "Jess" and "Lucile," with their big casts of photoplayers. The new picture is "The Star of Bethlehem" and will likely be the most expensive and impressive biblical subject ever undertaken in this country. The release date has not been made known yet. The subject has been the main topic of conversation at New Rochelle for a number of weeks, as preparations for it have been going on at a great scale for that period. With an impressive result in mind, the producer's expenditure on "The Star of Bethlehem" has been little short of lavish, according to the cash books of the company. A special scenic, costume and property department was organized in the sole interests of the picture, and no detail was overlooked that made or increased excellence in the quality of production.

Photoplays From Essanay's

Some Coming Features

FILM bookings for the first two weeks in November reveal some excellent Essanay subjects. G. M. Anderson appears in a number of fine "Broncho Billy" films throughout the month. On Tuesday, November 5, the company releases "Chains," a masterpiece of dramatic construction portrayed by a cast of artists whose interpretation is par excellence. The story concerns the love of Ruth Keene, a beautiful young girl, for Harry Madden, a handsome and presumably upright and conscientious fellow. On the eve of their engagement Madden becomes entangled in a card game with some dissolute companions in the loft of a barn, detects one of their number in the act of cheating, a quarrel ensues and Madden, in the struggle, kills the man with his own revolver. Crazed with fear, he attempts to escape and is captured in Ruth's home, where he seeks protection. The result of the trial is a sentence of fifteen years in the penitentiary.

Ruth's innocent love now causes her to do a strange thing. She marries Madden in the jail, in spite of the protests of friends and the clergyman, and swears to be ever faithful until he comes back to her. Securing a position in the office of Robert King, a wealthy young lawyer, Ruth finds that King loves her dearly and desires to make her his wife. Gradually a kindred love springs up within her—a love that she battles against desperately, but in vain. King reveals his love, and the wretched girl is forced to confess her marriage and the fact that her husband is a convict serving time for murder. King begs her to divorce Madden. With a new hope for freedom, Ruth journeys to the penitentiary and is shocked to find Madden now a degenerate, brutal creature, who coarsely refuses to consent to a divorce under any conditions and becomes so violent that the guard has difficulty in removing the girl from the cell. Returning to King, she hysterically tells him the hopelessness of their love and he heartbrokenly allows her to go. Chained to the degenerate who languishes in his cell, Ruth stumbles from the room, and, with the awful truth ringing in her ears, "Until death do us part," gropes her way blindly into the unknown future that stretches blackly before her.

Cutting California Redwoods.

Miss Ruth Stonehouse, whose portrait adorns the cover page of the present issue of Motography, and who is said to be the youngest leading lady appearing in photoplays in this country, gives a fine emotional portrayal in the role of the wretched girl. Miss Stonehouse is a beautiful young woman, and her treatment of the many exhaustive scenes throughout the film is superb, and stamps her as a dramatic actress of wide range and remarkable individuality. Francis X. Bushman renders Miss Stonehouse excellent support in the role of the young lawyer, and his many film admirers will see much to appreciate and remember in his interpretation of the character. Bryant Washburn handles the difficult role of Madden splendidly, and his slow degeneration from a handsome, care-free young chap to the creature of the prison cell is a fine piece of work. The other members of the cast are capable.

"When Wealth Torments," released November 8, is a fine bit of comedy with a novel plot. Mrs. Mahoney has a charming daughter, Maggie, who is loved by Jim O'Brien, a stalwart young chap. Mrs. Mahoney is only too glad to accept Jim's attentions to Maggie, until one day she receives a telegram stating that a deceased uncle has left her a fortune of half a million. Immediately Jim is ordered to keep away from the house, and Mrs. Mahoney moves both herself and Maggie into a fashionable hotel. Maggie is heartbroken at the loss of Jim,

Francis X. Bushman as the French Count in "When Wealth Torments."

Ruth Stonehouse and E. H. Calvert in "From the Submerged."

and secretly manages to see him on several occasions, but always to be found out by her watchful mother, who drives poor Jim away. A friend now proposes a scheme to Jim to cure Mrs. Mahoney of her airs. Jim has heard her declare that Maggie shall marry a foreign title, so he sends his friend to her as a matrimonial agent representing a French count and a German baron, both of whom Mrs. Mahoney is eager to see. Thereupon Jim disguises first as the count and calls. Maggie is disgusted with his actions until he reveals his identity, then she aids him in carrying out his plan. Jim's manners are shocking, and Mrs. Mahoney finally orders him out. Rigging himself out as the baron, Jim calls an hour later and proceeds to still further disgust the frantic Mrs. Mahoney with his actions until she drives him away and bemoans the fact that poor Jim is now lost to Maggie forever. Removing his disguise in the hall, Jim quickly returns in his true character, and Mrs. Mahoney is so thoroughly cured of desiring foreign titles that she readily consents to a renewal of the engagement, entirely unsuspicious of the trickery that has been played on her.

Francis X. Bushman portrays the witty Jim. His work in the characters of the two foreigners is splendid, and shows his remarkable versatility. Mildred Weston is charming in the role of Maggie, and her many scenes with Mr. Bushman are captivating. Helen Dunbar is splendidly cast as Mrs. Mahoney.

A good Western drama is "An Indian's Friendship," released November 9, with G. M. Anderson in his world-famous role of "Broncho Billy." Broncho is instrumental in saving Yellow Wolf, an Indian, from the wrath of Dan Runnion, a surly cowpuncher, and Runnion swears revenge. His chance comes when he sees a notice from the county sheriff advising that cattle rustlers are at work and for ranchmen to watch their stock. Finding one of Broncho's shirts out on the clothesline, Runnion places an incriminating note in the pocket and steals away. Getting the ranchman, he returns to Broncho's shack and accuses him of being one of the rustlers. The ranchman finds the note in the pocket of Broncho's shirt, advising Broncho to come and get his share of the proceeds from the stolen cattle. In a rage he summons his cowboys and Broncho is led away to be hanged. Meanwhile, Yellow Wolf, who has witnessed Runnion writing the incriminating note and heard his threat to get even with Broncho, rides madly to town, summons the sheriff, and they arrive in time to prevent the hanging of Broncho. Yellow Wolf tells his story and the guilty Runnion tries to escape, but is captured and meets his just desserts, while the boys gladly congratulate Broncho on his narrow escape. G. M. Anderson is dominant, vigorous and powerful in his role of Broncho. Frederick Church gives a fine portrayal of Yellow Wolf, and Brinsley Shaw does the villainish work in the role of Runnion.

"From the Submerged," released November 12, is another dramatic masterpiece from the Essanay Chicago studio, and contains an undercurrent of deep heart appeal. The Man, a poor vagrant, is about to cast himself into the river when he is stopped and started upon the right road by the Poor Girl, a pitiful character, who begs him to face the future with a stout heart. He does so, discovers his father is advertising to learn his whereabouts, returns home, is forgiven and finds a fortune at his command. Some time later he is engaged to the Rich Girl and a slumming party is made up one night. They visit Chinatown and pass the well-known bread line, at which the Rich Girl sneers and laughs. Realizing how little of real life she knows, the Man, disgusted with the social whirl of her class, dons his old attire and wanders down by the river for a breath of fresh air. Here it is that the Poor Girl, more wretched and ragged than ever, comes to cast herself into the black waters. As she had saved him once, so now does he prevent her from carrying out her design, recognizes her and leads her tenderly to his beautiful home as his wife for all time. The union of two hearts that have arisen from the submerged is made complete. Ruth Stonehouse, in the role of the Poor Girl, gives a beautiful portrayal of a character entirely submerged in the despair of life's bitterest hour, and the scene of her regeneration is particularly fine. E. H. Calvert gives a striking study of the Man, and his big scenes are splendidly done. Dolores Cassinelli is dashing and beautiful as the Rich Girl, and the other members of the cast give good accounts of themselves.

In "Cutting California Redwoods," an Essanay educational subject, released November 14, the spectator is transported by train to the wonderful Redwood district

G. M. Anderson as Broncho Billy in "An Indian's Friendship," Essanay.

Augustus Carney in "Alkali Ike's Close Shave," Essanay.

of California, and many scenes en route are vividly pictured. Reaching the lumber camps, an immense giant of the forest, fourteen feet in diameter at the base and towering three hundred and sixty feet tall, is shown about to be felled. With double-headed axes the men hack the base nearly through from one side, then the undercut is finished from the opposite side with a saw. For a moment the giant totters, then falls with a crash. Next the bark is peeled, the tree cut into logs, and these logs are yarded out by means of a donkey-engine and conveyed on flat cars to the river, where they are launched into the water and yarded down to the main landing. This, together with magnificent views of hundreds of cleared acres of timber land, makes as interesting a full-reel subject as is often seen. The production is a distinct feature.

Picture Houses in North China Scarce

Consul General Samuel S. Knabenshue of Tientsin, China, says there is but one moving picture supply house in his district (Pathé Phono-Cinema-Chine, 16 Rue de France, Tientsin). The moving picture business is in its infancy in China, or at least in North China. There is one house there (the Arcade), which obtains its patronage almost entirely from the white population, including the soldiers of different nationalities stationed there. Several efforts have been made to establish a moving-picture house in the Chinese city to cater entirely to Chinese patronage, but such efforts have been only moderately successful; that is to say, the proprietors have not been able to establish a house permanently. Undoubtedly the taste for moving pictures will grow with the Chinese as it has in South China. At present the Chinese who wish relaxation in the evenings patronize the Chinese theater. There are a number of them in the native city of Tientsin, and all are well patronized.

New Haven Exhibitors Form League

The exhibitors of New Haven have formed an association known as the Motion Picture Exhibitors' League of New Haven. The officers are John Gentile, president; James J. Cannon, vice-president, and Mr. Fahy, treasurer. It is the intention of the New Haven association to interest the exhibitors of other Connecticut cities. The New Haven men have made a good beginning and will be a nucleus for a state organization. The immediate object of the organization is to make a strong stand before election and force the various political candidates to declare where they stand in the matter of Sunday opening.

Reliance Doing Industrials

The Reliance Company has entered the industrial film field on a large scale and has already secured contracts from several large advertisers. The first release will be called "From Cow to Consumer," and will cover the milk supply of a large city from the milking of the cow through all the various operations until it is placed upon the table. C. Lang Cobb directed the picture.

Current Educational Releases

Cotton Industry and Reunion Week.—Gaumont. Covers the cotton industry in the south and in New England, and gives views of the recent reunion week in New Haven, Conn.

Panama Canal.—Gaumont. The views are probably the best that have ever been obtained on the isthmus, and show work on the canal within a few months of the opening of the "Big Ditch." The enormous landslides at Culebra Cut are clearly indicated and give a comprehensive idea of the immensity of these cave-ins. With this film is given the visit of the United States battleships to New York harbor. Thirty-two titanic fighting craft are shown, more than a hundred million dollars worth of steel and iron collected within a comparatively small space. The Gaumont operators have accomplished remarkable results in photographing the battleships, many views being obtained in close proximity.

Straw Hats Made in Florence, Italy.—Cines. An interesting subject showing the selecting of the straw, plaiting of the straw by hand or machine, drying the hats, shaping and ironing, and the last finishing touches to place them in readiness for the market.

Reviewing French Troops by Airship.—Eclipse. "All aboard!" The ropes are released, and the great dirigible arises skyward. With her propellers revolving rapidly the huge craft soars over the beautiful parade ground where the army is maneuvering. After witnessing many interesting military scenes, we are taken over the city of Paris, which is spread before us in a series of panoramic views in which a splendid idea of the city is obtained, for the photography in the film is marvelously clear.

Life and Industries in Aden Campo, North Africa.—Cines. A fascinating travelogue, spreading before us many places of interest in and about the town of Aden Campo. We are shown the Square, the Marabut Shrine, the monument to Queen Victoria, many queer types of Arabs, Indians and Negroes, and several delightful views of the town and the picturesque bay.

The Town of Cognac, France, and Its Brandy Industry.—Eclipse. After viewing many picturesque scenes of this town on the River Charente, we are taken through a large brandy distillery, in which every step in the process of manufacturing the famous cognac is clearly shown.

Scenes of Irish Life in Dublin.—Vitagraph. The

Courtesy of the Edison," Nov. 2. Copyright 1912, S. A. P. Co.

characteristics of Dublin and its people, once seen, are not easily forgotten. The city and its outskirts are seen by the tourist from the vantage point of the tram-car, a two-story affair and very much different from an ordinary railway conveyance. At the Glondalkin Inn, the traveler is served by a pretty barmaid and is entertained by her Irish wit. The poor people of the city's outskirts farm their "bit o' land" and seem blessed with exceptional health and happy hearts.

Sulphur Industry in Sicily.—Eclair. Shows how these richest of all sulphur mines are worked and by the still primitive means it is done. Illustrates how it is run into trenches, then burned to a liquid state, which takes weeks of time. It is then run into moulds and in that shape is carried by mule-packs to the steamship docks.

Zoological Specimens of the Pond and Bruges.—Gaumont. From the Venice of the north come pictures of under-water life: the family affairs of the inhabitants of that world, their strong spirit of fight, which calls for the making and wearing of armor against attacks of enemies.

The Noodle Industry.—Lubin. An interesting industrial picture showing the process of making noodles. The scenes are taken in one of the largest baking plants in the world and located in Philadelphia. The clean atmosphere of the factory is a very agreeable information and will please the millions who enjoy the American macaroni.

Mosques and Turkish Palaces in Northern Africa.—Cines. Many beautiful edifices of the Church and palatial homes of the rich in the cities of northern Africa are spread before us in an unusually attractive manner. We are shown in turn the "Palace of the Bey," the "Palace of the Padro," the "Lion's Staircase," the "Kuba," the "Mosque of Padro Bey," and several other interesting buildings. Close views of the mosaic walls and columns are indeed remarkable and cause us to marvel at the designs and workmanship of these master builders of the east.

Specimens of Lizards and Frogs.—Eclipse. An interesting as well as instructive nature study, showing wall lizards, young alligators, queer creatures called geckos and monitors, and many specimens of frogs.

Venetian Lace Makers.—Cines. Every woman knows the beauty and value of hand-made Venetian lace, and will be delighted with this opportunity to witness the various processes of its manufacture. We are shown close views of the lace in actual making—every movement of the workers' hands can be followed in bringing the patterns to completion under their deft fingers.

"The Idyll of Hawaii," Nov. 23. Copyright 1912, American Film Mfg. Co.

The Geisha Girls of Japan.—Selig. A remarkable educational picture, taken in sunny Japan, showing the life and customs of the Geisha girls.

Biwa Canal and Shooting the Rapids of the Katsuragawa, Japan.—Selig. Another remarkable educational subject in which many points of interesting Japanese life are recorded for the first time.

Golden Shell of Palermo.—Cines. We are taken on a delightful trip along the poetical Palermo shores, during which we are able to view many of the most beautiful sights of the island, culminating with a glorious sunset scene in the "Golden Shell" on a summer evening.

Of Interest to the Trade

Nixon Talks on Photoplay in History

The forty-first anniversary of Chicago Day was celebrated in unusually impressive fashion on the evening of October 9th. It was observed in all the public schools of the city; neighborhood festivals were held at all the social settlements, together with the imposing exercises at the massacre monument on Eighteenth street and the lake by the Daughters of the War of 1812 and the Irish Fellowship Club, while in the evening the Society of American Research and the Chicago Historical Society had exercises at the beautiful home of the Historical Society on Dearborn avenue, the Selig Polyscope Company being the star guest of the night.

"The Thief's Wife," Nov. 18. Copyright 1912, American Film Mfg. Co.

Mayor Harrison presented a greeting, Thomas Dent of the Historical Society made an address, and Franklin Shepardson of the University of Chicago spoke of the scarcity of historic relics in this city. Charles E. Nixon, author of "Red Jacket," "Osceola," "Cortez the Conqueror," "The Coming of Columbus," and other historical plays and pageants, addressed the society on the possibilities for history in moving pictures, the address being followed by a display of 3,000 feet of film on historical subjects that had recently been made by the Selig Polyscope Company.

A portion of Mr. Nixon's remarks will be interesting to everyone interested in photoplays:

The vast, varied and potential possibilities of motion pictures may be cited as one of the absorbing interests and scientific problems of the time. The latter term is used advisedly, for although the photoplay has invaded a large space in the realm of popular amusements that have served the centuries, it has far from reached its acme as an art. If it has attained phenomenal popularity as a medium in serving the general public, its earnest, serious, scientific projectors aim at far more accurate and astonishing results. It mirrors, as it were, the very motions of nature and vividly impresses the emotions. One of the great considerations is to secure the sculptural values of life in the round and giving the moving picture stereoscopic solidity. Another aim is to synchronize it with sound—so that it will become wedded with the tonal engraving of the phonograph to vocalize the impression of life; and finally, when the colors of nature are incorporated, the illusion will approach perfection.

This is neither the time nor the place to elaborate upon the aims and ambitions of a new art and a great industry that even its best expositors admit has not yet sounded either its depths or exploited its infinite variety. It is the only form of legitimatized amusement enterprise that has voluntarily submitted to a board of censorship to keep its channels clean, to make it genuinely wholesome. The public owes a debt of gratitude to John L. Stoddard as a progenitor in the illustrated lecture field, likewise to his successor, our own Burton Holmes, and his stalwart and artistic elder brother from the City of Churches, Dwight Elmendorf. These distinguished gentlemen, who have long occupied a unique position in the esteem of the thinking public, would undoubtedly give meed of praise to moving pictures as a most valuable adjunct for the perpetuation of their popularity.

Aside from the almost universal vogue of animated photography as a current factor of amusement in the vitalization of stories grave and gay, in the dramatic and spectacular forms, it has a far higher rating in the informing and scientific values that is already attracting the attention and approval of educators. The materialization of the big events of history is both a difficult and delicate operation, and the earlier efforts in this direction should be viewed with patience and liberality rather than too closely criticized—for historians, as well as doctors, disagree.

When William N. Selig, head of the Selig Polyscope Company, saw opportunities for pictorially reproducing the greatest event since the beginning of the Christian era, in "The Coming of Columbus," there was no immediate response upon the part of the public conservators to aid such a movement essentially educational, because it was merely a private enterprise. It was only after tireless work in the missionary and monetary way that the crux of the picture—the original caravels that came to Amer-

ica as the gift of Spain were secured, that the work became possible and since has twined its films around the world as the greatest picture play of the time.

The informing value of such subjects as the great work of the Panama Canal Zone, the making of steel, the art preservative, as illustrated in the government printing offices at Washington, the securing of the habits and customs of the Indians, showing the homes and the industrial work of the vanished races of cliff-dwellers, and other useful arts embodied in pictures, but faintly show the vast range of activity of service performed by the Selig Polyscope Company. The accurate and tireless eyes of their camera have preserved for posterity the quaint picturesque customs and industries of old Japan and have followed Professor Starr, of the Chicago University, along the wilds of the Amazon and through equatorial Africa into the homes of the cannibals and the haunts of the pygmies. In the natural history line their industry has been equally useful and astonishing in recording such remarkable plays of wild animal life as "Back to the Primitive," "Lost in the Jungle," Captain Kate" and "Kings of the Forest." This sort of entertainments really disarm the fond grandparent of the time-honored excuse of "taking the children to the circus," in order to see the menagerie.

The excursions into history, under these auspices, have been most carefully studied and environed in the most consistent manner. The possibility of reproducing great historic events has been in their power because all the energies of highly trained specialists are called into play to work for ends that command respect of those who believe in the proper impressions of great historical matters of moment that have changed the tides of nations.

At the conclusion of the lecture and the display of pictures the chairman of the meeting asked for a rising vote of thanks for the Selig Polyscope Company—and the officers of the Society of Historical Research expressed their heartiest interest in the new departure that promised so much in the educational line.

Moving pictures have been made a prominent feature of the religious services of the United States army posts during the summer, and word comes from Boston, Mass., that as the plan has worked so well, Biblical stories will be illustrated in such manner during the winter.

Health Department Warns by Film Story

Moving pictures will be used in an educational campaign soon to be conducted by the Chicago health department for the purpose of establishing a better system of birth registration. Importance of this parental duty to the baby, it is believed, can be brought home more sharply through films. Dr. C. St. Clair Drake of the health department has written a scenario portraying the obstacles that may be thrown in the path of a man through the failure of his parents to register his birth.

Birth registration, according to Dr. Drake, who is editor of the health department bulletin, is, in spite of its importance to the individual and to the sanitarian, notoriously imperfect in this country. No state in the country has anything resembling a complete registration and the entire nation is declared to be behind Europe in this respect. It is believed that an active campaign, by health officials will produce great results and prompt instant registration after the birth of a child.

"Jim Bentley's Adventure," Nov. 16. Copyright 1912, American Film Mfg. Co.

Teachers Plan Educational Film Exhibit

Every school will have its moving picture machine some day, the modern schoolmaster believes, and to encourage this up-to-date method the Brooklyn Teachers' Association will give a special exhibition at the Brooklyn Training School for Teachers on October 31, and possibly on November 1 as well. The idea originated with Frederick W. Memmott, principal of Public School No. 2 of Brooklyn, and chairman of the Brooklyn Teachers' Association's committee on school problems, and a comprehensive programme is being arranged for the evening, which will show how motion pictures can teach literature, history, geography, agriculture, bird and insect life, botany, zoology and chemistry.

Some of the pictures which may be exhibited that

evening are: "Hiawatha and Minnehaha," "From Moth to Butterfly," "Wonders of Plant Life," "From Egg to Chick," "The Animal Kingdom," showing sea lions, Indian elephants, and the animals trained by Hagenbeck in Hamburg; a model farm in Argentina; On the Bank of the Ganges; Chemical Action Upon Aluminum, Magnesium, and other metals, and boys at drill at Reedham, England.

Mr. Memmott believes that it will not be very long before the moving picture machine will be a necessary adjunct to every well-equipped school, and it will add vividness and interest to the lessons and impress upon the minds of the pupils ideas that will not soon be lost.

Safeguard Picture Patrons in Ohio

Ohio Factory Inspector Kearns of Dayton has started a movement to further protect the safety of the many thousands of people who daily throng the moving picture shows in the state of Ohio. He has issued a general order for the stringent enforcement of the law prohibiting the turning of motion picture reels by motors or other devices, and the department's inspectors will make an immediate examination in Dayton and other cities to see that this law is obeyed. It is declared that when automatic devices are used to turn the motion picture reels, the operators are apt to leave the booths, and, in case of fire, the blaze gains much headway before discovered.

Selig Offered Use of War Relics

Through the courtesy of Charles F. Gunther, who has the distinction of owning the largest collection of Spanish American and Civil War relics in this country, the Selig Polyscope Company will be enabled to use any and all of Mr. Gunther's various historical chattels that they desire, in the production of historical pictures. The original flag of the Merrimac will be borrowed from Mr. Gunther and utilized in a forthcoming production by the Selig Company.

Newman Very Busy

The Newman Manufacturing Company, Cincinnati, Ohio, and New York City, has contracted to furnish all of Jake Wells' circuit of theaters with all their brass work, which contract represents quite a tidy sum. This firm is the largest manufacturer of this kind of goods, making a specialty of brass poster and photo frames, brass push plates, brass rails, and brass program signs. Business is so good that the company is of necessity compelled to operate the plant until 9 every night. The New York plant, in charge of S. and E. C. Newman, at 101 Fourth avenue, has lined up quite a number of theaters during the past month in the Eastern and New England states. This firm furnished all brass rail work and brass lobby display frames and easels for the new Colonial theater in Dayton, Ohio, one of the prettiest theaters in the country. The Newman company was selected to do this work on account of the high class of work it turns out and the excellent reputation it bears, having had thirty years' experience.

King Alfonso in Many Picture Poses

King Alfonso of Spain has gone cinematograph mad. Formerly he kept at his various palaces four court photographers, whose business it was to snap his majesty at all times and in all postures. He has now installed a moving picture operator at the palace at Madrid, and he seldom lets a day slip without looking in at the royal bioscope theater, a converted billiard room. Here are thrown on the screen daily the very latest pictures of the monarch.

Film Advertising and Educating Abroad

According to Deputy Consul R. J. Novakovitch, Belgrade, Servia, American fashions seem to have become suddenly popular in Servia. Within the last half year one frequently sees in Belgrade men—and more particularly young men—with their hair cut in American fashion, while their clothes bear unmistakable signs of the local tailor's effort to imitate American styles.

These facts, and the unprecedented demand at the stores there for hats, boots, and other wearing apparel of the kind in vogue in the United States, make one, out of pure curiosity, seek the reason for this newly evinced taste for things American; and investigation seems to point to the cinematograph show, especially the production of moving pictures depicting life and events in the United States, as the main factor in creating this demand for American goods. American films are the chief attraction of the cinematograph shows there. The scenes greatly appeal to the people, so much so that the younger generation, as already said, try to imitate the actors in outward appearance. This circumstance in itself suggests the possibility of utilizing the Servian liking for moving-picture shows to boom American manufactures by cinematograph.

The Servian tradesman is very much inclined to conservatism, especially in opening up new relations with a distant country whose language, currency, weights and measures, and commercial usages are all strange to him and all so much at variance with his accustomed mode of dealing with producers in Austria, Germany and Italy. The surmounting of these obstacles would best be served by developing the public taste for American goods to such an extent that the demand for them becomes so constant and general that the Servian merchant must of necessity keep a stock on hand, and the moving-picture film seems to be, at least so far as Servia is concerned, a most admirable means to achieve this result.

The adoption of this suggestion does not seem to present much difficulty. It is to be expected that proprietors of existing shows would be only too glad to enlarge their regular programs by a few reels attractively depicting the manufacture or utility of this or the other American article, especially if the necessary films were placed gratuitously at their disposal by the interested firms. The risk, as some might contend, that the likely scope of business to be done in the country (roughly 3,000,000 inhabitants) would not warrant the expense of having the films made could be practically eliminated by arrangements for their display in other cities of the Balkan Peninsula—Sofia, Adrianople, Constantinople, Saloniki, Athens, Bucharest, etc.

Fairs and agricultural exhibitions offer, incidentally, good opportunities for direct cinematograph advertising by showing to those interested modern agricultural implements and machinery in actual use and operation. As few Servian farmers have as yet had opportunity to visit moving-picture shows, the novelty of the thing could not fail to leave a lasting impression. Agricultural machinery and implements have been mentioned only as an example. There are many articles which, though in general use in more advanced countries, are as yet practically unknown there. Railroads are being built just now throughout the Balkans, opening up new territory and creating new or modernizing existing industries. Woodworking machinery and mine equipment are two other classes which have a bright future in the Balkans and offer good reward to the enterprising business man. Leaflets giving the more important data about the article shown, also price, name of nearest agent, etc., could be distributed to advantage while the various advertising films were being thrown on the screen.

Cinematograph advertising seems to recommend itself especially for those cities where the establishment

"Man's Calling," Nov. 11. Copyright 1912, American Film Mfg. Co.

of a commercial museum does not appear sufficiently attractive to the American shipper, for it shows the practical working or use of any article, no matter how large or small; it entails no cost of maintenance; it can conveniently be moved from place to place by mail; and there is no risk that an article lent for exhibition purposes, as in a commercial museum, be damaged or lost.

Consul General R. M. Bartleman, Buenos Aires, Argentina, reports that for the enlightenment and education of the newly arrived immigrants lodged at the government's hotel in this city it has been decided to install the moving-picture plant which was used in Argentina's display at the Turin Exposition. It is expected that the views of the country and its agricultural and cattle industries will be a help to the immigrant in adapting himself to his new surroundings.

There are 55 moving-picture theaters and 45 cafes showing moving pictures in Buenos Aires. In 1911 nearly $850,000 United States gold entrance fees were collected, but this amount does not take into consideration the returns of the cafes. The Republic imports about 2,000,000 meters of films annually, the duty on which is 27 per cent on an appraised valuation of $4.83 (United States gold) per kilo (2.2046 pounds), a film 2,000 feet in length weighing about 4 kilos. At the present moment dramatic films of a comic nature have the run. Western (American) cowboy films are also great favorites, as well as industrial films, but comedy, magic, trick, fantastical, allegorical, and sensational films with plots are all well liked in South America. The average bill at a theater is consistent with the size of the programs given in the United States.

Consul F. B. Keene, Geneva, Switzerland, says there are in Geneva (a city of 132,000 inhabitants) not less than ten permanent cinematograph shows, several cafes where occasional presentations are given, and two or three places where the display of films partially serves as an advertisement. It is said that each day 140,420 feet of films are unrolled before the eyes of the public in Geneva.

The Department of Justice and Police and the Department of Public Instruction are about to prepare a ruling (1) to regulate discipline of public school children when out of school, following other Swiss cities in this line relative to home-going time, smoking, public spectacles, etc., and (2) to forbid entrance to public places where cinematograph views are shown to children not accompanied by their parents or guardians, exception being made in the case of films prepared for school children and approved by the department of public instruction.

A new film company has been organized in Topeka. It is called the United Film Company. The members are O. T. Crawford of St. Louis and S. R. Wells, Jack Truitt and Nate Erber of Topeka. The firm has secured the exclusive rights of the Atlas Manufacturing Company of St. Louis. The Atlas releases in Kansas will be controlled by the new company.

Motography Publication Dates

Since MOTOGRAPHY has changed its publication date from the first day of each month to every other week, there has been more or less confusion regarding the time when advertiser's copy should be in our hands. This table will supply the information:

Publication Date	Closing Date
November 9	November 4
November 23	November 18
December 7	December 2
December 21	December 16

A Remarkable Cut-Out Poster

An extremely elaborate piece of advertising matter for the use of exhibitors is the twelve-sheet mounted cut-out on Selig's "Kings of the Forest." The design and construction of this work was very expensive, as

Selig's Cutout Poster for "Kings of the Forest."

might be supposed. The frame upon which the poster is mounted is heavy and substantial and folds in three sections. The poster is varnished and a shipping case included with each cut-out. It really makes a very striking display.

The Selig Polyscope Company acted as host at its mammoth plant on the northwest side of Chicago during the forenoon of Wednesday, October 16, to nearly seven hundred members who were attending the seventh annual convention of the American Meat Packers' Association of the city. The visiting body made their trip to the plant in some hundred and fifty automobiles with pennants flying and banners waving. At eleven o'clock, as the packers arrived at the Selig plant, a moving picture was made by the Selig cameras of their approach, two hours later, this same picture was exhibited to the meat barons at their banquet at the Rienzi cafe.

The Essanay Company is arranging to send a company of players to Ithaca, N. Y., for the purpose of securing some corking good football pictures at Cornell University. Theodore Wharton, director of the company, returned the past week from the East, after completing arrangements for the trip. Mr. Wharton has a number of excellent football scenarios on hand.

DAILY "FILM SUPPLY" RELEASES

(Independent)

MONDAY: American, Comet, All Star.
TUESDAY: Thanhouser, Majestic, Gaumont.
WEDNESDAY: Reliance, Solax, American, Gaumont Weekly
THURSDAY: American, All Star, Gaumont.
FRIDAY: Thanhouser, Solax, Lux.
SATURDAY: Great Northern, Reliance, Comet.
SUNDAY: Thanhouser, Majestic.

DAILY UNIVERSAL RELEASES

(Independent.)

MONDAY: Imp, Nestor, Champion.
TUESDAY: Gem, Bison, Eclair.
WEDNESDAY: Powers, Nestor, Animated Weekly
THURSDAY: Rex, Imp, Eclair.
FRIDAY: Victor, Powers, Nestor.
SATURDAY: Bison, Imp, Milano.
SUNDAY: Eclair, Rex.

Brevities of the Business

PERSONAL NOTES.

Messrs. Verneau and Cohl have come from France to aid in the further producing of Eclair's films. Mr. Cohl, before taking up directorate work in the picture field, was a foremost cartoonist in France. He will put original ideas into effect in his production of animated cartoon drawings.

M. J. Jourgon, of Excelsior, is successor to Harry R. Raver, who resigned as member of the board of directors of the Motion Picture Distributing and Sales Company.

Frank Egan, of Los Angeles, Cal., has arranged with James K. Hackett for the latter, with his entire company, to present "The Bishop's Candlesticks" for film purposes.

Charles Giblyn and William Clifford have been added to the Bison's staff of directors. Giblyn was formerly with Oliver Moroscoe and Clifford is from New York.

Henry Stanley, who is Orlando Pegran in real life, is with the Melies people in Haiti. He was formerly with the Bison company.

Thomas H. Ince and Fred J. Balshofer are among the prominent picture people who organized the Broncho Company which is making western and military life pictures at the Bison "101" ranch studio at Santa Barbara, Cal.

Lillian Hayward, of the Selig Edendale plant, was the latest hostess to the company's "500" club.

True Boardman is a new leading man with the Essanay Film Company at Niles, Cal. He is with the Arthur Mackley company. Mr. Boardman was a one-time leading man in stock in California.

Charles G. Husted has returned to New York and the Reliance Film Company after a visit to the Pacific coast.

R. C. Rabey, the travel-lecturer, will describe a number of film scenes of Texas in various cities in New York and New England. The films will be furnished by the Southern Pacific advertising department. Pictures of the cotton, rice and oil industries will be among the principal ones to be shown.

Edward Roskamp is general manager of the newly opened offices of the World's Best Film Company.

Joe Welch, the clever character portrayer, has arranged with the Universal Film Company to play the lead in a reel production to be called "The Peddler."

C. B. Clapp is a new member of the Biograph forces. He formerly was motion picture editor for the *Mirror*.

Harry Warner will be the western manager of the Warner's Features Company.

C. A. Willatt is arranging to go to Los Angeles, where he will reorganize the Bison plant. Mr. Willatt is general manager of the New York Motion Picture Company.

Mae Hotely of the Lubin company is playing juvenile and heroic leads in contrast to the character parts she formerly played.

Isabel Lamon and Mathilde Baring, 'tis said, are deserting the Eclair studio for that of the Lubin company.

David Miles, Joseph Le Saint and Frank Woods are in charge of the Kinemacolor company which has gone to Los Angeles for the winter.

Romaine Fielding, directing the productions of the Lubin stock company at Prescott, Ariz., has received the appointment of deputy sheriff.

E. B. Lockwood, Kinemacolor's publicity man, came to Chicago to be in charge of the opening at the Fine Arts theater.

Russell Read, of the Thanhouser company, and Rhea Eline, nine years old, and also a member of the company, met with an accident recently while enacting a rescue scene among the wrecked cars at Saugatuck, Conn. Read was carrying the little girl, when he tripped over some wreckage while escaping through the window of an overturned coach, and fell with his girl-burden beneath him. Rhea was painfully bruised and cut, but Read's only injury was a sore knee.

William J. Burns, the noted detective, has been secured by the Kalem company, it is claimed, to appear in a film entitled "Detective Burns in the Exposure of the Land Swindlers." The story will tell an actual experience of Detective Burns.

To B. N. Judell is accorded much of the credit for the rapid progress made by the new Mutual Film Corporation office in Minneapolis, Minn. He left the Milwaukee office of the Western Film Exchange to assume his present office, and is living up to his reputation as an excellent booking agent.

George Nicholls, producer, whose specialty is stupendous military pictures, has resigned from the Gem management.

Florence Barker will join the other players at the Universal plant at Los Angeles soon, and looks forward to the event, as it will mean a winter's stay with her mother and sister, who make their home in that city.

H. E. and Roy Aitken, representing the Mutual-Majestic Reliance companies, are arranging for feature subjects in Europe.

Barry O'Neil, general director of the Lubin company, has brought the troupe back to Philadelphia after thirteen successful weeks of picture taking at Cape Elizabeth, Portland, Maine.

K. W. Linn, after a three months' tour of Europe, expects to arrive in New York about November 1.

Major J. A. McGuire, for many years in the motion picture business, will be assistant director to Rollin S. Sturgeon for the western Vitagraph company at Santa Monica. Occasionally he will appear in pictures.

William C. Dowlan has succeeded Jack Conway as leading man in William H. Fahrney's company at the Universal's western plant. Louis Fitzroy is a new character man in the same company.

F. C. Gunning, a newspaper and advertising man, has taken charge of the publicity work of the Universal Features Company and the Pictorial Film Publicity Company. He will also do some special work for the Eclair Film Company.

Charles G. Husted, secretary of the U. S. Film Company, en route to the City of Mexico with a company of thirty-six players, has reached Los Angeles. The travelers left New York August 18; they are taking a circuitous route and many pictures.

Joe B. Warshauer has left New York to represent the Great Northern Special Feature Film Company throughout the south.

William B. Ranous is again on duty at the Vitagraph plant after a serious illness.

Miss Lily Branscombe, who for the last year has become popular wherever motion pictures are shown, by her splendid taking of leads for one of the troupes at the Essanay's eastern plant, has left the company to take a rest which is the first indulged in for three years. She claims to have no definite plans for the future beyond complete enjoyment of her vacation, which is to be of indefinite length. The well wishes of the Essanay company and of the many friends Miss Branscombe has made during her year in Essanay pictures will accompany her in whatever work she undertakes.

W. C. Robinson, a well-known motion picture man of the west, who for the last seventeen months has been connected with the Moore & Green Amusement Company of Denver, Colo., has assumed the management of the Lyric theater at Cheyenne, Wyo., succeeding Mr. Farnsworth, who is now in California, and who it is understood will engage in business there for himself.

Siegmund Lubin, the moving picture capitalist, accompanied by his son, called upon Superintendent Robinson recently and after congratulating him upon his promotion as head of the police department handed him a check of $100 to be applied to the Philadelphia Police Pension Fund.

William J. Bauman is meeting with remarkable success as a producer for the American Film Manufacturing Company. Mr. Bauman played leads in many of the most successful plays on the legitimate stage; he shared with Miss Adelaide Keim the honors in "Prince and Pauper," in stocks such as Keith's and Albee's. His reputation as a playwright is of no mean proportion, as he is the author of "Twenty Minutes for Lunch," and "Little Mother." He wrote and produced "The Devil," "The Servant and the Man." Together with J. K. Friedman he wrote "The Family Entrance," and for a long time directed Clay Clement. His grandest success in moving pictures is the production of Opie Read's "The Starbucks." As Mr. Bauman is still a comparatively young man he bids fair to acquire a most enviable career. The American Film Manufacturing Company is to be complimented on securing so capable a producer.

William Ham of Linton, Ind., and A. Stewart came to Chicago to book "Gypsy Blood" on the Illinois state right basis. Both men were pleased with Chicago courtesy and surprised at the beauty of Chicago's picture theaters.

Nicholas Power has returned from his six months' stay in Europe and is again at the head of affairs at the Power's plant. His trip is said to have renewed his health and energy and furnished him with some new ideas as regards projecting machines.

King Baggot will appear shortly in three new releases, which are, "King the Detective and the Opium Smugglers." "The Necklace," and "John Smith, Alderman."

George H. Wiley presides in the office just opened in Kansas City, Mo., for "Warner's Features." Room 305, Shubert building, is the address. Mr. Wiley is president of the Missouri branch of the Motion Picture Exhibitors' League of America.

President Goebel, he of the St. Louis Motion Picture Company, made a recent business trip to New York.

Theodore Wharton, Essanay director, will have charge of the troupe of players to be sent to Ithaca, N. Y., to secure football pictures at Cornell University. The Cornell team will cooperate with the troupe in making the pictures a success.

J. Roy Hunt, who, as a camera man, has been representing the Gaumont Company in the South, went aboard the Hamburg-American steamship, the Cleveland, October 19, for a cruise round the world. On this voyage he will expose, exclusively for the Gaumont Company, about twenty-five thousand feet of film. Many of these views will appear on the Gaumont Weekly. Another Gaumont Weekly operator is touring the world westward.

B. E. Clement has opened an office at 634 Marquette building, Chicago, where he will talk New York feature films to all comers. Headquarters are in New York City, in the Marbridge building.

Mabel Trunnelle and Herbert Prior will feature in the two-reel release being prepared for the Majestic Company by Oscar C. Appel. The film is Steele Mackaye's "Hazel Kirke."

Harry Harvey has withdrawn from the directorate of the Solax Company. He has had sixteen years' general experience in the film game and has several propositions under consideration at present.

Edgar Jones comes from the Liebler and Company players as one of the newest recruits to the art of photoplay acting. He has played important roles with Kyrle Bellew, Harry Miller, Viola Allen and other noted stars. He is affiliated with the Lubin Company at Philadelphia where he is qualifying as a rough rider and a generally fine actor.

D. Mundstuk and H. B. Fitzpatrick are the owners of the M. and F. Feature Film Service Company which has fitted up quarters in Room 1005 at 167 West Washington street, until their permanent suite at 805-06, the same building, shall be ready. Both men are exhibitors with wide experience. Among their first releases will be a three reel film telling a story, the original happening of which was seen by Mr. Mundstuk, himself. It will be entitled, "Sentenced to Siberia."

Lawrence Grant gave his first explanation of the pictures, "Yellowstone National Park and Crow Indian Celebrations." for the Kinemacolor company, on October 21 at Tremont Temple, Boston. Mr. Grant, to whom such work is especially familiar, was engaged by Henry J. Brock, president of the company, who feels that motion pictures in the color of nature have a big field.

Chester Barnett, who attained much honor on the legitimate stage, has joined the Crystal Film Company. He played to Miss Frances Starr's lead in "Rose of the Rancho," under the direction of David Belasco and was a member of Ben Greet's company, famous for its portrayal of Shakespearean plays.

Mr. Beck is westward bound in the interest of the Special Event Company. He will take a number of special pictures for large railroad companies in California, spending his time en route on the observation car, from which flying view point he will take many educational picture series.

Warren Kerrigan was the model for the painting typifying the American Cowboy, which was recently hung in the South Wales Art Academy at Cardiff. The painter is a London artist who, seeing Kerrigan in the film, "The Call of the Range," pronounced him a perfect specimen of manhood and representative of the true cowboy. He procured a photograph from Kerrigan and from this perfected the figure of the cowboy on a spirited little pinto.

Arthur D. Hotaling has taken the Lubin Comedy Company to Jacksonville, Fla., for the winter, where a studio will be built and the company given every advantage necessary for the making of successful southern pictures. Among the twenty-six people in the troupe are the two Misses LeMoyers, George Reehm, May Hotely and Walter H. Stull, who are among those of the old company to be retained.

M. Neilan has succeeded Ed Coxen in the Kalem camp at Santa Monica, Cal.

Ella Hall is now a player of ingenue roles with the Oak Crest, Cal., Pathe Company. She formerly was with the Bison and Nestor companies.

Harold Lockwood has resigned as leading man with the Bison Company to assume a like position with the Selig people at Edendale, Cal.

V. R. Day, manager of Essanay's Chicago office, is confined in the Park Avenue Hospital, suffering from a broken ankle bone. Mr. Day sustained the injury during a visit to the Argyle street plant last week and, though extremely painful, the break is knitting nicely and Mr. Day expects to be back at his desk very shortly.

Edna Maison who formerly played leads at the Pathe studio at Edendale, Cal., has joined the Nestor Company, at Oak Crest, where she is taking leading roles.

George K. Spoor, president of the Essanay Company, returned from Philadelphia last week. Two days spent in the Quaker City were plenty, according to Mr. Spoor's reports, and he slept soundly all the while. Great place for insomnia.

ROLL OF THE STATES.

ARKANSAS.

The Arkade moving picture theater at Arkadelphia, owned by F. A. Saunders, has moved its place of business to new quarters at Seventh and Main streets.

CALIFORNIA.

A week-old motion picture theater at Gridley was damaged by fire recently, when a film burned. The operator and patrons of the theater escaped unhurt and the fire was soon under control. The cause of the explosion is not known.

A new moving picture theater will be opened at Orange in the Moore building on North Glassell, which has been leased for that purpose by B. W. Maxwell, a San Luis Obispo man. The building is to be lengthened by 40 feet, and the entire front remodeled in regular theater style.

A moving picture house will be opened in the Strifler at Pasadena.

A contract has been let for the erection of an open-air theater for Ganesha Park, Pomona; cost $40,000.

COLORADO.

The illumination of the new $300,000 Paris moving picture theater, 1751 Curtis street, was a recent event in Denver. The electric candle power of Curtis street, considered the best lighted thoroughfare in Denver, was increased from 250,000 to 286,000 by the illumination. The lighting of this new structure is credited to be the most beautiful Denver has ever seen. Five thousand lamps, giving a candle power of 36,000, were used on the building. The theater is strictly a home product and every bit of material used in its construction was made in Denver or Colorado. Only steel, brick and cement were used, which makes it absolutely fireproof. It has a seating capacity of 2,300 and is beautifully appointed.

KANSAS.

The new Jewel motion picture theater on East Main street, Independence, formerly the Lyric, has opened under the management of F. L. Smith.

KENTUCKY.

The Cardome School, near Georgetown, has installed a moving picture apparatus.

IDAHO.

The Princess theater, a moving picture and vaudeville house at Kellogg, has been sold by L. O. Beyer to G. M. Wilson and F. F. Moe of Harrison, who took possession of the business October 10. The purchasers are well known business men of Harrison and have been owners of a theater there.

J. W. Chittenden will erect a new moving picture house at Lapwai.

ILLINOIS.

A. E. Long, formerly of Galena, has opened a moving picture theater at Mendota. Alfred Dockstader of Savanna is operating the machine.

A motion picture house to be occupied by A. C. Woodyatt, who now is proprietor of the Lyric theater on Sixth avenue near Fifteenth street, will be erected at 1611 Fifth avenue, Moline. The dimensions of the building will be 125x35 and the seating capacity will be 700. It will have a sixteen-foot ceiling and will be modern in every particular. The approximate cost will be $12,000.

At 1616 Devon avenue a one-story brick theater and stores will be built by C. Grady, 1500 Republic building, Chicago.

A contract has been let for a theater building for the Metropolitan Amusement Company, at Madison near Forty-fourth avenue, Chicago. C. W. Christensen, architect.

Earl Scott, son-in-law of ex-Mayor Burkholder, has purchased the Marrymore theater in Moline. Mr. Scott will redecorate and refurnish the theater throughout after which he will convert it into a moving picture house. The theater has a seating capacity of 1,200.

Barron Brothers will be the owners of the three-story theater store and loft building to be erected at a cost of $16,000 at 1911-13 West Van Buren street, Chicago.

A new moving picture theater will be opened on First

between Joliet and Marquette streets, La Salle. Peter Mackiney and Thomas Whitfield, managers.

The National Moving Picture Manufacturing Company has been incorporated at Chicago with a $5,000 capital, by Archibald McKellar, Henry Eckhardt and Frederick H. Kay.

Bids are being received for a new theater building for the North Shore Investment Company at Chicago. C. W. and George L. Rapp, architects.

William Morse has reopened the old Star theater in the Hunt block in East Main street, Aurora, with complete new fixtures. Charles Cope is operator of the motion picture equipment. A thorough fireproof iron cage for the operator has been built in the theater and the place otherwise improved. An orchestra furnishes music at all regular performances.

A contract has been let for the erection of a new moving picture theater for Percival W. Jones, owner, at Chicago; cost $50,000.

Popular Theater Company, Chicago; $2,500; management of five-cent theaters; Louis D. Levi, Wladyslaw Pawerewski, Wenzel J. Leve.

INDIANA.

The Home Motion Picture Company has incorporated at Muncie, Ind.; capital stock, $30,000. Directors, Harry R. Wysor, Burt H. Whiteley, C. Ray Andrews.

The Hamilton Amusement Company, a new organization incorporated for $10,000, has begun work on the erection of a $10,000 moving picture theater at 2114 East Tenth street, Indianapolis. The theater will have a seating capacity of 600, and will be opened about November 20 as a five-cent showhouse. Members of the company and the incorporators are: Charles A. Allen, William E. Deno and William C. Allen. Mr. Deno is an experienced moving picture theater operator.

The Olympic Theater Company of Churubusco has filed articles of incorporation at Indianapolis with a capital stock of $5,000, and with F. C. Ort, F. M. Sonday and W. Z. Smith as the chief stockholders. The new building was erected during the past summer by popular subscription and is a model structure in every respect.

A new moving picture theater will be opened at South Bend by John G. Berschiet of Aurora, Ill.

IOWA.

L. J. McClinton will be manager of a new theater to be opened up in Cedar Falls.

The grand opening of the Davenport theater at 1119 West Third street has taken place. It is declared to be one of the finest picture theaters in the state and is open every evening, with Saturday and Sunday matinee. William Reimers is proprietor.

Manager B. F. Wright sold the Gem theater at Charles City to Misses Ella and Maud Spensley of Independence.

MICHIGAN.

A contract has been let for the erection of a new motion picture house at Menominee. Harry Cohodas of Houghton, manager.

J. T. Starks of Grand Rapids, proprietor of the Ideal theater, will erect a new building directly across from the present location of the Ideal. It will be constructed of concrete, with a stage 23x14. The seating capacity will be for 500.

LaVerne Lavanseler of Royal Oak is building a moving picture show on the Poppleton property at Birmingham.

Harry L. Johnson, Antigo, Wis., has purchased the Princess theater at Muskegon and will remodel same.

With the culmination of plans now under way and nearly perfected, Kalamazoo will in a few months have the finest animated picture and photoplay theater in the United States, with the exception of New York city, costing $100,000, and a house, too, where the admission price to see the very latest, costliest and most perfect films, depicting the noted actors and actresses of the world, will be but five cents. Although, for business reasons, the name of the promoter of the newest theater undertaking is withheld from publication, he is a well-known Kalamazoo financier.

MINNESOTA.

The Lyceum theater, which was opened to the public at Thief River Falls, cost $13,000, complete with chairs and stage scenery. It is 25 feet wide by 140 feet long, and has a seating capacity of 500. The latest convenience for heating, lighting and ventilation have been installed. Roy Morgan is the owner of the building, which is claimed to be one of the finest of the kind in the state, as far as interior appointments are concerned.

H. B. Hanson has opened the Star theater at Maurek's, Austin.

MISSOURI.

American Feature Film Company, St. Louis; capital $6,000. Incorporators, M. J. Miller, John Ellman and Charles Werner.

Charley Jackson has rented the Dr. Sargent room and has opened a moving picture show. He will run three nights out of the week, using the other three nights at Bolckow and some other town on the Creston branch.

NEW JERSEY.

A large addition is soon to be made to the recently completed moving picture theater at 990 South Orange avenue, Newark, which is owned by the Hope Amusement Company. Plans for the improvements, which will involve an expenditure in the neighborhood of $18,000, have just been drawn by Romolo Bottelli. The work will consist of additions to the side and area of the present structure, which, when completed, will cover a plot 42x125 feet. It will have a balcony, which will be constructed of reinforced concrete, as will the roof, so as to provide a roof garden. The building will have a seating capacity of 850.

All theaters in third-class or frame buildings at Atlantic City have been notified to cease showing moving pictures. Eight of these were notified to close their doors by the Building Department under orders from Commissioner Bartlett. All these places will remain closed so far as the moving picture business is concerned until the buildings in which the shows are given shall be made fireproof or at least of the slow-burning type.

NEW YORK.

The Dreamland Motion Picture theater at Oneida is closed for a few days while a new fireproof steel operating cage is being installed. The house is being rewired throughout.

The Mutual Film Corporation Missouri, New York city, capital stock $5,000, has incorporated to acquire and operate motion picture films and exchanges. Incorporators, H. O. Coughlan, Joseph F. Curtin, New York city.

Plans for a pretentious moving picture theater which A. E. Wheeler is to build in Syracuse at the corner of Lexington avenue and Cherry street have been practically completed. Erection of the building, which will have a frontage of twenty feet on Lexington avenue and a depth of ninety feet, marks the moving picture show invasion of the Seventeenth ward, which at present has no minor playhouses.

William H. Farnum announces that he has made arrangements for the building of a new moving picture theater on his lot in Genesee street, north of the St. George Hotel, Avon, and that he has leased it for a term of years to a Rochester operator. The building is to be fireproof.

Quadruplex Safety Picture Machine Company, Inc., Manhattan, has been chartered to deal in picture machines; capital $500,000. Incorporators, E. B. Biedler, A. E. Sunderhauf, W. Biedler, New York city.

The Van-Halstead Amusement Company, Amsterdam; theaters, opera houses and moving shows; capital $10,000. Incorporators, Charles I. Halstead, Mary B. Halstead, both of Rochester; George H. Van Demark, of Elmira.

NORTH CAROLINA.

The Edisonia motion picture theater has reopened under the management of Mr. J. W. Anderson, a well-known motion picture man of Birmingham, Ala. The theater has had a thorough overhauling and a new front and lobby have been installed. The Edisonia is one of the oldest and best-established of Charlotte's picture houses.

NORTH DAKOTA.

The new moving picture show at Hettinger has opened. The local house is on a regular moving picture house circuit, including Montevideo, Aberden, Lemmon and Miles City.

OHIO.

Woodward Theater Company is erecting a brick picture theater building at Main and Webster streets, Cincinnati, to cost $10,000.

A new moving picture theater will be opened in Toledo. Walter B. Moore is the manager.

Dr. Edward Behymer, 3848 Eastern avenue, will build a concrete and brick picture show building at Cincinnati, to cost $7,000.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY, as they may be obtained of the manufacturers.

OTTAWA TALKS

From The Rex Theater

FILM SUPPLY COMPANY,
New York.

Gentlemen:

Your prompt and courteous co-operation in reply to my letter induced me to decide in favor of your films and I am very much pleased.

I will send you photos of the inside of the theater so you can see for yourself what we are doing.

Thanking you and assuring you of our support, I am,

Yours,
Harry De Witt Carr,
Manager Rex Theater

LET US HOOK YOU UP TO A LIVE SERVICE

OPENING THE SCHOOL DOORS.

HOW can the motion picture be advantageously incorporated into the school course?" asks Josephine Redding in the *School Board Journal*. The fact that so much interest is being shown in the question by that and other educational publications is an assurance that it will be so incorporated in time. The matter of ways and means, however, is a little puzzling at present.

Here are some of the views of the writer above referred to:

The child's unappeasable delight in pictures that move indicates how potent a method of school education it can become if and when it is properly systematized. And in this connection it is interesting to note that a very comprehensive movement is already under way, the purpose of which is to develop through the motion picture machine a series of practical school room studies covering a large number of branches. Experienced educators who have at their command immense sums of money on call from private sources are interested in the movement which, when its plans are thoroughly worked out, will largely revolutionize the methods of study in private as well as public schools. This constitutes the first practical effort ever made in this country to meet the inquiry, "How can the motion picture be advantageously incorporated into the school course?" For years school authorities and civic workers here and in Europe have realized the immense possibilities of the motion picture machine in school work, but the task of working out a practical system has been stupendous from the financial standpoint. No school board in this country has set aside a fund for experiment along this line, and film manufacturers, who have never posed as philanthropists and who are reaping a harvest from the general public, could hardly be expected to finance this untried phase of the motion picture machine possibilities.

Any educator who knows anything of child psychology will appreciate what it will mean to its mental development to have a dozen or more school studies, now largely abstractions, vitalized for him through persistence of vision applied to the motion picture. The screen brings the textbook into intimate relation with actual life. For example, the chief products of a country will no longer be a matter merely to be memorized, but the actual processes of agriculture, industry, the operations of manufacture, those of transportation will be shown exactly as they are operated. Vivid interesting images will be presented to the child instead of words, only words.

The intensified interest stimulated in the child not only makes for better discipline (since a larger part of restlessness and mischievousness than is always realized is caused by the children being bored as well as uncomprehending), but it will augment the child's power of assimilation and shorten the time he need spend upon individual study while not impairing thoroughness.

Already pictures are being used in an attempt now under way to impart certain simple moral truths to school children in some parts of the country. The medium of the story has been selected for this purpose, the subject being the actual every-day experiences that befall children, presented, of course, in dramatic form. The start has been made with stereopticon illustrations of the incidents used in these stories, especially designed to point a moral. It might as well be a Jarley Wax Work show, however, so far as the child gets any sense of actuality from a fixed picture where the girls and the boys are merely posed. On the other hand, by means of the motion picture machine, the boy caught stealing at marbles, or the one who stops a bully from inflicting unmerited punishment on those smaller and weaker than himself, become to the school child actual boys

engaged in real and very interesting activities. The influence of what appear to be excerpts from actual life will naturally be many times stronger than when the events simply go by in panoramic fashion.

Until educators and manufacturers get down to working out together all the practical details of a carefully developed plan, it is not possible to dogmatize as to how many subjects in the wide field of knowledge can be better taught with the aid of a motion picture machine than at present. But even lacking an intelligently thought-out system of combining the motion picture machine and the courses of study in the schools, any who give the matter thought will realize that the teaching of literature, hygiene, physiology, history, geography and the natural sciences especially, can be greatly helped by this modern device.

The motion picture machine has arrived at the school house door. Will this be opened to it?

The co-operation of educators and those who make and dispense films will solve the problem. It will not be necessary for the industry to finance the new adaptation. It is true that no school board has at its disposal an experimental fund which can be devoted to this purpose; but funds are available for innovations which are not experiments.

The educational value of the motion picture is not experimental. It is established. Thorough conviction of this fact on the part of those in authority is all that is necessary. This is a matter of educating the educators —a work which the specialists of the industry are amply able to handle. A persistent, earnest and enthusiastic campaign of the right sort of publicity will do much to open the school doors to the motion picture.

STEREOSCOPIC PICTURES

STEREOSCOPIC motion pictures, by which is meant pictures that stand out on the screen in natural relief just as do the twin photographs that are viewed through the familiar hand stereoscope, have come in for considerable discussion of late. Several inventors have gone so far as to claim that they are near the solution of the problem. Without wishing to belittle the work of these investigators, many of whom are undoubtedly entirely honest and earnest in their belief that the feat can be accomplished, it may be well to point out just why no one is apt to invent or discover such a system in the present state of the art.

The common hand stereoscope has two lenses, one for each eye. The photograph which is viewed through it has two pictures, one for each lens. These two pictures are not identical. They are taken by a camera with two lenses, whose centers are approximately as far apart as the two human eyes. The pictures are taken, therefore, from two diffrent viewpoints, which vary by about two and one-half inches.

Imagine, in such a picture, two trees, one directly behind the other. Placing the stereoscopic camera so that in the image made by the right lens, the rear tree is barely hidden by the other. Then the image made by the left lens will show a portion of the rear tree. This is just what the human eyes do; and it is by this phenomenon that we are able to judge distance. Gaze at an unfamiliar vista with one eye only, and you will find it very difficult to form any accurate conception of the location of objects.

Stereoscopic vision, therefore, depends upon the use of two eyes; and furthermore, it depends upon the image formed by each eye being different from the image formed by the other eye. When both eyes receive the same image, as they do when regarding a picture, no stereoscopic effect is possible.

At present no method is known of presenting a different picture to each eye simultaneously except by the use of dual lenses, as in the stereoscope. This was the principle of the early system in which the two pictures were superposed on the screen, but one in red light and the other in green. No stereoscopic effect was visible until the observer was provided with a pair of spectacles with one green and one red glass. Looking through these, of course one eye saw only the red image and the other eye saw only the green image. The two images being different according to the rules of stereoscopy, a true stereoscopic image resulted. Furthermore, the red and green colors blended so that the resultant picture in the eye was black and white.

Developments of this scheme are simple enough; but they involve the objectionable use of special eyglasses by the observers. How to make each eye receive its own image, and keep it from perceiving the image intended for the other eye, is a problem not likely to be solved in the immediate future.

FILMS ON "NOT NECESSARY" LIST

It was formally written in a decision of Supreme Court Justice Bischoff that motion-picture shows and the distribution of their films could not be included in the general category of "public utilities." The occasion for this decision, which will prove startling to many of the faithful, was offered by the petition of the Majestic Motion Picture Company to constrain the Motion Picture Distributing and Sales Company to handle its films in its general business.

Justice Bischoff denied the petition and declared: "The plaintiff asserts its right to compel the concerns in a private lawful enterprise to receive it as an associate and to give to it the benefit of a trade built up through efforts which it has not seen fit to make for its own independent benefit.

"In the matters closely touching the public interest, a monopoly of trade to the exclusion of one whose services might further the public good may be regulated or restrained. But the subject of this action—distribution of motion picture films—is not within the class of public utilities."

PLAN SHOW FOR RAILROAD DEPOT

Kansas City's new passenger station probably will "have it on" any other station in the country when it comes to entertaining passengers while waiting for trains. For in addition to everything else that is known in union station accessories, Kansas City probably will have a moving picture show in her new station building. The directors of the Kansas City Terminal Company are contemplating such a move. There will be ample room in the station for such an innovation, and it is believed moving pictures would prove profitable as well as entertaining.

WARN BOYS FROM FILM BOOTH

Every moving picture machine operator in Newark, N. J., has been notified by C. Albert Gasser, superintendent of the Bureau of Combustibles and Fire Risks. that no person under the age of eighteen years is permitted to act as assistant in a moving picture booth. Although this has been a rule of the bureau, Mr. Gasser took occasion to remind the operators, because a fourteen-year-old boy was burned to death in a picture booth in Jersey City October 5. A postal card, sent to the operators, gives this warning: "If you, personally, violate these, or any of the Newark regulations, your license will be instantly revoked and canceled by the bureau."

The Gateway to Selig's Big Wild Animal Farm at Los Angeles, Cal.

Maintaining a Wild Animal Jungle for Pictures

The Diamond-S Farm

A GREEN tract of far-stretching acres in which animals,—wild animals—will have the right of way, is the latest dream of W. N. Selig, which has come to pass. The permanent home of the jungle beasts is already being made ready. The accompaniment will be the jingle of more than one hundred thousand dollars. The location is the vicinity of Los Angeles, Cal., which will add to the name and fame of the wonder city.

With him in the venture of forming the world's greatest collection of wild animals, Mr. Selig has chosen Otto Breitkreitz, famed as probably the world's greatest animal trainer and breeder. "Big Otto," he is called, and "Big Otto," he is known to all showmen. He is king in his particular line of work. He is big in stature, weighing three hundred and fifty pounds, and is big in heart and policy. He formerly owned and conducted shows in which wild animals were the chief attraction, and has to his credit the training and breeding of the animals used in the majority of American shows. He has retired from the show business, however, and devotes himself to just the rearing and training of animals which, to him, are pets, but to outsiders, are just brutes.

For years "Big Otto" has been in charge of the Selig wild animals. He is the genius of the farm where they are at present, in the city of Los Angeles. Here the big trainer, his family, his employees and their families, have

Some of the Guests at the Farm

His Majesty the King.

The Animal Quarters from the Grounds.

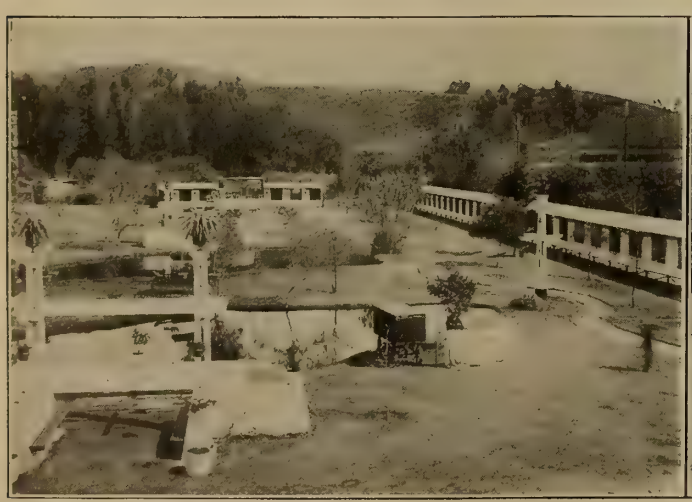
Front or Outside View of the Cages.

their homes. They are pretty little cottages with wide verandas on which baby lions and tiny leopards play. Lion kittens which, having been deserted by their own mother, were adopted by a dog and thus fondly cared for, have been the pets at Foreman Sanders' cottage for the last several weeks. They consider themselves in duty bound to keep at the heels of Mrs. Sanders and when that busy housewife thoughtlessly goes beyond their range, she is reprimanded for her violation of the cub speed law, by a heart-rending series of meows, for all the world like those of protesting kittens. A baby leopard, beautiful in the markings of its velvety coat, is the cage companion of the cubs.

The jungle wilds of all the world have furnished the specimens of which the Selig farm already boasts and which, in its present consignment, is the biggest and most complete of any individual picture company; and the same jungle wilds will be visited for future additions to the without-the-city-limits tract, to be sacred to bears, tigers, elephants, pumas, camels, hyenas, horses, mules, monkeys, ponies, wolves, dogs, wild goats, jaguars, sacred cattle, raccoons, guinea-pigs, ant-eaters, parrots, geese, ducks and various hybrids.

A recent photograph-day at the animal farm put most of the animals on their good behaviour. "Kitty," the puma, however, wasn't inclined to be good even with the incentive of company present. Olga, the adopted daughter of "Big Otto," and who is professionally known as the Princess Cecelia, entered the cage wherein the puma was housed and was forcibly greeted by the occupant, which sprung at her and, before two attendants could come to the rescue, had torn her tailored suit almost to pieces. Three times the puma renewed the attack on the girl and each time the force of her whip drove him back. When help came, she had driven the animal into an adjoining compartment of the cage.

The remainder of the farm specimens, though, were quite agreeable to the suggestion of being photographed. The dog-wolf stood erect and looked into the face of the camera; lion cubs, eight months old, stood side by side and calmly awaited the momentous click; the fierce laughing hyena pointed its ears and showed all its teeth; the sacred ox nibbled amiably at a proffered delicacy; the jaguars rolled over and stretched themselves and one allowed Miss Olga to recline against him and fondle his ears; Duke, the great African lion, selected a pose which showed to best advantage, his massive head and mane, and Toddles responded to Miss Olga's voice and obediently stood with uplifted fore-leg and trunk until the photographer had finished.



The Pool in the Grounds, Also the Totem Pole.

The Training Stage for Animals.

More of the Cages.

Toddles is a big fellow, despite his name, and is a faithful actor in whatever part he is cast. His meagre requirement is two bales of hay, daily. Toddles was the star performer in the film, "Lost in the Jungle," in which, during his wanderings through the forest, he found the heroine lying exhausted on the ground and, kneeling, he lifted her to his back and thus bore her to safety. While not acting he stands patiently day after day, chained to a tree, appreciative of meal times, and the fragmentary conversation of the keepers.

The lion, Duke, who weighs six hundred and fifty pounds, is said to be the largest in captivity, and is a splendid beast. He is the father of several dozen cubs which vary in age from four weeks to eight months. Many of the animals answer when called by name.

The proposition of the keep of the farm's wild inhabitants is a big one. For the carnivorous ones, two horses are slaughtered daily as the meat has been found to be preferable to beef. For the young or sick creatures, ducks, geese and rabbits are raised as food.

The animals are divided into groups, there being five trainers and each trainer has his own particular set of animals which obey him implicitly.

The enlarged animal farm, soon to become a reality, was sought for by San Diego. But the house of Selig is partial to Los Angles on account of its large plant already near there; so the Los Angeles neighborhood it is to be.

"Forest Rose" by Thanhouser

Friday, November 29, has been selected by the Thanhouser Company as the release date of its "Forest Rose," in two reels. It is stated that the New Rochelle producing firm has made a stirring picture from Emerson Bennett's story of early days in the great West, and that the Indian and pioneer life of the period has been accurately reproduced. A large company spent a week and a half in the mountains making the subject. The principals of the company were Marguerite Snow, Jean Darnell, James Cruze, William Russell, Fred Vroom, David Thompson, Harry Markes, and of the juveniles the "Thanhouser Kid," the "Kidlet" and Leland Benham.

The big situation of the subject is, as any who have read the original story may remember, where the "Forest Rose" aids Wetzel and Albert to outwit the Indians who are on their trail, and reach the fort in safety. The whole story is replete with situations that thrill, and the feature should add zest to any program.

The American Film Manufacturing Company has changed its release days from Monday, Wednesday and Thursday to Monday, Thursday and Saturday. The new order went into effect in November's first week.

A Film Study of Street Conditions

At the Cities Exposition held recently in Duesseldorf, Germany, the perils of street traffic were illustrated in a convincing manner by means of kinematographic pictures made by the Duesseldorf Street Railway Company. Everybody knows that it is dangerous to board or to alight from a moving car. Statistics show that nearly fifty per cent of all street railway casualties are due to this foolish practice. One film showed a woman alighting from a slowly-moving car in the usual careless manner and coming to grief in consequence. In contrast was exhibited a film bearing the device "The Left Hand on the Left Handle," and showing a woman alighting properly and safely. A third film illustrates the danger which a person walking, driving or cycling behind a car incurs by shifting to the other track without assuring himself that his new course is clear. The film shows a bicyclist turning to the left from behind a car and colliding with an automobile moving in the opposite direction. Another film illustrates the notorious bad habit of truckmen and hackmen, who persist in obstructing the tracks in defiance of the warning gongs and whistles of overtaking trolley cars. This obstructive policy of drivers should be combated by energetic measures. It is intolerable and absurd that thousands of persons should be delayed daily in this age of haste by the selfish obstinacy of a few drivers. The time-saving and other advantages of the new type of street car, in which the exit is separate from the entrance, are also shown by comparative kinematographic studies.

The Selig Parrot Gives Advice

While the Selig western company was producing a picture entitled "Object Matrimony," recently, the producer had occasion to use a talkative parrot in some of the scenes. Miss Myrtle Stedman, playing the part of an eccentric old maid, was supposed to fall violently in love with a young cowboy. The cowboy, in his efforts to escape from the old maid's clutches, placed her and her parrot in his single seated rig and started to drive at a break neck speed for his ranch. As the buggy rounded a sharp turn and came into full view of the camera with Miss Stedman clinging madly to the neck of the cowboy, the producer and other members of the company, watching the scene, were suddenly convulsed with laughter. The parrot had inspired the mirth by shrieking at the top of his squeaky voice, the advice, "Cut it out, you dam fools,—cut it out!"

Railroad Teaches Firing by Pictures

A moving picture show, operated by the Union Pacific railroad in the local yards, was the Mecca of employees of that road in Omaha, recently. Model methods of firing locomotives are shown by the films, which show pictures taken by the educational department. Good and bad practices are illustrated side by side, and firemen are expected to glean knowledge by the comparison. The moving picture car has been traveling over the Harriman system and with excellent results, according to officials.

Sans Grease Paint and Wig

by Mabel Condon

Francis Xavier Bushman.

FOR goodness sake, where was everybody?

Mr. Steck didn't know, but for the honor of the Essanay company, he tried awfully hard to find out by serenading long and vociferously outside various dressing-room doors. No answer forthcoming, he left me standing in the middle of space with the injunction to "wait." I did; first on one foot, then on the other. Years came and went, but they brought no Mr. Steck.

A long, thin man in knee breeches and a red-striped blouse glided past me and I removed myself to the top of a trunk where I could keep out of the way, swing one foot to keep myself company, and wonder where in the world Francis Xavier Bushman was, anyway?

The red-striped gentleman, followed by a monk, paraded back and through a doorway and along about New Year's, 1915, Mr. Steck hove in sight with the joyful tidings that he had located Mr. Bushman; so I slid off the trunk. Mr. Steck knocked at the door of the only dressing-room he had neglected to serenade, and there stood Mr. Bushman.

He was in the act of putting on his cuffs, but let them dangle while he shook hands and invited me to be seated. The cuffs safely adjusted, the wearer took the only other chair the long, narrow little room afforded and then he asked that awful question, "What do you want me to tell you?" And I made the usual awful reply, "O, about whether you like motion picture acting better than the legitimate, and whether you're married, and—everything."

He told me all of that, and as he talked with his mouth, his hands, his eyes, his eye-brows and pivoted from the edge of his chair to its very furthest inch, I tried to find a resemblance between the speaker and some of the pictures I had seen of him. But I couldn't, for he is so much better and younger looking than any likeness of him I had ever seen.

He is full of life and motion; his mouth turns up at the corners because he laughs so much and his eyes are brightly blue and shining because they are full of smiles. His hair is glossy and wavy and is the almost-brunette kind that doesn't get itself all mussed up but stays just the way that its owner puts it and that all the girls are crazy about.

"Of course, now, I'm all enthusiasm for film acting," Mr. Bushman was saying as my gaze descended from his shiny head. "I like the out-door life it gives me, the horseback rides, the tramps through the woods, the time for my gymnasium, the association with the pleasant people here, the year's fifty-two weeks of work, and, most of all, the fact of playing to millions of people yearly. Why, I've made thousands of friends I never could have reached on the legitimate stage. I like to think that people like me, and nothing pleases me more than to hear that they do."

"Letters?" I suggested.

"Yes, stacks of them."

"Answer them all?"

"Every one."

I sat back, prepared for the worst. It came. "See those photographs?" as he pointed to a string of girl pictures on the mantel—or dresser, as he called it. Yes, I saw them. "Well, they all came from admirers of my work. Each means that I have made a friend, and I'm proud to have received them. That's why I answer every letter sent me; I think that if the writers like my work well enough to tell me about it, I ought to take time to acknowledge their appreciation. I like to get their letters; everybody does. If anybody says he doesn't, why, he is not telling the truth."

Mr. Bushman was very much in earnest. I sneaked my pencil and made a note of the fact. He resumed, "It is natural for one to like to receive compliments, but it is caddish to get the swellhead about them."

"Not caddish," my pencil recorded in the secrecy of my handbag.

"If there is any criticism to be made about my work, I want to hear it."

"How about the director's remarks?" I wanted to know.

"Oh, I don't pay any attention to him—not while I'm working," he supplemented. "The first time I played, the way the director kept bawling at me through that megaphone made me think I was doing it all wrong. I found that I wasn't and after that I just worked right ahead, keeping the preliminary suggestions of the director in mind and doing the rest of the interpretation as I saw it. For"—and I took this verbatim—"the director can give you the business, but you have to put the personal touches in your role yourself. That's what makes your acting yours. See?" I saw. "My big desire is to put on my own scenarios and I want to accomplish it sometime soon.

"But I still have a warm spot in my heart for the legitimate," and the fervor with which Mr. Bushman's right hand located the upper left pocket of his coat, as he leaned forward and smiled a big smile, could leave nobody in doubt as to that. "I miss the lights, the music, the faces of the people. They are the inspiration the legitimate actor has. The first time I looked in the face of the camera and acted, I felt foolish. But nothing short of a Belasco contract could tempt me from the film world now. Lucky Mary Pickford! Belasco has signed her for next season, and motion pictures will lose one of their best actresses."

"What a shame! I just love Mary."

"So do I, though I've never seen her except in pictures. But she appeals to me as a delicious baby that I'd like to take a big bite out of." And Mr. Bushman's pantomine of taking a big bite out of little Mary Pickford was so funny that the laughs which followed would have reassured even the most timid eavesdropper.

"Doesn't the absence of lines in picture acting make it difficult for you?" I questioned when we had satisfactorily disposed of Mary Pickford.

"Well, it would; only I insist on lines. You have to consider that part of your audience will comprise lip-readers, and they know in a minute what the people in the picture are saying. You know"—but I didn't, it was news to me—"that there was so much profanity used by actors that the lip-readers made an awful complaint and so it has been practically eliminated.

"For instance, instead of one man's coming in and saying to another, 'Can nothing save the old homestead?' he'd probably extend the greeting, 'Hello, there, you blankety-blank old scout! How'd you like to have a drink about now?' And just then, as though in answer to a call, Howard Missimer, in high silk tile and frock coat, sought entrance with the quest of a silver mounted revolver as an excuse. Mr. Bushman could give him but an ugly black one, so Mr. Missimer took his disappointed fastidiousness elsewhere.

Reference to a picture of two athletes on the spaceless wall brought forth the information that Mr. Bushman had been the model for the figures and that for five years he had posed for every sculptor and painter of note in the east. At one time, he confided, he had thought of becoming a sculptor himself, and so "sculped" for an entire year with Isadore Konti. But the stage, which had known him since he was nine years old, called him back, and he went.

And how old do you suppose Mr. Bushman is? Twenty-nine, and unmarried. Perhaps, though, he wouldn't tell if he were, because he believes that the fact of an actor's being married hurts his popularity. He thinks that about Maurice Costello. Most of Mr. Bushman's pictures make him look much older than he is, so he said he'd give me his very best and newest one, and he did—one for the office and one, nicely autographed, for myself.

Norfolk, Virginia, that's where Mr. Bushman was born, is awfully proud of Francis Xavier, and "Bushman night" is a big feature there. Francis Xavier loves Norfolk, of course, for Bushmans have lived there for three hundred years, and he kind of feels that he owns some stock in the city.

"And maybe Norfolk wouldn't be tickled to death to donate some to him—just for the sake of bragging about it," I guessed as I left Mr. Bushman to take off his eyebrow make-up.

The Cinematograph in German Schools

The German Ministry of Education proposes to introduce the use of the cinematograph in various courses at institutions of higher education. Films for courses in anatomy, biology and bacteriology are already available in Germany. A leading philanthropist has presented two fully equipped moving-picture machines to the schools of Berlin, one of which is to be used in the higher normal schools and the other in the high schools.

Napoleon Commanding His Army. From the Kleine-Cines Feature "At Napoleon's Command."

On the Outside Looking In

By the Goat Man

TONGUE-TIED integrity never lugged anybody very far. I know some film men who can't look you in the eye. I know others who are afraid to serve you in their own interests. Take "Motography's Hand Book and Film Record," for example. It is now being distributed to every film man in North America. It lists all the films of all the makers—the product of an entire year. It is an eighty-four page booklet, and it is free for the asking. We know that this is a useful and necessary work. The demand for it is constant. Country exhibitors tell us it is the only convenient thing they have to check their service. Manufacturers use it to trace titles; scenario writers want it to help them determine upon new subjects. We have had telegraphic requests for the book. Some of the city exhibitors use it to keep tab on the stuff their competitors are showing. There are many substantial ways that the "Film Record" serves the trade. And yet the manufacturer, some of him, turns a deaf ear to our appeals for co-operation in making this book. They fear that the doing of this favor for us—checking up their own record—would place them under some obligation. It would be quite the contrary. When you get your copy of the "Film Record," be sure to observe who helped in the revision. When you see every length given, you will know that that manufacturer "came through" with his corrections—that he was big and broad enough to help himself. When you see the right hand column of the page putting on a raw-edged expression, you will understand that some more of our good stationery was filed in the waste-paper basket! In the years to come, these details will all be remedied. Men who are now "busy in the head" will look back upon these mute pages with a trace of shame in their face as they shove their shrunken fingers through their gray locks. I want to repeat that tongue-tied integrity isn't worth very much. It pays to tote fair. It is sad to have to apologize when you do your best.

* * *

C. Lang Cobb has quit his job—he is not with Reliance; he spent their gold,* so I am told, and now he is looking for another connection.

* * *

King Baggot is getting along with his Screen Club, if all the reports are true. Merely as a matter of record, I cheerfully give space to his life class. Paste it in your hat: Both Kessels—Charley and Ad; Bill Bechtel; Pat Powers; J. V. Ritchey; Bill Steiner; Carl Laemmle; J. S. Dawley; Hector Dion; Charlie Baumann; C. J. Williams; Herb Miles; G. M. Anderson; Ed O'Connor and Mark Dintenfass.

* * *

I have been asked why I ripped up a certain film two weeks ago. The answer is the easiest thing I know. That film had it coming to it. If I ever see another that approaches it half way—no matter who turns it loose—me for my pot of vitriol. There is no excuse for such rough work nowadays. Manufacturers of films have no right to inflict bad subjects upon an unsuspecting public. The film I saw was awful. I couldn't help saying so. I am sorry I said so little, but words failed me. If I could

*That souvenir stuff he scattered around the conventions. Billy for a baby cutting teeth.

"The Lost Inheritance." Copyright 1912, Selig Polyscope Co.

find other films of like kind, I would always have something to write about.

* * *

Speaking of quality films, I guess I will have plenty of backing when I say that they are getting better. There are more scenarios than ever before and the bugs are getting their work down to a fine point. Ask any director. The directors all agree that the scenario is the real foundation for the reel.

* * *

Men who buck human nature, buck themselves. I am reasonably sure that I have served my journalistic apprenticeship in the film business. I have been at it for four years. I am deeply interested in the game. My business isn't selfishly my very own business. My interest is in other men's businesses. I have a selfish interest in wanting these men to succeed. Film men are prospering. I know that nothing is so sure as evolution, and nothing quite so slow. Four years' experience is enough to prove this. I am constantly looking forward to something quite substantial for myself. I am getting closer up to the men worth while. I am making a place for myself by playing square. Slowly but surely every obstacle is being overcome. The goat must have his fodder and he will get it. The getting will be better as I go along. I know, because I've been going over my subscription ledger!

* * *

Twenty-five dollars seemed to be the stumbling block to a Chicago Screen Club. Oh, very well. Some of these fine days we'll start something at a hundred. Who should worry?

* * *

The newest of kinks in this big kinky mess that bothers me greatly, I'm here to confess, is the passing of Freuler—a bully good scout—who was anchored for keeps before he blew out. Loan me a handkerchief, please, while I cry! They've left a good Indian out there to die—a man who has boosted and plugged right along in a game that is far from being a song. I'm fussing with this thing far into the night; I wonder if everything doing is right; I'm blinded and battered and bleeding and sore. What's the matter with Freuler; why didn't he score? I've wanted the good ones to rally around to keep the old ship from going aground. I've counted on Freuler as one of the crew to leaven the loaf and season the stew. Perhaps he will fool me and take a new tack and meet me a-smiling, upon his way back. Whatever's the matter, I'll make a loose bet we haven't lost Freuler, already, not yet. But I'm crazy to get it—a new, modern map, that'll show we are through with all the clap-trap. A map that is warranted never to tear and one that will keep me from pawing the air.

* * *

Wouldn't it be great, if all of us exhibitors were doing business in our own little restricted zones, where we could each have the pick of our own exclusive programs at about thirty-seven cents a week? How easy it is to dream! But there is something in the zone theory of operating—something that the exhibitor himself should undertake to solve. An exhibitor who has fought his

way into the good graces of his neighborhood and won his prestige and patronage by the hardest kind of work, day in and day out, week in and week out, year in and year out, including the nights and Sundays, should not be made to suffer the ill effects of a split program. There should be substantial reward for his energies and there is no better solution for it than the zone theory. Get into this, you fellows and don't waste time.

* * *

The affairs of the Motion Picture Exhibitors' League are very satisfactory. The organization grows. There is no let up. I see that the tall, curly-headed blonde president is calling four more state conventions. Nebraska is about the limit of the lot. The exhibitors out there play all their music in the lobby. They have big houses and never know when to stop showing reels. If there was time enough in an evening, they would fall for twenty reels—all for a nickel. When President Neff goes to Nebraska, he should take a club and leave all his spread eagle dope at home. Nebraska needs splints instead of superlatives.

* * *

They are whispering it low in the dark places that Charlie Hite and this Christmas star film of his are inseparable.

* * *

When a producer gets married he makes a permanent engagement with his leading lady. What did they say when Edna Fisher hooked Rollin Sturgeon? Some regular little fisher maiden, I take it.

Los Angeles is threatened with a Screen Club and I'm sure it will take. As a film center, Los Angeles looms large. Why, they even pinch the crooked promoters out there and that means they've got 'em to spare. H. J. Brand and Fred Osborne were arrested, not long ago, for alleged swindling in their zeal, to form a moving picture company. Think of it!

Riley Chamberlain.

Marie Eline.

Appearing in Thanhouser Films.

* * *

Now that election is over, let's all get down to four more years of good film business. That's our concern, after all.

"The Saint and the Siwash." Copyright 1912, Selig Polyscope Co.

Otis Skinner Professes Faith in Camera

Otis Skinner, the eminent actor, now playing a prolonged engagement in the Arabian Nights spectacle "Kismet" at the Illinois Theater, Chicago, was an enthusiastic spectator at the Selig Chicago Plant last week. Mr. Skinner was the personal guest of W. N. Selig, president of the company. In Mr. Skinner's party were his business manager and his stage director. The party spent all morning at the plant watching the many interesting intricacies of motion picture production. Mr. Skinner was especially enthusiastic over a scene being then produced by Oscar Eagle, whom he has known for some time. Before leaving Mr. Skinner stated that in his opinion, "the motion picture was destined to make as wonderful an advancement in the future as it has in the past."

Pictures for Mayors' Convention

Efforts are being made to use motion pictures as a feature of the annual meeting of mayors and other city officials. The first was held in Walla Walla, Wash., October 24 and 25, under the direction of the newly organized League of Pacific Northwest Municipalities. Secretary Charles G. Haines, professor of political science, in Whitman College made an effort to secure all of the health and civic films possible.

Settle Sunday Picture Show Question

The question of permitting motion picture shows to open on Sunday was settled at Ashland, O., by the passage of Ordinance No. 40, which prohibits the opening of these places of amusement on Sunday, and provides a fine for the violation of the ordinance of from $25 to $100. The ordinance received yea votes of all the councilmen. The question was not debated and was settled in ten minutes' time.

Vigilant as to Shows' Minor Attendants

City Clerk Monaghan of Lackawanna, N. Y., advertised an addition to the city ordinances, which provides that no person under the age of 16 years shall be permitted to attend any moving picture show or exhibition unless accompanied by his or her parent or guardian. This provision was presented to the common council by Corporation Counsel Short and were to become part of the city ordinances after it had been advertised three times.

Poster Design by American

The American Film Manufacturing Company is placing on the market a three-sheet panel poster as an aid to the exhibitor in advertising "Flying A" films. It is in the form of an elaborate and ornate frame, with the center panel just the right size for the regular one-sheet poster. Altogether it makes a very attractive piece of publicity.

"Bludsoe's Dilemma," December 7. Copyright 1912, American Film Mfg. Co.

Others Interested in Motor Drive

Our article on "Motor Driven Projectors Made Safe," in the last number neglected to mention the fact that John McFeely and Luther Schaefer are entitled to credit in the designing of the system. The original patent on the electrical part of the equipment was issued to Mr. McFeely, while Mr. Schaefer did considerable toward perfecting it.

American Film Manufacturing Company announces that it will very shortly release split reel comedies. This line of subjects has been given most careful consideration and the results secured are highly pleasing and will no doubt add considerably to the exclusive variety now being offered by this company.

Motion Picture Possibilities

By H. Bedford Jones*

THAT is a great word, a wonderful word: "Possibilities!" It contains all the essence of dream-stuff, all the lure of the unachieved and unthought-of things that never were. I do not know that moving pictures are the greatest things in the world today; but I do know that by applying to them this one word they easily seem to become the greatest things in the world tomorrow.

The moving picture business is yet in its childhood. Like all healthy children, it will have a hard time going to the bad. It contains elements both of good and evil, but in this case the good elements—which stand for companies—are so aggressive, broad-minded, receptive, that their power is fast becoming absolute over the child. In pictures—and substantial ones, too, not cigar ashes. Take advertising. Here is an auditorium, a joint advertising medium where admittance is free. You may see here anything from views of summer and winter resorts or publicity seeking municipalities to views showing how a cement house is poured into shape. You may see your pears or pickles processed, from the soil to the bottle. You may see your underwear evolved from the sheep's back or the cotton field to the box. You may see the latest fiction or the world's greatest newspapers grow from proof sheet to final condition. You may see almost anything the advertisers want you to see—but there will be a pure-film inspector insuring against the reels being doctored.

"For Her Own Country," November 28. Copyright 1912, American Film Mfg. Co.

the sense of quantity, there are more possibilities in a very bad child; in the sense of quality, there are more in a very good child—if he be not too good! We can all get along very comfortably with a slight admixture of the bad; it keeps us well balanced and prevents us getting over-lazy, as it were.

What of possibilities? So much, that we can only glimpse the outer edge. There is always a horizon beyond our reach. Some men who search for possibilities are like Ol' Bob Warde. They show you a magnificent plate-glass cabinet, point to a bushel basket within, and to a second. Then, with solemn tones and awe-filled faces, they say: "This is the largest and most wonderful collection of cigar-ashes in the world!"

It is not hard to imagine the possibilities of motion

Take education. Not the education of the schools, but the higher, greater education of life. Here is a building devoted to immigrants, from all quarters of Mother Earth. In this Government building they may see how to govern themselves under new conditions; how to come into the world, get married, and die in strict accordance with the laws. Here they may be warned of traps and pitfalls, of gold bricks and labor agencies, of loan sharks and penitentiaries.

Even today picture shows are being used in the penitentiaries, by the way. Their influence is staggering, when the moral is not made too obvious, and the opportunity for character building is tremendous. After all, is this not the real mission of the motion picture in this world of ours? All character building is education—although it is equally true that all education is not character building—and education covers a multitude of

*Chicago Press Club Prize-Winning Article, Selig Contest. Copyright 1912, by Selig Polyscope Company.

"The Stain," Essanay.

things. Being educated really consists in making over all that one sees and hears into part of oneself. That does not mean the adoption of a general ball-bearing view of life, by any means; least educated of all men is he who hitches his trolley to the line of least resistance.

"Possibilities!" There is a dangerous allurement in that word. Somewhere under that fascinating rainbow lies a pot of gold for him who can temper his imagination with realities. What could not Jules Verne have done with the motion picture to work on and with? But there is no lack of prophets in Israel; we do not need the Jules Verne type, and we do need the Edison type. It is easy to leave your brain with the world, like Verne, and it is easy to leave your hands with the world, like the man working in the street; but it is hard to leave both brains and hands, as Edison will do. The man who can do this thing will find no lack of opportunity in the picture field.

Come down to concrete facts—give a specific instance? Very well. The first that comes to mind is a chance that is open today. Many people of culture and some of no culture whatever have a passion for oriental rugs. They know little about rugs, of course, and that is why they have a passion for them. As they come to know more, the passion becomes a love. Well, give lectures, private lectures, on oriental rugs. Use colored pictures—motion pictures, mind—showing the making of a genuine Shiraz or Saruk, showing the Ghiordes and Senna knots, showing the general designs; showing, in a word, the thousand and one minutiae that appeal to rug devotees.

But, you argue, that is not leaving both brains and hands with the world; that is merely making money hand over fist. You are quite right. But if I knew how to do this bigger thing, if I were able to leave with the world my own brains and my own hands, I would be doing it instead of talking about it.

If, today, some producer were to stumble across a film showing the old buildings, costumes, and plain every day life in the streets of Washington forty years ago, we would flock as eagerly to see it as we do now to see a farcical comic picture. A hundred years hence the people of tomorrow will hear the embalmed voices of Nordica, Caruso, and the rest. Why should they not witness our daily life? Not that it is anything to be proud of, but it might at least be instructive. Why should not the state archives contain sealed reels to be given to the public at specified periods by the government? The art of Bernhardt, Beerbohm Tree, Dusé, is being preserved in motion pictures, but is it being logically preserved?

"Possibilities" is as risky a word to use as "socialism"; both are firmly believed in by a great many people and openly professed by a very few. Whether or no the mission of the moving picture be education, in the broadest sense of the word, remains to be seen. Not "higher" education, though; for to admit that there is such a thing tacitly implies that there is a "lower" education, which is impossible. Education is largely a matter of personal experience, applied. Those who cannot go to seek this experience must have it brought to them, and this, I affirm, is the business of the moving picture, and

of nothing else. Books cannot do it. Only a writer of great genius can "present a picture" and writers of great genius are as rare as lilies of the field, in this country of ours.

On the other hand, we must remember that education cannot be an obvious, straight from the shoulder thing, especially when it is to be brought about by motion pictures. It must be suggestive; a brutally frank education is only repulsive. It must be compelling, powerful, but in an extremely subtle way. We all are perfectly willing to be educated, just so long as we do not know that we are being educated.

"But," you argue, "films of that nature would lead nowhere! To have power, a moving picture must be brutally frank! The system you propose would not come to anything. It doesn't bring you anywhere!"

For the matter of that, neither does the "Ode to a Grecian Urn," nor the Symphony Pathetique. The scent of a violet does not bring you anywhere, nor does the Dance of the Nymphs. Nevertheless, Keats and Tschaikowsky and Corot were men who left both brains and hands with the world. They were educators, being creators. And who is more of a creator than the producer of the moving picture? So much for your argument.

We lose half of the force of history and all of its lessons through having to read of it in books, through having it dinned into us day in and day out, until we curse it and shun it forever after. Personally, instead of having to stumble through a mass of text and notes. I would much prefer—in fact, would like nothing better than to see the actual scene in the Senate House, see honest old Chick-pea thunder forth his *"Quo usque tandem, oh Catilina, nostra patientia abutere?"* and all the rest of it down to the last scene among the northern hills where the stolen eagle reeled into ruin. It would be a tremendous object-lesson to our anarchistically inclined youth—as well as to our ditto foreign population!

Still, I admit that this is hardly a possibility, except as applied to and by our boards of education. For all I know, the Selig people may be getting out the Cicero-Catiline debate now. Someone once said that people repent of their sins because they did not enjoy them as much as they expected to. Whether the said people enjoy their repentance or not, I do not know; I do know that this remark hits the keynote of education, and perhaps comes close to that of religion.

The danger to America lies in her battle-cry, "Getting a living is living!" That is what is thundered out on all sides of us today. As long as we know it is false, there is no harm done. When we come to believe it, danger threatens, for then we cease to believe in anything at all. Is it a far cry from moving pictures to slogans? I am not so sure of it! Once let this battle-cry of business thunder tacitly forth through our motion pictures, as it is tempted to do, and we are lost. This because the motion picture is the greatest power in the country today.

Yes, greater even than our much-vaunted newspaper. We go to our newspapers for the news, and we believe possibly half of what we read. But we go to our theaters for amusement, and believe all we see—without knowing it. The lesson taught by the pictures, whether for good or evil, is one of auto-suggestion pure and simple. That is the responsibility resting on the shoulders of the picture producer, and he is responsible to the future alone. Today is built on the ruins of yesterday.

And in any case, little enough of our education is gained from books. We seldom read, and when we do, we prefer a "Diamond Dick." If the Diamond Dicks can educate us through amusing us, so much the better for us. If we succeed in keeping a love for reading in spite of our school and college course, the struggle for existence and need of more practical education drives it out of us. But, and a very large but it is, we are all and

"The Hidden Treasure," November 30. Copyright 1912, American Film Mfg. Co.

always children enough to love pictures. From the farmer's green plush album to the tourist's collection of foreign postals, the trait shows everywhere. It is at once our curse and our blessing, according as we use it or abuse it.

The value—by which I do not mean the commercial value—of a motion picture lies in the ideals which it expresses. The great motion picture is that which shows us how to get into touch with our ideals, every day in the year. That is a large theme, but it would grip life at more points and control our minds more than any other. It would be an Open Sesame to the ideal. Best of all, we would enjoy seeing it over and over again.

That is the test of a motion picture, as it is the test of a book or a picture or a symphony. What is evident and patent we tire of at once. What is imaginative, appealing, subtle, suggestive, we never tire of. There are few moving pictures today which we care to see more than once. That is why the film people have to turn out from three to seven new ones per week. We do not find new suggestions, new ideas, new turns of thought in them with each repetition, as we do with the Ninth Symphony, for example. Yet there is no reason why we should not. And we do with a few, a very few.

"Possibilities!" Do you see any in all this? Or do you, after all, view the rainbow with a skeptic's eye? To me, a really good moving picture is like some great musician. He is not a mere man making a tune to amuse people with. The great musician is he who sings the most themes together in his playing. He blends the notes of his instrument, the heart of his audience. And the very soul of the composer into one. The blending produces a message that goes home to his audience. And the effect of this blending is what we call art. No one, specific, tangible thing is art—merely a surge of feeling, an ideal, an inspiration that is nameless and therefore all the more powerful. And this, it seems to me, is the possibility of the moving picture.

Feature Child Riders in Films

Marshall Stedman has just finished the production of a series of thrilling western subjects featuring a small boy eleven years of age. One of the pictures will be entitled "Roderick's Ride." In this production the boy rode seven different horses and all of them at a tremendous rate of speed, making some truly wonderful flying dismounts. The lad is claimed to be the world's youngest daredevil horseback rider. He rode a total of over twenty miles during the making of the different scenes. In another picture entitled "A Little Hero," a professional child rider four years of age is used in many of the scenes.

Madame Andre Presented to Napoleon. From the Kleine-Cines Feature "At Napoleon's Command."

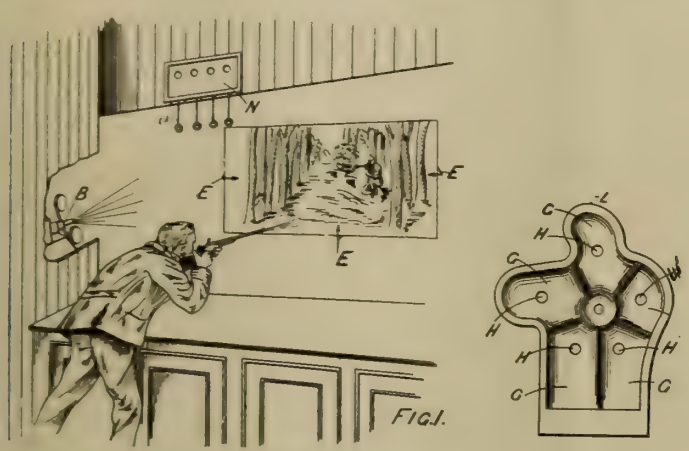
Recent Patents in Motography

By David S. Hulfish

UNITED STATES Patent No. 1,035,811. Shooting Range for Rifle and Revolver Practice. James Paterson, London, England. Filed February 8, 1912.

The invention relates to ranges for shooting practice in which a kinematograph picture forms the object to be fired at. It refers particularly to the provision of a traveling metal target arranged behind or as a part of the picture screen, and to the provision of hit recording devices for announcing when the moving target has been struck by a marksman's bullet.

In the illustrations which have been chosen to accompany this review Fig. 1 represents the interior of a shooting gallery equipped with Mr. Paterson's improved motion picture target. The arrangement of the picture



1,035,811.

screen *E* and the projecting lantern *B* are clearly shown, as well as the annunciator *N*. Fig. 4 shows the actual target upon which the bullets of the rifleman strike. In Fig. 4 each of the sections *G* is cupped and an electrical contact device is placed at *H* at the bottom of the cup. It is not necessary to strike the exact center of any area to ring the bell or record the shot in any way, but merely to strike within the designated area.

At *N* in Fig. 1 is shown an annunciator which indicates the result of each shot, the target of Fig. 4 being connected electrically with the annunciator *N* of Fig. 1.

Motion picture targets or targets combining kinematograph with other devices to obtain a moving object which may be fired upon, have been described and patented heretofore. The present invention refers to the combination with such a target of means for causing the shot recording mechanism to keep in motion and to keep in register the moving image of the kinematograph projection.

To obtain the movement, the recording target of Fig. 4 is connected to wires or cords which are passed around suitably arranged pulleys and are led to the firing point or to the kinematograph projection point, where they are operated from a hand wheel by an attendant. As a means of indicating that the moving tarket is in register with the picture, the target is provided with indicator points shown near the letters *E, E, E,* of Fig. 1, and it is the duty of the attendant to keep the indicator points in register with the kinematograph image.

There are two claims in the patent, and in the second claim the invention is described as follows:

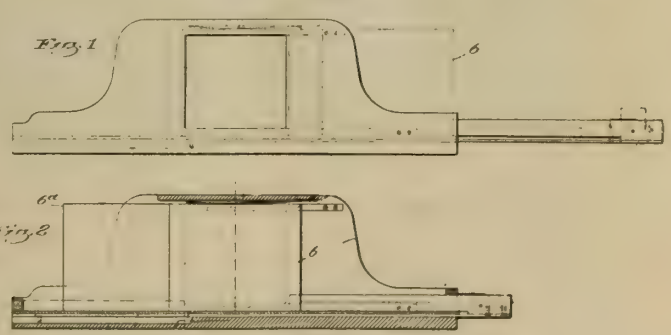
2. Shooting rangers for rifle and revolver practice comprising in combination, a kinematograph lantern and screen; a metal target of the form of the object to be fired at and having its face recessed—the dished sides of the recesses converging to centers in which are mounted movable bolts for completing by contact electric circuits with an indicating device at the firing point; means for moving the said metal target synchronously with the moving object to be fired at; means for indicating when the target is in register with the moving object; and an indicating device at the firing point operated electrically from the target and indicating by step by step revolving recording dials when a hit is made and the full total of such hits made.

No. 1,035,872. Slide Carrier for Projection Apparatus. Emory W. Goodrich, Somerville, Mass. Filed February 23, 1909.

The slide carrier which is now commonly employed is in the form of a frame having a movable holder provided with two slide-receiving pockets and adapted to slide back and forth in the frame to bring either pocket in alignment with the aperture through the frame. The holders above referred to are usually adapted to receive one size only of slide or transparency, and if at any time during the use of a projection apparatus it is necessary or desirable to exhibit slides or transparencies of different sizes, it is necessary to remove entirely the holder and substitute therefor another holder having pockets of the correct size to receive the desired transparency.

The objects of this invention are to provide a novel slide carrier in which slides of a variety of sizes can be used without changing any of the parts and which permits all of the slides to be inserted into the carrier from the side adjacent the operator, and which is so constructed that slides of different sizes and thicknesses will all be properly centered and positioned in the carrier.

In Mr. Goodrich's improved slide carrier there is



1,035,872.

but a single pocket for the slide, as is shown on the illustration. There is a pushing rod which will push the first slide into the exhibiting pocket of the slide carrier, and when withdrawn will leave the slide in that position to be projected upon the picture screen. The second slide now is dropped into position on the pushing rod and when pushed into the exhibiting pocket will itself push the prior slide out of the exhibiting pocket to a point where it may be lifted by the operator's hand and restored to the slide box.

The general appearance of the improved slide carrier is shown in the figures, in which Fig. 1 shows the push-

ing rod withdrawn with the transparent slide *6* in place ready to be pushed into the pocket for projection, and in which Fig. 2 shows the pushing pushed in, the slide *6* now being in position for projection, and the prior slide *6a* being in position for removal.

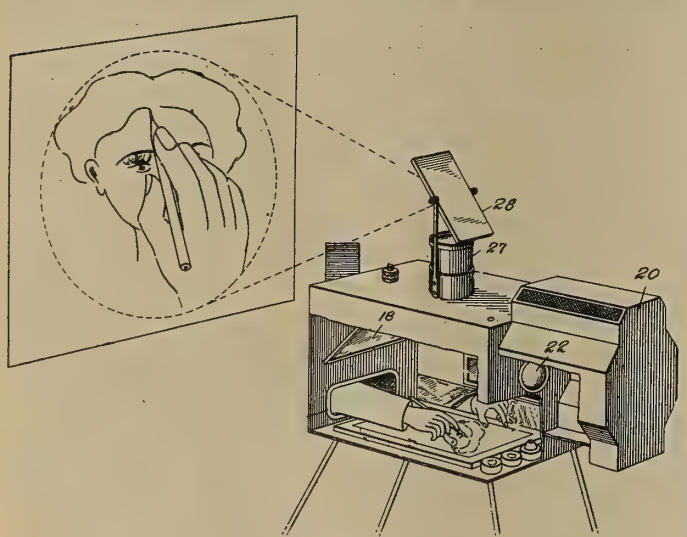
In the illustration which assists in describing this patent there is shown the apparatus in operation with an artist's hand sketching a lady's face, the sketch being made within the projecting cabinet and being projected upon the picture screen line by line as the sketch is made. (That the hand within the sketching cabinet contains six fingers including the thumb, while the hand projected upon the screen contains but the usual five, probably is not a feature of the invention and therefore is hardly worthy of mention.)

The principal use of an apparatus of this character is projecting election results and current news and announcements rather than the sketching of pictures.

In the illustration accompanying this review, the label *20* indicates the lamp house of an ordinary projecting machine and *22* represents the usual condensers; *18* is a mirror within the sketching chamber which reflects the light from the condensers downwards upon the artist's hand and the sketch. The lens in the tube *27* serves to project the image vertically and the mirror *28* turns the projection horizontally to the picture screen.

The patent as issued contains five claims, of which the following is the first. Read in connection with the illustration the claim serves to describe the invention still more definitely:

1. An apparatus of the character described, comprising a portable casing having a hand hold therein, means for highly illuminating the interior of said casing, means for preventing the escape of light from said casing through said hand hole upon the insertion of the hand into the casing, a lens supported by one wall of said casing and a mirror for reflecting the light rays, whereby there may be projected upon a screen an enlarged image of the hand within the casing.



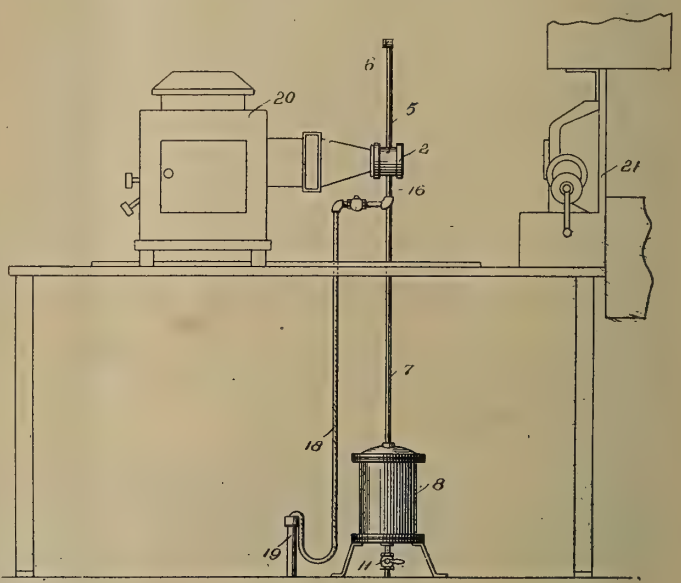
1,035,872.

No. 1,036,429. Moving Picture Apparatus. J. Bottlander and J. Paffrath, Ford City, Pa. Filed October 25, 1911.

The present invention relates to alum cells or water cells for subtracting the heat from the cone of rays between the condensers and the motion picture film, and it has as its particular feature the object of providing means for permitting a continuous flow of water or solution from the transparent heat-absorbing cell so that the contents of the cell may be kept at a comparatively low temperature.

It is deemed most convenient to use pure water, as, for example, from the city mains where water may be obtained conveniently under pressure, and the patent discloses the combination of a filter in connection with the circulating system.

In the figure the filter is labeled *8* and is connected



1,036,429.

to the water mains at the stop cock *11*. The circulating system extends upward through the pipe *7* to hinge joint *6* and thence downward through the pipe *5* to the transparent cell which is labeled *2*. From this point the water is carried through the pipe *16* to the flexible tube *18* and thence into the waste pipe *19*. The combination of the joint *6* and the flexible tube *18* allows the cooling cell to be moved into the proper position before the condensers, and permits it even to be swung from the kinematograph projecting position to the slide projecting position as the lamp house is moved on its cross rails. The lamp house is shown conventionally at *20* and the motion head is shown conventionally at *21*.

The patent contains one claim which reads as follows:

In a moving picture apparatus, the combination with a light box and a film box, of a funnel-shaped hood supported adjacent to the light box, a water receptacle interposed between the hood and the film box, said water receptacle having transparent ends, means for movably suspending the water receptacle including a supply pipe, and a valved discharge pipe associated with the receptacle.

No. 1,036,462. Kinetoscope. O. P. M. Davis, Bedford, Ind., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Filed January 21, 1910.

The invention comprises a device designed to prevent the wear and uneven pressure upon the film at the film gate of the kinetoscope. The invention is shown as applied to an Edison type of projecting machine which has the projecting lens in the fixed frame in line with the aperture plate and which has a framing device adapted to be raised or lowered to center the film image behind the aperture and in line with the projecting lens. The movement of the framing lever results in dragging the film over the face of the aperture plate at such times

as the lever is moving continuously and the film is at rest between its successive steps during projection.

Mr. Davis effects an improvement in this feature by applying a guide attached to the framing carriage and placed between the film and the aperture plate so that when the framing carriage is moved the film guides move on both sides of the film and the film is not dragged over one of them.

The patent contains six claims which include not only the feature above described but also the combination of that feature with a spring mounted roller for guiding the film.

No. 1,036,730. Method of Cutting Out Contour Bands or Stencils Used in Coloring Kinematograph Films. Carlo Sciamengo, Turin, Italy. Filed November 2, 1911.

As has been described in previous issues of MOTOGRAPHY, the well-known colored films usually referred to as "hand colored films" are really colored by stenciling the colors upon the film; the stencil, however, is produced by hand cutting.

The invention for which this patent has been issued to Mr. Sciamengo consists in an improved method of cutting out the stencil bands. By the improved method, the stencil to be cut out is traced over by a point heated to such a temperature that the celluloid of the band is softened without taking fire. By this means, the desired contour may be cut out neatly, with great accuracy and smoothness. The point may be heated by an electric current, or in any manner, and is mounted in a handle.

The patent is issued for the method of doing the work, and not for the means or particular form of hot point used. Quoted below in full are the two claims of the patent:

1. The methods of cutting out contour or stencil bands of celluloid for use in coloring kinematograph films, which consists in passing over the celluloid band a point heated to a temperature sufficient to cause the desired contour to be cleanly cut out.

2. The method of cutting celluloid, which consists in subjecting it to the action of a tool or point heated to a temperature sufficient to soften the celluloid.

No. 1,037,112. Moving Picture Machine. George W. Bingham, New York, N. Y., assignor to the Bingham Manufacturing Company. Filed September 29, 1910.

The invention relates particularly to the intermittent mechanism or film stepping mechanism of a motion picture projecting machine.

In the drawing of the patent the film shown is not provided with sprocket holes and the projecting machine is not provided with sprockets. The stepping effect is secured by upper and lower oscillating film guides.

The patent is issued with 36 claims which constitute brief but accurate descriptions of the principal features of the invention. The following are reproduced as typical:

1. In a moving picture machine, film advancing means comprising film guides through which the film is passed, a common support for said guides, and means for imparting an oscillatory movement to the support and thus to the guides carried thereby.

9. In a moving picture machine, upper and lower flat tubular guides for the reception of the film, a common support for said guides, and means for oscillating the support and guides carried thereby, whereby an intermittent advancing movement will be imparted to the film.

12. In a moving picture machine, upper and lower film guides adapted for the reception of the film, means for oscillating said guides to impart an intermittent advancing movement to the film, and a fixed though relatively adjustable guide associated with the upper movable film guide.

21. In a moving picture machine provided with an exposure opening, flat tubular film guides through which the film passes, located above and below the exposure opening, a common support for said film guides, and means for oscillating said support and the film guides carried thereby with a comparatively slow upward movement and a relatively quick downward movement.

"Broncho Billy's Heart," Essanay.

"The Whip" as a Photoplay

The big English melodrama, "The Whip," which comes from Drury Lane, London, to the Manhattan Opera House shortly after election is to be presented in motion picture form.

Because of its massive proportions and the fact it requires weeks to prepare any stage for the presentation of "The Whip," announcement was made that it would not be given an American tour.

This brought the motion picture men buzzing with propositions and the Drury Lane interests have done little through the last weeks except to negotiate with the representatives of the films. These negotiations compelled the management of "The Whip" definitely to define its scope of operations in America and the original program has been modified to permit of the presentation of the big melodrama in Boston, Philadelphia and Chicago as well as New York. In the former the Boston Opera House will probably be used; the Metropolitan Opera House of Philadelphia, at Philadelphia, and the Auditorium at Chicago. With the exception of those four Metropolitan centers, the country at large will be given over to the picture houses.

The offer of Adolph Zuker, president of the Famous Player Film Company, to pay $50,000 for the exclusive picture rights of "The Whip," in the territory where the melodrama will not play, is filed and probably will receive favorable consideration.

"The Whip" is considered especially desirable for motion picture purposes, because of the incessant action that runs through it and the numerous sensational incidents such as the automobile smash up, the railroad collision, the horse race, etc. The pictures will be taken at a series of dress rehearsals before the American premiere and will be released for presentation after its New York run.

Sage Foundation Using Pictures

Motion pictures will be given special study as an agency for teaching the people of New York about "making cities to be better places in which to live." This will be done by the newly organized Department of Surveys and Exhibits, which has been established by the Russell Sage Foundation.

This new department was established because twenty-six national organizations of welfare workers asked the Russell Sage Foundation to establish an agency for helping them in the work of gathering exact facts, and then explaining these facts so that the citizens of the respective cities would carry out the ideas suggested by the facts.

The directors of the department, which has just established headquarters at 31 Union Square, recognize that motion pictures offer a means for interesting people in the facts about city life, and at the same time the motion pictures offer the possibility of explaining the ideas which the students of the city hope to have carried out.

The directors of this work are Shelby M. Harrison, and E. G. Routzahn. Mr. Routzahn will specialize on the exhibition end, including motion picture possibilities.

The Motion Picture Exhibitors' League of America

General Headquarters
703 Euclid Ave., Cleveland, Ohio

OFFICERS OF NATIONAL ASSOCIATION.

President, M. A. Neff, Lock Box 15, Cincinnati, O.; Secretary, C. M. Christenson, 703 Euclid Av., Cleveland, O.; Treasurer, J. J. Rieder, Jackson, Mich.; Vice-Presidents, S. E. Morris, Cleveland, O.; Wm. J. Sweeney, Chicago, Ill.; Fred J. Herrington, Pittsburgh, Pa.; B. L. Converse, Owassa, Mich.; H. S. Dickson, Winchester, Ind.; E. W. Waugh, Huntington, W. Va.; Orene Parker, Covington, Ky.; Geo. H. Wiley, Kansas City, Mo.; Chas. Rothschild, San Francisco, Calif.; Sidney Asher, New York, N. Y.; Fulton Brylawski, Washington, D. C.; L. F. Blumenthal, Jersey City, N. J.; H. C. Farley, Montgomery, Ala.; E. V. Richards, Shreveport, La.; F. W. Young, Cedar Rapids, Ia.; W. H. Wassman, Nashville, Tenn.; Anthony J. Xydias, Houston, Tex.; Carl Gregg, Tulsa, Okla.; Paul LeMarquand, Winnipeg, Can.; M. C. Everstein, Jacksonville, Fla.; Geo. Osborn, St. Paul, Minn.

Four State Conventions Announced

President Neff has issued an official call for a state meeting of the exhibitors of Massachusetts to be held in the city of Boston on the 18th of November, 1912. The Massachusetts exhibitors are enthusiastic, and realize the importance of effecting a state organization at an early day. The benefit to be derived from a state organization is apparent to all motion picture exhibitors who have given the matter consideration. The Massachusetts convention will be a great success, as the exhibitors are thoroughly aroused and feel that they must organize to protect their interests. An invitation is extended to every exhibitor in the state of Massachusetts, and other New England states will be welcome. The Motion Picture Exhibitors' League is growing rapidly. New states are coming in, and arrangements are being made to organize every state in the Union in the near future. A national vice-president, a state president, a state vice-president, second vice-president, secretary and treasurer will be elected at the Boston convention.

The officers of the Motion Picture Exhibitors' League of Iowa have called a meeting in Des Moines on the 3d and 4th of December, 1912. The call has the endorsement of the national president of the Motion Picture Exhibitors' League. The exhibitors of Iowa are not only invited to attend the Des Moines convention, but are earnestly urged to be present. The convention is held for the purpose of completing a thorough organiza-

"Billy McGrath's Art Career," Essanay.

tion, and every exhibitor in the state is interested. A program will be published later.

A state convention of the motion picture exhibitors of the state of Nebraska is called to meet in Omaha on the 5th and 6th of December. Every exhibitor in the state is urged to attend the convention. The convention is called for the purpose of organizing the state league, which will be affiliated with the Motion Picture Exhibitors' League of America.

A meeting of the motion picture exhibitors of the state of West Virginia will be held on the 17th and 18th of December at Huntington, W. Va. There will be big doings and much important business transacted. Many prominent exhibitors throughout the country will attend this gathering. The meeting is called by M. M. Wear, state president, and L. R. Thomas, state secretary. There will probably be a new treasurer and first vice-president elected at this convention. President Neff will attend the convention.

Famous De La Guerra Mansion in Film

Aside from the story itself, which deals with the early customs of California, the historic backgrounds used in the American release, "Her Own Country," are of more than passing interest. The famous home of the De La Guerra's, built in 1828, by Don Jose, de la Guerra y Noriega, is used in this picture. It is generally conceded that the leading Spanish family in Santa Barbara is that of De la Guerra, often wrongly called Noriega from a misapprehension of the Spanish patronymic with the prefix "y" ("and") after their father's; this, however, is a matter of compliment to the mother, and the father's remains the lawful family name. Thus, the founder of this family from his mother being a Noriega was called De la Guerra y Noriega. This old structure is one of the show-places of Santa Barbara and is in a remarkable state of preservation. It is built in the form of a parallelogram with a large patio in front. Within this enclosure the elite of the early Californian period were wont to gather to the fandango and carnivals which were their forms of amusement. Don Jose De la Guerra y Noriega was district judge during his lifetime. Here it was that Richard Henry Dana attended the marriage, as he describes in his book, "Two Years Before the Mast," of his agent to the Donna Anita de la Guerra y Noriega, youngest daughter of Don Antonio Noriega, who was at that time (1836) the grandee of Santa Barbara. In this picture old costumes of the De la Guerra family that had been preserved for generations are worn by members of the American Company, through the courtesy and kindest of the present members of this household. With the assistance of Alexander F. Harmer, who designed the scenery and costumes for "Natoma," the scenes of which were laid in Santa Barbara and written by J. D. Redding and Victor Herbert and in which Mary Garden recently starred, "Her Own Country," to be released November 28, will be historically correct as to detail and mannerisms. Even to the greetings old Spanish cordiality will be reproduced exactly.

"Old Songs and Memories." Copyright 1912, Selig Polyscope Co.

Motography's Gallery of Picture Players

HERBERT RAWLINSON is the very last word in the haberdasher's art. It is quite an honor to have him tie somebody's tie for somebody, and it has been intimated that, on such an occasion, the somebody sits up all night with the tie on in order to preserve his dress-up distinction for the next day. Rawlinson is by no means a "dandy," however, as his spickness is quite as natural as his cheery smile, which is ever ready to develop into a laugh, notwithstanding the fact that he started life in London, England. He went to school in France, then came to America, where he lost his "kid foolishness" in circus experience, which led to theatrical work in big productions and big cities. He managed the Belasco house at Los Angeles last season, in the middle of which he was engaged by the Selig company, and now adds to the general popularity of western films by his work as juvenile lead.

Herbert Rawlinson.

MISS EUGENIE BESSERER ran away from school when she was twelve years old, and she's been running ever since. She didn't like the routine of school work in Ottawa, Canada, so she took a quiet little run to New York city, where she arrived with a quarter and the address of a former governess, and, after discovering the whereabouts of an uncle, made herself at home in his household and proceeded to become proficient in the art of fencing, holding the woman's championship record for several years. Her next try was at the stage, and she made good with McKee Rankin, Nance O'Neil, Wilton Lackaye and others. Then she resumed fencing, as an instructor, and four years later returned to the stage, as understudy to Margaret Anglin. At eighteen she had written a successful play in which she was starred. She went to Los Angeles, and landed in popular favor and leading lady roles with Selig pictures.

Eugenie Besserer.

PAUL W. SANTSCHI'S nationality is a puzzle to many, but after you learn he was born at Lucerne, Switzerland, you'll probably say, "I thought so," though you didn't, really. He is called "Tom," "Thomas" (in print), because the Selig director had difficulty in getting his name; and "Tom" is an awfully easy name to pronounce. Lucerne started Santschi to the states early in life with an ability to make watches, an inclination to play the piano by inspiration, and a desire to be an actor. The last two combining forces won and after much stage experience, brought Santschi to the door of picturedom. There he paused before knocking to try to comb some of the kinks out of his hair, but was welcomed, marcelle-effect and all. That was before the Western Selig company was formed, but when it was Santschi was chosen as a pioneer. He likes the work, the life, the company, and, in turn, is liked by all.

Paul W. ("Thomas") Santschi.

MISS PHYLISS GORDON is the regal blonde in Selig western pictures who inspires the female portion of her audiences with a new way to wear their hair, and makes the men sit up and wish they had worn their new tie as they had first intended. Then they forget themselves and think only of the splendid portrayal of whatever character Miss Gordon happens to impersonate, and when the flash of the diamond trade-mark signals "Finis," Miss Gordon has to her credit as many new friends as house capacities warrant. Tall and self-possessed, vivacious and versatile is Miss Gordon. Just one thing is missed by her friends from her film work and that is her voice, for, primarily, she is a singer, having been prima donna for the Shuberts for four years. In addition she has sixteen years of stock to her credit. Suffolk, Virginia, is her birthplace, but California is the state of her adoption.

Phyllis Gordon.

Kinemacolor Making Progress

It is announced by the Kinemacolor Company of America that the tremendous response to its film service announcement has not only immediately contracted for all its present ability to supply service, but that applications have been received in great number calling for installations two and three months away. Wherever the Kinemacolor film service has been instituted its triumph has proven instantaneous, and as each one subscribing has the exclusive right for his town it has meant a big increase in business for the houses fortunate enough to secure it.

From David Miles, at the Hollywood Kinemacolor Studios, Los Angeles, California, comes word that the company of fifty has arrived there in safety, and that work has already been started. Mr. Miles also remarks in his letter that he can use any number of good light comedy scenarios, and the New York offices, 1600 Broadway, are advertising that they pay the highest prices in the country and only "headliners" wanted.

The company has just imported from England a large number of the latest model machines and cameras.

Raise Picture House Admission

Practically all moving picture houses in Alameda county, Cal., raised their price of admission to ten cents recently. The commission fee will remain permanent. The San Francisco houses will follow suit and proprietors have even placed a cash bond of $200 each as forfeit. The film exchanges are encouraging this advance movement by arranging for additional pictures and features. Hereafter, no five-cent house will be allowed to show more than two reels of pictures. In short, the film companies are expanding their plants and also expending enormous sums of money securing the finest and highest talent, etc., thereby necessitating an advance in admission price along the entire line of picture theaters.

Carl Morrison, Cowboy, Has Mishap

What might have resulted in a serious accident occurred along the Southern Pacific right of way in taking the final scenes in the production "The Law of God," a "Flying A" production recently completed by Director Dwan. In the scene during which the mishap occurred, a posse was chasing Mr. Kerrigan. Mr. Carl Morrison in the lead of the riders had just ridden out of the picture when his horse stumbled and fell, pinning his rider's leg underneath, and slid about fifteen feet on the down grade, dragging Mr. Morrison with him. The other cowboys following had the presence of mind to guide their mounts to one side, but Mr. Charles Morrison, brother of the injured man, was so close behind that he was compelled to leap his horse over the forms of the fallen horse and his prostrate brother. Mr. Morrison suffered severe bruises about the face and head, but fortunately no bones were broken. The horse, however, was badly injured and it will take much of Mr. Charles Morrison's veterinary skill before the company will be able to use the horse again.

"Broncho Billy's Mexican Wife," Essanay, with G. M. Anderson.

Photoplays From Essanay's

Some Coming Features

STRONG dramatic studies form the bulk of Essanay's feature releases for the last two weeks of November. Of the ten bookings, seven are dramas and three comedies.

"Billy McGrath's Art Career," released November 21, is one of the most original and novel adventures this popular character has had. He attends an art exhibit of the new French "impressionistic" style, in company with his fiancee, Catherine Van Zandt, and her mother. Billy is introduced to the artist, Lecomte, but insults the dauber by his display of ignorance over the paintings. Strolling down the gallery Billy meets Ruth Radcliffe, an art student, whom he immediately takes a great interest in. That night he calls on Catherine, who declares he will have to do something to distinguish himself before she will become his wife. Billy is stumped, but happening to visit the art gallery again he finds Ruth in tears, and learns she is forced to return to her country home because of her parents' poverty. Taking her boarding house address Billy returns home. Deciding to distinguish himself in art work he goes in for the new impressionistic style and succeeds in making a fine lot of daubs of everything, including James, his butler. One of these daubs he angrily smears up, and, during his absence, Catherine and her mother call, see the painting, think it marvelous and take it with them, leaving a blank check for Billy to fill in at his own figure. The result of this laughable experience gives Billy an idea. He visits Ruth, smears up all her paintings, calls in a group of wealthy friends and disposes of the daubs for a large sum of money. Ruth is now enabled to finish her art course, while Billy, supremely happy over the fact that he has done a really big thing, lights his pipe and dreams of approaching wedding chimes.

John Steppling is brisk and thoroughly satisfying in his popular role of McGrath, Ruth Stonehouse is petite and charming as the art student, Dolores Cassinelli is splendidly cast as Catherine Van Zandt, Eleanor Blanchard is an impressive "grand dame" type in the role of Catherine's mother, E. H. Calvert is excitably interesting as Lecomte, the artist, and Augustus Carney is extremely laughable playing an art connoisseur. The production is staged with infinite attention to detail, and the many superb settings are very attractive.

Norman McDonald and Harry Cashman in "The Iron Heel."

"The Penitent," released November 22, is a fine dramatic subject. The plot is entwined about Bob Arling and Hugh Thompson, two chums, who are rivals for the love of pretty Alice Danville. Hugh wins her, and Bob, though heartbroken, wishes them life happiness. A few days later Professor Danville, a noted scientist, is experimenting in his laboratory when Alice enters, and in spite of his precaution causes an explosion of chemicals that renders her blind. Hugh now shows the despicable side of his nature in tiring of his blind sweetheart and transfers his affections to Dorothy Haddon, Alice's cousin, who is paying a visit. Bob notices Hugh's fickleness and upbraids him angrily, but Hugh refuses to listen. Still loving Alice with all his heart, Bob gives her every kindly attention. Doctor Hardcastle, a noted specialist, now examines Alice's eyes and agrees to perform an operation he believes will restore her sight. This operation is successful and Alice is overjoyed. Hurrying out into the bright sunshine to find Hugh and surprise him, she discovers him and Dorothy together and realizes his perfidy. Pretending still to affect her blindness, Alice approaches them, then suddenly reveals the truth just as Bob comes on the scene. Stricken with remorse, Hugh leaves, while Dorothy humbly asks Alice's forgiveness. A few hours later, in the quiet of the conservatory, Bob again asks Alice to be his wife, and this time does not ask in vain.

Beverly Bayne renders a beautiful portrayal of the blind sweetheart, Mildred Weston is splendidly cast as Dorothy Haddon, Francis X. Bushman and William Bailey are sharply contrasted in the roles of the two chums, and their work is strikingly delineated. Howard Missimer is the scientist and Helen Dunbar his wife, while William Walters portrays the noted eye specialist.

On November 23, "Broncho Billy's Heart" is released, with G. M. Anderson, of course, in the title role. The story is a keen tale of old Western days. Old Silas Jordan, a settler, finds that his horse is not able to pull

Beverly Bayne and Francis X. Bushman in "The Penitent."

the heavy load demanded, and discovers the well-fed broncho of Jim Davis, a ranchman, staked out near the trail. Jordan deliberately takes the broncho, hitches it to his wagon, and drives on. A few hours later he stops to cook dinner, and meets Broncho Billy, who has a great romp with Jordan's children and eats with them. The meal finished, Broncho bids Jordan goodbye and rides on. Late in the afternoon Broncho meets Jim Davis and a bunch of his cowboys, who are on the trail of the missing horse. Davis tells Broncho of the matter, declares that they will string up the man who has stolen the horse, then gallop on. For a moment Broncho studies, then suddenly remembers that Jordan was driving a horse answering Davis' description, and leading another behind the wagon. Realizing the danger of the old settler if he is caught, Broncho rides desperately down the trail, overtakes Jordan and offers to trade horses with him. Jordan agrees, exchange is made, and Jordan goes on. Turning the white horse loose on the trail, Broncho finds a good place near by to bunk for the night, and has just pillowed his head on his saddle when he sees Davis and the boys gallop up, identify the horse, and, thinking it had merely strayed away, gallop back up the trail. With a deep sigh of satisfaction, Broncho lights a cigarette and puffs away contentedly with a grim smile playing over his brown face.

Mr. Anderson has never been seen to better advantage in his popular role than in this production. Frederick Church portrays Davis, the ranchman, and Arthur Mackley is Jordan.

"Mr. Hubby's Wife," released November 26, is an uproariously funny comedy, the first from the Eastern studio featuring Augustus Carney, famous as "Alkali Ike." Mr. Hubby attempts to flirt with his pretty stenographer, has his face soundly slapped by the enraged girl, and she leaves at once. Getting his friend Hobbs on the telephone, Hubby asks him to send up a peach of a stenographer and Hobbs does so. Cassie proves to be a bewitching girl, and Hubby is making outrageous love to her when his wife enters and catches them. She gets rid of Cassie in short order, upbraids her unfaithful spouse, and makes him carry her grips to the station, as she is planning a trip to the country. Hubby accompanies her half way, then begs off and she allows him to return. But she does not take the train. Instead she plans with her friend, Mrs. Briggs, to cure Hubby of his flirting. Next morning Mrs. Briggs, disguised as an ugly old maid, is installed in Hubby's office as stenographer by Mrs. Hubby, then Mrs. Hubby again departs supposedly to take the train. But she makes a detour, returns to the office during Hubby's absence, changes places with Mrs. Briggs and prepares for Hubby. Thinking wifie gone, Hubby returns and starts to dictate a letter to Cassie saying wifie has gone to the country, etc. Then sud-

Augustus Carney and Eleanor Blanchard in "Mr. Hubby's Wife."

denly Mrs. Hubby throws off her disguise, and Hubby is mauled about the office until he is a sight by the enraged woman. But he finally promises to be good, and she forgives him. Augustus Carney is a riot of mirth, as always, in the role of Hubby, Eleanor Blanchard gives him splendid support as Mrs. Hubby, and the other members of the cast are admirable.

On November 29, "The Iron Heel," one of the month's feature melodramatic studies, is released. The story is a gripping plot of circumstantial evidence. Old Abner Wiley, a wealthy and crabbed miser, is rescued from some tormenting boys by the son of his bitterest enemy, Robert Gregg. Wiley and the elder Gregg had loved the same girl back in the Rebellion days, and Wiley had been turned out of the house by Gregg when discovered threatening the girl for refusing his offer of marriage. Through the long years Wiley has nursed his hatred of Gregg, now long since dead. Discovering the identity of the younger Gregg, Wiley concocts a fiendish plan to bring about his vengeance. Calling young Gregg to his house one night, Wiley makes him heir to all his possessions. Astonished, Gregg returns home, and is warned by his mother not to see again the enemy of his father. Next night Gregg is again called to Wiley's home to sign a paper, and forgets his heavy walking stick. In the morning, at the breakfast table, Gregg is arrested on the charge of murdering old Wiley. A visit to the house reveals the library to have been the scene of a desperate struggle, and Gregg's cane is discovered on the floor stained with blood. Following open clues, Ross, a detective, discovers evident traces of old Wiley's charred body in the ruins of a burned house near by. Entwined in this fearful net of circumstantial evidence, Gregg is dumbfounded. The trial is held and he is condemned to death. On the morning of the execution, Ross is at headquarters when one of the attendants passes him with a tray of dishes. Instantly Ross recalls seeing one of the maids at Wiley's home coming down stairs from the second floor with a tray of empty dishes. With his brain working rapidly Ross rushes to the Wiley home with his assistant, places the maid and butler under arrest, then lights a smoke-torch, places it in the hallway and shouts "Fire!" at the top of his voice. Suddenly, through the density of the smoke, a panel in the wall is shot back and old Wiley, trapped like a rat, staggers out in a paroxysm of fear. Captured by Ross, and realizing his dastardly scheme has come to naught, Wiley dies of heart failure, while Ross reaches the jail in time to prevent Gregg's execution. It is easily seen that this dramatic plot is quite out of the ordinary. The scheme concocted by Wiley is a masterpiece of circumstantial evidence, and would have allowed him to reappear after Gregg's death and gloat over the accomplishment of his sworn vengeance. Norman McDonald, remembered for his fine work as Colonel de Valpeau in "Ghosts," gives another remarkable study as old Wiley, a portrayal that runs the gamut of fiendish and heavy emotional moments. Francis X. Bushman portrays two characters, that of the elder and younger Gregg, and his well known versatility is one of the dominating features of the film. Helen Dun-

"The Boss of the Katy Mine," Essanay.

bar is well cast as Mrs. Gregg. Harry Cashman portrays Ross, the detective, in a manner that leaves nothing to be desired. The production is a marked feature.

Essanay ushers out the month with "Broncho Billy's Mexican Wife," released the 30th, another fine Western drama featuring Mr. Anderson and his capable players. Broncho marries a Mexican girl at the earnest entreaty of her dying father. Later a Mexican singer wins her love, and, to get Broncho out of the way, she has him arrested and jailed on the charge of having assaulted her. In a frenzy of rage, Broncho secures the sheriff's revolver, escapes from jail and tracks the pair to his shack. Meanwhile the Mexican singer's sweetheart, jealous of his attentions to Broncho's wife, reaches the shack first, and, when Broncho bursts in gun in hand, he finds the pair dead on the floor, her knife having found both their false hearts. Mr. Anderson's remarkable ability as a portrayer of Western types is splendidly shown in the production, and he dominates the entire action of the story.

San Diego Puts Ban on Motor Drive

Despite the protests of moving picture operators, Edward Jewell, city electrician, at San Diego, Cal., declares that he will enforce the law which prohibits the use of motors in running the machines. He states that the electrical code of national underwriters which was made a part of the city building ordinance, makes it compulsory to operate the machines by hand.

"If motors are so dangerous why do some big cities recommend their use?" ask the operators. "Surely the officials of these cities are as competent to care for the public's safety as are those in San Diego.

"As to the danger of motor-driven machines," they continue, "we would state that the only accidents that have occurred in San Diego (three in number) have been on hand-driven machines. The only way a fire could be started on any moving picture machine is by the pulling apart of bad patches and the leaving of a part of the rapidly passing film exposed to the heat rays. The operator with a motor-driven machine has both hands free to examine each film every time it is used, thereby reducing this possibility to a minimum. But now, thanks to the great improvements in projection machines, and to the enterprise of the local managers in installing the same, the machines are fitted with safety devices that render a fire impossible."

Double Screen Theater

Cleveland has the first double-screen picture theater. The Oxford, recently opened at the corner of Ontario and Champlain streets, is actually two theaters in one. There are two picture curtains, two picture machines and two shows are run continuously. A person may go in the theater, and for a single admission, see two shows. Sitting on the right side of the theater one screen is in view, and when the complete program has been shown it is only necessary to move to a seat on the opposite side of the room and see another entirely different set of pictures.

"Between Love and Law." Copyright 1912, Selig Polyscope Co.

Of Interest to the Trade

Odd Facts About "Bethlehem"

Eight thousand dollars was spent by the Thanhouser Company on "The Star of Bethlehem." Seven reels of negative were made, from which a final three were selected.

One month was consumed in producing the picture.

In the cast where 200 people, of whom there were 40 real principals.

A special animal department handling sacred cows, asses and camels, was organized for the production of the subject.

There were special costume, property and scenic departments.

A special force of electrical experts was engaged for light effects.

The trick effects alone took over a week to produce.

Some of the largest scenes, such as the battle ones, were taken by three cameras, posted at as many different angles.

A committee of New Rochelle churchmen, assisted the company officials in selecting, from the seven reels of negative turned in by the producers, the best portions for the three releasing reels.

The infant used was selected from sixty tots brought to the Thanhouser studio by New Rochelle mothers. At the moment the infant was "picked," the Thanhouser studio resembled a baby contest.

Eleven automobiles were employed in transporting the players from the studio to the outside locations. Three of the machines were of the truck type, seating from twelve to sixteen people apiece.

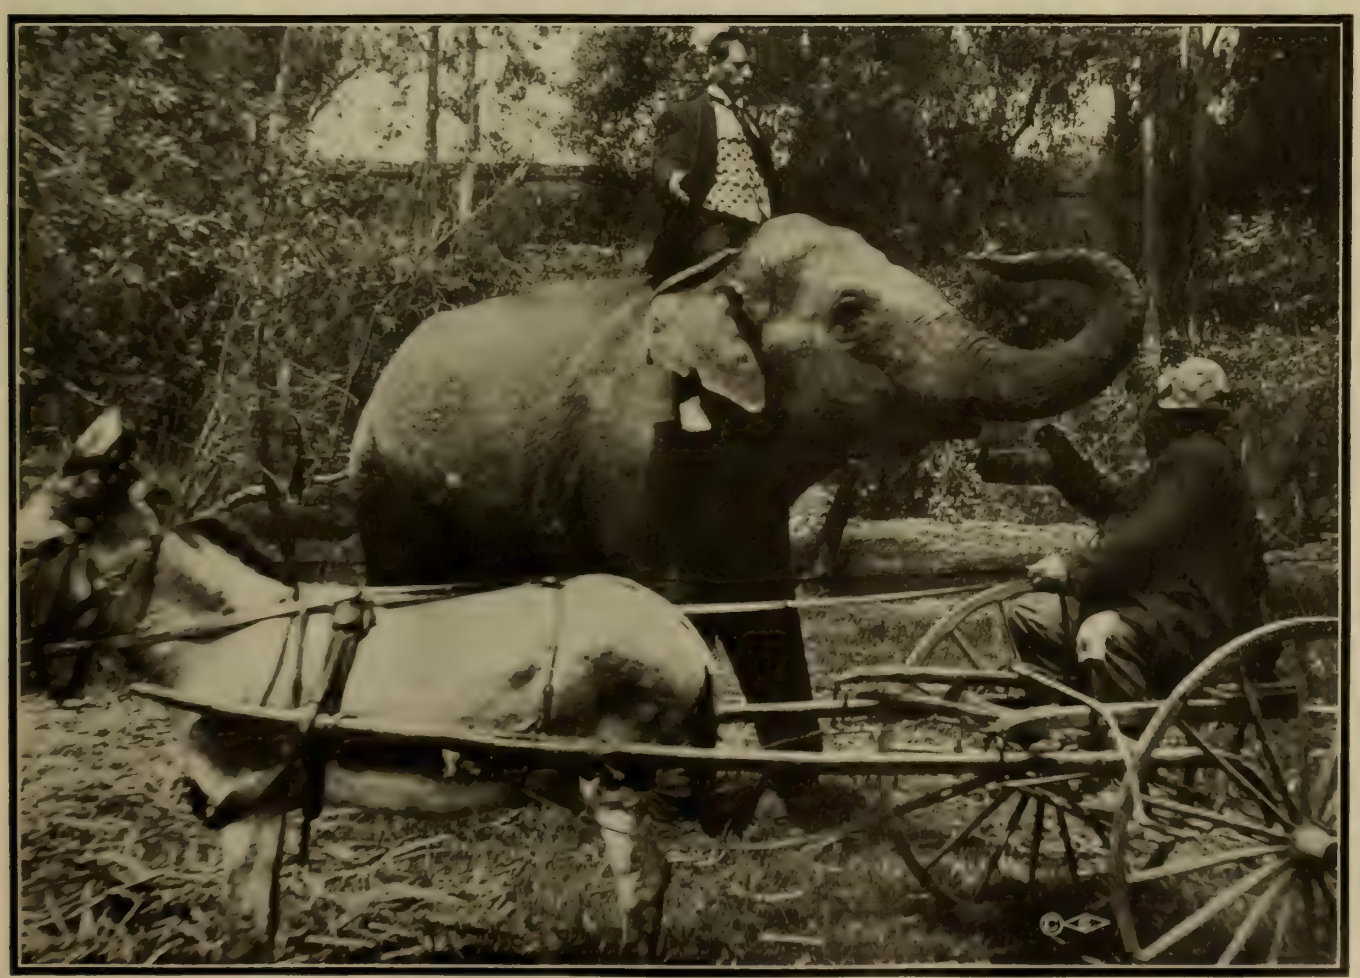
The story of "The Star of Bethlehem," will be told in MOTOGRAPHY'S next issue.

Kleine's Cines and Eclipse Releases

George Kleine's schedule of releases for the week ending November 16 offers a program of interesting and pleasing variety consisting of a splendid war drama, a three-subject topical reel, and a heart interest drama of especial excellence.

The first, "On the Firing Line," depicts an exciting military story interwoven among actual scenes of the Italian-Turkish war. The public never tires of these war films, and will especially appreciate the opportunity of witnessing genuine action. The plot of the drama is simple. It was described in a recent issue of MOTOGRAPHY.

The Wednesday Eclipse release "Reviewing French Troops by Airship," shows remarkable views of French army maneuvers and glimpses of the city of Paris, taken



"Mike's Brainstorm." Copyright 1912, Selig Polyscope Co.

"Atala." Copyright 1912, Selig Polyscope Co.

from a dirigible. The photography is above criticism and every detail of the dwellings in the city is wonderfully brought out. The reel is completed by two interesting topical subjects.

The Saturday Cines release entitled "The Old Actor's Vision," is a very artistic piece of work. It describes the experiences of an old actor who has fallen into distress and when kind friends make him comfortable, he slowly sinks into a reverie and has vision after vision of his former triumphs upon the stage. The dreams are beautifully executed by double exposure and the whole photoplay is worthy of the highest praise.

The reel is completed by a travelogue entitled "Life and Industries in Aden Campo," which spreads before us places of interest in and about the town and several delightful views of the picturesque bay.

Series of Sensational Fire Pictures

Everyone knows the thrill inspired by the clang of the fire-gong, and there is a kindred thrill in the imagination as it pertains to the fire story. During the past thirty days, the Selig Polyscope Company has completed two fire-plays with big emotional values and some wonderful realistic effects, that quite eclipse all of the company's previous pretentious efforts in this direction. The first play was produced by Oscar Eagle, enlisting Charles Clary and William Stowell in the leading roles, and Miss Adrienne Kroell as the bewitching heroine. Another notable masterpiece in fiery fiction has been produced by Hardee Kirkland, in which the stalwart Stowell and the beauteous Miss Kroell as dashing and loyal leaders have many daring adventures by fire and flood. One of the scenes is a remarkable rescue from the fourth floor of a blazing tenement. In this scene the life net of the fireman is advantageously utilized.

New Move by a Western Hustler

We take pleasure in announcing the opening of a general eastern sales, distributing and repair branch for the Motiograph machines in New York City. The Enterprise Optical Manufacturing Company has leased a loft at 30 East 23rd street and commenced business November 1, 1912.

The establishing of this eastern branch, including a fully equipped repair shop is in line with the hustling policy of the Motiograph makers in extending repair facilities to the many users of the machine in the eastern and New England states. It is the purpose of the company to carry a full and complete line of machines, mechanisms, and all repair parts in New York stock, and as soon as the demand justifies, a competent repair man will be sent from the factory in Chicago.

The appointment of Fred A. Clark to the position of manager of the eastern office is in recognition of his services in the territory to be cared for by his office.

We are asked to extend a cordial invitation to all to pay a visit to the eastern office of this well-known machine, where its latest product, the 1913 Model Motiograph, will be demonstrated, beginning with the opening on November 1.

Mr. Woodward, vice-president and general manager of the factory, is spending two or three weeks in the East with headquarters at the Imperial hotel, New York City.

No "Hats Off" Order Here

A feature of the new $5,000 Theatorium at Evansville, Ind., is the fact that women will be enabled to sit in the amusement place without removing their hats. People in the seats directly behind them will be able to see the pictures despite the fact that one or two picture hats wave in front of them. The reason for this is that the floor of this house will not slope as in the ordinary theatorium. The floor is level. The ceiling of this house is twenty-four feet high, and the pictures will be thrown so high from the floor that anyone in the house can see them.

Suit to Oust Motion Picture Combine

At Austin, Texas, James D. Walthall, attorney general, said he would have charge of the prosecution of the suit against the alleged moving picture trust which has been filed at Beaumont against the different companies charged with being in the combine. The petition alleges that the trust has been operating in Texas since 1908. Penalties aggregating $3,000,000 are prayed for, and that the defendant companies be forever enjoined from doing business in this state. The defendants in the suit are the Motion Picture Patents Company, General Film Company, Biograph Company, Thomas A. Edison, Essanay Film Manufacturing Company, George Kleine, Lubin Manufacturing Company, Kalem Company, Petere Freres, Selig Polyscope Company, Vitagraph Company of America, Armat Moving Picture Company, Frank L. Dyer, Henry N. Marvin, J. J. Kennedy, William Felzer, Samuel Long, J. A. Berst, Siegmund Lubin, Gaston Melies, Albert E. Smith, George K. Spoor and W. N. Selig.

Advocate Pictures in Schools

Moving pictures in the public schools will be one of the vital topics to be discussed at the November convention of the Wisconsin Teachers' Association. Women's clubs in that and other states are agitating the innovation and school superintendents have taken notice.

While the actual moving picture as yet has not gained a hold in the Milwaukee's schools, the steropticon picture is in weekly operation in several. Supt. Pearse praised the innovation, saying that the moving picture is a vivid method of story telling for children and that the pictures can be made a valuable adjunct to education.

The advocates of the moving picture urge as advantages the fact that the apparatus could be installed in the schools at a small cost and insure children as well as parents beneficial entertainment. It is planned by women active in the innovation of school education to petition the legislature for the enactment of a bill providing that in cities of the first class moving pictures, approved by a board of censors, shall be included in school work.

Films a Success as Salesmen

The motion picture is usurping the field of the traveling salesman. It demonstrates the goods better than 1,000,000 salesmen could do; better, in fact, than anything else except watching the actual goods in operation —and as most of these goods are steam-road rollers and electric drills and huge derricks and massive machines and 90-horsepower harvesters and such things, an ordinary salesman could not very well walk into a man's office or into his front yard or his factory and make a demonstration of his goods.

Before the days of the moving pictures, firms handling such big things had either to pay the fare of a prospective purchaser to and from the factory to see the things work, or try to sell the goods by means of photographs and written descriptions, and the photographs were the ordinary "stationary" sort that couldn't show whether the derrick could actually lift a locomotive or only a wheel-barrow.

Homer Croy has written in an interesting manner on this phase of salesmanship in a monthly magazine, "For some time," writes Mr. Croy, "the motion picture man has been explaining the wonders of a factory to the public, how a fountain pen is made, or how the bristles are set in a tooth-brush—campaigns to enlighten the public as a whole. But it is only recently that it has been found that it would pay to spend thousands of dollars in making a reel for an audience of half a dozen.

"The size of a dredge or a derrick precludes its being moved to the would-be buyer, but a reel and a perfection machine can be brought in a suit-case to a possible buyer. The film gives a good working idea of the machine as it appears on the railroad or the canal.

"One large company in Ohio which manufactures brick-setting machines, sand dryers, sand-lime brick and cement machinery, has been using motion pictures for the last six years to demonstrate its goods to direct buyers of this kind of machinery. Its products and processes are departures from the common types used throughout the country, so that its machinery is beyond the capacity of the average brick manufacturer and is used only by the larger plants producing ten or twenty times the number of brick which are made in the ordinary plant.

"Motion films are being used to sell a most interesting variety of things. Not only can a traveling crane be sold by moving pictures, but also stove blacking. A borax company has demonstrated for the last two years that a household commodity can be pushed by this means. In fact, this company thought so well of the proposition that it sent out five crews to disseminate biograph information. Films were exhibited in 331 cities to a total attendance of 947,479 people, at a total cost of two and nine-tenths cents a person.

"Films have been made to exploit laundry machinery, hoppicking machinery, marble-quarrying outfits, powder machines, excavating outfits, derricks, water sluices, rubber-manufacturing machinery; and, by way of contrast, to sell golf balls, automobile tires, soap, lace curtains, and fountain pens.

"For the purpose of displaying these pictures, a firm

has just put out a small projecting machine for the special use of salesmen. The whole machine may be carried in a compact little case. When the salesman brings it into an office he merely draws the shades on the windows, attaches a socket to the electric light and begins to turn a crank—while the machine he is selling leaps out upon the wall and goes through its workings as noiselessly as a shadow. The customer does not have to study a catalogue. He merely leans back in his swivel chair and watches the evolutions of the apparatus, while the salesman explains each detail as it comes, or stops, or passes at his command."

Brevities of the Business

PERSONAL NOTES.

Miss Myrtle Stedman has had her sister from Chicago as her guest for the last several weeks at the Selig plant at Canon City.

E. P. Sullivan is a new character lead with the Reliance Stock Company.

Edwin S. Porter is now "late" of the Universal Film Manufacturing Company. He resigned to give all his time to a more favored project, the Famous Players' Film Company, in which he, Daniel Frohman and Adolph Zukor share interests. He has disposed of financial holdings in the Universal Company, and as he is a rich man anyhow, money will not be the guiding star in the progress of whatever the Film Company undertakes. James Carlton has been named as Mr. Porter's temporary successor.

Miss Kathlyn Williams has gone to the Los Angeles studio of the Selig Company where she is ready to begin work in a series of wild animal film stories. En route to the studio city, she stopped at her father's home in El Paso where she was lavishly entertained during her short stop-over. At her arrival at the Edendale studio of the Selig house, she was given an impromptu reception at which she was heartily welcomed back after her two years' affiliation with the Chicago studio.

Sue Balfour is again at it, making name and fame in Reliance pictures, after her several weeks' indisposition resulting from an accident.

William Duncan, leading man and producer of the Selig Colorado Company, who was seriously injured during the production of a recent western picture, in which he was accidentally shot in the chest, has resumed his duties with the company and started upon the production of a new picture.

John Rock has reserved two tables and two boxes for himself and Vitagraph players at the New York Exhibitors' ball.

Samuel Eskin has been chosen to fill the office of president of the New Haven Exhibitors' League, which was left vacant by the resignation of John Gentile.

George H. Roth, secretary of the Pennsylvania State League, announces a meeting of exhibitors of that state for November 11 at Harrisburg, Pa.

W. A. H. Mang of Cleveland, O., 29 years old, who for several months had been manager of the General Film Company at 24 West Naghten street, fell dead on the afternoon of October 20 as he stepped inside the door at the office. He had been engaged about the office all afternoon. The coroner's opinion was that his death was caused by overdoses of a medicine he had been taking for a cold. He was a sufferer from lung trouble. Relatives in Cleveland were notified of his death and the body was sent to that city for burial.

Al Ernest Garcia, one of the most popular members of the Pacific Coast branch of the Selig Polyscope Company, is acting as manager and captain of the Selig Company's western baseball team. A series of games have already been played between the Selig nine and teams from other studios in the vicinity. Plans are being made for a series of games between the nines of the Pathe and Selig eastern studios and also between the nines of the same companies' western studios. These games will take place sometime early next season if everything is favorable.

Phyllis Gordon, Anna Dodge and Lillian Hayward each celebrated an October birthday within the same week and the rest of the Selig Edendale company assisted at the respective celebrations.

Watterson R. Rothacker, manager of the Industrial Moving Picture Company, Chicago, left Chicago October 21, for Portland, Ore., where he remained but a day and then proceeded to New York.

Forrest Halsey, who put his novel, "Men Who Dare," into picture form for the Reliance Company, is a writer now for the Reliance and Majestic Companies, exclusively.

Richard Spencer has returned to California and his duties there as scenario editor for the New York Motion Picture Company after his vacation trip to the east which included a short and pleasant visit with old friends in New York.

Mr. Thrash is in charge of the "Warner's Features" office at Dallas, Texas. He formerly was with the Consolidated Exchange of New Orleans.

Evelyn Francis, who has won favor in leading roles in Champion films, took the part of Helen in the Vitagraph's production, "Four Days a Widow."

Messrs. Weinberg and Samwick, 32 Union Square, New York City, have secured the sole rights for New York state for Sarah Bernhardt's "La Tosca."

J. V. Ritchey of the Carlton Motion Picture Company, has invested in a life membership in the Screen Club.

Hobart Bosworth, through the courtesy of the Selig Polyscope Company, appeared in the production of Austin Adams' great play, "The Landslide," which was presented at the Lyceum Theater in Los Angeles the week of October 28.

Fred Mace, of the Keystone studio at Edendale, Cal., will have his parents as guests for the next several weeks. Both are more than eighty years old.

Edna Maison, after an absence of several weeks, is again back at the Pathe studio at Edendale, Cal.

Harry Raver is the designer of the Italia posters which are causing much favorable comment.

William A. Paley, old in camera service, is ill at the Good Samaritan hospital at Santa Monica, Cal. He has been operated upon several times within the last five weeks as the result of an accident sustained last March.

M. A. Stevani, the Ambrosia American Company's president, is combining business and pleasure on a trip to Europe. His return will be an early one.

Richard V. Spencer has resumed his editorial work at the Edendale branch of the New York Motion Picture Company. During his respite from work he visited Chicago, New York, Philadelphia, Boston and Washington.

Charles Kessel and C. J. Willat are in California looking to the interests of the Kay-Bee pictures.

J. R. Freuler is again in New York after several weeks of road work in the interests of the Mutual Film Corporation.

Earle T. Simmons is again at work at the Broncho studio, playing leads at Santa Monica, after a vacation made necessary by poor health.

Al Lichtman was forced to abandon his trip to Philadelphia, to have been made in the interest of the Famous Players' Film Company, on account of illness.

Neva Gerber is the substitute for Miss Christie in George Melford's company of Kalem players at Glendale, Cal. Miss Christie's going to New York meant Miss Gerber's first appearance in pictures in which she is playing leads.

Harry Harvey needed a rest so he resigned from the Solax Company. While resting he is considering a number of offers for future work.

Elmer Morrow of the Broncho studio, has his sister, Cleo, of Muncie, Ind., as his guest at Santa Monica, Cal.

J. D. Tippetts is being thanked by everybody interested for renaming Universal Features, which is now called Union Features. Much confusion was caused by the former title.

Anna Little, a Broncho favorite, fell from a horse recently and injured her spine. The accident necessitated an operation from which she is slowly recovering.

Frank Lanning is a new member of the eastern Pathe company. He formerly was a Kalem player but left that company to take a vaudeville sketch on the road, and in turn, left vaudeville to join the Pathe Company.

L. E. Dougherty has taken the comedy section of the Biograph Motion Picture Company of New York, to Los Angeles for the winter. The drama troupe will follow later.

W. E. Macarten is president, N. K. Parkhurst vice-president and manager and C. D. Crane, secretary and treasurer of the newly organized film company entitled the Ocean-to-Ocean Highway Motion Picture Manufacturing Company. It proposes to start at the Pacific coast and picture everything of

interest on its route of travel from there to the Atlantic. The company is now ready to begin work.

David Kirkland is a new member of G. M. Anderson's company at Niles, Cal. Mr. Kirkland was at one time with Kolb and Dill and also performed for the Essanay Company at San Rafael.

Sidney Cohan of the Canadian Gaumont Company, spent a busy week in New York.

Frank Norcross is a new producer for Imp films. He is a theatrical man with much experience as a producer.

Fred Huntley has exchanged his title of director for that of actor, at the Selig Edendale studio.

Frank Selig is back in Chicago after several months' connection with the management of the Edendale plant.

G. W. Bradenburgh, of Philadelphia, has opened a branch of his film business in Room 1011, Exchange Building, 145 West 45th street, New York City. The New York branch will handle features and rent independent pictures. It will be in charge of John Child, who has been connected with Mr. Bradenburgh for several years.

James D. Denton, of much film experience, has charge of advertising and publicity for the Hochstetter Utility Company.

Charles Ranson, of Broadway legitimate fame, has joined the Majestic Company.

Shelby M. Harrison and E. G. Routzahn are directors of the newly organized Department of Surveys and Exhibits, established by the Russell Sage Foundation and which will make motion pictures the medium for instruction as to the betterment of cities, making them better places in which to live. The founding of the new department was the outcome of a request by twenty-six national organizations of welfare workers.

S. S. Hutchinson, president of the American Film Manufacturing Company, will stop at Seattle, Portland, San Francisco and Los Angeles, en route to Santa Barbara, the home of the "Flying A" films. Here he will arrange for a new series of pictures and start a new order of things that is predicted to win the approval of the entire industry.

Mrs. Connie Mack is a new comedy actress in the Majestic cast under the direction of Charles Weston. Mrs. Mack is the wife of "Connie" of baseball fame.

Dave Porter, director of the Ammex Company, will take a company of forty-five people, including a band of Indians, to the mountains to produce frontier films.

Arthur M. Brilant has resigned the photoplay editorship of The Rounder to write scenarios for the Universal Film Manufacturing Company.

Martha McGraw is another addition to the Majestic comedy force.

Mary Pickford gave a farewell ball to more than three hundred guests, one recent eventful night at Bretton Hall, New York. The attendance included the stars of picturedom. The much beloved Mary leaves soon to undertake her Belasco contract.

Miss Charlotte Burton has been engaged by Director Dwan to play opposite Jack Richardson in heavy roles with the Western "Flying A" Company. While new in the picture realm, Miss Burton is an old favorite in coast stock productions, having starred in Theodore Kremer's production, "Buried at Sea," for three years. She was successful from the first and received many favorable criticisms from the press and public.

Mr. and Mrs. H. R. Ashbrook, from Toledo, spent a few days in Chicago this week. They visited the American studio and plant, witnessed a private demonstration of advance releases and expressed themselves in very decided and favorable terms about the excellent equipment and facilities. Incidentally, Ashbrook remarked that "Flying A" products were meeting excellent results in the Toledo territory.

ROLL OF THE STATES.

ALABAMA.

The New Savoy, what is claimed to be the finest motion picture show house in the south, has been opened at Birmington. L. F. Phillips is proprietor of the new house.

ARKANSAS.

The new moving picture theater at Harrison being fitted up by Messrs. Lowell Whitesides and Frank Mitchell, is about ready for business. The building has been refitted throughout with raised floor, opera chairs, and ornamental front, and will be up-to-date in all lines.

An important change in the moving picture show business of Helena took place when interests of F. C. Seford in Idle Hours and Maxine theaters were sold to Joe Truemper, Jr. The two theaters now belong to Mr. Truemper and Lex Graves, who will continue them under the present management.

CALIFORNIA.

B. D. Phillips will erect a nickelodeon, east side Twenty-third avenue, 160 feet north of East Fourteenth street. It will cost $4,500.

F. M. Charlton of the Story building, Los Angeles, reports that Hemet in the San Jacinto valley is adding to its already numerous city achievements a large concrete picture show building with all the latest improvements. Hemet already has a large opera house, built several years ago.

Ben Michael's Palace, a picture house on Broadway, San Francisco, was almost entirely destroyed by fire recently. A panic among the capacity audience was narrowly averted.

COLORADO.

A contract has been let for the erection of a new moving picture theater for S. S. Baxter, on Curtis street, Denver.

CONNECTICUT.

Plans are being prepared for the erection of a new theater building on Whalley avenue, Westville, by A. Raccio of 25 Hudson street.

ILLINOIS.

Plans are being prepared for a moving picture theater in Pekin, for D. C. McClellan, manager.

The Gilmore Amusement Company, Chicago; capital $2,500; to operate theaters and places of amusement; incorporators, Louise Wille, Walter Wille, Anton Wille, Arthur Wille, George J. Gilmore.

Arthur Nichels and M. Clark have opened a new picture theater in the Hinckley opera house, at Hinckley.

Plans are being prepared for a new theater building for Oak Park to cost $100,000. Peck Gatts and Sackett, managers.

Earl Smith, since his purchase of a Canton theater, has remodeled and overhauled the place considerably, with the result that it is generally improved.

A new motion picture theater for Joliet is assured by James C. Wallace of New York, representing a film company. The theater will be located in the building now occupied by A. C. Rott, the florist, and the Royal restaurant. A new structure is also under consideration. Work will be started after the first of the year. The seating capacity of the house will be about 1,000. A local manager will be placed in charge of affairs.

Plans are being considered for the erection of a new moving picture theater for the East Side, Champaign.

Standard Theater Company, $15,000; operating theaters; Herschel L. Vallandigham, Fred H. McMillan, Alexander Smietanka.

J. H. Braffet has purchased the interest in the Lyric theater at Paw Paw owned by F. M. Edgett and is now sole proprietor. The shows are fine and attendance so far has been excellent.

A contract has been let for the erection of a new theater building for Milton S. Plotke in Chicago.

INDIANA.

A new theater, known as the Royal, will be opened soon at Hartford by J. Rosenbush, owner.

A panic was caused at Brown & Agar's picture theater at Princeton recently, when the films caught fire, throwing flames into the audience below. Carl Kuebler, the operator, was badly burned and Roy Brown was seriously burned and injured when he fell from the loft into the audience. Several children suffered minor injuries in the scramble to escape. The fire was soon extinguished.

The motion picture business in Shelbyville is dwindling and there are now only two 5-cent houses in the city. At one time there were five picture houses and an airdome in operation.

A contract has been let for the erection of a new theater in South Walnut street, Hammond. Harry R. Wysor, owner.

D. P. Roberts, a motion picture theater owner of Indianapolis, has dismissed his appeal to the Marion county circuit court in the case which was instituted to test the theater ordinance of the city as it applies to licenses.

The Anchor Concrete Company has the contract for the work on the Marble Hall theatorium on Main street, Evansville. The company has already started the work of filling in the basement.

IOWA.

A new theater building will soon be erected by Mr. Albert Burkley, owner of the Burkley hotel at Iowa City.

Robert Kremer, who for the past few years has been the moving picture operator at Dreamland theater, Galena, Ill., has purchased a show house at Davenport, Iowa.

KANSAS.

Plans are being prepared for a new theater building at Topeka for George Gordon and Hyman Gordon.

Thacher Brothers have begun to remodel the Litowich-Wolsieffer building in Salina for a moving picture house.

KENTUCKY.

The next annual convention of the Kentucky Motion Picture Exhibitors' League will be held in Louisville, April 22-24, 1913. This decision was reached at a meeting of the executive committee of the league held at the Seelbach recently. The 1912 meeting was held in Lexington. The league has a membership of 125 in Kentucky, a score of these being Louisville exhibitors. The next meeting of the executive committee will be held in Covington, January 5.

T. Neal Hubbard, who has so faithfully and capably managed the Pastime motion picture theater in Maysville since its establishment several years ago, has accepted an offer of Arn & Simons, owners of the Gem theater, to sell him a third interest. Elmer Bridges, who for several weeks has been assistant manager of the Pastime, succeeds Mr. Hubbard as manager of that theater. Will Kirwin, who had been managing the Gem, tendered his resignation also.

George A. Epstein will erect the National theater on the southwest corner of Fifth and Walnut streets, Louisville.

MARYLAND.

Architect Otto C. Simonson has drawn plans for a moving-picture theater to be erected at the corner of Gay and Wolfe streets by the Northeast Baltimore Moving Picture Parlor Company. A number of builders have been asked to submit bids.

The new Pickwick is one of the most popular of the houses in Baltimore. The program is always a good one and the patrons of the theater are always sure of seeing the newest and best pictures that are being shown in the city. New features are always being added and the pictures constantly changed.

A moving picture parlor and skating rink to cost $15,000 will shortly be erected at Baltimore for the Pitt Amusement Company. Plans by Architect J. M. Spedden on Pennsylvania avenue.

MICHIGAN.

A contract has been let for the remodeling of the Superba theater at Grand Rapids, to cost $14,000; Nicholas Brothers, owners.

A contract has been let for the erection of a new theater for Harry G. Sommers, at Grand Rapids.

Following the recent announcement that Kalamazoo will soon have a magnificent new $100,000 moving picture house, comes the confirmation of another report which assures for the south side, somewhere in the vicinity of Portage street and Washington avenue, it is stated, a theater with a seating capacity of fully 500, to cost approximately $35,000. The new place of amusement, which will be devoted exclusively to the presentation of photo-plays, is to be erected by the Elite Amusement Company, which now owns and operates the Elite theater on South Burdick street, and which, from the time it opened its doors eight weeks ago, has proved a financial success.

MINNESOTA.

Motion picture films and stereopticon views of American resorts and points of interest have been prepared for the use of Twin City public schools by the Great Northern railway. They are furnished in the interest of the Great Northern's "See America First" campaign. They will be shown first in St. Paul schools.

The St. Paul Alhambra has dispensed with vaudeville and now runs only high grade motion pictures and picture features; also a five piece orchestra and organ selections.

MISSOURI.

The Consolidated Feature Film Company, St. Louis; capital, $5,000; to manufacture and deal in films. Incorporators, O. T. Crawford, W. B. Laumann and Ike Schlank.

John W. Hicks, Jr., acquired the Electric and Palace theaters, at Sedalia, having purchased both properties from Frank Bailey, who retires after five years in business in Sedalia. Mr. Hicks has not determined upon any definite plans in the conduct of the theaters. He will, however, maintain and operate both in their present locations with the same standard of photo-plays as Mr. Bailey offered.

MONTANA.

The Family theater of Hamilton has been sold by Messrs. George Reeves and Aimie Beaubien to Cecil Nixon, George Ransom and Victor Wheeler. The new proprietors have engaged a four-piece orchestra to play nightly. Messrs. Reeves and Beaubien will go to Deer Lodge, where they have made arrangements to open a moving picture theater.

The new Cascade's theater has been opened by Lemon and Bovee, owners, at Great Falls.

NEBRASKA.

Motion pictures are a new feature at the Auditorium skating rink at Omaha. Two intervals of twenty minutes each are used each night, during which skating is stopped. The middle of the floor is banked with 200 seats.

A contract has been let for the erection of the Starland theater at Omaha.

NEW JERSEY.

A contract has been let for the erection of a new theater building at the corner of Brandford place and Hasley street, at Newark.

NEW YORK.

Porter & Co. have leased for D. & J. H. Tonjes, the corner store in building at the northwest corner of Eighth avenue and 124th street, New York City, to a motion picture theater for ten years, at an aggregate rental of $37,500.

The inspection of Rochester picture theaters, by H. M. Hudson, of the state fire marshal's office, has borne fruit in orders to City Fire Marshall Edward Wheeler for immediate changes in about a dozen theaters.

A new theater will be erected in Norwich soon, the transaction having been closed whereby the DeLaney Amusement Co. purchased the Harvey J. Daniels property on South Broad street. The location is one of the most desirable and the lot is plenty large enough for the erection of a fine theater, which will seat over a 1,000 people.

A new picture theater will be opened at 72 Main street for the Thompson & Tyler company of 10 Plymouth avenue, Batavia.

John A. Evans has leased for Lachman & Goldsmith to the Motion Picture Sales and Construction Company, New York, the plot 100x100 feet on the east side of Longwood avenue 167 feet south of Westchester avenue, for twenty-one years at an aggregate rental of $125,000. The lessee will erect at once a theater with a seating capacity of 1,000. The same broker has leased for Patrick J. Reville to Harold W. Rosenthal a motion picture theater at the southeast corner of the Southern Boulevard and 172d street for ten years at an aggregate rental of $20,000.

The new theater in Clinton avenue north, near the Masonic Temple, in Rochester, is promised for use by December 1st, and the four Gordon brothers, who are financing the project, expect to have everything running without a hitch before the holidays. The building, which is to be given over to moving pictures and vaudeville, will have a seating capacity of 1,800, and will be of exceptional safety, the owners say.

The New York Motion Picture Company has outgrown its present quarters on Fourteenth street, New York, and removed its executive offices to the Longacre building, at Broadway and Forty-second street, where it has taken a suite on the ninth floor.

NORTH DAKOTA.

W. C. McGuiness' new theater, The Orpheum, at Williston, has opened to the public with an entertaining picture program and an excellent orchestra. It is a very pretty and convenient show house and bids fair to become popular. It has a seating capacity of 250 but Mr. McGuiness figures it will be too small at that.

OHIO.

The airdome of Shober Brothers, 4023 Eastern avenue, Cincinnati, is to be converted into a regular motion picture house from plans prepared by Architects Stewart & Stewart. The building will be 36 by 110 feet, and will contain 413 seats.

Oakley is to have a motion picture theater building which will contain 1,000 seats. Moorman & John have commissioned Architect Edward Sloctemyer to plan a fireproof structure of this type on the north side of Madison road, near Gilmore avenue, the cost being about $25,000. It will be built as an investment. The dimensions will be 60 by 150 feet.

A brick and concrete amusement building at 18-20 East McMicken avenue, between Vine and Walnut streets, Cincinnati, to be known as the Variety theater, will be erected at a cost of $12,000.

Plans are being considered for the erection of a new theater on Ninth street and Superior avenue, Cleveland. Charles A. Otis, banker, is manager.

A motion picture theater, to contain at least 1,000 seats, is to be built at the southwest corner of Clarion and Montgomery avenues, in the heart of Evanston. C. P. Morton, who is with the Rebhun Last Company, has bought the lot from the Enneking estate through a firm of Norwood brokers, and is now quietly securing estimates as to the probable cost of the building. This is one of the few available sites in Evanston for an improvement of this kind. This will be the first five-cent theater in Evanston. It is understood Morton is figuring upon an expenditure of about $40,000, which would include the cost of the ground.

Charles Steen, of Findlay, has purchased a motion picture theater at Tiffin.

William Maroney, Jr., has purchased the Forum moving picture theater from Cherry & Tharp, at Hillsboro.

A motion picture theater, to contain about 500 seats, will be built at 18 and 20 East McMicken avenue, Cincinnati. The improvement will be 41.5x120 feet, and will be of fireproof construction. Peter Schorr is one of the interested persons.

The Cleveland Motion Picture Film and Supply Company has incorporated at Cleveland; preparing photographic films for motion pictures; $5,000. Fred W. Zimmerman, H. W. Ewing, A. F. Counts, M. L. Colabrese and J. B. Felber.

The Exclusive Films, Toledo, moving picture films; capital $10,000. Incorporators, A. A. Gottschall, Rupert Holland, F. F. Frieder, J. E. Stepp, C. H. Duggan.

PENNSYLVANIA.

Mayor Stratton of Reading has had every amusement manager in Reading to call on him, except one, in response to a letter to confer with him relative to continuing the policy of presenting moving pictures or stage entertainments that will raise moral standards instead of lowering them. The sole absentee gave no reason for not putting in an appearance. All who called promised co-operation. Incidentally orders were given that no children under the age of 12 were to be admitted after 8 p. m. unless accompanied by adults.

Plans are in preparation by E. Allen Wilson for a vaudeville and moving picture theater to be built at Richmond and Clearfield streets, Philadelphia, for McCartney & Redmond. It will be 72x190 feet, and will have a seating capacity of 1,500.

The Palace moving picture theater at Catasauqua has been completed by the contractor, A. W. Hirst of Northampton, and the formal opening has been held.

B. Bornstein is estimating on a moving picture theater, 48x85 feet, at Sixty-fourth street and Woodland avenue, Philadelphia, for M. A. Benn.

A contract has been let for the erection of a moving picture theater at Philadelphia. West End Realty Company has awarded the contract to W. E. Dotts & Co. Cost $40,000.

A contract has been let for the erection of a moving picture theater at the northeast corner of Locust and Sixtieth streets, on ground sold by John C. Knox.

Work on the new theater on Market street at Harrisburg is progressing rapidly. It is being built of cement blocks and will be a handsome structure.

A contract has been let for the erection of a new theater building for W. B. Scott at Altoona.

SOUTH DAKOTA.

A massive mirror screen or glass curtain, installed at the new Princess theater at Sioux Falls, is of solid glass which displays a frosted appearance, weighs 2,040 pounds, and cost the management $1,000. It is the first curtain of its kind to be installed in the state, and pictures projected on it stand out with wonderful clearness. S. J. Smith, manager and proprietor of the theater.

A contract has been let for the remodeling of the Cosy theater at Aberdeen, which will be known as the Princess theater. Gus Moberg, architect, and N. Hoilien, manager.

TENNESSEE.

The Piedmont Amusement Company, capital $5,000, was incorporated by W. M. Bratton, Lewis Wassman, C. W. Walters and others, at Chattanooga.

T. E. Buckingham's motion picture show at Erin was destroyed by a recent fire. The owner managed to save the projecting machine.

The Bonita motion picture theater at Chattanooga has been sold to T. C. Thompson and F. B. Holt. The transfer was made by the Mountain City Amusement Company. The owners contemplate making several big changes before the winter season opens. The lobby will be remodeled and several additional improvements added. They will conduct the house along the same lines as in the past, only changing the film service. T. C. Thompson, who was formerly manager of the Colonial, will be the manager of the new house.

The Mountain City Amusement Company, of which Howell Graham is manager, has begun work on a new motion picture theater for Chattanooga. It is to be located between Seventh and Eighth streets on Market, in the building formerly occupied by Willard Bros. More than $6,000 will be spent in improvements on the building.

TEXAS.

A moving picture house will be opened at Sherman, known as the King, and installed in the building vacated by the Sherman Vehicle Company.

The moving picture shows at Halletsville have been forced to close down until 9 o'clock every night on account of the dynamo at the light plant being unable to furnish sufficient light for the two shows and other lights in the town. They will be allowed to open at 9 o'clock to operate their shows because at that hour many of the other lights are turned off. There are two moving picture shows that operate every night. The city will likely purchase a larger dynamo, as the increase in lights used has made this necessary.

E. H. Hulsey, of Galveston, is building a $100,000 motion picture theater at Elm and Akard streets. The building, now under construction, when completed, he said, will be one of the largest and most magnificent motion picture theaters in the South. The seating capacity of the new structure will be about 800 persons. Private boxes and a scientific system of heating and ventilation are its essential features. A solid glass curtain, 16 by 18 feet, is another new feature. This piece of glass will be the largest ever shipped into Dallas, it is said. The theater will be completed by December 24 and will open Christmas day. The program will consist entirely of motion pictures.

The state of Texas is after the so-called moving picture trust in Texas. The attorney-general has filed suit at Beaumont against a dozen film and moving picture concerns operating in Texas, charged with violating the anti-trust laws and for penalties aggregating $2,500,000. H. A. Wroe, a banker, of Austin, on appplication of the state, was appointed receiver of these concerns and his bonds fixed at $100,000. The state also asks for an injunction to restrain the concerns from doing business.

UTAH.

The moving picture show house at Driggs, has been purchased by Bert Choules. Fine performances are given every night with a matinee on Saturday.

A handsome vaudeville and moving picture theater will be erected at Gunnison for S. M. Duggins at an estimated cost of $18,000. The size of the building will be 46 by 112 feet, the auditorium 46 by 60 feet. The stage will be 22 fet deep, with dressing rooms beneath. There will be a spacious vestibule and foyer. There will be two stores in the front of the building and offices above. The seating capacity will be 650 persons. The theater is to be fitted with modern conveniences and appliances and will be one of the handsomest of its kind in the state.

The Utah Moving Picture Company, capitalized at $100,000, has purchased the $50,000 Ellaye Moving Picture Company of California, which had the contract to make the feature film, "One Hundred Years of Mormonism." The Utah company will display the picture in both the foreign and domestic field. It will be completed within a few weeks and having the endorsement of the Mormon church, promises to be a big historical success. The production represents the expenditure of more than $30,000.

The new picture show built by Messrs. Bennett and Evans at Burley has opened to the public. It is a modern, up-to-date building in every respect.

WASHINGTON.

Irene Gordon, who for the past year has operated a motion picture house at Granger, will reopen the Lois theater in Grandview, which has been dark for six months. Miss Gordon will continue to operate her Granger theater.

WEST VIRGINIA.

C. D. Thompson of Wheeling will start a picture show house in Warwood for the United States Amusement Company.

WISCONSIN.

The Gem moving picture theater at Racine has again changed owners. It is now the property of C. W. Christianson, who purchased it from C. J. Smith. The theater is closed for repairs.

DAILY "FILM SUPPLY" RELEASES

THURSDAY: Rex, Imp, Eclair.
FRIDAY: Victor, Powers, Nestor.
SATURDAY: Bison, Imp, Milano.
SUNDAY: Eclair, Rex.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY as they may be obtained of the manufacturers.

BALLS AND PROGRAMS.

OUR subject for this brief dissertation is balls—not codfish balls, nor baseballs, nor yet the kind with ginger-ale, but the sort that is pulled off by enthusiastic local associations and branch leagues of one variety or another.

With balls for their own sake we have no quarrel. While not startlingly unique or novel, they provide an evening's entertainment for those who enjoy dancing and general sociability, and bring together pleasantly the personal factors of the trade or art represented by their instigators.

Balls cost money. It is necessary to hire a ballroom, an orchestra, some decorations, a few refreshments, and numerous other items of transitory use. To meet these expenses it is customary to charge an admission fee, or else, in the case of an association, to draw upon the treasury or the entertainment fund specially provided in the by-laws.

There is, however, another method of paying the piper. It is quite simple, consisting of a program committee, a program dummy, and a number of "prospects" who will fall for pages of advertising at ten dollars to one hundred dollars per page.

As an annual proposition, what little objection there might be to this plan is largely theoretical. The Motion Picture Exhibitors' League of New York just held a very successful ball, and we understand the program had a great many pages of advertising. Presumably it was mostly New York advertising, and it will not come again for a year, if at all.

But now comes the announcement that Columbus Local No. 4, Motion Picture Exhibitors' League of Ohio will hold its first annual ball December 12. The publicity committee announces that every member of the Local is exerting himself to secure the largest possible attendance. The souvenir program will be typographically excellent and the advertising will be limited to the industry. The rates for advertising are from ten dollars to fifteen dollars a page.

Now, Columbus has just as much right to give a ball as New York, and just as much right to solicit advertising for its program. Furthermore, the film makers and exchanges and machine manufacturers and supply dealers have just as much reason to advertise in the Columbus program as in that of the New York League. That makes two.

There are already upwards of thirty state and local League branches. There are, moreover, forty-eight states in the Union, with a conservative possibility of four locals to a state. That makes almost two hundred League branches that we may reasonably expect to see organized within the next few years. Suppose, as an ultimate result of this organization, each of these League branches decides to hold an annual ball. The advertiser

who now contributes ten dollars for a page would find himself solicited for two thousand dollars for two hundred pages annually. And if each program averages twenty pages, the industry would be pouring forty thousand dollars a year into ball program advertising.

Of course there is no immediate danger of this condition. The organization indicated is inevitable; but a great many of the branches will not attempt the ball idea, and others which do attempt it will get along without the money-making program. But even a casual inspection of the system shows that it is wrong fundamentally.

The exhibitor does not need the financial support of the manufacturer. He does need his moral support. It is hard, humanly speaking, to secure both. The man who contributes financially generally feels that he has done his part, and further appeals for help may find him a little cold.

This is especially true when we consider ball program advertising on its merits. It is admitted that its publicity value is almost *nil*. It is to be feared, indeed, that its chief power is a negative and unwholesome one, in that it tends to encourage a spirit of retribution toward those who do not patronize it. If program advertisers ever get results, it is not because of their advertising, but because they contributed five or ten dollars to the enjoyment of their customers—which is a bad business principle.

Without wishing to discourage any projects now under way, we cannot but think that serious consideration of the subject will lead the members of the League to see it in this light, and ultimately to discard the advertising program.

A BIG CORPORATION'S PIPE DREAM.

DOUBTLESS our readers have already discovered among our advertising pages a discussion of the use of cigarette coupons as picture show admission tickets. The American Tobacco Company has delivered to each of as many exhibitors as it could find listed, a hundred cigarettes of a new brand. In each package of ten cigarettes is a coupon bearing the legend in red ink, *"Worth ½ Cent in Admission to Moving Pictures."*

The tobacco company's scheme, of course, is to redeem these coupons from exhibitors who accept them, at the half-cent rate. Thus a system is inaugurated which is supposed to be of mutual benefit to the exhibitor and the tobacco company. The cigarette smoker is encouraged to smoke a certain brand to the end that he may accumulate enough coupons to pass him into the theater, thus securing a hundred cigarettes and one theater admission for the price which he is accustomed to pay for the cigarettes alone. Furthermore, it is calculated that if he affects this particular brand of smoke he will naturally find in time that he has the wherewithal to admit him to the show, even if he is not a picture fan, and so will add one nickel to the coffers of some exhibitor.

The motion picture (to indulge in a rapidly aging bromide) has grown into a tremendous industry. The American Tobacco Company is not the only big corporation that has looked with covetous eyes at the attendance statistics uttered periodically by the lay press of the country. Everybody would like to get in on what looks like easy money. The tobacco concern sees its opportunity in the cigarette coupon. The idea is particularly alluring to cigarette fans who also happen to be picture fans, since they can now indulge both hobbies without interference.

We were about to express a fear that the tobacco company had made a bad move in trying to link picture shows and cigarettes. But that is wrong. The company's business is making and selling cigarettes, and it probably has little patience with or understanding of the paper pipes' enemies. So we will amend it to read that we believe the exhibitors of this country will regard it as a bad move on their part to encourage the combination.

The cigarette has many enemies. Chief among them and with the greatest claim to legitimacy, are the fathers and mothers of growing boys. These are already regarding the picture show, if not with suspicion, at least with watchful eyes. When they have found the pictures good and the environment satisfactory, their first doubts have been dispelled. That they would regard with complaisance the exaltation of cigarette coupons to the status of legal tender in picture show circles, however, is quite doubtful.

There has been a marked effort in many states and cities to deny the picture show by law to the unaccompanied child. The only way to combat this unfortunate tendency is by conducting irreproachable shows. Against such defenses the "reformer" spends his strength in vain; but he does not give up his quixotic warfare. If the program is all right, he attacks the character of the attendance, or the dimness of the lights, or the sensationalism of the posters.

The cigarette coupon, in its proposed role of picture theater ticket, gives the "reformer" a weapon that will make him scream with delight. For it makes a convincing argument in the effort to close the show to the boy and girl. One single example of a minor gaining admission by means of cigarette coupons would fly from one reform circle to another across the continent in the batting of an eye, and be magnified into a national calamity.

Many of us are smokers. We have no quarrel with the American Tobacco Company, or any other tobacco company, and we are sorry to see them embark upon a project that doubtless appears perfectly proper to them. But we cannot avoid the conclusion that with a more careful pre-analysis of the situation, the cigarette coupon-theater ticket scheme would never have gone as far as it has.

OPPORTUNITIES FOR THE SALESMAN.

EVERY number of Motography records the building or planning of scores of new picture theaters all over the country. "Brevities of the Business" is the best little index to the growth of the industry we know anything about. It shows that thousands of new theaters, of all sorts and costs, have been erected during the last few years, and it shows, to a large extent, the increasing investment in and permanency of these theaters.

Making a record is not the only value of this department, however. Wide-awake manufacturers, dealers and exchanges are using these items to increase their lists of prospects. Every new theater listed in Motography means a new film renter for some exchange, a new machine of some make, some hundreds of seats, thousands of tickets, and all the other items that go to make up a show business.

Oftentimes these new theaters are recorded before even the architects' plans are completed. This gives the exchange solicitor and the machine salesman plenty of time to argue the merits of their respective lines before the demand becomes pressing.

The opportunities we thus make public are free to all, and we urge salesmen and solicitors to take advantage of them.

The Wise Men at Herod's Court. From Thanhouser's "The Star of Bethlehem."

"The Star of Bethlehem"

Thanhouser's Christmas Feature

A BIBLICAL tale, magnificent in its settings, notable in its cast yet wonderfully familiar in its story, is "The Star of Bethlehem," as it is told in two well-acted reels by the Thanhouser Film Corporation.

The subject has been impressively handled and is to be released as the Thanhouser Christmas feature, December 24 being the date named for its presentation to the motion-picture public.

The costuming of the many characters who go to make the story the stupendous production it is, was a consideration of months. The settings were minutely studied and worked out until correct and perfect in every detail, in so far as history enlightens one on the subject. The expense of the whole monster venture was spared not in the least.

The story goes back to the time of Micah, the prophet who was the first to inspire Israel with the hope of a great Redeemer. As the Bible gives his prediction, it is supposed to date back to 701 B. C., when Sennacherib waged war against Judah. Micah foretells Zion's capitulation and the deliverance of the people elsewhere. Also he named Bethlehem as the city wherein the Deliverer and King should be born, as that city was also the birthplace of David.

Mary and Joseph Are Betrothed.

Previous to the birth of Christ, there were numerous signs and portents which affected the Israelites and their rulers and a vague unrest pervaded the people. Herod was so much affected that he called together the wise men of his court to tell him where and when the Messiah would be born.

Long had the Jewish people paid tribute to Rome, and Augustus, who then reigned, was accustomed to call together, periodically, the subjects of his domain that they might be inscribed. When the proclamation was declared, Mary and Joseph, whose birthplace was Nazareth, journeyed to Bethlehem, the city of David, the place in which his family

The Star Stood Over Where the Young Babe Lay.

descent required that he be inscribed according to custom.

The film shows the journey as the Bible describes it. When the tired travelers reach their destination they find there is no place for them to rest, as the inns have been filled with the earlier arrivals. Because of Joseph's descent from David, however, the door-keeper offers them the only quarters he has, those in a stable. But Joseph and Mary are thankful for these accommodations and gratefully accept them, as others of their countrymen are forced to sleep on the hills and in the vineyards of the town.

Part two opens with the journey of the three wise men from the east, who hearing of the birth of Christ, come to Bethlehem to adore Him. Resident in three widely separated countries, they had found favor with the Almighty and are brought through deserts to a common meeting place. The guide of each is a wonderful star in the heavens that precedes each man, until, bringing the three together, it disappears.

They exchange experiences, traveling in company to Jerusalem, and there inquire as to the new King of the Jews. Herod learns of their inquiries and sends for them. They are questioned as to who the new King might be and asked to return to Herod and tell him of His whereabouts that he, too, might worship Him. So the three wise men resume their quest.

When they had entered Jerusalem the star had disappeared, but now it shines again and guides them to Bethlehem, becoming stationary over the inn wherein there had been no room for Mary and Joseph.

At the inn the wise men inquire if any children had been born, and they are told of the Child who was born in the stable where He and Mary and Joseph still remain.

Meanwhile, some humble shepherds, who have been tending their flocks on the hillside, are visited by an angel who tells them of the birth of the wonder-child in a lowly stable in the little city of Bethlehem. And leaving their flocks, the shepherds descend the hillside and make their way to the stable.

There they find the new-born babe in a manger, with Mary and Joseph attending Him. Kneeling down, the shepherds adore Him. The three wise men enter and offer their gifts from the far east. They bow in adoration before the tiny form in the crib; the humble stable becomes transformed by numerous glittering angels who appear and sing "Hosanna Unto the Most High."

And the humble shepherds and the learned men from the east kneel side by side in thankful prayer for the privilege of seeing the Savior and for the miracle they have beheld. Thus ends the pretty Christmas story.

At the Siege of Jerusalem.

Ultimate Uses of the Motion Picture

By Harry Irving Greene*

WHILE the moving-picture machine will undoubtedly always have its function as a device for the amusement of mankind and the provoking of his laughter in his lighter moments, there are unmistakable indications that eventually its scope will become so enlarged that the purely amusement feature will be deeply overshadowed by far greater and more serious portrayals, as, for example, the astronomer in his peerings among the vast bodies of infinite space; the microscopist in his equally astonishing delvings into the infinitesimal universe beneath our feet; the chemist in the midst of his wonderful experiments; the wizards of laboratory and workshop in their unearthing of new elements and the harnessing of them for the weal of man. And, as had the moving-picture man arrived two thousand years ago we would now be able to see the Miracles and the burning of Rome, so will the countless millions in the ages of the future into which we are sweeping be able to see us as we are today, witness our mistakes and make themselves wiser, happier and greater than we are because of the lessons we shall teach them through the most convincing of the human senses, the eyesight. And this brings to mind the immense possibilities of the moving picture as an educator in the time already arrived.

Even today children are learning the greatest and most vital lessons of the hour, not as heretofore from hated books of learning, but from the ever intensely interesting portrayal of moving life itself. And another beauty of the prospect is that under this new system no one will ever consider himself too old to remain a student so long as he has merely to sit quietly and witness the great men of the world as the camera summons them before him to teach him without further effort upon his part than to sit and watch. It is notorious the world over that the average child hates his lessons, and that the monotony and confinement of the schoolroom drive him to the restlessness of a caged creature, yet, on the other hand, every child loves a picture, and when that picture moves and breathes for him he will pay his last penny for the privileges of looking at it. Thus all unsuspected upon the child's part, as we contribute to his day's enjoyment we educate him by lessons which he learns in a manner which makes it impossible to forget them, and when the moving picture takes its place in every schoolroom as a piece of equipment as essential as the blackboard and the atlas, then his school instead of being a hated place will lure him irresistibly. For while he will read of the daily life of the Eskimo or Patagonian mechanically and with indifference, he will watch him spearing his whales, building his snow igloos or chasing his game amongst the jagged rocks of the Antarctics with absorbed interest.

And as the scope of the lessons which may be taught him at the present day is large, the field will expand with each new discovery made or modern miracle performed. Already he may see the rubber workers in the jungles of the Amazon, the sledge journeys of the pole seekers, the deep-sea divers recovering their treasures from lost ships, the native spongers amongst their coral reefs, the whalers at work among the ice, the building of aeroplanes, the forging of the shafts of mammoth liners, the Hudson Bay Indian stringing his fur traps, the Zulu planting his grain—all lessons which he would spurn had he to memorize them from print, but which absorb him when he can sit and witness them. And he is also beginning to learn bits of recent history in the same manner, a generation from now he will be absorbing most of his knowledge of that subject through visualization with but brief explanatory notes before him for guidance. As yet, however, unfortunately his teachings through the moving picture are but incidental and unsystematic and are produced only in conjunction with irrelevant and unconnected subjects, but once this work is taken up seriously by those whose duty it is to look after our institutions of learning, and when the daily moving-picture lessons are correlated, harmonized and synchronized, then will they take their true place as one of the greatest educational factors of the time; and who is there that can doubt that every well-equipped schoolroom and university in the land will utilize this method daily, both for an hour of instruction and relaxation?

No sooner does one actuality, probability or possibility occur in this connection than it leads to others equally alluring. Nearly every grown person and practically every child is keenly interested in the wild life of the earth, the beasts of the jungles and plains, the birds of the air, the fishes of the waters. Every zoo daily has its hordes of curious mankind hovering about the cages of its wild life, speculating, wondering and for the most part grossly ignorant as to the habits and traits of the caged ones when living their natural lives in their native habitats. Natural history is one of the most fertile fields for the moving-picture man, and as long as we perpetuate the camera films no animal can be lost to the world. A thousand years after the last whale has been killed, the children of that age will be able to see him arise from the sea in his tremendous bulk, spout and leap to full length above the water and then go plunging away beneath the thrust of the harpoon. What would we not give to witness our ancestors creeping amidst the primeval forests as they warily approached the now long vanished mastodon? And so one might go on indefinitely as he enumerated the things of vast import to mankind that this greatest of modern inventions is certain to do for the human race yet to come, and even then touch upon but a tithe of them. For the moving picture is yet but a swaddled infant and it remains for posterity to see it as the Colossus it is bound to be. And the Colossus will live as long as man lives and continues to grasp onward and upward in his insatiable quest for knowledge and power; as long as humanity loves to wonder, laugh and weep.

Upon the mechanical side of this great industry new wonders are upon the way, many of which are close at hand. Practical, every day photography of the living colors is bound to come into common use, but there is another startling feature already successfully performed of which the average man perhaps is not conversant. Already they have taken pictures which when projected upon the screen are not the flat representations we now see, but which stand forth rounded and developed in full bas relief. And when in the future soon to come we will in a picture see men step forth in full naturalness, see the fabric of their clothes and the color of their eyes and

*Chicago Press Club Prize—Winning Article, Selig Contest. Copyright, 1912, by Selig Polyscope Company.

hair and by means of phonographic accompaniment hear their voices in their every inflection, then we will have attained the ne plus ultra of this marvelous invention, for then we shall not only see the dead arise and walk, but hear them speak as well.

And that all this will happen is as certain as that man having already flown the continents will eventually fly the seas.

Photoplay Popular in Frankfort, Germany

Cinematograph shows have been as successful in winning popular favor in Frankfort, Germany, as elsewhere. In addition to some 15 regular shows there, the more important of which renew their programs twice a week, films are exhibited in variety shows, amusement halls, etc. While films are manufactured in Germany, some three-fifths of the pictures exhibited come from abroad, according to a local firm handling both German and imported films.

American films representing typically American subjects are popular and always find a good demand. In order to do business there an American house must secure a good agent to get around and see the middlemen in the leading cities, who buy the films outright and rent them to the shows. At least three pictures should be turned out a week in order to pay the heavy traveling expenses. Arrangements must be made with a reliable firm for copying films after orders have been secured, it being impracticable to secure copies from America. Censorship of films is carefully exercised by the police.

Prussia Approves Pictures in Schools

The Prussian ministry for education and culture has signified its entire approbation of the use of the cinematograph in all higher schools throughout the country. Geographical, historical and natural science subjects are considered the best for the educational films, which are soon to be introduced into the curriculum.

The expenses are to be met by a combination of sources, including government grants, appropriation of some of the school funds, and private donations. One world-famous firm of manufacturers on the Rhine has presented Berlin with several complete apparata including films for the use of the metropolitan schools, and several others are providing them under cost price.

American Plant Inspected by Film Men

Dr. Schallenbarger of Chicago, Mr. Mandlebaum of Cleveland, Mr. Bracken from everywhere, Mr. Gregory from New York en route to California, Mr. Freuler, general manager of the Mutual Film Corporation, and Mr. Nehls, manager of the American Film Manufacturing Company, formed a jolly party on the afternoon of November 11 on its inspection of the American Film Company's studio. The trip from the downtown offices of the company was made in the big new car belonging to the company, and it took the visitors to their destination in quick time. The inspection of the plant proved of great interest and the facilities for producing good "Flying A" pictures were highly approved.

The Grand Ball of the New York League

A BLARE of music, a flash into twinkling life of thousands of lights, the surge of a pleasure-bent throng of four thousand—and the grand ball was on. It will go down in the annals as a thing to be remembered, that ball of November 14, given by the Greater New York Branch of the Motion Picture Exhibitors' League of America. Time and time again, it was whispered that the Palm Garden at 58th street and 3rd avenue would be too small, and to the visitors, looking down from the boxes, that truth was pressed in just about as hard as were the dancers, pressed down on the floor.

The entertainment which preceded the dance, was comprised, first, of exhibitions of moving pictures in which both licensed and independent pictures were shown and, second, of the introduction of the players who go to make these film stories popular. And this was what the many came for, mostly.

John Bunny, the inimitable, was the star of the players' portion of the entertainment and his famous smile was the signal for vociferous hand clapping and cheering. John held the stage for quite a while with a humorous story of his experiences on a recent trip to England.

King Baggot, a king by right and a prince of good fellows, was another who found it hard to break in on the hand clapping to make his little speech about how glad he was to be there and to extend the felicitations of the Screen Club to everybody present.

Florence Turner, the popular lead of the Vitagraph Company, was a decided hit in a little take-off *a la* Rose Stahl and her department store salesgirl patter, was a scream from start to finish. One of her compatriots, Flora Finch, did a sister act with Kate Price that was worth the regular price of admission alone. Hammerstein please note.

Billy Quirk had a collection of stories and jokes that kept the big crowd giggling and bubbling all the time he was on. Jane Fearnley was pretty and entertaining and the Thanhouser kid had some witty, snappy things to say and the way she said them cemented her popularity. Pearl White, Vivian Prescott and others, too many to name, were strong with the audience.

Sam Trigger, president of the New York branch, extended a hearty greeting to those present, thanking them for the splendid way in which they had responded to the league's efforts to make the ball a success. To wind up the program came the tall sycamore from the banks of the Ohio, President M. A. Neff of the Motion Picture Exhibitors' League of America, who spoke warmly of his appreciation of the efforts of the New York contingent for the national cause.

Then came the grand march, which Maurice Costello and Gene Gauntier led. There was no chance to clear the floor, because there was no place to drive the spectators except out on the sidewalk, as the balcony was packed, the cloak room and rathskeller likewise, the halls were jammed to suffocation and the ball room floor had apparently just as many on it as at the start.

One of New York's finest with a hold on Cos's arm waved and pushed the spectators aside during the progress of the grand march, but everybody took it good naturedly and the hundreds following their popular leaders tried hard to master the intricacies of the weaving procession.

Around the balcony were boxes fantastically draped with American flags and banners of the various manufacturers. General Film, Universal, Kalem, Mutual Film, Thanhouser, Majestic, Reliance, Vitagraph, Warner's Features and Screen Club were some of them. Power, Simplex, Motiograph and Standard machines occupied little booths at one end of the room.

Anyone willing to dance was a martyr and one could easily appreciate that the film stars were used to hardships from their willingness to be sacrificed at this altar of amusement.

There was a place for tables, too, in this suffocating jam. At one of the tables, Herbert Brenon was host to a throng; King Baggot had his coterie of friends at another; Carl Laemmle had a long spread of tables and he proved beyond all question that he knew how to entertain.

Vic Smith of the Vitagraph company had a number of players and their friends at his table, where Mrs. Costello shone like a queen. Harry Raver, the man who put the "it" in Itala, had a nice battery of tables that were decidedly popular. Charley Baumann hung on to this live-wire crowd.

Our own Bill Swanson was another who didn't have to extend fiddler's invitations; his table was always crowded. Little Tommy Evans, who has succeeded to entire charge of the Champion studio at Fort Lee, shared honors with his pretty little wife in entertaining.

Madame Blaché easily carried the honors of being the most popular manufacturer present and her good nature accorded a dance to every supplicant for that favor. Herbert Blaché, minus the little Vandyke beard he used to wear, was another strong favorite. He looks

younger than ever, which was probably the reason for the many side glances the ladies gave him.

Joe Miles and his missus were there with bells on, the latter proving to be one of the classiest dancers on the floor. C. Lang Cobb, Jr., and Alice Egan Cobb each had given the other strict injunction to mind his and her own fortunes for the night; but at that they did not stray very far from each other; everybody knew, anyhow, that they were newlyweds. Hopp Hadley and his bride were another couple to enjoy themselves and Mr. and Mrs. Herbert Miles were strong with the crowd and each other.

To list the entire gathering would be impossible—but a feeble attempt at the most prominent follows:

Sidney Ascher, H. E. Aitken, Mignon Anderson, Bert Adler, Mr. and Mrs. John Bunny, King Baggot, Herbert Brennon, Leah Baird, C. O. Baumann, Mr. and Mrs. Joseph Bernstein, Mr. and Mrs. Herbert Blaché, Lee Beggs, Joe Brandt, Ed. Barry, Miss Millicent Bright, Mathilde Barring, Harry Benham, C. Lang Cobb, Jr., Alice Egan Cobb, Irving Cummings, Mr. and Mrs. Maurice Costello, B. C. Cole, L. G. Coover, Lila Chester, Jas. Cruze, "Bobbie" Daly, Mr. and Mrs. Mark Dintenfass, Jean Darnell, Ann Drew, Mr. and Mrs. Thomas Evans, Flora Finch, Jane Fearnley, J. R. Freuler, Sidney Franklin, Joseph Farnham, Gene Gauntier, William Garwood, Charles Gericke, Hopp Hadley, Violet Horner, C. J. Hite, Louis Reeves Harrison, Joseph L. Hoff, Andrew Harte, Theodore Heise, A. L. Haase, David Horsley, Alice Joyce, Lamar Johnstone, Mr. and Mrs. C. L. Jourjon, Calder Johnstone, "Jimmie" Kirkwood, Darwin Kerr, "Ad" Kessell, Joe Kessell, Will Kessell, A. Kauffman, Mr. and Mrs. Carl Laemmle, H. Z. Levine, Isabelle Lamon, Florence Le Badie, Mr. and Mrs. Owen Moore (Mary Pickford), Mr. and Mrs. Joseph Miles, Mr. and Mrs. Herbert Miles, Eric Morrison, Mr. and Mrs. Maire, M. A. Neff, Irene Nolan, Edw. O'Connor, Katherine Price, Vivian Prescott, Frank Powell, P. A. Powers, Billy Quirk, Harry R. Raver, J. V. Ritchie, Gertrude Robinson, Mr. and Mrs. Edward Roskam, William Russell, F. E. Samuels, Mr. and Mrs. Victor Smith, Mr. and Mrs. Julius Stern, William Shay, S. M. Spedon, Charles Simone, Mr. John Stock, Julia Stuart, Mr. and Mrs. William Swanson, Alfred H. Saunders, Marguerite Snow, Dr. Wilbur Shallenberger, A. L. Sweet, Samuel H. Trigger, Florence Turner, Barbara Tennant, J. L. Tippett, Pearl White, Mr. and Mrs. Abe Warner, William Wright.

League Notes

The Iowa Motion Picture Exhibitors' League will meet at Des Moines, on Tuesday and Wednesday, December 3 and 4. Headquarters will be at the Savery hotel, and exhibitors going are advised to send in their reservation for rooms. Fred Young, the national vice-president, will give information as to space for manufacturers. He may be reached at 319 Security Bank building, Cedar Rapids, Iowa. The Des Moines convention will be the first to be held by Iowa, and hereafter the event will be an annual one.

Another league meeting is that arranged for December 9 and 10 at Kansas City, Kansas, and Kansas City, Missouri. An enthusiastic and large attendance is expected to make the two days of league business eventful ones.

"The Daughters of Senor Lopaz," December 16. Copyright 1912, American Film Mfg. Co.

Omaha has been chosen as the host city for the Nebraska state convention scheduled for the fifth and sixth of December. The Rome hotel will furnish headquarters.

Columbus Local to Have Ball

On December 12 Columbus Local No. 4, Motion Picture Exhibitors' League of America, will hold its first annual ball. Through the efforts of every exhibitor in Columbus and nearby cities, the local expects the largest attendance of any ball ever given in that city. Every motion-picture exhibitor in the neighboring cities is invited to be present.

The souvenir program will be as good as possible from a typographical standpoint, the advertising to be limited to the industry.

Motography's Gallery of Picture Players

JAMES CRUZE is wonderfully well liked, for he has a strong right arm ever ready to defend or support a maiden fair; his eyes slant just enough to inspire the corners of his mouth to do likewise and his naturally good disposition to follow suit. All of which, together with his fine acting and general good looks, puts him on the softly cushioned seat of popularity with the other recruits to the matinee idol brigade. The birthplace predestined for Mr. Cruze was Five Points, Ogden, Utah, and the year 1884. He admits both facts, and adds that he attended the public schools there and entered the theatrical profession in 1900. He played the lead in "The Heart of Maryland," and in any number of melodramatic productions before he reformed and took to motion pictures. He enlisted in the cause of the Thanhouser productions, where he is "the" lead. His latest big role is in "The Star of Bethlehem."

James Cruze.

MARGUERITE SNOW has ever so much dignity about her; a dignity that goes well with her slight, graceful figure and charming face, and suggests a royal role, well played. She is another contribution from the south, her birthplace being Savannah, Georgia. Denver, Colorado, however, was the city in which her childhood was spent and where she received her education at Loretta Heights Academy. When she was fifteen, she decided she was "grown up" enough to enter the profession in which she had made for herself a dream-name in token of imaginary successes. The dream-name became a reality with her portrayal of leading roles in notable productions, among which was a Broadway success. Then came a call to the motion picture with the Thanhouser people. She played the leading roles in "Lucile," "The Woman in White," "Her Darkest Hour," "Dora Thorn" and "East Lynne."

Marguerite Snow.

FLO LA BADIE has just turned twenty. Piquant Flo, at that age, has many honor marks to her credit, for at the very outset Mother Nature bestowed upon her the gift of beauty and later added many gifts, chief of which are a talent for acting and a sunny disposition. In her, artists have found the perfect model; her wondrous face and hair being depicted in various and picturesque posings on the front cover of magazine and art book. Miss Flo is another motion-picture star to revere New York partly because she was born there and mostly because it's such "good fun." She attended both public and convent schools and began her stage work in 1909 with Chauncey Olcott and later played in "The Blue Bird" at the New Theater. In 1911, Mary Pickford introduced her to the Biograph management. But for some time she has been a lead with the Thanhouser Film Corporation.

Florence LaBadie.

WILLIAM RUSSELL being a New Yorker born and bred slights his "r's," calls purple "poiple," and doesn't care who hears him. Also he considers his town quite the best on the map—which is all very well—and is interested in football because he made the Fordam College eleven when he went to school there, not so very long ago. He claims to have been born in the "early eighties" and to always have had an ambition stageward. It was in 1902 he first realized his ambition and then followed successive appearances with May Tully, David Higgins, John Stoddard, Catherine Countiss, Chauncey Olcott and Ezra Kendall. He also played in stock in Seattle, Wash., and Lancaster, Pa. So he knew perfectly what he was doing when in 1908 he gave up legitimate stage work for films. Some of his work with Thanhouser has been "The Little Girl Next Door," "Merchant of Venice," "Through the Flames," and "Jess."

William Russell.

"John Colter's Escape," December 6. Copyright 1912, Selig Polyscope Co.

Notes of the New York Ball

Mark Dintenfass was out for the long distance grape record. Somebody said, "I feel so sorry for Mrs. D," and Bill Swanson replied in his gruff bass, "For what? Feel sorry for Mark; he needs it."

Mrs. Bill Swanson is some turkey trotter. Everybody wanted to try it out with her.

On Friday, Joe Brandt appeared at his office wearing his dress trousers, a coat and vest he'd borrowed from George Stephenson and carrying his shoes in his hand. He said his feet were swelled. Betcha he got his ends mixed.

Babe Farnham, he of the broad expanse of shirt front, took a taxi ride through Central Park after it was all over, and woke up in the surface cars at Bowling Green. And to think a man who has such an acquaintance with water didn't know whether a blue gill was a fish or a rabbit!

King Baggot said he didn't care that he had to work in the pictures Friday morning—the part he had was that of a souse anyway. And yet people think the situations in pictures are faked.

Gene Gauntier says everybody spells her name wrong. Here you are, Gene—G-A-U-N-T-I-E-R.

Madame Blaché carried three Universal Rosettes. Messrs. Blaché and Raver made the contributions.

Alice Egan Cobb and J. V. Ritchie were turkey trotting very nicely while Cobb looked on with tears in his eyes. Nobody loves a fat man, C. Lang.

Police Commissioner Waldo looked down from one of the boxes. Some censorship, eh?

Charley Hite went home early. I guess little Marguerite Hite ain't some attraction. What?

Maurice Costello is an applicant for the driver's seat on the "wagon." Good boy, Maurice.

Who owes who? Raver borrowed fifty from Miles, Blaché ran short on a waiter, Raver slips him the fifty, Raver gets a wad of twos back and runs short himself on the next round and some ones else comes to his help. Now, how can you straighten out anything like that?

Mr. and Mrs. Harry Raver have the cutest little flat in Morningside Heights. Greatest little wife in the world, says Harry. Always except one.

Next thing of importance will be the Screen Club ball in February. Hire the Garden, fellows; it's bigger.

Where was Joe Engel, anybody know?

To some the ball was very tame. No one shampooed Mark's head with champagne and nobody spent Baumann's money but Baumann. Oh, very well.

Everybody had a good time and everybody thanks Messrs. Trigger and the League for it. It was a big show and next year will mark a bigger one because of the success of this.

C. O. Baumann took a trip through the Universal offices last week and after sizing up the new mahogany furniture and fittings, said, "Cost you fellows a lot of money, didn't it?" "Not a cent," was the answer. "I don't make you," said Baumann. "Why, you're paying for this," said his guide; whereat Baumann saw through the hole in a millstone.

Marc Klaw's son will soon engage in the manufacture of moving pictures if all signs point right.

On the Outside Looking In

By the Goat Man

A LOT of you fellows who sit around in the mornings looking at films and sit around in the evenings looking at the people who come to your houses to pass judgment on your bookings, forget that your brothers out in the country never get a chance to see their show until the crowd is with them. It makes a difference. That condition is the film exchange problem. There is more shifting from one program to another in the country than there is in the city. There is fine opportunity in the country for the hustling exchange salesman. Hustling is the proper word, because with some of the stuff that finds its way to some of the exchanges, the salesman must carry a full head of steam to make a showing. The day has gone by when the manufacturer can slip a three hundred dollar film into the exhibitor's hands and make him like it. Take the example of the recent New York film pow-wow. I mean the second annual ball with its second annual annex. There were some liberal spenders there that memorable night and morning and a lot of money went under the belt instead of into film production. The spenders who spend *after* their film is good and the spenders who spend *before* their film is good are two different propositions. There was an awful lot of four-flushing in New York a week ago Thursday night. Men who have never turned out a decent film slathered the money around. They were vying with their superiors. They were near-sports. There is one faction of the film maker who is long on this grand-stand play. They are a lucky bunch who profit on the simp exhibitor, who is nursing an ingrown grouch. Some exhibitors never know when they are well off. They are bound, in the end, to have a place to go and they usually wind up by joining the crowd who spends money every old way, provided always, it isn't in bettering product. I have been responsible in developing a number of correspondents who tell me things I might never know, if they hid their lights in bushels instead of lamphouses. Some of them are slang slingers from Slingerville. All of them agree that there is one group of film makers who are only promising to improve their brands and who never get away with it. They are of the opinion this condition will prevail right along unless the exhibitor settles down to a better knowledge of what the public wants. The bad film should never find a market. A good film on every screen makes a better film business for everybody. Then the first visitor to a picture show will come again. He will be a fan and the fan with his little old five-cent piece is the answer. It isn't wise to spend your money until you have a good film show in every inch of negative.

Herod the King. From Thanhouser's "The Star of Bethlehem."

* * *

You gotta have a ticket to get into Kleine's. The mooch is crowding the exhibitor and that will never do. Chris Whelan knows what a mooch is. Ask him.

* * *

Ever sit in a still, dark room and hold your breath, awaiting the repetition of the noise you thought you heard? Dreadful experience. Or, when you were little and imagined a spook was after you—my, how you could run! Not half as exciting as our wonder at Bill Sweeney gum-shoeing it down to New York and back. L. H. Frank was chaperon, but you can't squeeze a whisper out of either one of 'em. Mercy, this is exciting!

* * *

Frank L. Hough, Jr., gets his mail at 166 No. State street, Chicago, Cook county. Take the elevator to the

third floor and he's right there with the glad hand and a California smile. Hough acts like he had been there for a long time. He seems to belong. Come to think of it, he does—Hough actually belongs. It is perfectly natural for him.

* * *

Do you know that Joe Brandt is the guy who puts all the bull in the bulletins?

* * *

Why only a half-cent coupon in a box of Tokios?

Here is an exchange man's lament with out-croppings of the goat's butting-in proclivities: "I spent from Friday to Sunday, inclusive, day and night shifts, in eight small towns. I rode on two regular trains, two cabooses and three interurbans and the Cincinnati Northern. If you have missed the Cincinnati Northern, you have no idea of high life. The conductor's uniform consists of a cap and all other equipment matches it. But the thing I found in the small towns made me nervous. Film rental prices were a joke. I used to deal in junk, before

"The Law of God," December 9. Copyright 1912, American Film Mfg. Co.

I wouldn't smoke 'em if they carried a ten-cent piece, coin, cush, U. S. A. argentiferous wafer. The very idea. Why, us exhibitors don't know any other than the Phil Morris and Pall Mall brands. Nix for the Tokio. Besides, this business must have its goat and he isn't ready to die yet.

* * *

Furthermore, we can afford Dimitrinos. It was a mistake to send us 200 Tokios.

* * *

Billie Horne, D. G., Los Angeles, is still advertising in his lobby of the gold pillars. Hear him sing: "Do not see this unless you wish your habitual temperament to have a rude shock." This is another: "I'm still warning the grouches to keep out." And this: "Please don't go in, I beg of you!" When he gets a drama he does it like this:

A Vitagraph Drama
"Her Spoiled Boy"
A well told western story. Regards
to Broncho Billy. Goat man please write.

I am promising myself a trip to Horne's town when my ship comes in. I want to see the kind of people who can't be shooed away from the Theater Beautiful of Spring street. I want also to see the big manufacturing colonies and lots of the folks I know or ought to know.

I came out of the tall grass and took a peep at civilization. In those days it was easy to get customers to pay $18.00 to $25.00 a week, for seven or eight reels. There wasn't any record of the release dates. They were lost before the flood. Noah had to make room for the animals. Neither were there any lithographs. I remember having a copy of Damon and Pythias and seven rain-bespattered still photos for lobby display. I thought more of those photos than I did of the print. Used to lock 'em up in my safety deposit box when they weren't on duty, and all that sort of thing. It was easy sledding to do business in thes towns in the 'good old days.' What do you suppose these fellows want and get these fine Indian summer days? From 21 to 35 reels a week! They cry their eyes out if they miss a litho and call a lawyer if you spring a contract. And you had better believe they insist on the guaranteed release date clause. These country exhibitors are the wise ones all righty, all right. They are chuck full of the buzz-buzz and kick like blazes because they only showed to 800 last night. If they'd only had Custer on Saturday instead of Thursday they'd have done better and so on till the cows come home. They are the boys who are sinking their socks down the old abandoned well and no mistake. Incidentally they know a film when they see it. You can't go an inch if you knock. Just get out your little old cans and show 'em.

They know the game. All of which seems to fit in with the arguments you have been ladeling out till one exchange man believes it. More strength to you. Here's mine."

* * *

To whom it may concern—particularly those loyal chaps about Chicago who *signed* applications for membership to the proposed Chicago Screen Club. I've got a life member. Come in and look at the mazuma. Now, altogether: What are we going to do about it?

* * *

Broncho Billy is world famous, but I'm still forwarding very personal letters to him. That ought to hold you for a minute—you scoffers who tell me that MOTOGRAPHY isn't creeping in.

* * *

Where will we meet Frank Lewis Dyer the next time, now that he has resigned the presidency of Thos. A. Edison, Inc.? Give you just one guess.

* * *

Itala announces two comedies on every reel every Monday morning. Two comedies on a reel are one too many, no matter how good they are. A comedy should be good for some laughs. It takes ten minutes to run 500 feet. If it is comedy—genuinely that, a few laughs in ten minutes is enough. I believe that a comedy belongs on a scenic split reel. That is the best place because the average fan won't take anything but drama in allopathic doses. The showman wants comedy—lots of it, but I am sure he wants most of it in the shorter lengths and it has to be good or he don't want it at all. I'm hoping Itala is all good—especially if it comes in approximately half-reel lengths, two on.

* * *

Omer Doud has sold his petrol cart, packed up his family and vamoosed to Santa Barbara. Awfully sorry to lose him from about town, but glad to see him climb into a bigger place.

* * *

If there is a motion picture theater in this country that has not received a free copy of MOTOGRAPHY'S Hand Book and Film Record, we simply don't know the address of that theater. We are proud of this little work because it serves. Nearly every day somebody tells us of a new use for it. It is our one best advertisement and the day will come when it will be your best advertising medium. Thanks to all who have said nice things about it. We'll make it better as we go along.

* * *

I attended the New York Exhibitors ball by proxy. Next time I'll attend in person. From afar, it looks like the independents made the most of the opportunity. I guess the licensed bunch have found a more satisfactory way to enjoy their profits.

* * *

A manufacturer whom I hold in very high esteem writes me: "Some people, as you know, cannot stand a little criticism. They feel that everything they do must be A1 and anybody who criticises their work cannot be friendly. This is a mistake, for adverse criticism is more important to the manufacturer than fulsome praise." Pish, for all of that. I know manufacturers who couldn't ever get a line of praise unless it might be had at so much per.

Essanay's "Broncho Billy's Love Affair," with G. M. Anderson.

Whitney Raymond as Young Lawton in Essanay's "The Error of Omission."

These same makers haven't any more regard for adverse criticism than the big bull moose has for fusion. When this Windy City Beeze will go down on its all fours to get some dirty dollars it will be colder than it is this eighteenth day of November, year of nineteen-twelve. All we want is fair play and a fair-minded maker who has regard for our goods and our sincerity of purpose. We don't believe in film criticism. We don't care to knock. You get me?

* * *

Get your copy in now for our Christmas number. The goat's kiddies need some new breeching and the goat himself would like to buy a loving cup for old Carl Laemmle, or somebody or other. Any how, we never have had a real chance to show you what we could do with a lot of advertising copy, so you ought to take one chance in our Santa Claus issue. Maybe we'll do the cover in four colors and treat ourselves with other extravagances. You can't tell. Last day for copy, Monday, December 16. All you dopsters remember that. Stick it up where you can see it. Come on in.

Films Give Women's Tailor Fashion Ideas

The girls have been passing up a bet. Before their eyes Dame Fashion has been displaying her modes and they have not caught the big idea. It is in the picture shows. Ask any enterprising woman's tailor in Pittsburgh, for it was there the fact came to light recently.

One of the delegates to the Ladies' Tailors' Association sat in a down town theater watching the operator strain tears through the film. The heroine had just been clasped by those outstretched arms. The tailor leaned towards his neighbor and whispered excitedly:

"Have you a pencil?" Hurriedly he drew an old envelope from his pocket and sketched rapidly. By the time the lived-happily-every-after scene was on the screen he had made a fair drawing of the heroine. Then returning the pencil to the owner, he explained:

"I suppose you wonder why I drew that picture. You see, I'm a ladies' tailor and have to know the latest styles. That heroine's dress was something new, and Pittsburgh women want what is new in clothes and styles.

"I often get good ideas from the dress of the moving picture actresses. These pictures coming from the different centers of the country reflect the styles in vogue at those places, and often I am able to catch a new design or to elaborate on one not too old. I will have this latest model for new customers in a week."

Pastor Installs Picture Machine

Rev. J. W. Cool of Parkhurst Congregational church in Minneapolis has learned how to make the children of that city come to his church, and it is nothing else than moving pictures, shown during the services. He tried it out and 300 children and as many adults packed the edifice. The films shown were "Jephtha's Daughter," a Biblical picture, and "The Manufacturing of a Panama Hat." The picture machine was also used to make the children sing hymns, the words of which were flashed on the screen.

Current Educational Releases

Arabian Sports.—Vitagraph. People of this section of the world are apt to associate Arabia with some far-distant point, with customs and manners past finding out. Whatever our ideas have been, we are thoroughly enlightened with regard to the sports and pastimes of the Arabian people in this particularly interesting and instructing film. We are brought right into contact with the people in the midst of their life and pleasures, and they are wonderful to behold. The Arabs are remarkable athletes, and create no end of surprise at their astonishing performances.

The Slate Industry.—Lubin. An interesting industrial picture showing the evolution of the school slate. First the quarrying, splitting and cutting, later in the factory, where the slates are polished, trimmed, framed, bound and laced. The scenes are taken at one of the largest factories in America.

Cutting California Redwoods.—Essanay. A film of exceptional educational value, showing the mammoth kings of forestland, first as they stand majestic and towering over the smaller specimens which, in comparison, look like mere shrubs and then throughout the various stages of cutting and peeling, of converting the huge trunk into logs and the yarding of these away to flat-cars by means of a donkey engine. From the flat-cars, they are toppled over into the river and as each one hits the water, there arises a monster spray. A wonderful film, that of the redwoods, which shows, in addition to the work of cutting and hauling the trees, stretches of cleared timberland and other scenes of equal interest and value.

The Beauties of Portugal.—Pathé. Among the beautiful views of Portuguese castles and ruins are included the country home of ex-Queen Amelia and the palace of Queen Maria Pia.

How New York Travels.—Gaumont. Here is shown how six million people travel daily and the system of transportation which conveys the population of the second largest city of the world from the extremes of Brooklyn to the Bronx limit. All kinds of trolley cars are shown. There are also pictures of the subway car which travels to and fro in the largest hole in the world and also of the elevated and of the Fifth avenue bus. There are views of the Brooklyn Bridge and last but not least of the electric patrol wagon.

Thl Forest of Fountainbleau.—Pathé. A blending of autumn's green and gold around the castles of the

The Student Parade to the Gridiron, from Essanay's "Football Days at Cornell.

ancient French kings where Napoleon signed his abdication in 1814.

A Study of the Fly.—Eclair. The last few years have aroused men of mighty ability to combat this seemingly innocent little pest. Scientific and medical researches made the horrible discovery that the house fly is a more deadly enemy to humanity at large than all wars, fatalities and plagues other than which the fly itself carries. This firm discovers the dangerous little insects swarming about the dead and decomposing body of a hog which has succumbed to cholera. There it is seen feasting on foul flesh and then crawling under this carrion body to lay its eggs. We are shown the generation of its larvæ into life and the peculiar phenomena which it has of liquefying the decaying flesh that it may obtain its nourishment. Under highly microscopic conditions, its dangerous physical parts such as the hooks about the mouth the respiratory cord at the other end are clearly depicted. Then, as maggots, which is their common term, they are shown crawling into the decayed recesses of the flesh, there to remain till they break their shell and issue forth as flies. After all this repugnant filth, we see them fly and feast upon a cookie which a dear little child afterwards most innocently picks up and eats.

Brusia (Asiatic Turkey).—Eclair. This film shows the beauties of Murad, a town dating from 1420; a calm cemetery; some curious streets and the old bridge. After a travel through this picturesque town we are shown the way oxen are shod. These oxen are used for transportation and finally they are exported.

The Melies Trip Around the World.—Melies. The picture-show patron will accompany them just as soon as their around-the-world films begin to be released. Among the many places to be visited are the following few: The company being twelve days at sea on the "Manuka" after leaving Frisco, will land at one of the Society Islands in the South Pacific, Tahita, the land of graceful girls and perpetual summer with blue sea, foamy beach, and on shore, full of purple tints, wattled huts thatched with palm leaves. Then they go through New Zealand, from Wellington to Auckland, the forest country with high snowy mountain peaks and very fertile valleys. The Maories who live there in mysterious grottoes are gentle and dislike quarreling, though they have proved themselves no cowards in war. From New Zealand they proceed to Australia, the home of the little bushman and of the kangaroo who runs through the immense steppe over which horizon-high mountains appear.

They will then reach Java, the beautiful island which has been called a paradise, because of its fertility; forests which spring up in three years are inhabited by tigers, elephants, rhinoceroses and a horrible bat called the flying cat. Java is full of monuments of bygone splendor, magnificent temples built more than 800 years ago, temples half buried in volcanic ashes that are now the homes of bats and wild tigers. After passing through Singapore and the Straights Settlements, a wasp's nest of pirates, they will be in Siam, the "land of the yellow robe." In the cities there the people go about in "Rick-sha" pushed by Chinese. In the country the farmers plow, wading behind a yoke of buffaloes and their houses are often boats rocking softly on the surface of the stagnant water. They will then continue their course across the large world.

Vineyard Scenes.—Selig. One of the largest vineyards in the world was recently placed at the disposal of the Selig Pacific Coast company for a period of two days, to be used as a setting for an unusual Italian romance. This mammoth wine ranch is located at Guasti, Cal., and comprises 4,000 acres of bearing grapevines in unbroken rows. The vintage season was at its height when Producer Lem B. Parker took a company of fifteen people out to the vineyard and produced one of the most elaborate costume plays ever attempted by the Selig company. Backgrounds for the various scenes show the vineyards with hundreds of pickers at work. Other scenes give background glimpses of the grapes as they are being hauled from the vineyards to the crushers over the company's narrow gauge railroad, the dumping of tons and tons of grapes at one time into the automatic conveyor, the huge fermenting vats, the almost feudal life of the great ranch house and its surrounding Italian colonists, and numerous other incidents of the work and play that can be seen on this vast estate. Four hundred tons of grapes are crushed each day during the season in these vineyards, and grape juice is transferred from one process to another with the aid of high conduits and mammoth fire hose, for all the world like mere water.

The Cranberry Industry.—Imp. Though the cranberry enjoys especial popularity during the season it particularly suggests, very little information is had as to the industry which makes for the further fame of the toothsome turkey. It was for the Imp company to collect all information regarding the berry and will give it to the public in interesting pictures released November 23.

Manfredonia (Southern Italy).—Cines. Situated in the southern part of Italy, this picturesque seaport town is especially interesting to tourists. After witnessing several charming bird's-eye views of the town, we are shown many scenes of typical native life and customs.

Picturesque Dalmatia.—Eclipse. Owing to the hostilities in the Balkan States, Dalmatia has lately been drawn more into the public eye. We are taken upon a trip along the coast visiting the military posts, Grovosa, Pola and Ragusa, which are well equipped with garrisons and harbor defenses.

Corneto Tarquinia (Central Italy).—Cines Situated a short distance from Rome, Corneto Tarquinia contains many places of interest which are well preserved from medieval times. We are shown the Principal Gate, the beautiful Vitelleschi Palace, the National Square, St. Stephen's Square, the Great Tower, the Castle, and several remarkable views of the town.

Trebizond and Surroundings (Asia Minor).—Depicting many interesting places in and about the town of Trebizond, such as the Constitution Square, Turkish Square, the Fortress of Comneni, and the military camp; also several scenes of quaint Turkish life and customs are shown.

The Ancient Town of Narni (Central Italy).—Cines. Situated a short distance from Rome, Narni, founded in the thirteenth century, possesses many interesting ruins. We are shown the historic rock of Alexander VI, the ancient market place, a view of Stifona and some delightful views of the Nera Falls.

The Story of a Stolen Symphony

A Lubin Feature

THERE is an interesting dramatic release scheduled by the Lubin company for November 25. Originally it was not to have been given to the public until latter December, but the earlier release date was decided upon in order that England and the foreign countries might have the privilege of it for a Christmas offering.

The film is "The Stolen Symphony," Lawrence McCloskey is the author, and it is thought that this, his latest scenario, is also his best. To the Lubin people and others who know of the story of "The Stolen Symphony" and the talent that has gone to make the telling of the story, an unanimously accorded success is predicted for the offering.

The tale has to do with a young German musician, with a lovely girl in straitened circumstances who is also a music lover, her aunt, a wealthy New York woman who gives the girl a home, and with a world-renowned pianist.

Arthur Johnson puts his whole self and splendid acting into the part of the young German musician, who toils early and late on the composition of a symphony which he intends shall be the great American Symphony. He gets his inspiration from the swirling, pulsing activity of the new country for which he has left his beloved fatherland.

Helen, the death of whose father has left her penniless, and who occupies the room next to the young musician, with whom she becomes acquainted and early learns to love, is portrayed by Lottie Briscoe with a charm that is bound to capture the fancy and sympathy of all spectators.

The aunt with whom Helen finds a luxurious and happy home is played by Madge Orlamond with a splendid "grand dame" rendition, while the role of Jeretsky, the wonderful pianist, who stole the great symphony submitted to him for criticism, is interpreted by Howard Mitchell with a closeness to detail that easily makes him a most successful villain. The romance of the story and the way in which it is worked out will make for a most satisfied world of picture seers.

As the story goes, Helen Landis by the death of her father is left penniless and has to seek employment and

Jeretsky Plays the Symphony as His Own.

take humble lodging. She rents a room in a rooming house and is located next door to a young composer, Paul Romig, who is hard at work on a symphony composition which he feels will be a masterpiece. As the work progresses Helen becomes enthralled with the music and is often heard to hum the beautiful bars. One day Paul and Helen meet at the front door, which the composer assists the young lady to open. Later they meet on the street and Helen permits Paul to accompany her to the park. The Symphony is discussed and an acquaintance is commenced which gradually becomes an attachment.

Helen receives a letter from a well-to-do aunt who has just returned from Europe. It is an invitation for her to come to New York and make her home with her relative. The arrangement is too good to be refused, and though she feels a little regret at leaving her neighbor, Helen packs up and goes to the new home. The Symphony is completed and one day Paul, passing the Academy of Music in Philadelphia, reads a sign, "Jaretsky," World's Greatest Pianist, Concert Every Afternoon."

Paul Romig Discovers Jeretsky's Advent.

An idea strikes him; he will try and induce Jaretsky to play his music.

He forthwith waylays the great pianist at the stage door, and though not cordially received, pushes the scrip into Jaretsky's hand as he is getting into his auto. A few days later the city is wild over a new American Symphony rendered by the great pianist, who claims it as his own composition. Romig again presents himself at the stage door, but Jaretsky ignores him, then has him arrested as a madman. Paul is taken to an insane asylum and held in close confinement. The newspapers tell the story of Jaretsky's masterpiece and how a madman had claimed to be the composer.

In New York, Helen and her aunt receives an invitation to join a party of friends at a concert. The great Jaretsky will play his wonderful Symphony. The invitation is accepted and Helen hears the familiar composition which had enthralled her. She gets her aunt to engage the pianist for a private recital at the house. She then communicates with the directors of the asylum, and explaining the situation, demands that they shall permit Paul to be present under guard. The function is duly arranged and Jaretsky executes the masterpiece. When he has finished he is confronted by Paul and Helen. The pianist, unnerved, falls in a faint.

The story is made public and in a few days Paul receives a letter from the Metropolitan Opera Company enclosing a check for $10,000 advance royalty for the greatest American Symphony ever composed. He hands the letter to Helen, and she offers him both her hands.

Mrs. Fiske to Be Seen in Films

Mrs. Minnie Maddern Fiske has entered into a contract to pose for motion pictures. The announcement comes as one of especial importance, as Mrs. Fiske is probably the only person on the American stage who possesses, in such large measure, the elements of both actress and stage manager; also she is the first really great American actress to lend her art to film reproduction.

Before giving a final decision, Mrs. Fiske went thoroughly into the subject, visiting a large number of picture shows where high class films are shown. She noted the appreciation of them by the spectators and became convinced of the great educational value of the photoplay. Daniel Frohman, manager of the Lyceum theater, New York, and also managing director of the Famous Players' Films Company, brought the contract from Chicago to New York after completing arrangements for the enterprise.

"Becky Sharp" will be the play in which Mrs. Fiske will play before the camera. Her creation of this character is held to be one of the six great classics of the stage, the others being the Juliet of Adelaide Nielson, the Meg Merriles of Charlotte Cushman, the Hamlet of Edwin Booth, the Beau Brummel of Richard Mansfield, and the Rip Van Winkle of Thomas Jefferson.

The scale upon which the enterprise is to be projected will exceed anything ever before attempted in the field of film industry. The entire production will be under the personal direction of Mr. and Mrs. Fiske, and Mrs. Fiske will pose for the pictures at times convenient to her prior to the opening of the regular theatrical season of 1913-14.

Films in School Would Prevent Truancy

How the school teacher may use the motion picture to prevent cases of truancy or to arouse interest in an otherwise dry subject was demonstrated to teachers in attendance at the annual meeting of the Wisconsin State Teachers' Association held recently in Milwaukee. Any boy or girl would rather follow the processes of a frog's development from the seed mass that looks like tapioca pudding, through all the wiggly stages to maturity by watching the moving-picture screen, than by laboriously following out the frog's life history in the laboratory. Many a boy has run away from a history lesson at school taught from a book and paid a nickel to see history dramatized in motion pictures.

Film Aids Red Cross Seal Sale

"Hope" is the title and the leading note in a motion-picture film released for exhibition by Thomas E. Edison, working in co-operation with the National Association for the Study and Prevention of Tuberculosis. The scenario of the picture was written especially for the anti-tuberculosis campaign by James Oppenheim, and the film will be used during the next five weeks as a special feature of the Red Cross Christmas Seal sale.

Arrangements are being made by the Wisconsin Anti-Tuberculosis Association to have this film shown at different theaters throughout Wisconsin. Several films will be needed to cover the state before the end of the Christmas Seal campaign.

Another Study of the "Little Corporal"

Cines' "At Napoleon's Command"

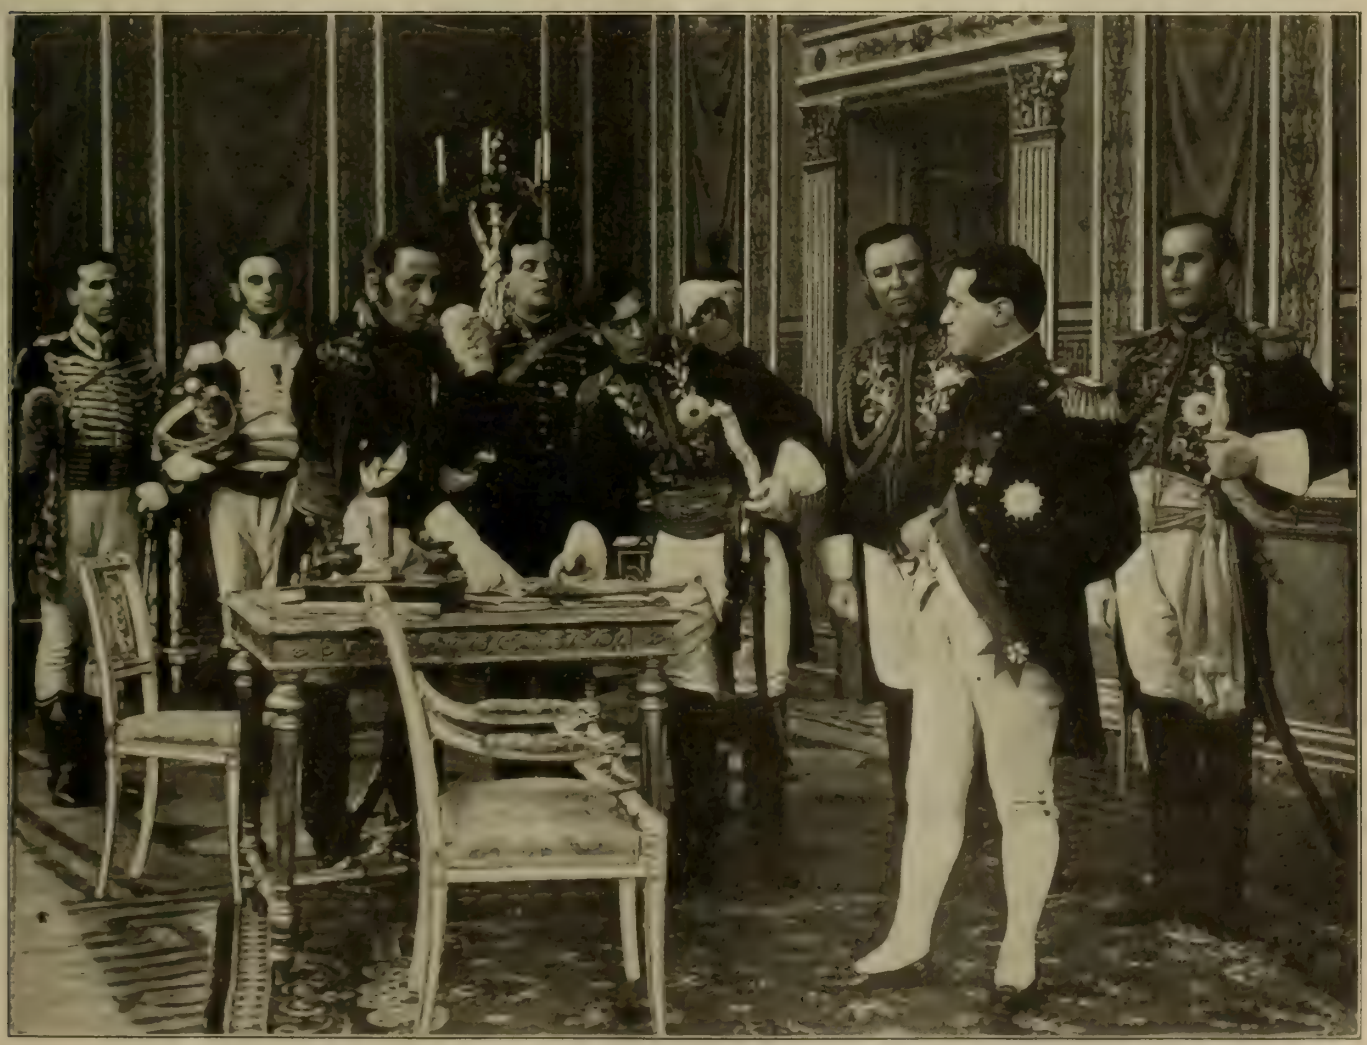
A SPECTACULAR war drama entitled "At Napoleon's Command," one of those high-class historical subjects for which the Cines company has made such an enviable reputation, will be released by George Kleine December 2.

The story is laid in the midst of Napoleon's campaigns, at the time when he was battling against the combined forces of nearly every monarch in Europe, and was astounding the world by his military genius. The gallant Lieutenant Vidar is home on leave, but his pleasure is of short duration, for but a few days have passed when he receives a summons to join his regiment without delay. With solemn pledges of love, and of a safe return to his pretty sweetheart, Juliet, he embraces her tenderly and hurries away to mingle with the vast crowds of soldiers marching to joint Napoleon's main army.

Two years elapse and Vidar has not returned to his sweetheart, as he so faithfully promised. In the meantime, distress has visited the home of poor disappointed Juliet. Deserted and in actual want, she visits the camp of a regiment of soldiers quartered nearby and begs for assistance. While she is being cared for, the pretty face and charming manner of the girl attract the attention of Sergeant Andre, who sympathetically listens to the story of her past life. She tells him of her misfortune, but fails to reveal to him the name of her false lover. Andre becomes infatuated with Juliet, and after an ardent wooing wins her consent to marry him and to make her home with his mother in Paris until his return from the wars.

Four years later Napoleon is at his magnificent palace at Fontainbleu, surrounded by a brilliant suite of officers and their wives who delight to promenade in the beautiful gardens. Among the gay throng are Andre, who has been promoted to field marshal, and his wife Juliet, the latter very proud of her gallant husband, who has become one of the emperor's most trusted officers.

A magnificent reception takes place at the palace, during which Juliet is to realize one of the most cherished ambitions of her life—to be presented to the great sovereign. And it is indeed a scene of great splendor: the ladies arrayed in their costly gowns and priceless jewels, contrasted with the glittering uniforms of the officers, present a remarkable sight. All is extravagantly gay,



Napoleon Consults with his Marshals. From the Kleine-Cines Feature "At Napoleon's Command." Copyright 1912, George Kleine.

and the hum of conversation is at its height, when suddenly the magic words "The emperor!" are spread in a whisper throughout the assemblage, and Napoleon enters, bowing right and left to his awed guests. Juliet is soon introduced, and her happiness is supreme, when all at once while gazing radiantly into the gay throng, she is shocked at the sight of the face of Marshal Vidar, her false sweetheart, and when he is brought up to be presented she faints away and has to be carried from the room.

The next day Andre announces to his wife that he has invited Marshal Vidar to dine with him, for he and Vidar have become close friends. She is greatly shocked, and exclaims that she cannot receive him, thus revealing by her excuses that Vidar is the man that so cruelly wronged her in the past. Greatly incensed, Andre immediately seeks out Vidar, and, after insulting him, challenges him to defend his honor. A duel is arranged, but in the midst of the encounter, the emperor, who had been secretly informed of the affair, appears and sternly commands the officers to return to their regiments.

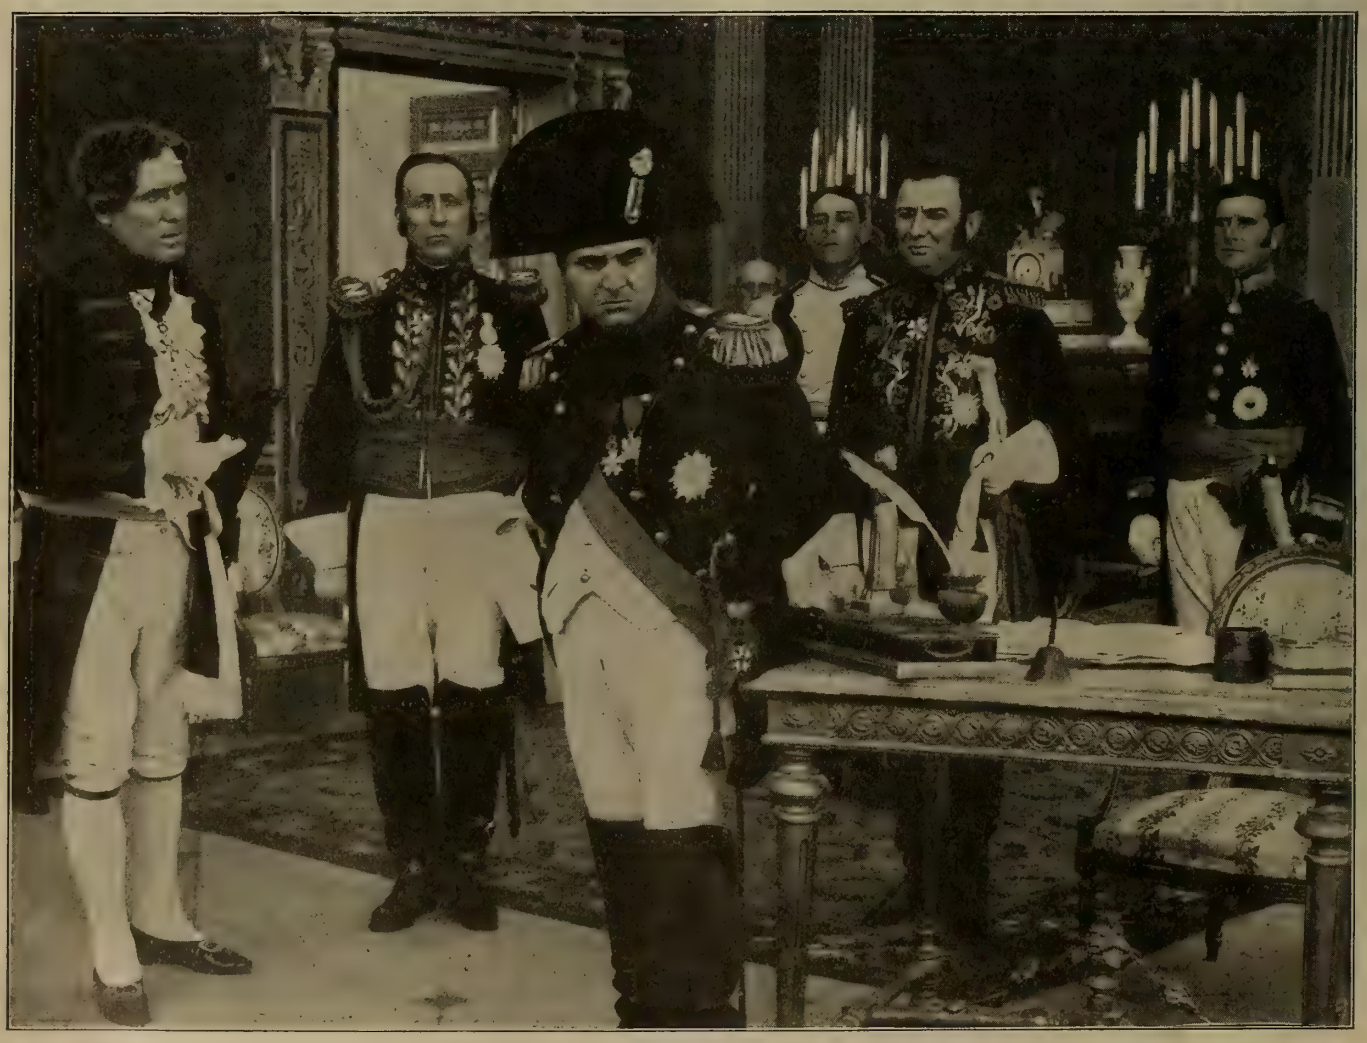
Not long afterwards preparations are in progress for a great battle. The enemy outnumber the French forces, but Napoleon frantically exhorts his soldiers to fight desperately for France and their emperor. On the eve of battle the great commander retires to his tent, where he has vision after vision of the glory that success will bring to him on the morrow. At the break of day all is ready. The mass of the army move forward toward the enemy's line, the emperor himself, seated upon his white charger, directing and inspiring his men to victory.

The advance is followed by a desperate charge, which causes the enemy's line to waver. Heavy guns are brought up from the rear and the slaughter is begun in earnest. A terrible shower of lead streaming out from the angry mouths of the cannon wreaks frightful carnage, and soon the field is literally strewn with dead and dying.

Napoleon's wonderful nerve and unerring strategy in directing his troops have their effect. The final bayonet charge at the enemy's most vital point proves a fatal blow, and a great victory is won.

Roll call reveals the vacancies in the ranks of the various regiments, and the two field marshals are numbered among the missing officers. Juliet searches for her husband upon the battlefield, and at last finds him at the point of death, and near him Vidar, who is also desperately wounded. When the two officers are laid side by side, Andre begs his wife to forgive Vidar because he attempted to save his life during the battle.

As they are lying there upon the field, the emperor and his army are seen to march past and on into the distance. And here we must leave these two loyal officers, who inspired by the sight of "The Little Corporal," their beloved leader, are content to forget their wounds and spend their last expiring breath in shouting "Long Live the Emperor!"



The Emperor Informed of the Duel. From the Kleine-Cines Feature "At Napoleon's Command." Copyright 1912, George Kleine.

Sans Grease Paint and Wig

by Mabel Condon

Adrienne Kroell.

"THAT'S the place," I told myself as I sighted a big-lettered fence and walked fast to keep warm. But when I came within reading distance of the big letters, instead of their announcing the Selig plant, they informed that something or other was "on draught."

It was then, as I turned to consult a lamp post for street directions, that I saw the man with the straw hat and winter overcoat and only for him I might still have been in time for my appointment with Adrienne Kroell; though, I confess, I probably would still be wondering about the November combination of a straw hat and overcoat.

As it is, my mind is at peace as to both of them, for I stayed in the vicinity of the straw-hatted one long enough to learn that he was but awaiting a director's signal to doff the overcoat and race his auto across the street to the curbstone, there to meet and shake hands with a grimy son of toil who at that particular moment was intent upon demolishing a substantial looking sandwich in two bites.

So when I reached the Selig studio, Miss Kroell was "working." Would I step up? I would, and stepped three flights. Miss Kroell was sitting at a kitchen table telling the story of the three cakes and the bad dog to a curly-haired little girl on her knee who showed but one tooth at either side of her mouth in the laugh which accompanied the disappearance of each cake.

After Miss Kroell had told the story several times and had assured her ex-convict husband an equal number of times, that "it will all come out all right; we'll manage somehow," Mr. Hardee Kirkland told her that would be all and she took me down to her dressing-room to meet Billy.

Billy is a canary and one to be envied on the score of sharing his pretty owner's sunny dressing-room, which, the pretty owner remarked, she had done over in red hangings because the sun had faded all the color out of the pink ones which preceded them; besides red was more practical for the winter.

When Billy had chirped his satisfaction at the amount of attention bestowed upon him and Miss Kroell remarked that Billy doesn't sing but he is *such* good company, we settled down to business; Miss Kroell, in front of her dressing table, her little sister, Anna May, in a rocker in the corner and I on Miss Kroell's shirtwaist box, facing Billy, and respective pictures of Selig stars and King Baggott, which looked down from the opposite wall.

"I played in stock with King Baggott," said Miss Kroell in explanation of his likeness and autograph. "Neither of us thought of motion pictures then, and, isn't it funny, that we should both be playing them now? Let me see," and her big eyes narrowed to a reminiscent slit, "it must have been about four years ago that we played together, for it was after I had given up my position as Mort Singer's secretary to take the part left vacant by Olive Vail in 'Honeymoon Trail,' and I'm sure that was after I had walked the marathon from Minneapolis to St. Paul, because my experience in companies with Wilton Lackaye, Marguerite Clark and Virginia Harned came before then, for I distinctly remember I was studying with— —"

"Dear me," I gasped, "whenever did you get time to do all those things?"

"Well, I tackled a little bit of everything. To start with, I could sing. I knew that. So did my parents, but they never intended me to sing publicly; they wanted me to teach. So, to please them, I took the normal exams, though I never intended to be a teacher. While going to high school I studied music, and the vacation after I was graduated I took up stenography. Six weeks after I began the course, I had finished and obtained a position as secretary of the St. Louis Horticultural Society.

"There was a stock company in St. Louis in which I managed to obtain a part and I played in it evenings and attended to my secretary work in the day-time. It was about this time that I played with Wilton Lackaye, Marguerite Clark and with Virginia Harned in 'Trilby.'

"Meanwhile, I had kept up my music and my teacher advised me to go to Chicago and try for a position in a musical play. So I came. I went to Mort Singer and he said to come some other time and he would hear me sing, as he was too busy just then because his secretary had quit and left him with ever so much work that just had to be done.

"That gave me an idea and I applied for the position of secretary right then. He laughed but I told him I meant it so he gave me a letter and said, 'You're engaged.' I got along just fine and was heralded in the newspapers as 'the model business woman.'"

"For goodness sake, that well? I suppose you were interviewed and everything?"

"Yes, on all kinds of subjects. If you don't mind getting off that shirtwaist box for a minute, I'll show you something I wrote for a paper at that time and of which I'm quite proud."

I abdicated the chintz-covered throne and Miss Kroell scatttered heaps of pretty white things on her rummage to the bottom of the box from which she emerged with what she went after.

"Model business woman gives advice to girls in offices," was what I read and among the advisements were:

"Cultivate good sense and humor.

"Don't become careless or untidy as that marks you 'failure.'

"Don't go to lunch with your employer unless its an urgent case of time-saving.

"Don't invite the confidence of your employer's wife if she has the office 'bug' and—

"Don't tell her the business of the office; leave that to your employer."

"Great stuff! And what happened after that?" I asked when Miss Kroell had poked the clippings back into the box.

Well, the next thing that happened was Olive Vail's becoming too ill to continue her role in the 'Honeymoon Trail' road company and Mr. Singer's suggestion that I take it. I thought it would be too big for me but tried it and continued in the part for three seasons. Then the motion-picture people saw me—"

"But what about the beauty contest you won? And you haven't said a word, yet, about the marathon race."

"I didn't suppose you knew about the beauty contest," returned Miss Kroell, modestly. "It was conducted by a newspaper in St. Louis. I don't know who entered my name, but my dad said to leave it in; and I won. The prize was a diamond medal. The marathon was also conducted by a newspaper; one that had offices in both St. Paul and Minneapolis, and the distance walked was from one office to the other. It was twelve miles. I had played in Minneapolis the night before and was to play in St. Paul that night, so walked from one city to the other. It took me one hour and thirty-two minutes and I was just two minutes in the lead. It was awfully exciting."

"I should think so."

"It was out west that I first became interested in the making of motion pictures. I met Mr. G. M. Anderson and he asked me to work in a swimming picture but, on account of matinees, I couldn't get time. He told me to visit the Essanay studio when I returned to Chicago and I did. By that time I was very much interested, so became engaged by the Essanay company and remained there one year. Then I came to Selig's and have been here one and one-half years. I just love the work because there is always something new and the players have time to live like real people. My home is not far from the studio and I have four sisters all younger than I, who have all appeared in pictures."

"I'm the youngest," declared Anna May, breaking the long silence in the rocker corner, "and I'm hurrying through school so's I can act all the time 'stead of just on Saturdays. I'm ten."

"Cheep, cheep," piped up Billy championing his little friend.

"And how old do you think I am?" asked Anna May's big sister. I was dying to know. "Twenty-one." Then she listed her sister's ages; so she's honestly and truly only twenty-one. Not that she looks older but she has done so much more with her twenty-one years than other girls have that one would surely guess her to be more.

She's a very, very beautiful twenty-one, too. She has wonderful skin, soft brown eyes, straight, black brows, and pictures do not at all do justice to her hair and teeth. She holds the record for being the most engaged girl in Chicago; there are countless pictures of her in the act of "getting engaged" to prove this claim.

But that's in pictures. However, she wears the loveliest diamond, all by its lonesome, on her ring finger.

"I wonder?" I remarked to Billy as I told him goodbye; and Billy answered, "Cheep, cheep."

"The Triangle," November 28. Copyright 1912, Selig Polyscope Co.

Photoplays From Essanay's

Some Coming Features

OF THE ten Essanay releases booked throughout the first two weeks of December two are educational subjects of more than ordinary interest. "Football Days at Cornell," released December 5, is a splendid reel of college life at Cornell University, Ithaca, N. Y. In this subject the Essanay camera conveys us to the beautiful Cayuga lake and valley, one of the garden spots of America. Here are the most gorgeous bits of scenic beauty imaginable. Wonderful panoramic views of the valley, taken from Cornell University, are unfolded before us, and then is shown the university campus with its hurrying throngs of students. The Varsity football team is next seen at afternoon practice, including tackling, bucking the line and going through various intricate formations. Next we see a football aspirant tried out for a position on the team. He lasts until the entire team make mince-meat of him, then solemnly swears "never again." One of Cornell's annual football games was snapped by the Essanay camera, and the film is replete with sensational views of the game during the most exciting moments. This, together with views of the students parading to the field, and going through their famous "snake-dance," terminates as interesting a subject on college life as can be imagined. The Essanay camera men spent one entire week at Ithaca snapping this film, and the production will undoubtedly arouse the old college spirit of all those who love their alma mater.

Evebelle Prout and Whitney Raymond in "The Supreme Test."

"The Supreme Test," released December 6, is a dramatic subject, splendidly portrayed. The story tells of Eva Jackson and Raymond, who are sweethearts in school, and their betrothal is sealed with a sun-bonnet kiss. In the years that pass Raymond graduates through college, marries Eva, and they enter their beautiful new home, the gift of Raymond's father. A few months later, at a fashionable reception, Raymond meets Lois Whitehall, a siren who fascinates him. In the days that pass he spends most of his time with Lois, and is coldly indifferent toward his pretty wife. Discovering his infidelity, Eva leaves a note saying she is returning to her mother on the afternoon train, and starts for the railway station. Meanwhile, Raymond discovers that Lois is merely trifling with him, furiously upbraids her and hurries from the house. Arriving home he is handed Eva's note and, a moment later, reads in the paper that her train has been wrecked and her suitcase found. Crazed over her evident death, Raymond is about to kill himself when Eva enters in time to prevent the suicide. Fortunately she had missed the doomed train. For a moment he thinks her a phantom, then sinks on his knees, begs her forgiveness, and the compassion within her heart again restores happiness to the little household. Evebelle Prout is prettily cast as Eva, Whitney Raymond does excellent work as her sweetheart and husband and Frances Mason portrays the enchanting siren who very nearly leads him on to self-destruction. The other members of the company are capable.

On December 7 "Broncho Billy's Love Affair," a sturdy Western drama featuring G. M. Anderson in the character-creation he has made famous, is released. The plot is gripping, and the portrayal is par-excellence. Winnie Allen, a pretty western girl, is loved by Dan Wild, whose father owns the Circle-C ranch. Broncho Billy, foreman of the Circle-C, also loves Winnie and she favors his suit. Knowing this, and to make his way clear, Dan persuades his father to discharge Broncho. Broncho is unable to learn the cause of his dismissal from Wild. Dan now manages to secure Winnie's engagement ring from her room, forges a note in her writing, telling Broncho she is returning the ring because he has been discharged for dissipation, then pins the note and ring to the door of Broncho's shack. Broncho finds it and, unsuspicious of the trickery employed, leaves the county. Years later young Wild, now a dissipated ruffian, is married to Winnie. Taking her meagre earnings, he goes to the town gambling hall, becomes involved in an argument and kills one of the punchers. Broncho Billy, now sheriff, is advised of the shooting and immediately starts out to find Wild. Mortally wounded, Wild staggers back to his shack and gasps out his story to Winnie, who does everything possible to alleviate his suffering. Tracking Wild to the shack,

Broncho enters and recognizes Winnie. Realizing death is upon him, Wild now makes a full confession of the despicable way in which he won Winnie for his wife, secures Broncho's promise to care for her always and dies. It is useless to comment upon the excellence of Mr. Anderson's work in his famous role of Broncho. The dominant personality he has given it stands out boldly, and his thousands of admirers will find in this production much to appreciate and admire. Evelyn Selbie portrays Winnie charmingly and Brinsley Shaw gives his customary finished study of the dissolute Wild.

"The Shadow of the Cross," released December 10, is one of the finest dramatic subjects ever released by Essanay, and contains a number of exquisite double-exposures, perfect examples of the up-to-date "dissolve." The plot is powerful. Leandre and Jacques, two young Italians, are in love with Francesca Tonelli, a beautiful girl. Leandre is favored by Francesca. One night a dance is to be held and Leandre writes Francesca pleading with her to wear a red rose if she returns his love. By chance Jacques secures possession of the letter and, in a frenzy of jealousy, changes the word "red" to "white." All unknowing of the trickery involved, Francesca innocently wears the white rose and Leandre leaves the town with a broken heart. Taking opportunity of the chance offered, Jacques wins Francesca for his wife. The years pass and Leandre has become a monk. One day a poor girl falls exhausted at the cloister door and Leandre is horrified to discover it is Francesca. He cares tenderly for her, and then learns for the first time of Jacques' perfidy and that he has deserted her. Francesca dies, and Leandre swears to have revenge on his false friend—though bound by his eternal vows. Years pass and one night a stranger falls senseless at the monastery door. Leandre carries him to his room and there, by the flickering light of a candle, recognizes the wasted face as that of Jacques. Whipping a knife from Jacques' belt, Leandre raises it aloft. Suddenly the candle is dashed to the floor and the room is left in blackness. Gradually a shaft of light penetrates the gloom and falls upon the crucifix on the table. When the form of Leandre, with repentant face, crawls to the table and bows before the crucifix while his lips move in silent prayer.

E. H. Calvert and Bryant Washburn in "The Shadow of the Cross."

The Essanay Company has made a feature production of this startling and absorbing story, and the production is a masterpiece. Miss Ruth Stonehouse, well known by her many admirers for her splendid work in "Chains," "From the Submerged," and other fine dramatic studies, gives a wonderful interpretation of the role of Francesca, a part that calls for the most exhaustive emotional and delicately shaded delineations of character. E. H. Calvert is sturdy and impressive as Leandre, his character work as the aged monk being especially fine, and Bryant Washburn does excellent work in the role of Jacques, the false lover.

With the co-operation of the Chicago Board of Health the Essanay Company has made a splendid educational film to be released December 13, entitled "The Error of Omission." The aim of the production is to show, in a startling manner, the laxity of parents in registering the birth certificates of their children compared with the promptness with which pet dogs are registered immediately. With the valuable assistance of Dr. C. St. Clair Drake, of the Chicago Health Board, a very fine scenario was prepared and this has been given excellent interpretation in the film. Tommy Lawton is born into the world and his father, one of the common type of careless parents, neglects to register his birth certificate in the flurry resulting from having a young bull pup sent him by a friend. The dog is registered at once, however, and the contrast of the two registry offices is startling. Before the dog registry office a huge crowd clamors for attention from the overworked clerks, while at the birth registry counter the clerks yawn and nod over their neglected books. Tommy grows into a sturdy lad, and his father has the greatest difficulty in securing him a place in the public school because of his birth never having been registered. At the age of fourteen Tommy is left alone in the world by the death of his father and attempts to secure work. A truant officer intervenes and Tommy, unable to prove his exact age, is unable to look for employment. The years pass on and Tommy is now a young man in love with pretty Eva Cushman. Feeling himself of age, and desiring to cast his vote for a staunch friend of Eva's father, Tommy tries to register at the polls, but is challenged because of his youthful appearance and, not being able to prove his age, is turned away. Later he endeavors to secure a marriage license but it is the old story—he cannot prove his age and is rejected. One morning he receives a letter advising that he has inherited a fortune if he can prove his identity. Again the neglect of registering his birth almost loses Tommy the fortune until he happens to discover his father's old dog registration paper on the back of which is carelessly scribbled: "Also became the father of a fine,

Augustus Carney in "Alkali Ike's Motorcycle."

bouncing boy on this date." With this scrap of good luck, Tommy hurries to the lawyer, proves his identity by revealing an odd birth mark on his neck, and is rewarded with the money.

It will at once be readily seen that this production of the utmost importance in the daily lives of every community. Through just such carelessness the lives of thousands of innocent children are very nearly wrecked and their future blotted out because of the failure of their parents properly to register at once the date of their birth. The question is of vital importance, and Essanay's film will undoubtedly go a long way toward correcting the evil.

On December 14, "Alkali Ike's Motorcycle" is released and, like the many famous productions of this great Western comedy creation, is a riot of mirth. Lack of space prevents describing it fully, but the story deals with "Alkali" securing a motorcycle upon which to take the buxom Soffie for a spin along the trail. Of course he loses control of the mechanism and a wild ride ensues that is one long scream of hilarity for any audience. Finally the machine lands in the creek and there we leave "Alkali" in the hands of the enraged Soffie, who does things good and plenty to him. Augustus Carney is furiously funny in his famous role, and Margaret Joslin is again seen as the buxom Soffie.

Extolls Films as Educational Agency

Declaring that the moving picture today deserved to be called the "Five-Cent University," and that it was one of the leading educational factors of modern life, Rev. Herbert A. Jump, pastor of the First Congregational church of Oakland, Cal., addressed the classes in education of the University of California recently.

"This new force has entered into the conditions of modern educational power of modern life," said the Rev. Jump. "No student of social conditions can afford to be ignorant of its power.

"Of every twenty-three persons you meet on the street, one has been attending a photoplay. Five times as many people patronize the film theaters as attend the regular drama. Every hour a new film is published.

"This is the latest in the series of inventions which has made human history. It has transformed the existence of the moderately well-off wage-earners. It has doubled his opportunity for clean fun.

"You now have your Shakespeare reeled off a spool, and human life taught at the end of a crank. One travels over land and sea without leaving one's seat and sees the great personages of the world perform their mighty deeds. We unconsciously derive knowledge of life and the world which makes a difference in our entire viewpoint.

"The scenes of cruelty, vice, brutality, makes it easier to believe that the world contains cruelty, vice, brutality. The scenes of human love, of heroism, make those acts easier. As to the moral standards of the picture theater they are quite as high as those of the public library."

Mother Sees Long Absent Son in Film

Once in a while it is noted of people who attend the moving-picture shows suddenly recognizing some one or some thing they have seen previously, and occasionally it is stated, but not verified, that a woman has discovered a lost son or daughter, or some such happening. Recently it fell to the lot of a woman of Macomb, Ill., to recognize her son while she was watching a reel of pictures. The Macomb boy who figured in the picture was Scott McCaughey, who is a graduate of the Annapolis naval academy and is now stationed on board the battleship Nebraska, and the picture was on scenes aboard this ship. Mrs. Doug McCaughey, his mother, was a spectator, and was greatly surprised to see her boy, life-like as possible for pictures to produce. Mrs. McCaughey immediately hunted up Mr. McCaughey, who came and saw the second show in order to see his boy.

British Film Censor and Board Appointed

The Manufacturers' Association of England has appointed G. A. Redford as the censor of film plays. Mr. Redford for nearly twenty years occupied the onerous post of examiner of plays under the lord chamberlain, and his great reputation and experience will gain for him a very warm welcome from the whole industry. He will be assisted in his work by four examiners, and the association has announced the official title of the new body "The British Board of Film Censors." This decisive step will be regarded with entire approval by all sections of the industry, together with its numerous well-wishers, not the least of whom are those who are interested in the educational and scientific side of cinematography. The manufacturers' association has adopted a very wise policy, and one which will exercise a judicious and far-reaching influence.

Better Lighting for Theaters

Managers of moving-picture shows are beginning to accede to the public's demands for at least a "twilight" quality of illumination in the room during the presentation of the films, so that persons coming in late can find seats without groping in the Stygean darkness which formerly prevailed. Several cities have, indeed, made this the subject of ordinances, chiefly for reasons of moral protection to the young people who frequent the exhibitions. Milwaukee, for example, has a law fixing the minimum lamp wattage per square foot of floor area to be kept burning during exhibitions. In other places attentive managers have observed and profited by the fact that the most popular show houses are those which are best lighted during the pictures.

This higher illumination in the auditorium has called for rapidly increasing powers of the projecting arcs, in order to produce good "contrasty" pictures. A manufacturer of 60-cycle rotary converters for supplying direct-current to picture machines lately reports being forced to bring out new ratings of much larger ampere rating than the original stock built under the requirements of even a year ago. A 30-ampere direct-current arc used to be considered of good size, but machines are now in use employing one-inch carbon electrodes and demanding 65 amperes. The next step seems likely to be 100-ampere lamps for the larger houses. Direct current, of course, provides a better and more efficient arc, but the fact that four-fifths of the central stations in this country distribute only alternating current makes some form of converter apparatus necessary.

In another direction the central-station man, who is often the sole local exponent of good-lighting principles, can do much to conserve the eyesight and comfort of his community by urging nickel-show managers to remove or shield all lamp filaments from the vision of the audience. All too frequently the visitor finds low side-lamps with reflectors pointed directly at the chairs, exposed orchestra or piano-score fixtures, or even some such surface as a clock-face or program sign with unnecessarily high illumination, the intensity of which, compared with the picture, forms an annoying source of glare all during the performance.

Selig Company in Camp at Des Plaines

Director Oscar Eagle of the Selig Polyscope Company's Chicago studios, has started on the actual production of a series of elaborate and spectacular war pictures. Mr. Eagle, assisted by a score of lieutenants, some two hundred soldiers, several military advisers, and a small army of players, carpenters, and property men are now encamped at Des Plaines, near Chicago. The producing camp is being run under strict military discipline and the town of Des Plaines looks as if it were under martial law. Several sets of field artillery are being utilized in the various productions. Many thousands of dollars are being expended by the Selig company to make this series of war subjects far greater than anything it has yet done in this line.

Facts About Motion Picture Advertising

By Watterson R. Rothacker*

THE practical advertising value of moving pictures has been established by the successful motographic campaigns engineered by such reputable and representative business organizations as the Du Pont Powder Company, the Northern Pacific Railway Company, the International Harvester Company of America, the M. Rumely Company, the Holt Caterpillar Company, the Pacific Coast Borax Company and others of national importance. Moving picture advertising is no longer merely a logical prophecy; it is a phrase backed up by a record of successful achievement.

The value of illustration to advertising and the acknowledged superiority of moving pictures as a means of illustration, introduces moving pictures as an advertising force so directly that the progressive advertising expert must give consideration to this new factor.

In this consideration he will be confronted by a set of figures which are really astounding. A certain man in the film business who has given careful and intelligent study to the situation, makes the statement that in the United States alone there are approximately 30,000 places "at which moving pictures are being more or less continually shown." This statistician further states that "12,000 of these places are moving picture theaters; the remainder being schools, churches, chapels, ordinary theaters, halls, etc."

A VAST AUDIENCE.

It has been calculated that 5,000,000 people visit the moving pictures of the United States *daily*. On this basis, it is estimated that the aggregate weekly attendance amounts to, in round numbers, 30,000,000, which would give each moving picture theater a weekly attendance of about 2,500. Figure this as happening every week in the year and you have a grand total of 210,000,000 visitors per annum—the moving picture public in the United States. It is understood, of course, that the two hundred and ten million estimate includes the "repeaters" or regular film "fans" who follow the pictures consistently.

The average admission prices for moving picture entertainments are five and ten cents; by applying these prices to the estimate herein suggested it will be seen at a glance that the money contributed at the box-offices of the moving picture theater runs up into the millions.*

FILMS BY THE MILLION FEET.

The Eastman Kodak Company sells approximately 600,000,000 feet of negative and positive moving picture film every year, in London, England, 150,000 feet of new film being released every week; while New York's record is but a bit smaller. Just bear in mind that the average moving picture is taken and projected at the rate of a foot per second, and that the average reel of moving pictures is 1,000 feet in length.

"Nell of the Pampas," December 12. Copyright 1912, American Film Mfg. Co.

The figures quoted in this article are, if anything, conservative; but even tone them down a little and you will arrive at conclusions which magnify the moving picture business so that your eye can't get away from it.

The moving-picture business is the giant among industries. It is growing like a weed and developing wonderful possibilities. And it has severe growing pains.

*From *Advertising and Selling.*

The pains in the advertising arm (the right) of this giant have been instigated and caused mostly by ignornace. Now, however, this right arm is being used more judiciously and carefully and is stronger than ever. It is outgrowing the painful period and has developed a punch that drives home results.

The statistics of the moving-picture attendance are often misleading to the prospective user of moving-picture advertising, who is too often encouraged to believe that if he has an advertising film made he can show it before as many people as we are told constitute the moving-picture public. This is absolutely and positively impossible; furthermore, if it were possible to exhibit before this magnificent number of people most of the circulation would secure mere publicity rather than sales-suggesting advertising.

LIMITS AND COSTS.

The advertiser who contemplates the use of moving pictures should bear in mind the unalterable fact that the film business is not only controlled by factions whose rulings must be respected, but that many theater managers will not permit pictures of advertising intent to be exhibited in their houses.

The circulation of advertising moving pictures is therefore limited, but even within the limitation the field is so broad, so fertile, so virginal as to be sufficiently attractive without the exaggeration employed by the ignorant or unscrupulous who misrepresent it.

Now about the cost of advertising moving pictures: The charges for negatives taken in places where artificial lighting is necessary range from $1.00 to $2.00 per foot, depending upon the scale of production and whether the scene is natural or elaborately staged. The prices for negatives taken where natural light is sufficient and no artificial lighting is required range from 50 cents to $1.50 per foot; the adjustment likewise governed by the settings. The prevailing prices for positive film, which is used for exhibition purposes, run from 10 cents to 20 cents per foot, the tinted or toned film (colors) bringing the top prices. As stated in another part of this article the average reel carries 1,000 feet of film.

The negative is more expensive than the positive for obvious reasons; the positive being printed from the negative simply by mechanical multiplication.

SELECTING CIRCULATION.

The production of a moving-picture advertising subject should be prepared with the same careful thought one would give to an important piece of ad copy intended for publication, and for the same reasons.

The circulation of the finished film should be handled with the object of reaching not just "how many people," but the people most likely to respond to the advertising message carried on the film.

It is acknowledged that illustrated advertising is good; it is reasonable to assume that moving pictures illustrate most comprehensively and realistically. Therefore, it is apparent that moving pictures possess the power to advertise; but this power to advertise must be developed and directed so that the subject, when filmed, *can* advertise and is circulated and exhibited so that it *will* advertise.

I have said more than once that the best ad will never be *written* because moving pictures are the superlative advertising medium and exceed the limitations of *any* pen. I repeat that statement; but just as the best of written ads would be ineffective if circulated inadvisedly, so the most potent moving-picture advertisement would fail to ring the bell that signalizes results if its power is restricted or misdirected by poor circulation. It is the old problem of finding your customer—but more than anything else moving pictures will induce the customer to find you.

"The Power of Love," December 19. Copyright 1912, American Film Mfg. Co.

Of Interest to the Trade

Noted Players Visit Film Plant

Among the many visitors to the Essanay Chicago studio during the past week were Raymond Hitchcock and Flora Zabelle, who are just completing a splendid run in "The Red Widow," at Cohan's Grand Opera House, and Herbert Corthell, the rotund and jovial comedian in "The Girl at the Gate," now running at the La Salle Theater. These well-known players spent an entire afternoon viewing the many marvels in the big plant, and were highly enthusiastic over the many systems by which the film is taken, developed and produced on the screen. Essanay's wonderful overhead lighting system, the only one of its kind in the country that employs the use of movable trams carrying the light-banks from one end of the studio floor to the other, was another source of amazement for the players. Mr. Hitchcock, Miss Zabelle and Mr. Corthell also were enabled to work for a few moments in a comedy production that was being made, and Miss Zabelle expressed herself as being perfectly delighted at the thought of seeing herself on the screen. The players were also posed before the camera and some fifty feet of film was run off depicting them laughing and enjoying the lark. This film has been developed and is now in their possession as a memento of the occasion.

Scenario Department of the Selig Company

The accompanying cut shows a corner in the rooms of the Selig plant in Chicago that are occupied by the scenario editor and his staff of assistants. Kenneth Langly, editor, occupies the first desk. Other members of the department are Chris Lane, J. Edward Hungerford, Charles E. Nixon and Arthur Tobin.

Selig's Scenario Department.

Besides the above mentioned writers, the Selig company employs a large staff of readers who carefully scrutinize practically every short story that is published, also plays, novels, etc., to which the Selig company has exclusive rights. In addition to this large regular staff the Selig company has many well known literary men that contribute to its supply of scenario material.

Screen Club Holds Housewarming

The New York Screen club formerly put into action its "Welcome" policy at the hospitable housewarming held Saturday night, November ninth. The attendance at the event, which had long been anticipated, was large and comprised, besides members, a large number of guests. The address of the club quarters is 163 West Forty-fifth street and among the accommodation rooms which the club offers are music room, library, smoking room, cafe, dining room and a large assembly hall.

The interior finishings are tasty and pay tribute to the artistic yet practical ideas of the club's president, King Baggott. The music room is finished in mahogany and in the library, and smoking room a red and green color scheme is carried out, the chairs being of Spanish leather upholstery, the tables of mahogany and the floors carpeted in green. The large hall also boasts a green carpet, while the chairs here are wicker and are green cushioned. Plants are everywhere in profusion. Mrs. Herbert Brenon, who is mother of one of the board of governors, presented the club with its first picture.

The names recorded by the register on the clubs' opening night were: J. H. Gerhardt, Carl Laemmle, Mark Dintenfass, William D. Shea, King Baggot, Edgar Lewis, Edwin August, A. F. Mayo, William F. Russell, Oscar C. Apfel, Budd Ross, William E. Shay, Charles Craig, William Robert Daly, Julius Stern, Hughie Mack,

Calder Johnstone, Irving V. Willat, Harry J. Morey, Howard Crampton, George O. Newhall, Louis Gelang, Bert Adler, John Charles, Howard Howard, Edward Wynard, John Adolph, Arthur D. Jacobs, Arthur Housman, Harry Beaumont, C. Jay Williams, Josh Hopkins, Herbert Brenon, T. G. Holliday, W. W. Robinson, F. E. Balladney, George W. Terwilliger, Frederick A. Thorne, Charles D. Chapman, Arthur V. Smith, Crane Wilbur, C. Francis Jenkins, Harry Spear, Hugh Hoffman, Henry Belmar, Edward J. Warren, H. Z. Levine, James Kirkwood, George Ober, Frederick Best Spear, the Rev. E. B. Stockton, H. S. Mack, Charles F. Fisher, R. Gaumont, Herbert Miles, Isadore Bernstein, John Arnold, Irving Cummings, Darwin Karr, William Pincus, Edward Thomas, Joseph Carroll, J. T. Bernstein, A. Kessel, Jr., W. H. Clendenning, Harry R. Raver, Hopp Hadley, G. W. Saint Loupe, C. Cobb, Jr., John Bunny, Alec Budd Francis, Harold Wilson, George Heming, Henry Benham, Wm. Garwood, Albert W. Hale, James Young, Paul Scardon, William Steiner, Maurice Costello, Lee Beggs, Frank Powell, John W. Noble, Harold M. Shaw, Yale D. Benner, Tefft Johnson, M. A. Kraus, William A. Bechtel, A. Warner, W. F. Haddock, Lamar Johnstone, William Quirk.

Among the guests were H. S. Scallon, Arthur Pickens, James Cruze, D. Murrie, James Smith, John B. Clymer, F. M. O'Connor, Charles E. Graham, John Davy, H. E. Millarde, Henry Marks, C. W. Doty and J. Stanchfield.

Frohman to Use Films in New Play

Motion pictures to represent not a mere section of a scene, but vast divisions of a country into which the dramatic action of the play leads, are to be used by Charles Frohman extensively in a four-act drama which he has engaged Paul Potter to write. The second and third acts are laid in India, and there will be fourteen scenes. All of them will be represented without lowering the curtain, with the aid of the motion pictures. They will be interwoven with the dialogue and action of the play and will be in colors. Mr. Potter got his inspiration for the play from Mr. Kipling's Mulvaney stories, and his scenario is called "On the Road to Mandalay."

Motion Pictures in Parish House

Flatbush (Long Island) Congregational church has installed a moving-picture outfit in its parish house, considering it a valuable part of the machinery for its work, particularly with the children. The opening exhibition was conducted by S. M. Spedon of the American Vitagraph Company, who exhibited some fine films and lectured as well on "The Ethical and Educational Value of Moving Pictures." After the opening services in the large church Sunday mornings, children under 12 years of age are invited to pass into the parish house, where "Children's Church" is conducted and an illustrated sermon delivered.

"The Prospector," a Western Drama by Essanay.

Brevities of the Business

PERSONAL NOTES.

It isn't right to do it, but it can't be helped. This is a truthful little book. Because it's truthful, it is little. Truth, you know, has been the subject of millions of miles of piffle. This time, however, truth rises in wrath to expose "Bennie," the office boy of the National Waterproof Film Company. This is seven inches of truthful piffle. "Bennie," the office boy, is a myth. Throw the spot-light on him and you will find a full-grown, broad-shouldered, black-haired, pleasant-faced head of his own family. He isn't an office boy by forty rows of green apple trees. Why, he was born February 8, 1876, so you can figure it out for yourself. You can't qualify as a boy when you're thirty-six and have a boy of your own! Pop Daniels of the National Waterproof Film Company is the author of "Bennie." That's the inside dope. Bennie is Benjamin William Beadell, the outside man for the National Waterproof (duck brand) Film Company. He has preached clean films for ever and ever so long and he threatens to go right ahead and do it till every film exchange adopts the sanitary reel as the foundation for a bigger success. Beadell has been fussing around the celluloid ribbons for twelve years. He talks films all the time. He can't help it. Why, right at election time he wanted to know who was running for president against Taft, and when told, he said: "Why change?" Pressed for explanation, he whispered: "That's what the boys say to me when I want 'em to waterproof, at least some of 'em do." Ben Beadell was born in that part of Chicago that used to be called "Bridgeport." He is on to all the curves of a big city and he knows the "film gang" from Abrams to Zubrinsky. He knows film titles, chronologically, since the "Haunted House," which contemplates quite a few. He claims to be able to back into a theater while the show is on and tell whether it is a waterproofed Edison or one of the others that haven't adopted waterproofing as a fixed habit. To Beadell, a film isn't, if it hasn't been scrubbed with soap and water that morning. He hates dirty films and writes about them in language his Donald can understand. Here is his latest on his oldest subject—"Dirty Films":

The swear-est words of tongue or pen
Are worthless for our meaning, when
At picture shows our eyes are hurt
With films all scratched and filled with dirt.

But swear words come and swear words go,
When dirty scratches mar the show,
Because we know, without a doubt,
How easy 'tis to wash them out.

When films are waterproofed and clean,
There's nothing better to be seen,
But, when all streaked with dirty rain,
They give us nothing but a pain.

J. Edward Hungerford is the most recent addition to the scenario department of the Selig Polyscope Company. For some time past he has been a contributer to the department which he has now joined. Among the more recent scenarios, produced by the Selig Company which emanated from the pen of Mr. Hungerford are: "A Man Among Men," "The Voice of Warning," "Bread Upon the Waters," and "Under Suspicion."

M. G. Watkins, well known in film circles of the middle West, has been made general manager of the new "Western Pictures Only" Company which has been launched in Chicago by Walter C. DuBrock, a veteran horse raiser and stock breeder of Illinois. The new company is a film manufacturing one and will establish its laboratory and studio at Edgebrook, Ill. The first release will be a three-reel entitled, "Boys of Lost River Basin," in which DuBrock's four-year-old son and eleven-year-old daughter will take important parts as they are accomplished riders, shooters, and lariat throwers. Cowboys, direct from Idaho and Montana, with DeWitt C. Gollings at their head will comprise the older talent of the company. DuBrock has acres and acres of land near the south bend of Lake Michigan where herds of cattle and countless horses graze. He also has a riding academy in Chicago and provides the other picture companies of the city with educated horses, whenever called upon.

During the past few months the Chicago studio of the Selig Company has made several additions to the membership of its regular stock company. Among the new members thus secured are: Miss Rose Evans, and Messrs. Jack Nelson, LaFayette McKee, Colin Reid, Thomas Flynn, T. J. Commerford, Julius Frankenburg, Carl Winterhoff, Charles H. France, Mac Barnes, and Harry Lonsdale. Most of these well known and competent players have already attained large followings through their various appearances with the company in the past.

Clem Kerr has ceased manufacturing film advertising under the name of the Exhibitors' Advertising Company. He has reorganized the company to be known as the French-American Photoplay Advertising Company.

Herr Ollinger, that genial Milwaukean, has returned from Europe with a bundle of feature films under his arm. We doubtless will be able to tell a great deal more about them when Ollinger is ready to put them on the market.

Anthony O'Sullivan, better known as "Tony," has returned to the Biograph Company, after a three years' absence. He formerly was one of the company's best comedians; he returns as a dramatic producer.

H. Tipton Steck—he of the publicity sanctum of the Essanay company—has climbed another rung on the ladder of success. "Manager of Negative Production," is what they call him now and he answers to it as though the honor were always his. But that's just Steck—he works well and faithfully at whatever is assigned him, keeping one eye, meanwhile, on the position just one step ahead, so, when it is handed him he takes it with a bow and a smile, settles down perfectly at home in it, and casts his weather eye one rung ahead. The management of the negative production department gives H. Tipton a big field in which to gambol. But that is as it should be, for gamboling is the best thing H. Tipton does. He likes lots of rope and the Essanay people give it to him because he can ramble further with the Indian head symbol; and this with never so much as a kink in the rope. Harry Tipton's new duties will be many and arduous, but "the more the merrier," says Harry, who eats up everything in the way of work that drifts his way and then looks around for more. His new position will be exactly the same as that in which Horace G. Plimpton has scored so well with the Edison company.

When Steck casts an all-seeing eye over acceptable scenarios, gives them his final judgment, selects the producers to put on the various plays, swings into the armchair before his desk and compiles an arrangement of casts, rushes out to the studio where he oversees every step of every production and plays guardian up to the time each production is thrown on the screen, grabs off the time to take charge of the printing of titles and sub-titles and the arranging of notes and letters thrown on the screen, and then sees to securing a score of famous authors to write exclusively for Essanay—why, H. Tipton calls it a day.

Sad are the various publications which Mr. Steck has supplied with perfectly good press stuff; but "Cheer up!" comes Mr. Steck's message, "I introduce Don Meaney, who is a cracker-jack at dopestering." Mr. Meaney is the "Don" of Chicago *Examiner* fame who has been conducting the department in that paper under the signature "Don." So, with "Don" safely installed at the publicity desk, Mr. Steck moves up a notch; and everybody is glad, for Mr. Steck's sake.

Omer F. Doud has a wonderful knack of "fitting in." He has a habit, though, of outgrowing the fit and that is just what has happened to cause the American Film Manufacturing Company to transplant him from the Chicago scene of publicity labors to the far-away west, where he will—well, do most anything he wants and the American people will be satisfied. The well-known Omer, whose duty it has been to make American films known well and wide, has made a splendid record in his latest capacity for the American Company. Editor-in-chief is what they called him, and he deserved it so well that the firm decided the Chicago job wasn't quite big enough for him. In Santa Barbara he will find himself in close contact with the new number of producers and will also find material aplenty for scenarios with western scenes as a setting. Meanwhile, everybody who knows Doud—and that's quite a mob—will await in patience the results of his western trip, for they know they will be many.

Jean Pallette, a recent recruit from stock and the drama, is assisting Director Ricketts at the Universal camp in the West.

Edward Barry is handling, on the state rights plan, the film dramatization of the opera "Siegfried," an Ambrosio three-reel feature subject.

Pat Powers has sold his Toledo exchange to the parties who own the Detroit Universal. The deal was closed October 26. Joe Schutzer, the manager, goes back to New York and Art Smith, the booking clerk, is in charge. The Toledo exchange will now be operated as a branch of the Detroit Universal.

D. W. McKinney is recovering from the two months' illness which has denied the Great Northern company the benefit of his services.

Julius Singer, manager of the Capital City Feature Film Service, has moved into larger quarters in Des Moines, Ia.

Frank L. Hough, Jr., has left the Edison Kinetograph sales department to assume the general managership of the Projection Machine Company of the Kleine Optical Company.

Bernard M. Corbett, he of the Thomas A. Edison Kinetograph sales department, married Miss Emma Violet Chapman, on October 30. Cards announce them at home after January first, at 452 West Concord street, Boston, Massachusetts. The bride, for the last seven years, was stenographer for F. J. Howard at the General Film company in Boston and is well known and liked by every exhibitor in New England. Both Mr. and Mrs. Corbett have the best wishes of the film world.

William J. Bauman, producer at the Chicago studio of the American Film Manufacturing Company, has been transferred to the California studio at Santa Barbara where, in conjunction with Allan Dwan, producer at Santa Barbara, he will produce some excellent features during the coming months. A new stock company has been organized at Santa Barbara and will produce many of the new features.

George Greenbaum, son of Julius Greenbaum, president of the Vitascope company, is the American representative of the Vitascope Company of Berlin, which has opened offices at 145 West Forty-fifth street, New York city. One feature subject a week will be the Vitascope pace. "The Unwritten Law" will be the first release, and will be followed by a smuggling story entitled, "Custom House Station Number 12," in which an aeroplane will be used.

Isadore Bernstein, of the International Feature Film Company, New York city, has returned from an extended and successful trip throughout the states.

Albert W. Hale is recovering from an operation performed at the Neurological hospital. Mr. Hale resigned his position with the Mutual Film Corporation recently and will shortly join the Famous Players' Company in the capacity of general assistant to Mr. Porter.

C. J. Hite announces the merging of the Thanhouser company into a new corporation known as the Thanhouser Film Corporation; the policy of the new company remains the same as heretofore.

George K. Spoor, president of the Essanay company, has planned the immediate erection of a new studio at Niles, Cal., for the making of western pictures under the continued direction of G. M. Anderson. The new studio will occupy grounds near the new bungalow sites and will be commodious and finely appointed.

Lillian Kerns has joined the Pathe western forces and is playing ingenue roles. She formerly was with the eastern Vitagraph company.

Frank Woods is one of the latest recruits at the Los Angeles plant of the Kinemacolor company. He formerly was the "Spectator" of the *Dramatic Mirror*.

Helen Case, a late star of the Vitagraph company, is playing leads for the Nestor company at the say-so of Director Ricketts.

A. Teitel is westward bound from New York city, for the purpose of installing, in film exchanges, the Hochstetter Cleaning Process. Mr. Teitel is secretary of the Hochstetter Utility Company.

Edgar Jones has gone to the Lubin company in Philadelphia from the ranks of the Liebler and Company players. In addition to being an actor of much experience, he is also a good rough rider and horseman.

Fred a Clark, general manager, is in charge of the new offices of the Enterprise Optical Manufacturing Company at 30 East Twenty-third street, New York.

Bert Enis is the new manager of the publicity department of the New York Motion Picture Company. He formerly was with the Vitagraph company.

Chester Barnett, who appeared under the personal direction of David Belasco, supporting Miss Frances Starr in the "Rose of the Rancho," has recently joined the ranks of photoplayers and will appear in Crystal films. Mr. Barnett was formerly a member of Ben Greet's famous company portraying leading Shakespearean roles, and also took the part of the highly temperamental boy-musician in "The Climax."

F. Morris, president; J. R. Williams, secretary; C. W. Goddard, treasurer, were the men put in office at a recent meeting of the Motion Picture Exhibitors' League of California. Their jurisdiction is that of the Sacramento Valley, Local Number three. The managers of proprietors of motion picture theaters in Superior, California, are members and the following cities and towns were represented: Woodland, Corning, Marysville, Oroville, Auburn, Roseville, Dixon, Willows and Suisun.

Betty Harte is no longer a Selig artist. She has severed her connection with that company in order to take a rest, which will be the first in the three and one-half years she has played in Selig films. Miss Harte has already arranged for affiliation with another company, when she will have rested sufficiently, but she is not telling the name of the company just yet. Here's hoping Miss Betty's new connection will be a happy and successful one.

Mons. Benjamin Carre, a disciple of the celebrated painter Adelur, has affiliated with the Eclair Film Company, and is predicted as a happy addition to the production department.

Frank G. Coigne, of the Champion Company, has joined the Feature Photoplay Company as scenario editor.

J. D. McArdle has joined the Great Northern Film Company as general advertising and publicity manager.

Burt L. King and Mrs. King (Adele Lane) are Lubinites no more and Mr. King will hereafter devote his time to photoplay directing instead of acting.

Francis X. Bushman, Essanay's popular leading man at the Chicago studio, has returned from a time-rushed trip to the east where he visited his mother, for the first time in three years, at her home in Baltimore and spent several days in New York, where he made the Screen Club his headquarters and made application for a life membership in the club. 'Tis said that Bushman made quite an impression with the New Yorkers and that he received three tempting offers to remain in the eastern city.

Directors Noble and Garrick have taken respective Rex and Gem companies to the California coast.

C. B. Irwin, president of the Cheyenne Motion Picture Company, and Frank J. Carroll, general manager of the same company, have been spending some time in New York, Carroll, who is a charter member of the Screen Club, made the club his social headquarters.

C. Lang Cobb, Jr., represented the Majestic and Reliance companies at the Massachusetts Exhibitors' convention, held November 17 and 18, at Boston.

President Siegmund Lubin, of the Lubin Company of Philadelphia, has taken his family to Europe for a stay of indefinite length. As the Lubin party mounted the gang-plank, a Lubin camera-man turned the crank of his picture machine and secured a lively record of the good-byes and the waving of flags and flowers which accompanied them.

V. R. Day is back, and the particular film world in which he moves is rejoicing. "For Day's a jolly good fellow," and the Essanay Company and everybody else who knows him is aware of the fact. He's not all better, yet, though and to prove it has his foot still swathed in bandages and navigates between two crutches. A bad fracture, that of Day's ankle and one that will make necessary the wearing of a plaster cast for some few weeks yet. Mr. Day has been sanguine as to an early discard of the troublesome cast and tormented his doctor so with the query, "Goin' to take it off, today, Doc?" that the latter finally told him he was doomed to wear it for probably a month longer. "He was jollying me," dolefully complained Mr. Day to an inquirer for the well-being of the bandaged ankle.

Miss Myrtle Stedman, the versatile leading woman of the Selig Company was injured recently while playing in the "Mantle of Red Evans," which will be released on December 3. In

one scene she had to attempt the feat of being swept from her running pony by the projecting limb of a tree. She accomplished the act, but in doing so she had the flesh torn from both wrists. The injuries were very painful and it was some time before the plucky actress could continue with the picture. Attending doctors have told Miss Stedman that she will carry scars for the rest of her life on one of her wrists.

Mr. Mackley and a dozen members of the Essanay Company have taken possession of the Hollywood branch studio. Among those who constitute company No. 2 at Hollywood are: Mr. and Mrs. Arthur Mackley, True Boardman, Baby Audery Hanna, J. Hanna, David Kirkland, Cameraman William Evans, Stage Carpenter Benjamin Lee, Electrician Al Bundrick, Propertyman W. A. Russell, Scenic Artist Earl Pearson and Louis Morisetti. Mr. Anderson will keep company No. 1 at Niles, which is the Essanay Company's western division headquarters. Weather permitting many more "Broncho Billy" pictures and interesting dramas will be produced before spring.

A. A. Davidson, auditor of the Selig Polyscope Company, is at present on a trip to the Pacific coast studios of the company.

William Duncan, leading man of the Colorado Selig company, who was accidentally shot recently, is still unable to mount his horse because of his wounds. Shot is still being removed from his body. About a week ago an incision three inches wide and clear to the bone was made and a large bullet was extracted which had a small piece of Duncan's flannel shirt still clinging to it.

Miss Bessie Sankey, for a number of years at the Ye Liberty theater in Oakland and lately with the Margaret Rambeau company, is now a member of the Western Essanay company at Niles.

Julian Eltinge and a party of friends playing at the Columbia in San Francisco motored to Niles a few days ago and were the guests of G. M. Anderson. They watched "Bronco Billy" win a filled sack of "geld" at cards, and Brinsley Shaw make love to fair Bessie. Then out into the country they went with the Essanay company. While different scenes were being prepared Eltinge went rattlesnake hunting, but all he discovered was that he had developed a thirst. But—it was election day and the cafe doors were barred. So were the motion picture ones. Undaunted, however, he viciously attacked a tomato patch which served the purpose until Mr. Anderson's Niles bungalow was reached.

ROLL OF THE STATES.

ALABAMA.

H. M. Newsome has awarded the contract to C. M. Allen to erect a motion picture theater building at Birmingham.

ARKANSAS.

"Amuse U" will be the name of the new picture show to be opened up soon on West Second avenue, Pine Bluff; W. H. Eyler, Manager.

CALIFORNIA.

D. S. Kreublum, 238 H. W. Hellman building owner; Milwaukee Building Company, builder; one-story picture theater building at Los Angeles. Cost, $13,127.

F. H. Brunning, nickelodeon, north side Hopkins street, 63 feet east of Diamond, Oakland, $3,000.

W. N. Seaver will erect a photoplay theater, west side College avenue, Oakland, 312 feet north of Forest, $6,000.

COLORADO.

The Boniter moving picture show was destroyed by fire at Denver; loss, $2,000.

DELAWARE.

Harry N. Hart, manager of the motion picture theater, located in the Torbert block, at Georgetown, has leased the Lyceum Theater at Lewes, and will conduct it for a time at least.

The United States Moving Picture Company, Wilmington, Del. Capital stock $1,000,000. To manufacture, buy, sell and distribute moving picture films and other amusements. Incorporators H. Ralph Ewart, Clarence J. Jacobs, Harry W. Davis, all of Wilmington, Del.

The Chrome Kinetograph Company, New York city. Capital stock, $6,000,000. To acquire and operate a machine invented by Dr. Isador Kitsee, of Philadelphia, called a synchromer, being a device for operating moving picture machines. Incorporators, Thomas K. Mallby, H. O. Coughlan, Joseph F. Curtin, all of New York city. The state tax filed with the charter was $400.

DISTRICT OF COLUMBIA.

Complaints having been made of the production of improper pictures in the moving picture shows of the capital, the Federation of Women's Clubs has decided to organize a "Women Scouts" brigade. Mrs. W. E. Andrews, president of the federation, has sent out a call for one delegate to the brigade from each club. The "scouts" will watch the film shows carefully, report infractions of the law and make suggestions to the police.

GEORGIA.

Waycross will open its new theater building at Augusta, soon. Fred Grewer will be manager.

Moving picture men will take films of the big corn show parade on December 4, at Atlanta, if plans made by Secretary Walter G. Cooper, of the Atlanta Chamber of Commerce, are carried. The parade of corn club boys from all parts of Georgia this year will far surpass that of a year ago, in numbers participating as well as other features. Last year's parade proved a most attractive feature on the moving picture canvas.

ILLINOIS.

Laurel Clemens purchased the McCune building from Charles Schank of Summum, at Canton, which will be remodeled and used as an electric theater.

The Arcade theater at Cairo will be remodeled by Contractor Arthur Barter.

A new playhouse is to be built on ground opposite the Wisconsin avenue station of Chicago & Oak Park Elevated R. R. in Oak Park.

Worthmann & Steinbach, architects, 1859 West Chicago avenue, are taking bids on a new theater building in Chicago, for J. E. Snowden, owner.

T. N. Bell, architect, 1820 South Spaulding avenue, and Charles P. Mangold, owner, for a new theater building at Chicago.

Joseph Hopp will dispose of his theater holdings at Rock Island to Linehan & Bender, who will take charge.

General Feature Film Supply Company, Chicago, $5,000; manufacturing moving picture films; Ella Graham, R. J. Cuplar, Nathan S. Schoenbrod.

American Feature Film company, $50,000; moving picture business in Chicago; Helen H. Hood, Ernest J. Sichenlaub, Herbert W. Lawrence.

Henry Swanson, 1464 E. 69th street, Chicago, will erect of brick, theater building to cost $6,000.

IOWA.

L. P. Chase has leased a building at Emmersburg and he will soon open up a picture show there.

Dr. Maloney has sold the Isis moving picture show at New Market, to Dan Pace, who took possession.

O. H. Rice, of Sanborn, has rented the moving picture house at Ruthven for one year.

KENTUCKY.

The F. & D. Products Company, which will engage in the motion picture business and the manufacture of films, with a capital of $10,000, filed articles of incorporation at Louisville. Carl J. Crough, Walter J. Hoefflin and A. H. Schindler each hold $300 stock.

For the purpose of securing funds to equip the New Washington High School at Louisville with modern appliances a moving picture outfit has been purchased and shows will be given each Friday and Saturday night during the school term under the direction of Prof. Sanford B. Murphy.

MARYLAND.

For the purpose of erecting a moving picture theater the Pastime Company has bought property on the west side of Greenmount avenue, near Twenty-first street, Baltimore. The two lots have dimensions 32 by 100 and 8 by 100 feet, making a total area of 40 by 100 feet.

Pearce & Scheck, 415 E. Baltimore street, Baltimore, purchased site on the west side of Hartford avenue, near Chase street, and will erect a moving picture theater building.

MASSACHUSETTS.

A contract has been let for the erection of a new theater building south of the new Chaflin building in Milford.

MICHIGAN.

C. Howard Crane has let for Louis Schneider contract for a brick theater building on Woodward avenue, Detroit.

E. F. Alleman, of Youngstown, O., has purchased the moving picture show of A. G. Miller at Royal Oak.

Moving picture show owners are circulating a petition among business men in an effort to assure the people of Lansing a chance to vote on Sunday opening at the spring election. The city council is now drafting an ordinance opposing the opening of picture shows on Sunday.

Detroit is to have one of the largest moving-picture companies in the country. The Motograph company filed articles of incorporation with the secretary of state. The company is to manufacture a machine invented by Everett Bickley of the Monroe Theater company. Associates with Mr. Bickley are Dr. W. Francis McDermott, Frank C. Ruldy and Frank W. Sprowles. The company is incorporated at $500,000, most of which is paid in.

MINNESOTA.

Mr. West, of Canby, contemplates re-opening the Idle Hour moving picture show at Minnesota.

A contract has been let for the erection of a moving picture house for a new amusement company at St. Cloud. C. W. Saunders and E. J. Fetters with E. T. Davidson, are owners.

The new theater at New Ulm which will be known as the American Theater will open very shortly. A ventilating system which changes the air every five minutes has been installed as has also the indirect lighting system.

MISSOURI.

St. Louis moving picture houses and vaudeville theaters will be subject to a heavy fine unless all films and acts presented to the public have been approved by a municipal board of censorship, according to a bill being prepared by City Counselor Lambert E. Walther.

The Northeast, of Kansas City, Mo., is to have a theater, in the neighborhood of the high school that is being built in that district. John G. Hiatt is receiving bids for the erection of a $40,000 vaudeville and motion picture theater at the northeast corner of St. John and Elmwood avenues.

Famous Feature Film Company, St. Louis; Gustav Wagner, 54 shares; Nathan Steinberg, 5 shares; Lester Harburger, 1 share. To do a general moving picture and film business. Capital stock 60 per cent paid, $10,000.

NEBRASKA.

Earl Gray has sold his interest in the Elite theater at Hebron to his partner, Clarence Boyes, who will continue in its management.

Joseph Zerbes and Frank Nosky of Nebraska City, have purchased the moving picture show of W. H. Washburn at Shenandoah, Ia., and have gone there to operate the same.

Charles Whitehouse will open a picture theater in Oakdale, Nebraska.

J. H. Cory will start a moving picture show in Laurel.

NEW YORK.

A contract has been let for the erection of a theater building at Brooklyn. Cost $10,000. Owner Ditmas Theater Corporation.

William F. and F. J. Collins are to construct a fireproof motion picture theater in North Lowell avenue near West Genesee street, Syracuse. The plans for the building are being drawn by Architects Russell & King. There will be seating capacity for 600 persons.

OKLAHOMA.

The people of Bartlesville are considerably interested in the outcome of the proposition of closing all theaters and nickel shows on Sunday. An ordinance, passed recently by the commissioners, forbids their being opened on Sunday and Manager Crowley of one of the theaters, determined to test the law, opened one of his show houses on a Sunday and was promptly arrested and fined $25.

PENNSYLVANIA.

Architect John Ebeson, of Chicago, is revising plans for a theater building at Liberty avenue and Oak alley for Isaac and Henry Jackson, Pittsburg.

Philadelphia is soon to have another theater. The newest amusement palace will be erected at the northwest corner of Twenty-sixth street and Girard avenue by J. Fred Zimmerman, who recently purchased the property. The theater will be built along lines similar to the Liberty and Keystone theaters.

The high cost of living in Williamsport has extended even to moving pictures. Admission prices to the local theaters have been raised and the advance has gone into effect. The admission in the evening is now ten cents instead of five, and those houses giving two tickets for matinees for five cents give but one ticket for the price of five cents.

William R. Bricker has filed plans with the bureau of building inspection for a moving picture hall, 40 feet by 10 feet, to seat 480 persons, which is to be built on the north side of Spruce street, east of 60th. The cost will be about $7,500.

Arthur Lichtenthaeler, of Lebanon, will operate a moving picture show at Jonestown every Saturday night during the winter in the P. O. S. of A. Hall.

The Farrell Commercial Club has decided to show moving pictures of the big industrial plants in theaters all over the country. The idea is to advertise Newcastle which has some of the largest plants of the United States Steel corporation.

Arrangements for the making of 3,000 feet of film, picturing Scranton and its activities, have been about completed by the Towns and Cities Film Company, of New York, a concern that makes a specialty of letting cities see themselves as they are, and letting them see, too, how they are growing. After being shown at Scranton, the pictures will be exhibited within a radius of 100 miles of the city, and will later be shown in principal centers throughout the country.

SOUTH CAROLINA.

During a recent exhibition of moving pictures in a tent near the Southern depot at Camden, a reel caught fire and in a few minutes threatened to do considerable damage. There were several hundred persons in the tent at the time, and a stampede was narrowly averted. The machine was an old model and the film was caught in a barrel, instead of being wound on another reel. The machine was ruined and the heat was so intense that several of the connections were melted. Two stage hands threw a large carpet, which had been used by acrobats a few minutes before, over the burning reel, thereby preventing the flames catching the tent. Cool heads prevented a panic by demanding that the audience sit down, as the worst was over.

SOUTH DAKOTA.

The Princess theater of Sioux Falls has opened for business. S. J. Smith, manager.

WASHINGTON.

A contract has been let for the erection of a moving picture building at the corner of Commercial and Tenth, Anacortes.

The O. K. theater, at Snohomish, has opened, with Mr. Kay as manager.

WEST VIRGINIA.

Moving picture theaters at Wheeling are again open to their patrons. They were kept closed in conformity with the desires of the Board of Education on account of the local diphtheria situation.

Charles H. Keyser will remodel the Elk Grand theater, at Wheeling.

WISCONSIN.

Plans for a $2,000 addition to the Avenue theater, on Howell avenue, Milwaukee, have been finished by Architect P. M. Christiansen.

A contract has been let for the new Ideal theater to be erected at Grand Rapids.

Henry Goldman, proprietor of three moving picture shows in Green Bay, returned from Chicago, where he inspected the construction of different playhouses. It is understood he is getting suggestions for the equipment of a new theater. It is reported that Mr. Goldman has purchased the A. Kimball building on Washington street, which he intends to transform into a first-class vaudeville and moving picture house.

A new moving picture theater will be opened by B. T. Oftelie.

The new theater, the Rex, the home of feature photoplays, at Spooner, has opened and shows up to the standard. The building has been remodeled. Excellent help has been secured and nothing has been left undone to give the public a first-class show.

United Feature Film Company, Milwaukee; capital, $2,500; incorporators, Frank C. Meske, Edmund Gausewitz, Ernst von Briesen.

William Van Dyke, mangare of the Olympia orchestra, at Kaukauna, has purchased the moving picture theater on the south side, known as the Crystal.

The Crystal, Onalaska's new motion picture playhouse, has opened. The machine and screen that the management has installed produce a clear, flickerless picture.

SUNDAY: American, Thanhouser, Majestic.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY as they may be obtained of the manufacturers.

The Red Man's Honor

Copyright, 1912, by George Kleine

(IN TWO REELS)

Red Hawk before the great chief, White Eagle

An absorbing and romantic tale of the wilderness depicting love, jealousy, revenge, and the Indian code.

This film marks the first time in the history of the moving picture business that an Indian drama, perfect in every detail, has been produced in Europe and presented to the American public.

The principal characters—Red Hawk and June Dew—are ably taken by Mr. and Mrs. Joe Hamman who spent several years in the American Wild West.

Special Heralds, one, three and six-sheet Posters!

Kleine-Cines Release, December 28, 1912

Balkan War Scenes

Fresh from the battlefield

Authentic war pictures taken upon the field of battle, showing the armies engaged in the great conflict which is changing the map of Europe.

MOTHERS, CHILDREN AND PICTURES.

THE November number of the *Mother's Magazine*, published by the David C. Cook Publishing Company, might well be called a motion picture number. It contained no less than four separate articles on that popular subject, whose titles and authors were: "What Motion Pictures Do," by Bell Elliott Palmer; "Cleansing the Moving Picture Trap," by Edward Lyell Fox; "Poison That Lurks in the Moving Picture House," by George Storey, general secretary of the National Board of Censorship; and "Mothers and Motion Pictures," by Kate Davis, founder and president of the National Legal Regulation League.

Bell Elliott Palmer criticizes, rather mildly, the tendency to show subjects which, while perfectly proper and harmless to mature observers, are apt to have an unpleasant effect upon children, who really make up a large proportion of the neighborhood show attendance. On the whole, though, the author praises rather than condemns. The most interesting portion of the articles is a series of quotations from people interviewed by the writer. We exhibit a few of them:

"Motion pictures, to my mind, have done more to uplift the morals of the young, especially in the working class where few luxuries are possible, than any discovery of our age," said a thoughtful policeman one day, in the Chicago slums. "The natural youthful mind demands some recreation; now instead of sipping beer and lolling about on park benches until the moonlight weakens their power of resistance, they are laughing together and learning together what the world is like. When they have taken in two of the motion-picture shows they are ready to go home, rested and not desiring wrong because the face of a certain mother, or the sacrifice of a brave young man or woman has led them up, not coaxed them down the dangerous way."

"Undoubtedly," said a chief of police, "the motion pictures do more good than harm. There are always some half-delinquent minds in the audience, however, and it's my notion the robberies, western saloon scenes, and mischief-suggesting plots should be knocked out. As for the lights, I would turn them on a little higher yet, and saw out another window or two for ventilation."

"The motion-picture play is a bonanza for the traveling salesman, imprisoned from morning till late eve on account of poor train accommodations in a country town," said the proprietor of a comfortable hotel. "It's also a great relief to 'mother,'" he added, with a twinkle in his pleasant eyes. "She used to celebrate the birthdays of our children with a party that left her almost exhausted. Now she just troops in with a crowd of young guests to the motion pictures, rests and enjoys them herself, gets everyone a soda on the way home—and, presto! the celebration is over, with mother as fresh as ever, so that she often accepts my invitation to a new motion-picture show, when the night clerk comes on."

"In a motion-picture theater is where I live over my girlhood, and learn to see the sacredness of consecrated old age," smiled a sweet little woman of fifty. "I am especially fond of wood scenes and waving wild flowers and grass," she added. "Those were my first surroundings. I think a person can't watch motion pictures very long before he sees something that calls his mind or heart back home."

"Next in importance to the church," said a finely educated mill owner, of a decidedly philanthropic turn of mind, "I often

go of an evening just to see the tired faces of my workers—parents and little ones—light with restful lines. It teaches democracy, too, a lesson America is sometimes a little squeamish about adopting literally, it seems to me, in spite of her boast."

"We will soon have no more rustics, standing in open-mouthed amazement before every sky-scraper, or planting machine," laughed a jovial farmer. "The motion-picture show is throwing the wealth and wonders of the world before the feet of the pauper as well as the prince."

"Temperaments should be considered in pronouncing judgment upon motion pictures," said a thoughtful mother. "For instance, when the giant in 'Jack and the Bean Stalk' crashed down, and his hideous masked face broke into bits, my little girl buried her head in my lap and wept bitterly. For nights she had fearful dreams, and now begs never to go again. On the contrary, my boy of eight rose in his seat and chuckled with glee, as the visage of the grim old giant monster broke into fragments. It is a difficult question, I concede, but it seems to me that subjects might be chosen that could interest both sexes and not play disagreeably upon sensitive child natures. The animal trick shows and scenic effects, where some instruction is gained, seem to me the kind of pictures to be encouraged by parents."

"Two elopements without marriage, and three marriages between parties entirely too young to contract are the direct results of motion-picture plots," said a police matron of no mean intelligence. "I could also point to several of our boys now in reform school, who started their decline simply by trying to formulate and carry out tricks equal to those conceived in motion-picture plays. Often, too, they lure girls to try a day with a stranger 'doing' city sights. If all this can't be dropped, I would strongly advise doing away with the whole business."

"Few motion-picture theaters have anywhere near the proper ventilation," said a city officer. "If the pastime has come to stay, and I believe it has, immediate attention should be given to better ventilation, strict laws of fumigation and thorough means of light and exits."

"The motion-picture habit drains Bobby's every cent," sighed a worried mother. "He used to talk of putting his change in a bank, but now it's like the cigaret or soda water habit, it seems such a little to spend, that every night he tosses away his nickel or dime on motion pictures. It's better than just lounging around town, of course; but sometimes I wish the price would go up so high that Bobby couldn't easily reach it. He's sensible at heart, and if he had to save up his money quite a while to get into motion pictures, I guess he'd change his mind and put it in the bank."

"John and I were just about to be separated," said a pale-faced working woman with real tears in her eyes. "He's been grouchy sometimes when it was hard to find work, and I've been awful cross, with my nerves failing me since baby came. But now we've seen that moving picture about the poor man being separated, and coming back too late to kiss his little sick boy good-by, and we just can't bear to part. We are going to try all over again so hard—for baby's sake."

So there you have both sides of it, as the author sees it—but with the better side preponderant after all.

Edward Lyell Fox, despite the sinister title of his article, contents himself with a review of the work of the National Board of Censorship and ends up by advocating the formation of local censorship bodies. He claims the National Board can only decide the "general availability" of a subject, while the "specific availability" rests with the local organizations.

General Secretary of Censorship George Storey has another of those ominously-headed articles. But rest easy; the "poison" he refers to is *vaudeville*. In that, without going any farther, you will agree with him. He mentions also the small proportion of films that are sent out from New York every week without the approval of the National Board of Censorship. His statement that some of these are harmful to the good of the cause is undoubtedly true.

The last article, that of Miss Kate Davis, was a surprise in one way. Miss Davis, about a year ago, acquired a reputation, perhaps undeserved, of virulent antagonism to the motion picture. At any rate, her present article is quite sane and clear-minded, advocates co-operation with the local exhibitor and the League, and indicates that their assistance in any worthy project is easily secured.

The *Mother's Magazine* has a large circulation among the active, keen-minded women of this country. On the whole, the treatment by its writers of the motion picture "problem" shows an increasing respect for the greatest educator. What few criticisms are made are, in the main, deserved. Unquestionably the motion-picture show is unique in its effect on child life. If there is any one thing upon which the picture producer should particularly and unceasingly keep his eye, it is the fact that every film is seen by countless little children, whose simple minds absorb without analyzing.

FILM WITHOUT PATENT PROTECTION?

WORD from the East comes just as we go to press, to the effect that the Chicago Film Exchange has won the suit brought against it by the Motion Picture Patents' Company. It is declared that this means the removal of patent protection from the film product itself, leaving only the machine principle protected. It would seem to indicate that no further grounds exist for enjoining the independent manufacture of motion-picture films, provided the camera apparatus is proven non-infringing, or the independent exhibition of such films on a non-infringing or properly licensed projecting machine.

In the absence of the full text of the decision we cannot go more deeply into the subject. It is possible, however, that its effects may be far-reaching and immediate. Further analysis of the situation will be made in our next number.

MOTION PICTURES FEATURE OF CLINIC.

Moving pictures of the process of digestion and assimilation of food in a patient's stomach, taken with the aid of an X-ray projector and a cinematograph, and the grafting of a bit of healthy bone upon an arm bone from which a diseased portion had been removed, were two interesting events in recent clinics held at Mercy hospital, Denver, Colo., for the benefit of 300 physicians and surgeons of Colorado, Utah, New Mexico, Wyoming and Nebraska. The physicians and surgeons came to Denver for a series of clinics to discuss and demonstrate some of the latest discoveries in surgical science.

At the third annual session of the Clinical Congress of Surgeons in New York, one of the most enlightening events was the cinematographic demonstration of the technique of serial radiography of the stomach, given by Dr. Lewis Gregory Cole, at 103 Park avenue. These pictures, taken some days previous by means of X-rays, showed all the stages of digestion from the time food was taken in a person suffering from stomach trouble. It is said by Dr. Cole that the information thus obtained will be a great aid in the fight on cancer and ulcers of the stomach, in that they readily show the beginning of these troubles.

ENLIST MEN BY PICTURES.

The use of moving pictures as a publicity agent in obtaining enlistments in the National Guard was discussed at length at the recent two days' holding at Cincinnati of the twenty-eighth annual convention of the National Guard Association of Ohio. Major Bush stated that moving pictures have been used to advertise the Michigan National Guard and obtain enlistments and that satisfactory results were obtained.

An Indian Picture Made in Europe

An Eclipse Feature

A REMARKABLE Kleine-Eclipse Indian drama in two reels to be released December 16, 1912, "The Red Man's Honor," is of universal interest, because it is unique in the history of the moving-picture business; being the first time that a typical Indian and wild west picture, practically perfect in every detail, has been produced in Europe to be submitted to the American public. There have been other films released in the past, showing Indians and cowboys portrayed by European actors, but in every case glaring inconsistencies in the plot, characterization, or costuming made the subject appear ridiculous.

Joe Hamman, Who Plays "Red Hawk" in the Kleine-Eclipse, "The Red Man's Honor."

Exhibitors and exchange men who were in the business as far back as the years 1905 and 1906, will recall with amusement a film of this character which, although very successful at the time, called forth a great deal of ridicule, because the horses ridden by the "Indians," instead of being the customary lean and undersized "snakes" of the plains, were beautiful animals with bob-tails such as were used in the French cavalry regiments.

But one can find none of these faults in "The Red Man's Honor," for many reasons, probably mainly because, as it is announced, the principal roles are taken by Mr. and Mrs. Joe Hamman, Americans who have spent several years on our own wild west, thus being well fitted to portray Indian characters in a subject of this kind and at the same time able to direct others in the details regarding settings, costumes and manners of the American redskin.

The story is of the typical Indian kind, filled with savage passion, jealousy, revenge. Red Hawk, a brave and haughty warrior, loves the dark-eyed June Dew, the prettiest maiden of the tribe.

Seated Bear, a rival suitor, also desires to possess the girl for his squaw, and his savage heart flames with jealousy. One day he surprises the unsuspecting maiden down by the river bank, and overpowering her, carries her off by force in his canoe. The ever-watchful Red Hawk happens to appear upon the scene in time to witness the cowardly act, and, springing into the stream, soon overtakes the pair. A desperate struggle in the water ensues, during which the "Great Spirit" lends strength to Red Hawk's arm which enables him to mortally wound his treacherous rival. Leaving his victim apparently lifeless in the water, Red Hawk starts in pursuit of the drifting canoe and finally rescues the terrified girl and returns with her to the village.

Meanwhile the wounded Indian painfully makes his way to the shore, where, after being rescued by some of his comrades, he reports into their eager ears a false story of Red Hawk's crime, and then breathes his last. The accused is summoned before the great chief, White Eagle, who is majestically seated in council. After hearing the evidence, the chief consults with his advisors and finally speaks the following sentence of death: "He that has killed one of his brothers must die also. Twelve moons hence his spirit shall join that of the dead warrior."

The next day, his heart filled with bitterness, Red Hawk leaves the cursed village and rides away to join the army of the pale faces where he is enlisted as a scout. The white men are at war with their brothers and are only too eager to acquire such a valuable aid whose knowledge of the country and of the forest trails should prove invaluable. Soon after the redskin arrives in the camp, the commander calls for volunteers who are willing to face certain death in a desperate attempt to destroy a bridge in the mountains and thus check the advance of the enemy. Without hesitating a moment, Red Hawk bravely accepts the task, and immediately sets out with a wagon loaded with powder.

After a wild and perilous ride at a terrific pace over rough and rugged country, the fearless Indian at last reaches the canyon directly beneath the bridge. Fastening the packages of the explosives to his shoulders, he begins his perilous ascent up the cliff. Step by step, clinging to roots and crags, he finally surmounts almost indescribable obstacles and reaches the base of the bridge.

He soon succeeds in placing the powder in position and after lighting the fuse makes his escape to safety just as the whole side of the cliff is rent asunder and the bridge is blown to fragments. Red Hawk does not waste a moment; he whips up his horses and starts back. He soon encounters scouts of the enemy, who strive their utmost to bring him down with rifle bullets, but by desperate riding and using all his tricks in the saddle he escapes and arrives at the camp in safety, but severely wounded.

Red Hawk's bravery wins for him high regard in the army of the pale faces and he is happy in the new life and duties when suddenly he remembers the terrible verdict of the great chief. In a vision, the words, "He that has killed one of his brothers must die also. Twelve moons

Red Hawk Before the Great Chief, White Eagle. From the Kleine-Eclipse, "The Red Man's Honor. Copyright, 1912, George Kleine.

hence his spirit shall join that of the dead warrior," return to harrass his soul and he realizes that the fatal year has come to its end.

The struggle in his heart is of short duration; he will obey as his honor dictates. Without a word he sets out immediately for the village of his brothers, and presents himself ready to die. The prostrated "June Dew" begs him to desist, but his purpose being unalterable, she then determines to follow him even unto death. The pair are then taken to the sacrificial pyre heaped round with brush and firewood near the village. As they stand there, wrapped in each other's arms the flames mount higher and higher and their noble souls float away to join the shadows of their fathers in the Happy Hunting Grounds of the Great Spirit.

Chicago Film Exchange Gets Decision

The Chicago Film Exchange won a decision of the Court of Appeals of the District of Columbia declaring Thomas A. Edison is not the inventor of the motion picture film. The decision will release motion pictures from the protection of patent rights and stop the payment of royalties to Thomas A. Edison, Inc.

All that Edison did, says the court, was to give the film in operation the required motion by perforating the edges of the tape and causing it to revolve on cylinders bearing teeth fitting into the perforations. Such perforations, said the court, had been employed previously in feeding photographic films.

The invention of Edison, the court asserts, was exhausted in the construction of the camera which enabled the photographs of moving objects to be taken upon the film in a distinct, uniform, and satisfactory manner.

The Motion Picture Patents Company sued the Chicago Film Company for infringement of patent in the use of the film and obtained an injunction which now stands reversed.

Had the granting of the injunction been sustained the Motion Picture Patents Company would have been entitled to royalties for three years more.

The Screen Club Anthem

The words of the following, which has been adopted as the Screen Club Anthem, are by the members of that organization. The music to which they are sung was written by William Robert Daly.

Members of the Screen Club we,
Linked in true fraternity,
Brothers marching hand in hand,
A loyal and a faithful band.
We are members of the Screen Club,
Standing side by side;
'Neath our good club's standard
Which is our joy and pride;
Members of the Screen Club we,
And we will always be.

A Projection Lantern Without Objective

By Dr. Alfred Gradenwitz*

IN projection lanterns so far designed for opaque objects, a very powerful source of light had to be used or the size of projection to be reduced to a minimum on account of the enormous losses of light occurring in the optical system.

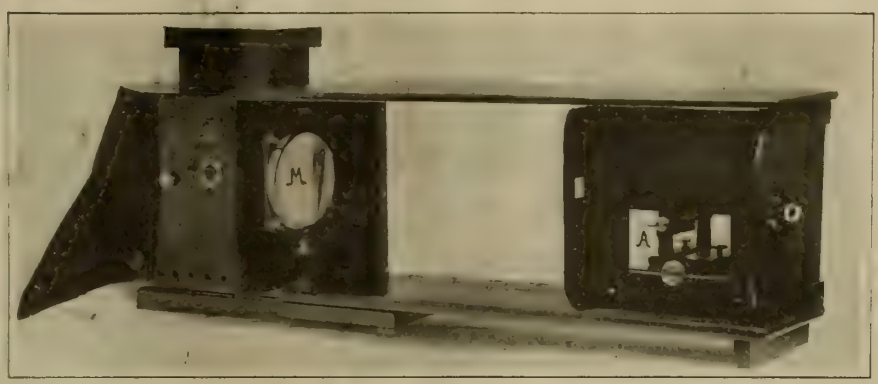

Fig. 1. General View of Projector.

The projection lantern without objective, designed by a Paris constructor, M. G. Massiot, for opaque objects and particularly for colored photographs as obtained by Prof. Lippmann's process, eliminates this drawback and has, in the case of Lippman photographs, the additional advantage that the angle formed by the incident beam with the beam reflected by the plate is very small, which corresponds with the maximum accuracy of color reproduction.

This lantern consists of a sheet-metal case provided with a double condenser in the focus of which an electric arc is placed. The parallel beam coming from the condenser *C* lights the object to be projected which is placed in *A*. After reflection there the beam strikes a concave mirror *M*, 15 centimeters in diameter and 1 meter in focus, which forms on the screen an enlarged image of the object.

In order to reduce as far as possible the angle between the incident beam and the reflected beam received

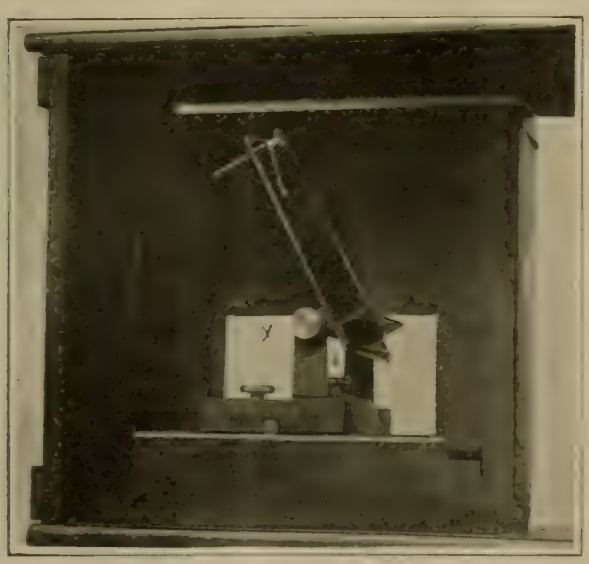

Fig. 3. Arrangement of the Carriage.

and thrown back by the object *A*, the mirror *M* should be placed as close as possible to the condenser *C*. To prevent stray light from reaching the screen, and there interfering with the regular image, a certain number of opaque partitions are provided to separate the different portions of the apparatus, and the conical beam coming from the mirror *M* passes through an opening *O* of very small dimensions, fitted with a shutter which is closed during manipulations.

Fig. 3 shows the arrangement of the carriage serving to carry the object or photograph plate to be projected. Its regulation can be effected from a distance by means of a rack and gearing. The orientation required to give a correct image is obtained by causing the carriage to rotate round two axes *X*, *Y*.

The advantages afforded by the mirror are the absence of any loss of light by absorption or reflection on lens surfaces. Moreover, the image is projected in its real orientation without any inversion as in the case of

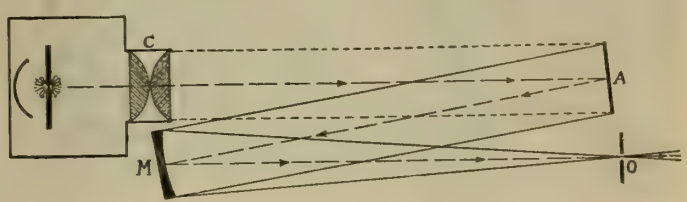

Fig. 2. Diagram of the Light Rays.

objectives, thus avoiding any alteration in the appearance of projected photographs, especially landscapes.

The mirror should be silvered at its surface and kept in good condition; it may be protected by a varnish. In case of need it can be resilvered by a very simple process.

It is a well-known fact that reflecting optical instruments present a number of advantages over refracting instruments. In the field of projecting lanterns these advantages have not hitherto been extensively made use of. The apparatus here described seems a move in the right direction, since, especially for the projection of opaque objects, reflection commends itself as the most natural principle to follow.

A Two-Reel Lubin

"The Crooked Path—A Story of the Underworld," is a two-reel Lubin feature to be released soon. Ben Lyons, a crook, has just stolen a watch and some money from a banker and is being chased by a crowd of police, but runs up an alley and gives them the slip. He goes to the home of his sweetheart, Nell Harris, and shows her the "swag." He asks her to go to a dance-hall, and while they are there the hall is raided and Lyons is caught, taken to jail and given a long term in prison. Nell is very unhappy and takes a walk in the park, where she reads in the paper the account of Lyons' trial. While she is sitting on a bench crying a clergyman, Will Kimball, sees her and asks what he can do. She tells him she wants to be a good girl. He tells her he will lead her to the straight road. He talks to her and decides to take

"Requited Love, an Essanay Drama.

her home to his mother, who is blind. They go to his home and Nell is to act as companion to Mrs. Kimball. Will Kimball falls in love with Nell and asks her to marry him. They become engaged. Lyons one day sees a rat come into his cell; he writes a note on a piece of his shirt in blood, ties the note to the rat's tail and sends it out through the drain pipe again. Dan's pal, who has been hanging around the prison wall ever since Dan was captured, sees the rat, catches it, finds the note, and sends in a string tied to the rat's tail—and then some saws, which Dan pulls into his cell through the drain. Dan saws through the bars of his cell and escapes. He is seen by the guards and followed. He swims a river, goes through woods and underbrush, and comes to an old ruin where he throws the guards off the trail. He comes to a scarecrow, takes the clothes off and changes from his convict suit, then meets his pal at an old tree. They jump a freight train and get back to the city.

Nell reads of Dan's escape and it makes her very unhappy. Dan is standing in the street and is nearly run down by Kimball's auto. As the car drives off Dan sees Nell in the car. Dan hires another auto and follows them to Kimball's home. He sends a note to Nell; she tells him she will see him. He wants her to go back to the old life with him again; she refuses. Kimball comes into the room and Nell introduces Dan as her brother. The next night Dan and his pal come to rob the Kimball home, and they get in. Nell hears them and goes down to offer them money. Dan will not accept. While they are talking, Kimball comes down with a revolver and covers Dan. Will accuses Nell of helping the thief to enter. The police enter with Dan's pal; they are both handcuffed and taken back to jail. Nell confesses that Dan loved her in the old days. Kimball forgives her and takes her to his arms.

The cast of characters follows:

Dan Lyons	Jack Halliday
Col. Barnes, the banker	Irving White
Nell Harris	Ormi Hawley
Bill Harris, the father	Frank DeVernon
Peters, a plain clothes man	Jack McDonald
Will Kimball, a clergyman	Edwin August
Mrs. Kimball	Mary Smith
Mike, a thug	Clarence Elmer

Panama Canal in Motion Pictures

The first official moving pictures taken by the government of the Panama Canal are now being procured by the House appropriations committee. A moving-picture operator, and also a photographer from the Geological Survey are members of the Congressional inspection party touring the Canal Zone.

Motion pictures of the big construction work are to be exhibited in the capitol committee rooms this winter, to illustrate graphically the necessity for appropriations. Fortification plans will also be illustrated in the pictures. Secretary of War Stimson, by a peculiar coincidence, is also inspecting the canal work while the House committee is looking over the project. A considerable part of the secretary's annual report to the president this winter is to be devoted to the canal, as the Taft administration's "last word" on Panama.

Motography's Gallery of Picture Players

HAROLD M. SHAW is another recruit from the sunny South; Kentucky, at that. Though 'tis scarce a year since Mr. Shaw recruited, he has done wonderful things in the way of film pictures since his date of initiation, January first, 1912. For, not only does he act, but he also produces. "A Fresh Air Romance," and "A Romance of the Rails" are among his recent efforts in the producing line and, of course, he had to be a perfectly splendid actor before he was entrusted with a director's title. It was in 1894 that Mr. Shaw first appeared on the stage. That was in California. Then he served five years in stock and several more years in other productions with famous players. Vaudeville was the next step, then motion pictures with the Edison company. And now? Pshaw! why everything is coming his way, before and behind the camera, and he is hustling around the Edison studio at a pace that promises more honors.

Harold M. Shaw.

GERTRUDE McCOY is a decoration, in more ways than one, to Edison films; for she is beautiful, decidedly so, and she is just as useful as she is beautiful. Her good looks go a long way toward inspiring the motion-picture patron to wish that "that very pretty girl would be in the pictures tonight" and that goes to prove that her acting is as good to look upon as are her big, dark eyes, her firm little chin, her expressive lips, her shapely nose, her rounded cheeks, and her wealth of lovely hair. Youth, a coveted asset, is hers and — what more could Gertrude McCoy ask? "More, much more," replies Miss Gertrude and tells the inquirer that her cherished ambition is to be a big somebody in the actress sphere of picturedom. And each time she is seen on the screen, she is that much nearer her goal, for, to see Miss Gertrude is to approve of her. Almost all her professional training has been in motion-picture work.

Gertrude McCoy.

MIRIAM NESBITT is a truly beautiful woman; beautiful mentally and physically, she embodies all the attributes that go to make up an actress of distinction. Chicago was her birth-place. Here she began her education, continued it at Notre Dame, Indianapolis and Mary Sharp college, Winston, Tennessee, and then took up the drama. She found an early berth with Daniel Frohman, who engaged her to support James K. Hackett on his first starring tour. She has played with many stars since then, her own halo of accomplishments growing brighter all the while. It was at the close of the 1909-10 season that Miss Nesbitt turned her back upon the stage and was welcomed into the photo-play world via the Edison stock company's door. This was her first experience as a picture actress. She liked the work immensely; it returned the compliment, so together they courted popularity and won.

Miriam Nesbitt.

WILLIAM WEST was headed that direction so he just naturally landed at Philadelphia where he made his stage debut in the old Woods museum. But Philadelphia and the museum were not entirely to his liking so he changed his course of direction and advanced upon New York. It was a dignified advance and was worth ten years in stock, after which he took a little jaunt out into the vaudeville world, followed by engagements with McKee Rankin and others, altogether playing in hundreds of noteworthy productions. Then he saw a picture show, liked it, saw another and presented himself at the Edison studio where he did creditable work in try-out films and has stayed ever since. That was three years ago. Mr. West's specialty is character work; he is considered an authority on the art of make-up. William West is quite satisfied with the east and intends to stay there, oh, indefinitely.

William West.

The Broad Appeal of the Motion Picture

By Roy O. Randall*

"I'VE just seen something I've been wantin' to see for about fifty years." A bent and whiskered farmer, his face wearing a pleased and gratified expression, joined a group of his kind in a Missouri village store.

"You know my folks came from England," he continued, when the others looked up inquiringly. "Ever since I was a boy I've wanted to see that wonderful country my father told about; the busy roarin' streets of London, the pretty roads in the country, the little farms, not much bigger 'n one of our pastures here. And tonight I dropped into one of them nickel shows and saw the whole thing! There was the streets with all the people, and the buses and cabs rushin' along just the same as if I was right there among 'em. Then they showed us the villages and farms, and an old-fashioned English dairy, and the funny big-wheeled carts takin' a jag o' straw along a road just as smooth as one of them St. Louis boulevards. One place was right along the Welsh coast, and I could almost smell the salt water. It was dashin' over the rocks and breakin' into spray so natural-like that I started to wipe it off my face. I tell you it did me a sight o' good—me nigh onto seventy and five thousand miles from old London. Think of takin' a trip to England for a nickel!"

The incident, narrated exactly as it occurred, illustrates one phase of the motion picture's broad appeal: It furnishes a substitute for travel. But it is safe to say that there is no enlightened human being to whom the motion picture is not interesting and helpful in one way or another. This cannot justly be claimed for any other form of amusement. The producers themselves, it is likely, hardly realize the many different angles which the average audience takes of the pictures thrown on the screen. Here is the householder who is enabled to enjoy a few hours' entertainment each week with his family at a minimum of expense. The schoolboy over there unconsciously is assimilating knowledge of western life by the thrilling exhibition of a cowpuncher photoplay. The farmer is avidly taking in glimpses of city life. The town-bred learn something about agriculture. The foreigner, in a new land and among strange faces, welcomes with delight views of his own country. His neighbor, a hapless victim of the wanderlust, poor of purse, is enabled to gratify his longings and to realize the life and beauty of distant lands for better than books or art could ever make him, while the more fortunate youth, when he takes his first eventful trip abroad, will go with an adequate

*Chicago Press Club prize-winning article, Selig contest. Copyright 1912, Selig Polyscope Co.

"The God of Gold," December 12. Copyright, 1912, Selig Polyscope Co.

knowledge of the life and manners of cities and natural wonders of the countries he has chosen to visit. And here is a man, worried and careworn, who forgets his troubles for an evening and laughs lightheartedly at some clever comedy sketch.

The motion picture is no longer only a feature of metropolitan life. It is an established institution in the cities, towns and villages of the globe. A comparison of the present world-audience with that of a decade ago would furnish startling evidence of its growth.

And it is by no means the flotsam of youth and irresponsibility that crowds the moving-picture show. Men and women of discernment are now identified with the large following of the motion picture. It affords them relaxation and amusement, and, better still, a broader outlook on like. There is stimulation to thought in a good picture, catholicity of interest, variety of viewpoint, health-giving laughs

This is largely due to the fact that film producers, during the last few years, have progressed from the trivial to the important in the subject matter of scenarios for photoplays and in the educational field. Genuine dramatic values are given proper consideration. The cheap, sensational escapade is avoided, and the portrayal of questionable adventures has been relegated to the past. Today it is the play of acknowledged dramatic form and technic that has taken the place of the puerile exhibitions that marked the early period of film production. The moving picture, furthermore, is fast taking its place as a powerful force for education, not only of the adult, but as an aid to text books, and as a means of holding the interest of the youthful mind.

The motion-picture theater has another marked advantage—it is inexpensive. The admission fee of five cents, ordinarily asked, is about as low a price as could be charged. In every large city both early and late shows are overcrowded, while the big theaters of the older type are disclosing from night to night a larger area of unoccupied seats. The frequenter of the nickel show "around the corner" will tell you that he is saving much, both in time and money—terms synonymous to the average American—and getting more benefit, proportionately, than is given in the regular playhouse for a much larger sum.

Based on the practical theory of the greatest good to the largest number, it is the breadth of its scope and numberless possibilities for present and future usefulness which, after all, makes the motion picture most important. Social settlement workers are finding it a valuable auxiliary. Clergymen have discovered that it helps to fill empty pews. It has made the lecturer's task easier. And it has opened a field of industry which means employment to thousands.

Further than that, we cannot deny the value of the presentation of contemporary life and manners to generations yet unborn. How much it would mean to us to have an accurate reproduction of some mediaeval pageant. The coronation of an ancient king, Shakespeare passing down a street of seventeenth-century London, George Washington in command of his army, the inauguration of Lincoln!

"The Heart of a Soldier," December 14. Copyright, 1912, American Film Mfg. Co.

With a perfected film there is nothing to prevent our descendants, centuries hence, from viewing the spectacular events of our day; our Shakespeares, our Washingtons, our Lincolns. In the intense interest such pictures would arouse, the "grave and reverend seignors" of that distant period would strive with the hoi polloi for the first look!

Considering the remarkable advance already made, it is impossible to estimate what the motion picture will eventually bring of education, enlightenment, world-federation, social uplift and wholesome amusement. It is a "new thing under the sun," destined not to die. It will live for incalculable good in the ages to come.

Seeing America First in Pictures

By Watterson R. Rothacker*

THE railway companies of the United States have put their seal of approval upon moving pictures as a means to encourage travel and induce tourists, homeseekers and investors to notice opportunity—offering places and territories. Railroad men, as a rule, are of the "Show me!" species, but it did not take them long to see in moving pictures a weapon to conquer the sceptic who scoffed at word pictures and pure assertion, no matter how truthful.

Ingersoll said of Abraham Lincoln: "He kept step with events." The railway interests of this country are in step with progress, and their formation of the See America First Association is an evidence of this. In Chicago not long ago a temporary committee was named, composed of men representing roads practically every one of which employs moving pictures as an educational advertising force.

One of the most extensive and complete moving picture advertising campaigns ever used by a railroad is that conducted by the Northern Pacific Railway Company. These Northern Pacific pictures have been a revelation to millions of people here in America who knew that there was such a thing as Yellowstone National Park, but whose imaginations built an iron fence around it and put it in a class with Chicago's Lincoln Park and the Bronx Zoo. When these pictures showed in motion the wonderful geysers, the splendid falls of the Yellowstone, fishermen's heavens on Yellowstone Lake and along the Firestone River, animal and bird life as it exists amid the crowning peaks and fir-hidden canyons; in fact, when the eye was made to see those wonderful things which mere words could not adequately describe, the desire to go there was at once created. The suggestion, "See Yellowstone Park via the Northern Pacific Railway" was followed, fulfilling the advertising purpose of the film.

The Northern Pacific Railway not only has successfully "filmed" the wonders of Yellowstone, but they have motographically recorded the great industrial prosperity of the Northwest and have put this record on the moving-picture screen in a manner that beckons to those who hear the "Back to the land" cry, and to those city-dwelling folk who yearn for broader fields for their labor or money.

"Nell of the Pampas," December 12. Copyright, 1912, American Film Mfg. Co.

The Great Northern Railway has similarly utilized moving pictures, and while the "movies" made for this road have not as yet been given to the public on a large scale, it is reasonable to assume that this winter the work that has been done this summer along the line will be in evidence at places where it will do its share toward encouraging the See America First idea.

Way down South in South Carolina, A. W. McKeand, the enterprising secretary of the Charleston Chamber of Commerce, has written his name in the history of moving-picture advertising by having made a series of moving pictures, illustrating his contention that South Carolina is a good place in which to live, make money and be happy. The films which accomplished Mr. McKeand's purpose showed in a reliable and comprehensive manner the cotton, tea, and phosphate indus-

*From *See America First.*

tries, truck-farming, and land-reclamation work as they are in South Carolina, and made a strong appeal for citizens by illustrating ideal school facilities, the home comforts of Charleston, Sumter and Columbia and the general prosperity and activity of the state. In putting forth this campaign Mr. McKeand enjoyed the co-operation of the Southern Railway Company.

At the big Land Show held at Chicago last year the Southern Pacific Railway utilized moving pictures and slides with great effect. In fact, because of the moving pictures the Southern Pacific exhibit was the most crowded and instructive feature of the show.

The Chicago, Milwaukee & St. Paul Railway has used moving pictures to a certain extent, and there are a number of the other national railway companies either at present reaping the benefits of moving-picture advertising or busy securing the films necessary to complete their advertising campaign.

W. H. Cochrane, general manager of the Chicago & South Haven Steamship Company, is the pioneer user of moving pictures in steamship advertising. By means of moving pictures Mr. Cochrane packed the boats between Chicago and South Haven with people who were prompted to make the trip because the moving pictures proved to them that it was decidedly worth while.

Moving pictures are a great boon to the community patriot who desires the world to know that his city is the "best ever." The list of moving picture achievements in municipal advertising includes Charleston, S. C.; Chattanooga, Tenn.; Mobile, Ala.; Springfield, Ill.; Battle Creek, Mich.; Oshkosh, Wis.; Kalamazoo, Mich.; Gary, Ind.; Little Rock, Ark.; Kankakee, Ill.; Elkhart, Ind.; Rock Island, Ill.; Burlington, Iowa; Muskegon, Mich.; Sumter, S. C.; Columbia, S. C.; Missoula, Montana; Denver, Colo.; Chicago, Ill.; Akron, Ohio; Joliet, Ill.; Decatur, Ill.; Oklahoma City, Okla.; and El Reno, Okla.

Moving pictures have contributed much toward the See America First idea, and they will contribute more as the follow-the-leader crowd clamber into the band wagon and make use of this greatest illustrative force.

Manifestly, moving pictures are the most intimate, reliable, comprehensive and educational means available to show the man in Portland, Maine, what Portland, Oregon, looks like. To prove to the prospective land buyer who lives at one end of the continent that the "buy" he is considering really exists at the other end of the country and not merely in the imagination of an oily-tongued salesman or promoter, it is the most convincing argument to be had.

The See America First slogan carries an appeal honestly presented; one that will stand for pictorial proof. The truth about America is good enough, and moving pictures prove it.

So realistic was the picture of a dog at a motion-picture theater in Brenham, Texas., that a dog in the audience jumped up on the stage and ran barking after the picture dog. Before he could be restrained he had demolished the screen.

"His Birthday Jacket," by Essanay.

On the Outside Looking In

By the Goat Man

AMONG the very first of the film men I met was Max Lewis, and one of the first wheezes I heard in the film business was, "Get 'em an injunction." It was credited to Max. When Max had nothing else to do, he would enjoin somebody. He enjoyed enjoining and he wasn't at all particular in making up his trouble sheets. One day he got a dose of his own medicine. The Motion Picture Patents' Company sued Max Lewis. The case was turned over to his lawyers and Max forgot all about it. The Chicago Film Exchange, of which he was the head, was scattered all over the country in those days and the contest was defended by the Washington branch. The papers of the country announced that the case was decided by the Court of Appeals of the District of Columbia, December 2, in favor of Max Lewis! He got 'em an injunction! Now what do you know about that? This decision purports to exempt motion pictures, the product, from patent protection. Keep your ear to the ground and you will hear some rumbles.

* * *

It has taken a new form—a seven-column quarto—and says: "A progressive journal published in the interests of the motion-picture industry." Don't you think that is exceedingly generous?

* * *

If we don't look out that word "Movies" will get a strangle hold. I get a $2.00 check about once a week from a "Movie Theater." Get busy; oh, you thin haired Neff. Resolve 'em all against it. The name—not our two simoleons.

* * *

The Hochstetter processes have taken on color. I mean color films—real nature stuff. It is a wonderful system, no doubt. If you ever saw Fred Hochstetter you would agree with me. Fred, you know, could take his camera into a sub-basement at Swift's packing house and without artificial light, bring out an industrial fil-lum showing 'em stacking hides. Fred is a chee-mist and a fotographhter—his ancestors were also. Oh, I've heard the yarn—heard it from Fred himself. I'm not so green as I pretend. I don't know all about this newest stunt, of course, but I should worry. What I don't know about it isn't hurting me any.

* * *

I see that the General Film Company is favoring the zone system of film rental. If you have the price, all you have to do is to name your zone; run the boundaries and get the pick of the first run, or all of it—there are no restrictions. Of course, my notion of zone operation isn't a commercial idea. I'm awfully dense when it comes to making money. I presume to know a trick or two about publishing, but that's all. I had thought that the man who had built up a satisfied clientele and had kept abreast of the times by actual catering to his public, should be protected. In other words, should a study of his opportunities pass muster by a representative of the G. F. Co. the established exhibitor should have the right of way. The prospective competitor should be warned that he was taking his own risk—that the neighborhood would not warrant his investment—that his service would not be allowed to interfere with the pioneer, et cetera. All altruistic, no doubt, but I believe it would work out most satisfactorily.

* * *

For I'm one of the guys who believe the theaters might just as well be owned by two or three factors, too. It would take some money, to be sure, but money isn't so hard to get if you put the right sort of stuff in the prospectus.

Annual Banquet of the Lubin Baseball Team.

There is an exhibitor in Chicago who has some unselfish virus in his veins. He recognizes the deportment mark of "Excellent" on school children's report cards as being good for an admission to his theater. It is worth more than a nickel to him to read the joy in the faces of those little ones who score. How the winners hurry to "cash in." How they bubble with excitement in telling the exhibitor how good they were for a month. Oh, you tough old brother, you have passed the age when you can be induced to be even half way reasonable for

Siegmund Lubin and Ira Lowry, of the Lubin Film Manufacturing Company.

any price. Think of spreading a five cent inducement over thirty days! I waded through Tom Edison's latest film dream of an eight-year school course without books. Here's a confession: I can understand an educational film boost that costs an exhibitor five cents a month. Tom Edison's scheme won't get by the text book combination for several generations, if ever. I am a film fan, alright, and an every hour booster, but none of us folks will ever see a school of any kind where books have given way to films.

* * *

Bert Adler has asked me to put him in the ranks of the unreasonable kickers. Any thing to please, dearest. Bing, you're in!

* * *

I haven't seen better argument for exhibitors to go right ahead and organize than is offered by a recent front page column of the Denver (Colo.) *Republican*. I give you several paragraphs to emphasize the necessity of chloroforming the cub reporter and the irresponsible sore head exhibitor who tips off the bunk. Here is

No. 1:

Denver moving picture shows using the so-called trust films are watching with interest the case brought against the Motion Picture Patents Company, a New York corporation, by the United States government, to force it to pay back approximately $10,000,000 which the company has forced picture shows throughout the country to pay into their treasury for nothing.

Isn't that fine business? Here is an admission that the exhibitor using licensed service has been "forced for nothing." Frank Dwyer (the *Telegraph's* own exclusive way of spelling it) ought to get that with one eye shut. Forced to pay for nothing is good. The licensed exhibitor never struck me as being a boob type. If you can force him, you get the medal. When you can force him $10,000,000 worth in four years you got to get right up and go. Now, here is

No. 2:

For several years 8,000 picture shows that use the Pathe, Klein, Selig, Vitagraph, Biograph, Edison and Kalem films, which are distributed by the alleged trust have paid $2 a week to the corporation without knowing why. They are forced to pay this by threats of having their contracts canceled.

You see how it rants along? Let's take it literally—count the whole 8,000 theaters who cough two bones a week—for nothing. That's $16,000 a week. Suppose they have all been doing it fifty-two weeks a year for four whole years, which is stretching the truth to beat the band, we have $3,328,000 instead of $10,000,000. You notice, too, that Melies, Essanay and Lubin are slighted in the line-up. I put 'em in because I never play favorites. Then please note that the fee is collected "without knowing why," and the answer follows. It is interesting to observe how some things find the light of day.

No. 3:

During the last few years this has amounted to more than one million dollars a year.

Which goes to show that when you drop down out of the clouds you get close to the earth.

No. 4:

There are 25 picture shows in Denver and if the government wins its suit there will be a large part of the recovered money distributed in this city.

Did you follow that rocket? Wow! The truth is out, Denver will share in the distribution, if. Now that isn't the kind of stuff us exhibitors want to see on the front pages of metropolitan dailies. You fellows who have used licensed service knew what you were

Lubin Stock Company at Cape Cottages, Portland, Maine.

about. When you paid two dollars a week for the privilege, you knew why you did it and you got your little old receipt for the money. You know that. There isn't an exhibitor, independent or licensed, who has had four years' experience in the business who would feel manly if he helped a cub reporter to a yarn like the one we have quoted. And there were lots more paragraphs, equally silly.

* * *

I never told you about the time I went down to

Pathés old place in New York to find out what C. G. P. C. stood for, did I? Well, I gave "Hoog" the high sign and he came from behind and I whispered. Sure, says Hoog, and he took me over to the big library table and showed me the big book of photographs and told me all about them. I just didn't have the heart to give the snap away, for Jacques was in the private sanctum and a commotion might have brought him out. Well, C. G. P. C. has meant, for a long time—Can't Get Pathé Copy. I want it to mean Can Get Pathé Copy. Hoogland please note.

* * *

December 16 is the very last day for that copy of yours if you want it to show in Christmas MOTOG. The Saturday before would suit us better. The cover is printed now—10,000 beautiful tri-colors on creamy stock. You ought to hurry your copy along for the only Christmas effort we ever made. We can't enthuse till it is all over and unless you help and hurry at the same time a lot of those nice little details will be lost, and it is care of the little things that make for handsome printing. Hurry it along—everything that will swell the thickness of the book and help pay the printer. Remember December 16 is the last minute.

* * *

No, Hector, Big Rock's Last Stand doesn't allude to Pop Rock. How frivolous you are, this morning.

* * *

Aubrey Kennedy, alone and unassisted, is keeping well in the spot-light to be so many hundreds of miles away from the two New York Joes.

* * *

Fellows, if you were as sick as I am right now, you'd go to a hospital. That's where I ought to be, but I can't make up my mind to hock my ring. If I did, and Carl Ray found it out, he'd redeem it, but he's got enough.

Getting Pictures in The Balkans

By an Ex-War Correspondent*

THE war cinematographer has found the Balkan Peninsula a really excellent place for securing interesting travel and industrial subjects. In and around that area, which has just been one of the greatest battlefields of Eastern Europe, abound many spots unsurpassed for interest and beauty in any other quarter of the globe. The writer, who was stationed in Macedonia for a period of six years, and who remained there almost until the outbreak of the present war, secured many of his best films around that country which is now tainted with the smoke of battle. The great Rilo range of mountains rises almost in the centre of the Balkan Peninsula, half way between the Danube and the Ægean. In form it is shaped like a colossal pyramid of nature measuring from east to west 50 kilometers, and 30 from north to south. The northern face is abrupt and steep, and is clothed with glorious virgin forests, where the sound of the axe will never be heard, for transport is impossible. Eastwards the Rilo joins the Rhodope, and to the south the Perin Planina. Its topmost peak is 2,930 meters above the sea (which is only a few feet lower than Olympus). The fauna and flora, and the geological formation remind one of the Carpathians; and, like them, the Rilo is dotted with small lakes, which the peasants call "the eyes of the sea." The forests reach up 6,000 feet, and above them, bare crags are the home of the chamois.

The monastery lies high on the mountain slope, and in the gorge below foams the Rilska Réka, a delicious crystal stream, whose trout furnish the staple food of the monks. It has the appearance of a baronial fortress (an excellent subject for the cinema), with cranelated walls and loopholes, and massive iron gates, which are closed half an hour after sunset, to open only at next dawn. The moment the threshold is crossed, however, one is brought face to face with the Church of our Lady, almost a counterpart of that of the monastery of Khilandar at Mount Athos, with a red and white stone facade and six silver cupolas. It stands in the center of an immense court, round which is built the monastery proper, three stories high. Seventy-six massive pillars support the balconies of the guest chambers, and also of the monks, three hundred in number. Some of these rooms are very spacious, and fairly well furnished with carpets, divans, and curtains. A niche contains water, and a basin and ewer, and wardrobes *a la Turque* are let into the walls. The walls of the church are entirely covered with frescoes representing various Bible scenes—the Day of Judgment, Lazarus and Dives, and the punishments reserved for each particular kind of sin.

I might mention here that the atmospherical conditions are admirably suited to photographic work throughout the Peninsula. Although the country is, as a whole, very mountainous, this fact has its compensations, as the operator will readily discover when engaged in following the rival armies.

Now let us turn our attention to Servia—the heart of the war center. Since its emancipation, this state has changed considerably, and Belgrade, as the capital, has made the largest strides towards claiming its place amongst the civilized centers of Europe. All the ancient Turkish quarter has been swept away, and is now chiefly occupied by a colony of Spanish Jews. A few half-ruined fountains, with Arabic inscriptions, and one single mosque—fast falling to pieces—are all that remain of the Moslem sway. These should justify, perhaps, the exposing of 100 feet of film. In close proximity to this last echo of the religion of the late masters of the city stands the National Theater, built in the modern Italian style, and over against it a model of Prince Michael on horseback. The Royal Palace is also a handsome block, though lacking in dignity.

If the town is not attractive, the surrounding country is perfection. Long avenues of poplar, beech, acacia, and elm lead out north, south, east and west, the big roads narrowing and broadening as the houses are left behind, into country lanes, between woods, fields and hedgerows, which will remind camera men of an English landscape. Down by the Danube and the Save broad marshes, covered with sodden grass and rushes fringed with osier, tempt the sportsman in search of snipe and duck, whilst the birch coppices, strewed with autumn leaves, through which, here and there, trickle snowborn streams, look a destined home for the woodcock.

**The Bioscope, London.*

Sees Lost Son in Motion Pictures

Out of a crowd of pictured figures photographed while witnessing the final game for the Pacific Coast baseball championship at San Francisco in October, a mother, sitting in a Portland moving picture theater, just recently, picked out the face of her long-missing son, and, as a consequence, a once-abandoned and apparently hopeless search has been resumed. The missing man is Gustaf Erby Vail, formerly of Portland, and the mother Mrs. Hattie L. Vail. Arrangements were made for a special midnight run of the picture. At the proper moment Mrs. Vail cried "Stop!" seeing the face of her son, almost life-size, showing upon the curtain.

Gustaf Erby Vail is 27 years of age and has a wife living at 416 Simpson street. Last August he mysteriously disappeared and the parents, persons of considerable wealth, commenced a search which led them from Vancouver, B. C., to California. While they came close on his trail, they did not overtake the young man. Now, with the fact established that the young man is somewhere around San Francisco bay, a new search is on.

Picture Machine in Paducah School

Motion pictures will be used in the Paducah, Ky., public schools. The motion-picture machine has arrived and the only delay is the arrival of the films. The machine will be used in connection with the work in geography and history in the departmental grades.

Installs Machine in Country Home

To offset the frequent objection to year-round residence in the country a New York man, Frederick P. Fox, has solved the problem in a house he is building at Shippen Point, not far from Stamford, Conn., by building a motion-picture theater in his new home. He will change the pictures twice a week. Moving back to New York one winter and visiting the photoplay theaters, Mr. Fox decided he had found the solution of one of the winter suburban life drawbacks. The theater has 700 square feet, or is 20 by 35 feet, and extends from the basement to the second floor. At the end of the room is a ten-foot stage, which is a continuation of an inside porch and may serve as a conservatory. The dining room on the first floor is carried a few feet over the theater floor in the form of a theater box so that guests may look while they eat.

Carry Gasoline from Burning Picture House

The news that there were two barrels of gasoline in the cellar of a burning moving-picture theater in the heart of a Brooklyn tenement district caused a panic. Deputy Fire Chief Goodson called for a volunteer to help him remove the dangerous fluid. Battalion Chief McGuire was the first man to reach his side, and the pair, with coats wrapped about their heads, groped their way through the dense smoke until they located the gasoline. Choking for air, they rolled the barrels to the door, and out into the street.

G. M. Anderson in Essanay's "The Reward for Broncho Billy."

Sans Grease Paint and Wig

By Mabel Condon

Charles Clary.

ALL that Charles Clary wanted was to be let alone. Alone on a wide, wide sea; alone on a desert isle; alone—well, alone anywhere that the feminine gender is not, and that is all that is necessary to make Mr. Clary's content quite complete.

Hence his utter unhappiness as he offered me the one good camp-chair in his dressing-room, at the Selig studio, and hoped I'd refuse. I not only accepted but opened my coat and took off my gloves in anticipation of a lengthy and enjoyable session. You see, I realized, the minute I met him, that he is the kind of a man who is scared stiff of girls, so knew that the pleasure of the ensuing half-hour was to be all mine.

"But I've never been interviewed by a girl in my life," protested Mr. Clary, and seized upon a vest-pocket comb and ran it frantically through his hair.

"Really! How remiss of your press agent!" I comforted as I straightened my hat in accordance with a suggestion volunteered by an opposite mirror.

"S-so you see, I don't know a thing about it."

"No?" in a voice which might have been reassuring had not the door just then squeaked its disdain of a prop and violently shut out the comforting sight of passing fellow beings to whom Mr. Clary might have appealed in case of emergency.

"Trapped!" agonized Mr. Clary's brown-gray eyes as their owner sank in the general direction of the one vacant camp-chair but remembered in time that it had a broken leg and was wiggly, so placed his two hundred pounds down upon it very carefully.

"Well, now that we're here, what are you going to talk about?" my victim wanted to know with a heroism false but sustaining.

"Me? Oh, you're to do the talking," then, to lessen the shock, "but, please, Mr. Clary, don't be afraid of me! Why, I'm so tiny—"

"That's just it," put in Mr. Clary, and turned clear around on the wabbly chair to do so. "If you were big, I wouldn't be afraid of you. You never knew a big man yet who wasn't afraid of a little woman, did you? It's the little ones who are dangerous."

"And, please don't blush so, Mr. Clary. I assure you I'm not dangerous; honest, I'm not."

"Well, I don't know," he grudged, though he seemed somewhat reassured. "I'm not married, but, for goodness sake, don't say that I'm on the market; for I'm not. I have a mother, sister and nephew to look after and that keeps me as busy as I want to be kept." I promised, then asked what Mr. Clary thought would improve motion pictures.

"Unlimited film footage," was the prompt and relieved answer. "Pictures will be more complete and satisfactory to both audience and player if the action of the story were allowed to go its own natural way with the speed-lid off. At present the director has to hurry some scenes and lengthen others, or, more often, hurry all of them in order to get them into the number of feet allotted.

"Consequently, the actor can't always give his part the consideration it ought to get and the story is lopped off at one thousand feet when it deserves to be run to fifteen or eighteen hundred. So, you see, the limited footage adherence hinders both producer and actor. Too bad! Too bad!" The great Clary shook his head and fingered his watch-chain.

"Too bad!" I echoed and counted the Clary gray hairs while waiting for the next announcement. It came on the forty-third count and before I was half through.

"I feel confident, though, that drawback to the making for better pictures will not be the order for very long, and there will be increased satisfaction for everybody concerned when that time comes.

"But the motion picture life is a fine one,' he enthused in response to a mental telepathy suggestion. "I like it better than the legitimate. Why? Oh, for many reasons. It makes one more versatile; you learn composure and learn to condense. The work is equally as hard as, or harder than, that of the legitimate and it lacks the monotony of the latter. I like to swim and to ride horseback, and motion pictures give me lots of opportunity to do both.

"Dangers? Yes, a few. I've waded with water-snakes in Florida, have run through swamps as an Indian, and have swam with sharks in the Gulf of Mexico. But I never thought of danger and have never yet met with a serious mishap. I skinned my arms and kn-elbows, the other day, though, in falling from the third floor of a burning building down into the basement."

"Mercy! Of course, though, you came down on a dumb-waiter."

"Of course, though, I did not," he corrected. "That's just it; people think that anything that looks dangerous is faked. I've been in picture houses and seen films in which I had acted and heard the person next to me say, 'He never did that; I wonder how they made it look that way?' That's one hardship of the picture actor; he takes his life in his hands to entertain the people and then the people won't be convinced that what they see actually happened." And the much-wronged Clary hitched his chair into another position to reflect upon the ingratitude of the unappreciative people, but the broken side of the chair sagged, so he sat still.

It was my turn to take my life in my hands, and I did so with the query, "Honor bright, though, Mr. Clary—wasn't there a dumb-waiter?" and he laughed a what-a-pest-you-are kind of a laugh that showed two rows of lovely, lovely teeth that would be reason sufficient for a laugh a minute, were he the least bit vain.

"No, there wasn't a dumb-waiter, but there was something else—" the people being vindicated, I was interested not any in what the "something else" might be, so the subject was buried by mutual consent.

"The Millionaire Vagabonds," December 18. Copyright, 1912, Selig Polyscope Co.

"This is my third year with the Selig house," ruminated Mr. Clary. "I left Mrs. Leslie Carter, for whom I was leading man, to take up picture work. Much advancement has been made in pictures even in that short time; for one thing, it is not necessary to have so many announcements and the players use less gestures."

"Because the pepole have become educated to films," I suggested, thereby earning a patronizing look which encouraged me to ask the height of the looker and remark that his pictures show him younger than really. He gave his height as six feet one-half inch, and Mr. Twist entered in time to hear his claim to thirty-three years. Mr. Twist laughed; so did I. Mr. Clary obligingly added two years. Again Mr. Twist laughed; I didn't, for thirty-five sounds a lot more interesting than forty, so we let Mr. Clary be thirty-five.

"Did he show you his shoes?" Mr. Twist inquired, and explained, hurriedly, "Charlie's hobby is shoes; he owns fifteen pairs this minute. He buys a pair a week—"

"And sells them to us at a half more than he paid for them," put in Harry Lonsdale, who based his right to enter the Clary dressing-room on the strength of a half-ownership. "Charlie" looked his utter bashlessness and selected a pink-striped navy blue tie from a hundred or more others on a convenient rack and dexterously exhibited it over two fingers, haberdasher style (the tie, not the fingers).

"Hideous," I murmured.

"Photographs well," was the Clary reason for its desecrating presence.

"Coming down-town to lunch?" queried the overflow meeting outside the door, in the person of Frank Weed, so I said, "Good-bye, Mr. Clary; I've had a lovely time," and Mr. Clary regained a shred of his reputation for truthfulness by not echoing the sentiment. But the big man who had played the title role in "The Landing of Columbus," and had "stripped to a gee string" in the part of Osceola, smiled a friendly smile as he shook hands and said, "You can say I'm a crusty old bachelor!"

"Well, not crusty, Mr. Clary," I returned.

"And yet they give women the palm for a wholesale denial of age!" I soliloquized, apropos of the numeral thirty-five as the Ravenswood "L" rocked me officewards.

"Punch" Is Latest Film Name

Light comedies will be the specialty offering of the new "Punch" films. Nettie Grant and Herbert Rice, both of vaudeville fame, are the leads in the new pictures and will be seen in comedies only. Rice is especially funny as, though a grown man, he is but the size of a small child, and thus takes parts that inspire laughs at everything he does. "Oh, You Baby" and "Poor Finney" are among the first "Punch" offerings.

A business man in a South American country informs an American consular officer that he wishes to purchase 600 theater seats. Quotations and catalogues should be in the Spanish language and the prices given c. i. f. city of destination. Address File No. 9917, Bureau of Manufactures, Washington, D. C.

Photoplays From Essanay's

Some Coming Features

THE Christmas edition of Essanay photoplays will cover the releases for the last two weeks in December. Much could be said about the merit of these stories, the splendid portrayal and the exceptionally good scientific work that has been accomplished. Essanay is finding out new and material improvements in its camera work every week. The possibilities are encouraging inasmuch as the camera man has discovered a new method of double-exposure, which in a test last week proved successful. The new double-exposure will be seen first in a new release for Tuesday, December 31, entitled "Requited Love." The story is one of the most beautiful the Essanay Company has dramatized. Lord Darlington is engaged to Ruth, who is a splendid dancer. She is requested to dance at a social function and complies willingly. During the dance, which is one of the most beautiful ever enacted before the camera, Lord Darlington rushes up to her and stops her from continuing. Ruth leaves the ballroom with her parents and returns home. Lord Darlington reaching Ruth's home at the same time the family arrive, tells Ruth that he will break his engagement with her if she continues to dance for the amusement of everybody. Ruth, a true American woman, tells him that "were she to lose all the titles in the world, still she would dance." She forsakes society for a professional career, and is given an engagement almost immediately. During one of the performances she sprains her ankle, a doctor rushes to the stage and has her taken to her home where he treats her. His continual calling and treating her finally leads to their falling in love. She finally marries him. The dances, which Miss Ruth Stonehouse does beautifully, are "Mendelssohn's Spring Song," "Visions of Salome" and the waltz from "Il Trovatore."

Miss Ruth Stonehouse in Essanay's "Requited Love."

Francis X. Bushman as "Old Grouch" in Essanay's "The Virtue of Rags."

"The Virtue of Rags," released December 17, is a splendid story of wealth versus conscience. It is an object lesson, taught as an Essanay object lesson can be taught, with extreme care and fine portrayal of the story by a company of excellent players. The story opens with a collector calling on a poor family living in a tenement dwelling, and finding them facing starvation decides to give them a little money instead of pressing them for the rent. He returns to his employer, Grouch, a crabbed

old gentleman, who discharges him for not getting the rent money. Grouch calls at the tenement and has the widow put out. After doing this kind act Grouch makes a visit to his club, where one of the members, being informed of his selfish and inhuman act, asks him to join the rest of the boys in a drink, that has been "fixed" with a sleeping powder. Grouch drinks, and falls into a heavy slumber. The boys now dress him up in old clothes and, taking him in an automobile to the park, leave him on a bench. A park policeman passing, notices the supposed tramp, wakes him up and orders him to "move on." He is later refused admittance to his home and is finally thrown into a station cell, where his friends find him asleep. They re-dress him and take him back to the club where, on awakening he believes it to have been a dream. Regenerated through the virtue of rags, he restores the widow to her rooms, installs new furniture and leaves with the satisfaction of knowing he has made reparation for long years of misery. Francis X. Bushman plays the part of old Grouch in a splendid manner, Helen Dunbar is the widow and Bryant Washburn is the collector.

"Guiseppe's Good Fortune," released December 20, is a whirlwind farce comedy with a continual laugh from start to finish. An Italian street musician sees a barber making love to his sweetheart, and wants to know the reason for it. The girl promptly tells him that she cannot marry him because he is too poor, hasn't any new clothes, and that she must have a good home. The Italian immediately takes his savings and, going to the nearest clothing store, buys a whole new outfit. Returning to his home, where a number of his friends have gathered, he joins them in a social drink. Feeling something queer in the shoulder of the coat he discovers a roll of bills amounting to $5,000. A newspaper reporter, who happens to be passing, hears the commotion inside, learns the truth, and publishes the story. The next day, the proprietor of the clothing store rushes madly to Guiseppe's home with the intention of getting the money. He is thrown into the street by Guiseppe and his friends. Returning to his store he finds the place crowded and doing a great business, as the result of the free publicity. He invites Guiseppe and his friends to a banquet. At the banquet that night, the clothing man is notified that his establishment is on fire. "Bring on more vine! I should vorry. It's insured!" says Rosen, and hilarity reigns supreme. E. H. Calvert as Guiseppe is really funny. John Steppling portrays Isaac Rosen, Ruth Stonehouse is Marie Baldi and Augustus Carney is a scream as Guiseppe's father.

"Broncho Billy's Promise," released December 21, is a splendid western drama with G. M. Anderson. The story is of a western girl who rejects a cowpuncher admirer for Broncho Billy. Snake, the rejected suitor, swears revenge and immediately proceeds to the village barroom to load up with ammunition, both for the gun and the inner man. Broncho strolls into the saloon and, finding Snake in a pleasant humor for taking lives decides to leave him alone. A quarrel is prevented by a good samaritan and Broncho returns to his bunk house. On reaching his home he finds a note written to him by his fiancee saying that he must not shoot Snake if he values her love, her father having been shot in just such a manner. He immediately goes to her home and promises her that he will not kill Snake. The following day, Broncho sees Snake force his attentions on his sweetheart by kissing her. He wants to kill him on the spot, but remembering his promise puts up his gun. That evening at the town saloon, Snake pulls a gun on Broncho and threatens to shoot him. Broncho reaching back to steady himself on the bar, pulls his own gun, and makes Snake drop his. Broncho then shows Snake that the revolver is unloaded. This completely cows Snake, who leaves the town disgraced. Broncho and his pretty sweetheart are left alone to plan their future happiness.

In "Bll Mixes With His Relations," released December 26, a tramp is seen sleeping on a bench in front of a railway station. A mail bag is thrown off a passing train and hits the tramp, scattering the mail in all direction. He pick up a postal card which reads "Dear Sarah: Cousin Whooper from Maine, whom you have never seen, is coming out on the four o'clock train. He's

"Broncho Billy's Promise," with G. M. Anderson.

kinder rough in his manners, but you'll like him. Lovingly, Hiram." After reading the postal he spies another one and picking it up reads: "Dear Cousin Sarah. Am detained here in New York on business. May be out in the morning or maybe tonight. Cousin Whooper." A great idea comes over the tramp, and he decides to be Cousin Whooper immediately. Entering a nearby back yard he finds a suit of clothes hanging on the line. He next locates a suit case from in front of a clothing store and awaits the arrival of the four o'clock train. The first postal card has been received at the Springer Farm and the supposed cousin is met at the train. He is taken to the farm where he devours a meal in record breaking time, eating everything on the table with his hands and

disgracing himself generally. After supper his "relatives" play the organ and entertain him in king's style. He is then shown his room where he sleeps in unaccustomed bliss. The real cousin arrives on the night train, and after walking miles, arrives at the farm only to have the good folks refuse him admittance, thinking he is a tramp. He sleeps in the wood-shed and in the morning tacks a note on the front door of the house and leaves for the railroad station, deciding to return to his home in Maine. A boy sees him and informs the town constable he has seen the man who stole the clothes and suit case. The constable arrests him, but on learning his identity,

"Guiseppe's Good Fortune," by Essanay.

takes him t the Springer farm, where the tramp has disappeared, taking with him the remains of the morning repast. He is finally discovered running through a corn field and is caught by the real cousin. The tramp is taken to jail and the real cousin taken into the Springer home, where he anticipates a good meal, but is disappointed as the tramp had taken everything in sight. Augustus Carney as "Bill" is a scream, the real cousin being played admirably by E. H. Calvert.

In "His Birthday Jacket," released December 18, a charming young daughter decides to make her father a smoking jacket for his birthday. Being in doubt as to the size, she bribes the butler to take his back measurements, the maid to take the chest measurements, the brother the sleeve measurements. These were to be taken at opportune times when the father would not be suspicious of what they were trying to do. After much trouble to all concerned the measurements are secured and given to the daughter, who makes the smoking jacket. On her father's birthday morn, he is showered with presents, among them a pretty smoking jacket. He opens up the package and puts on the coat. Lo and behold the coat is about three sizes too small. Servants laugh, daughter cries, father embraces daughter, and she swears "never again." Ruth Stonehouse as the daughter plays the part in a most charming manner.

"The Sheriff's Luck," released December 19, is another western drama of merit. A stage-coach is held up and the driver and occupants robbed. Immediately the sheriff is notified and a posse is sent in pursuit. The bandits escape into Mexico over the state line and leave behind an angry sheriff and heated mob. Returning to the town, taking the country road, they discover a runaway horse approaching them with carriage harness dragging on the ground. They speed up and find the Widow Barrett lying in the road, with the overturned carriage beside her. She is taken back to town and a doctor summoned. He tells the sheriff she must remain in his office in absolute quiet. After a few days of rest she recovers and returns to her home accompanied by the sheriff. He falls in love with her and writes a letter to the County Board, stating "It would be impossible to be sheriff and run a ranch." This leads us to believe that the Widow Barrett and the sheriff are married. He loses a bandit but wins a wife. Arthur Mackley as the sheriiff plays the rolls in a capable manner.

A new Essanay subject for release soon will be a beautiful Egyptian story written in the present century and going as far back as fifteen hundred years before Christ. This is another magnificent one-reel feature, entitled "When Soul Meets Soul."

"King Robert of Sicily," from Longfellow's beautiful poem, a stupendous scenic, three-reel subject, is to be released very soon. Our front cover gives some idea of its magnificent settings.

Health Films to Be Sent on Request

The Mississippi Federation of Women's Clubs has purchased a number of moving-picture reels on health subjects for use in the towns of the state under the auspices of clubs at Jackson. The federation is co-operating with the State Board of Health in its efforts to improve the sanitary conditions of the state, and these reels show in a graphic way unsanitary and sanitary dairies, the proper way of handling milk, how to care for the baby, the fly as an agent for the transmission of disease, and other lessons of value. The reels may be obtained for use in different towns by writing Mrs. H. R. Shands, chairman of the health committee, Jackson, Miss. These reels are sent out from the board of health office under the direction of the chairman of the committee, and also returned to the board of health office; in other words, the State Board of Health is co-operating with the ladies in the handling of the reels.

"The picture show habit is a good one to cultivate if you cultivate your mind along with it. The picture show is the handmaiden of education. It is difficult to estimate its true value. If it does nothing more to quicken the imagination, it is a great teacher," declared the Rev. Robert J. Burdette at the Throop Polytechnic Assembly recently. His subject was "The Picture Show Habit."

"Buck's Romance," December 17. Copyright, 1912, Selig Polyscope Co.

Managers Get Around Minors Ordinance

Owners and managers of motion-picture theaters in Indianapolis have found a way to avoid the city ordinance regulating attendance of children. They are said to have an opinion by attorneys that their plan is legal.

The ordinance prohibits the attendance of children under fourteen years old at any motion picture, burlesque or vaudeville theater unless accompanied by a parent or guardian, or by some person at least twenty-one years old, or unless the child has the written consent of a parent or guardian. The ordinance requires that such written consent shall be kept on file for at least twenty-four hours.

The ordinance was recently held to be unconstitutional in the city police court. The city took an appeal to the circuit court, where it was held the ordinance was valid so far as it concerned motion-picture theaters. Owners of motion-picture theaters have since asked the city council to repeal the ordinance.

Several of the motion-picture theaters have had blanks printed to be used in obtaining the permission of a parent or guardian for a child to attend a motion picture theater performance. The name of the owner or manager of the theater is printed in the blank, as the person authorized by the parent or child to accompany the child to the theater.

One of the places using a blank of this kind is the Vista theater in East Washington street, owned by H. T. Harrell. The blank which Harrell is using is as follows:

Indianapolis, Ind.,.....191...
I hereby authorize H. T. Harrell, Harriet flat, No. 1,.....
.....Indianapolis, Ind., to accompany.....
(Write child's name here).....of.....street,
Indianapolis, Ind., into the.....Vista theater,
located at No. .....1248 East Washington
street, Indianapolis, Ind., on the.....day of.....191...
Parent .....
Or Legal Guardian.....
Preserve this slip 24 hours after filing.

It is possible to name someone else on the blank other than Harrell to accompany the child, and the blank may also be used at any other theater by scratching out the name of the Vista and inserting the name of the place to be visited.

I Always 'Tend the Moving Picture Show

When my daily toil is over and I'm feeling kind of blue;
When I get so awful tired, and don't know what to do;
When familiar places bore me, and I don't know where to go;
It is then I seek the comfort in the moving picture show.

I used to study history in the good old fashioned way,
And tried to study chemistry because they said, "'Twould pay";
I thought I knew my Shakespeare well, but now I know I'm slow;
I've learned a deal more since then, 'tending the picture show.

You talk about your teaching, there's none that can compare;
It's education well absorbed, that you are getting there,
No matter how the censors talk, no matter how they blow,
I get the best of learning at the moving picture show.

—D. J. George.

Three Conventions Being Held

The Iowa convention, held on the third and fourth of December at Des Moines, Iowa, headquarters at the Savery hotel, is discussing such matters of importance as Sunday opening, the two dollars a week license and state legislation directly affecting the motion picture industry.

The big convention held on the fifth and sixth at Omaha, Neb., is being enthusiastically supported by the Nebraska motion picture exhibitors. Headquarters are at the Rome hotel. M. A. Neff, the national president, is present at both the Iowa and the Nebraska conventions. Mr. Neff will also visit Kansas City, Mo. on the seventh and eighth of December and address the Missouri exhibitors. Mr. Wiley, president of the state organization of Missouri, writes that he expects a very large, enthusiastic gathering of the exhibitors in attendance at the Missouri convention on the eighth.

After attending the Missouri convention, President Neff will cross the river, accompanied by Mr. Wiley and others, and on the ninth and tenth of December will organize the state of Kansas, at Kansas City, Kan. From Kansas City, after completing the organization, President Neff will proceed to St. Louis, Mo., where he will meet several motion picture exhibitors and from St. Louis, will go to Murphysboro, Ill., to organize a local branch of the motion picture exhibitors of Southern Illinois, which will affiliate with the Motion Picture Exhibitor's League of America.

After the grand ball, which was held in New York City on the fourteenth of November, Mr. Neff and Samuel H. Trigger, state president of New York Motion Picture Exhibitors' League, left New York Sunday morning, accompanied by Arthur Jacobs, arrived in Albany, N. Y., at 2:55, were met by a committee and escorted to the hotel, where a meeting was held by Albany Local No. 2. Mr. White, president of Local No. 2, introduced Mr. Neff, Mr. Trigger and Mr. Jacobs, who delivered addresses that were well received. After the meeting was over, a banquet was served and several of the members, with the national and state officers, went to Troy and visited with several of the local members of the league. On Tuesday morning, Mr. Neff and Mr. Trigger went to Boston. On their arrival at 2.55 in Boston, they were met by Mr. Washburn and Mr. Swette and several other Boston exhibitors, who accompanied them to the Hotel Essex, and they enjoyed a pleasant evening with several of the exhibitors of Boston. At 2 p. m. the Massachusetts state convention was called together at Memorial Hall on Washington street, and the following officers were elected: Joseph Mack, of the Hub Theater, Boston, president; A. L. Washburn, Unique Theater, Boston, secretary; Silas H. Bunce, Olympic Theater, South Boston, treasurer. First state vice-president, Charles W. Hodydon, Princess Theater, Wakefield, Mass.; C. W. Buckley, second vice-president. The national vice-president elected was George F. Washburn.

Then the convention adjourned to the banquet hall, where a splendid banquet was served, and addresses delivered by several local and visiting exhibitors. An abstract of President Neff's address follows:

From my boyhood until the present time I have always had a longing desire to visit Massachusetts, and especially Boston. Having read the history of the thirteen colonies, and so often hearing the traditions of historical Boston, it affords me great pleasure to meet with you here today.

Through the courtesy of Mr. Swett and Mr. Washburn, it has been my pleasure today to visit a few of the historical places of your city. I have been pleased more than I can ever tell to have been your guest, and viewed the spot where the tea party took place, and the thoughts that forced themselves upon me when visiting the historical spot where the first blood of the patriots was spilled caused me to wonder if those patriots suffered with the realization that they were establishing the grandest republic on the face of the earth, and liberating millions of people, defying the powers that denied them religious, political and commercial freedom. At this day I feel thankful to those grand old patriots who stood so loyally by the principles which they defended and believed in, and we today enjoy the fruits of their labor, privations and patriotism.

I have another ambition that I hope to gratify, and that is to organize the motion-picture exhibitors of Massachusetts into an organization that will work thoroughly and harmoniously to better the condition of our line of business, and promote and place cinematography on the highest plane possible. I cannot help but have faith in the ancestry of the patriots of colonial times. I therefore come to your city, firmly believing that you will organize and co-operate together; that you may assist in eliminating the undesirable conditions which have crept into the motion-picture business. We have been unjustly criticised by those who know the least about our business, and are least qualified to censure or condemn. We are educating and amusing millions; we are doing all in our power as an organization to eliminate suggestive and immoral pictures, and to bring about a healthy, clean condition, that the most skeptical may be convinced that the motion picture is not only the greatest educator the world has ever known, but the advance agent of the highest standard of civilization. I am pleased to meet with you and to receive you into the organization that means so much to you and to every exhibitor throughout the world. Petty strifes and jealousies should have no place among the motion-picture exhibitors. It is our duty to co-operate together in order that we may be effective and bring about conditions that will demonstrate to the world that we are earnest business men: that we are striving to uplift and amuse the world. Our organization is co-operative with many organizations and societies, which is of a great assistance to us. The advanced thinkers and educators of the age are turning to cinematography for inspiration and guidance. Of all the lines of business or professions there are none others so potential to the welfare of the human race as the motion picture. It is the corner stone of our education and progressive civilization. In the near future Boston will be teaching in the public schools with motion pictures, and the boys and girls at the age of 15 will be more thoroughly educated than they are now at the age of 21, and many of the preachers who

are now condemning the motion picture will be enthusiastically lecturing the pictures in the churches and the churches will be crowded instead of being partly empty as they now are.

The day and age of witchcraft is passed and gone. Ignorance and superstition no longer have a place in our high civilization, and like witchcraft, soon the day of criticism of the motion picture will be passed and adverse legislation and ignorance will disappear by reason of the camera and the curtain.

I will carry back to Ohio pleasant remembrance of Massachusetts and Boston and of the many incidents and things that I have seen while here, and hope to retain them in memory by reason of their pleasant associations.

After the banquet, Mr. Neff and Mr. Trigger left Boston at 11:15, arrived in Utica at 8:40 Wednesday morning, were met at the depot by W. A. Dougue, president of Utica Local No. 3, and after breakfast a delegation from Local No. 3 with automobiles took the visiting members sight-seeing through Utica.

From Utica Mr. Neff and Mr. Trigger went to Syracuse and Rochester, Mr. Neff going on to Cleveland, Mr. Trigger returning to New York.

After the visit of the national and state presidents at New York everything in the state of New York is in splendid shape and a state organizer has been put in the field to personally visit all of the exhibitors.

Chicago League Repudiates Cigarettes

At the regular meeting of Illinois State Branch No. 2, Motion Picture Exhibitors' League of America, held Monday, November 18, 1912, the following resolution was unanimously adopted upon the reading by the secretary of the American Tobacco Company's letter with coupons attached:

That we, the members of the Motion Picture Exhibitors' League of America, Illinois State Branch No. 2, wish to go on record against this or any other similar scheme inaugurated for the purpose of degrading the moving-picture industry and earnestly request every exhibitor, whether a member of our League or otherwise, to voice his disapproval of such practices and refrain from being a party to such methods which are inimical to the best interests of the league and its objects.

Vermont State Board to Instruct by Films

People of the state of Vermont are to be educated in matters of sanitation and health and this according to the jurisdiction of the Vermont State Board of Health, which is to use the motion picture machine as the newest means of instruction.

Always has the Vermont board been vigilant as to issuing health aids and doing it in the way that would best obtain results. In making the purchase of a picture machine, it is but carrying out its progressive policy. A Power's cameragraph is the style of machine added to the equipment of the board's apparatus.

Pictures dealing with the prevention, treating and cure of tuberculosis and other types of bodily ailments will be shown at the state laboratory and the films will be sent from city to city to be shown free of charge. In order that the pictures may be shown in rural gatherings and in places where electricity is not, the machine is provided with an electric generator, and the Vermont board is sanguine of splendid results.

"The Last of Her Tribe," December 20. Copyright, 1912, Selig Polyscope Co.

Of Interest to the Trade

A Great Northern Feature

It is claimed by the manufacturers that the three-reel special feature entitled "Dr. Gar El Hama" will prove one of the most realistic and sensational yet placed upon the market for approval. The Great Northern Film Company, through which the picture is being distributed, feels confident that this story of criminal daring will prove even more thrilling than "The Dead Man's Child," to which it is a sequel. The episodes do not deal directly with the commission of crime, but show the cleverness and ingenuity of Gar El Hama in his efforts elude the officers of the law pursuing him.

A. Hertel ("Gar El Hama")

Miss Sprange ("Mrs. Dr. Watson").

From the very outset the story is said to bristle with action and the camera has recorded in rapid fire fashion the exciting adventures of the principal actors in the drama. Gar El Hama first escapes on a hand car and is pursued by the police on a locomotive. From the cab window a clear view of the track is shown and the fleeing criminal is seen pumping with all his might at the handle bar. Suddenly another locomotive rounding the curve on the single track and a collision is averted by the narrowest of margins. Gar El Hama escapes in the underbrush and after disguising himself reaches his home by way of a secret passageway leading from the wharves. Here he pushes Dr. Watson, one of his pursuers, through a secret panel and the latter narrowly escapes, drowning in the vault below. Gar El Hama is captured finally, but even while on his way to prison he attempts another sensational escape.

This is but a brief resumè of the exciting episodes depicted in the three reels, and those who have viewed it through the courtesy of the Great Northern Film Company pronounce it a thriller.

The Theater Ornamental

If any motion-picture exhibitor has any doubt of the possibility of making his theater an ornament to his community, and therefore doubly attractive, it will be dispelled at once by a glance through the 68 pages of the Decorators' Supply Company's latest catalog. The book is nine-tenths illustration—and pictures often speak louder than words. A number of them are done in colors, while the black and white halftones are wonderfully clear and perfect, making an unusually beautiful work.

One of the most interesting features is a "before and after" pair of photographs. The first shows a building in St. Joseph, Mo., as it appeared when leased by Saxe brothers of Milwaukee. It is a corner brick building, and housed a saloon. The companion picture shows the same building remodeled as the Orpheum Theater. The remodeling was done, of course, by the Decorators' Supply Company.

Altogether there are forty photographs of theater buildings, as well as numerous detail views of ornamentations and decorations. Methods of lighting are also given considerable attention, and some beautiful examples of decorative ceiling and wall lighting units are shown.

Every exhibitor who takes pride in his theater, and is ambitious to make it an object of pride to its community, should send for a catalog.

A "Kings of the Forest" Display

The accompanying photograph shows the remarkable poster display used by the Alcazar Theater, Atlanta, Ga., in connection with the Selig feature film, "Kings of the Forest." It will be noticed that of all the big posters, no two are alike. The display, it is reported, resulted in a tremendous rush of business for the Alcazar, to the great satisfaction of its enterprising manager. The film, a three-reel, was released November 11.

The Atlanta Alcazar, "Kings of the Forest" Day.

W. N. Selig Is Tended Surprise Party

The most attractive and distinguished group of Indians who have ever visited Chicago are the band of Blackfeet chiefs who were brought here by Louis Hill, chairman of the board of directors of the Great Northern railroad. This is the first time that they have ever been off their reservation, which is located in the Glacier National Park. They were interested guests at the land show held at the Coliseum. With them was the famous cowboy band from Montana, and "Bill" Pruitt, the "Cowboy Caruso." Their visit to Chicago afforded the Indians an opportunity to thank W. N. Selig, president of the Selig Polyscope Company, for the work that he is doing in preserving the red men and their traditions and customs for the generations to come.

Some years ago the Selig Company sent a field company through that territory which is now known as Glacier National Park. The Indians and cowboys from that section have never forgotten the visit. So, when they arrived in Chicago, the first action on the part of the bewildered red men was a request that they be allowed to visit Mr. Selig. Lloyd McDowell, the personal representative of Mr. Hill, at once got in touch with the Selig Company, and the entire band of picturesque westerners were seen encamped in the city offices of the Selig Company. When Mr. Selig returned from lunch, a few minutes later, he was dumbfounded to find his private office occupied by chiefs, rangers, squaws and cowboy musicians, in picturesque attire. The Indians immediately recognized Mr. Selig; John White Calf, the chief of all the Blackfeet tribe, stepped forward and through an interpreter, on behalf of his race, made an elegant and dignified speech lauding Mr. Selig as the white father who is entitled to great credit for perpetuating the Indian race and their customs, as they have been brought down from their forefathers. The Indian chief was evidently sincere when he stated that it is the belief of the Indian that he will be enabled to live on and on through the lifelike record of the motion picture. The manner in which this splendid red man impressed this idea, and ideal, gave a good insight into the power of eloquence that was attributed to the Indians before they became the slaves of civilization.

When the chief had finished, Mr. Selig responded in a few words and then the cowboy band played several selections, and "Bill" Pruitt, the cowboy Caruso, sang a song especially written for the occasion. The Indian chief then presented Mr. Selig with a little token of their esteem and requested him to have his picture taken with them. This request seemed so earnest that Mr. Selig consented to be photographed, for the first time in many years.

Col. W. N. Selig Shakes Hands With Chief John White Calf.

The next day the entire party became the guests of Mr. Selig. Several touring cars were secured and Indians and cowboys were taken on a sight-seeing trip through the city. Later a visit was paid to the Selig plant on the northwest side of Chicago and the visitors were shown just how motion pictures are made. All work in the big establishment was stopped while the Indians and cowboys entertained the Selig employees. Several short films were secured and these will be presented to the Glacier National park for the entertainment of the Indians and cowboy guides. After a hearty lunch the Selig officials made arrangements with the artists of the Chicago Grand Opera Company for an impromptu serenade by the westerners. The entire body motored down

to the Auditorium theater and the opera stars sat in the auditorium of the theater while the picturesque visitors entertained with their dances and music. "Bill" Pruitt sang the song of Montana with such telling effect that Impressario Andreas Dippel was moved to hearty applause. After Pruitt had sung one or two other songs, Dippel sought him out and offered to send him to Europe for several years' study with all his expenses paid, with a grand opera career open to him at the end of that time. The generous offer was accepted, details arranged and Pruitt will start for Germany in the near future.

Among the Indians present were Ce-Pes-Tah-As (Chief Fred Big Top); Medicine Owl, Chief of the Medicine Men; Fish Wolf Robe (Mah-Mi), Dancer; Lazy Boy (Pah-Kops-Sku-Ma), Chief of Crow Dancers; Jim Big Top (Me-Ke-Sta); Long Time Sleep (Meh-Sim-I-Oka).

Law, when ready for the ascent, was clothed entirely in knit woolen garments because wool offers complete resistance to fire flashes. Under his woolen hood he wore a football player's leather helmet and a thin woolen veil over his eyes. He wore a life preserver under his sweater. When the balloon was making rapid progress from the Jersey to the New York shore, at about the height of five hundred feet, Law, who was sitting on a swinging cross-bar beneath the balloon, pulled a trigger string which he held in his hand and which was connected, in the balloon, with the dynamite. An explosion and a cloud of flame followed. The flame gave place to dense black smoke and from the debris descended the figure of a man under a parachute. The Libbie rescued him from the water where he was floating about. He was unhurt and jubilant over the success of the experiment, which should make a splendid film picture.

"Mrs. Brown's Baby," December 21. Copyright, 1912, American Film Mfg. Co.

Films to Feature Law's Plucky Ascent

Rodman Law earned the right to say "I told you so," when, little more than a week ago, he made a five hundred foot ascent above the Hudson river in a balloon filled with superheated naphtha gas, blew it up with dynamite, then, with a parachute, floated to the water below, where he was picked up by the tugboat Libbie.

The ascent was made to prove Rodman's contention that Melvin Vaniman and his four companions would not have been killed when their dirigible blew up at Atlantic City, while on its trial trip, had they taken the proper precautions. "I told you it could be done," was Law's satisfactory comment when his daring exhibition was over. The whole event was recorded by camera men for the International Feature Film Company, which will embody the risky incident in a three-reel film entitled "At the Risk of His Life" to be released in middle December.

Eugenie Blair Acts Unknowingly

Eugenie Blair, the clever emotional actress who is playing the part of Jacqueline in Alexander Bisson's famous "Madame X," tells of a peculiar experience recently had in New York City.

"One day," says Miss Blair, "I was called to the office of my manager, who wished to give me the part and manuscript of the play which I am at present appearing in. After the usual instructions and giving me details as to how this and that should be played I strolled down dear old Broadway to a nearby hotel and soon found myself seated in one of the comfortable chairs in the ladies' reception room.

"I had not been there very long when I was accosted by an old lady and soon found myself engaged in conversation with her. We talked about the weather and the coming styles of fall dress and hats, when suddenly she invited me to dine with her in a well-known cafe, which,

of course, I accepted. After the meal she had a nice box of bonbons wrapped up for me and we both left the place without paying anything at all.

"Seeing how liberal they were my ideas toward the old town somewhat softened. The next day I decided to have another free meal and went to the same cafe alone and dined. I had another box of bonbons wrapped up and started out. 'Hold on,' said the waiter, 'your bill is $9.50.' 'But,' I protested, 'I ate here yesterday and didn't pay anything.' 'I know,' said the waiter, 'but yesterday you were working for moving pictures.'"

Private Electric Plants for Shows

Even those not sufficiently interested to read the 125 page catalog of Brush lighting sets, published by the Chas. A. Strelinger Company, Detroit, will find much valuable information in the eight-page bulletin issued by the company. It tells some very interesting facts about the Brush 60 volt direct current generating unit.

This machine consists of a two-cylinder, ten horsepower, four cycle engine for gas, gasoline or kerosene, with a direct coupled slow speed dynamo of 60 volts and 66 amperes normal (70 volts and 85 amperes overload capacity), with switchboard, tanks, etc., complete.

This machine is not claimed by the makers to be the cheapest on the market as far as mere price goes; but when its completeness and general excellence are considered, it is bound to be satisfactory. It is economical as to fuel consumption, durable because using only the best of materials, well regulated and perfectly steady.

It is a curious fact that the company is often asked to quote on alternating current sets. Nearly every exhibitor knows, and all should know, that direct current is far superior for projection purposes. These inquirers are probably using A. C. at present, and do not know that the machine they are using will run, and run better, on direct current.

Those who cannot obtain satisfactory projection current, or who consider their electric bills too high, will derive a lot of satisfaction from the facts and figures of the Strelinger catalog.

We Have With Us Tonight

By the Staff Poet.

Who is it now that looms so big in Motion Picture ranks,
Who always looks so very trig, and dodges all the cranks?
Who is it that makes up the way that you should wear your tie,
And as you meet him every day some new stunt meets your eye?
(The only chap that had him tied was Adam, so I think;
Because he also had a bride, and never took a drink.)
But never in the line of dress could Adam e'en compete,
And Beau Brummel, I must confess, looked like a quince or beet.
When shaped longside this man I know, the best of them must fall,
They, every one, looked like a bo—big, little, short or tall.
This gay guy Stokes, with his thousand pants, his piker memory fades,
Our friend with even half a chance could give him cards and spades;
From hat to shoe this friend of yours is perfect without speck,
With simple clothes he just conjures, the same thing we would wreck.
The creases in his clothes are so, they simply perfect fit
The system with us doesn't go—we are not onto it.
From end to end of this great nation he sets the city styles,
And in them gained his reputation; our own plain Herbert Miles.

Augustus Carney in Essanays "Bill Mixes with His Relations."

Brevities of the Business

PERSONAL NOTES.

Sergeant Jeremiah O'Connor is at the head of the body of men of the police department of Chicago who represent the "powers that be" as regards the censoring of all motion pictures released in their city. It is a censor board that the city of Chicago is proud of and that other cities aim to emulate. Much of the credit for the efficiency and system of the board is due to Sergeant O'Connor. His ambition was to make the censorship bureau the reliable, competent organ it has become. In fact, it has more than responded to his vigilance and unrelenting efforts and as a result it is recognized throughout sister cities as a model board. The sergeant is held in high regard by those of the makers and exploiters of the motion picture who come in contact with him. The photograph shown was taken by a Selig photographer at a recent censorship inspection at the city office theater of the Selig Co. While the sergeant is of necessity quite a "regular" at the various little theaters of the Chicago studio show-rooms, his being there is not all work as the sergeant is somewhat of a picture fan himself and enjoys a good film story quite as much as somebody who sees them only at the pay-as-you-enter picture houses. With the head of the censorship board as well as with the other members of that board, "The picture's the thing—but it must be good!" is the slogan of the supervision of films and they are always ready with the proverbial "blue pencil" to check out any part of the film that does not meet with their full approval. Favoritism is an unknown quantity in the methods of the board. A uniform standard is set for picture plays and this standard is the gauge applied to every film submitted to censor, or rather, the film is submitted to the gauge; if it does not measure up to the standard, so much the worse—or better—for the film. Sergeant O'Connor realized, on accepting the responsibilities detailed by the office of head of the censorship squad, that a strict adherence to system, in the duty of censoring, would alone be the open sesame to the universal wholesome effect of motion picture. Another step toward success made by the sergeant was his choice of men to assist him in the important work which is their specialty.

H. M. Warner, of "Warner's Features" Company, will make St. Louis his home. He has already established business headquarters there, where he has twenty agencies.

L. A. Woodward, general manager of the Enterprise Optical Manufacturing Company, is again back in Chicago after a busy two weeks in New York, which time he spent in supervision of the opening of the new eastern office, now well launched under the management of Fred A. Clark. The offices, at 30 East Twenty-seventh street, are stocked with a variety of motiograph machines and supplies and a repair department will be a feature of the eastern offices.

K. W. Linn has returned from a five months' tour of Europe and will again identify himself with the United States motion picture industry. For five years he has been branch manager in the States for the Pathe Company.

George Ober, who acted with Booth, and has entertained in picture stories for a number of years, died November 16 at his home in Hastings-on-the-Hudson, after a pneumonia attack which lasted but one week. He was sixty-three years old and had followed the theatrical profession since he was a boy, his first appearance being at the Ford theater in his home town, Baltimore. "Rip Van Winkle," "As You Like It" and "She Stoops to Conquer," were among the earlier productions in which he starred. Later he managed several road companies, known as the Ober Players. He was a Vitagraph actor and one of the founders of the Screen Club.

M. A. Neff and Samuel H. Trigger visited Utica, Syracuse and Rochester, N. Y., after the Boston meeting.

F. C. McCarahan is back at his desk again in George Kleine's Chicago office after a week's vacation which he divided between Cincinnati and Springfield, Ohio, and neighboring Kentucky cities.

Frank B. Coigne, former director of the Champion Company, and president of the American School of Acting, in Philadelphia, is back in New York after a three months' absence and has joined the Feature Photoplay Company.

"Billy" Quirk is no longer the Solax smiler, he has transferred his name and fortunes to the care of the Imp Company.

Schuyler Colfax, of the Eastman Kodak Company, has annexed a yellow car which he persists in exercising daily; accordingly, his popularity is on the rise. There are rides a-plenty to be had but "mere man" need not apply.

C. A. Wilat's return to New York is scheduled for the first week of December.

Directors Frank Powell and Job Adolphi, of the Majestic Company, will leave for Colorado within the next two weeks.

Wilfred Lucas has left the Biograph Company, to join the Imp band.

Jerome Abrams, formerly a Great Northern representative in Baltimore, has been chosen to "run things" at the Boston office of Warner's Features.

Edna Maison, a former lead with the Pathe Company, succeeds Margarita Fischer in the Nestor Company. She will be with Director Ricketts' company.

Chauncey Herbert became a Champion producer on November 25.

Charles T. Kent, a Vitagraph actor and director, is convalescing from a pneumonia illness which he contracted on his recent trip to Canada. His friends are glad to know of his improvement in health.

S. S. Hutchinson, president of the American Film Manufacturing Company, has engaged an extra company to act on the coast, where Mr. Hutchinson has been for the last month arranging for the erection of large laboratories and granite and glass studios. 'Tis said that the growth of the American's enterprise in the west will mean that Warren J. Kerrigan will be seen in other than western plays, which roles he has taken for the last two years.

George Periolat, of the "Flying A" company, is spending the first weeks of his vacation in Chicago. It has been two years since Mr. Periolat has been anywhere but on the western coast and his recreation from film acting will continue until after January 1.

Frank Powell has affiliated with the Majestic Company and is busy turning out films that will be sure to take.

Fritzi Brunette succeeds Florence Lawrence as leading woman in Victor films. Miss Brunette is pretty, vivacious and talented in the art of picture acting. Much success is predicted for her in her work opposite Owen Moore for the Victor Company.

Charles Weston is the new director of "Punch" split reel comedies, the release dates for which will be Thursday of each week.

John Hardin has been given the newly created office of assistant manager of the Edison studio in New York. He formerly was connected with the Chicago office of the Thomas A. Edison, Incorporated, and was recently associated with John Pelzer at the Orange office. He is assistant to Horace G. Plimpton who, as manager of negative production, has found the increasing detail incident to a five-a-week release, too much for one man. The appointment of Mr. Hardin, who has a thorough knowledge of the film business, followed.

Hector Dion has joined the Biograph Company and will act under the direction of Tony O'Sullivan. He was formerly lead in Reliance and Vitagraph companies.

H. B. Coles is now general manager of the Precision Manufacturing Company, and it is predicted that the Simplex machines will have a rapid growth under Mr. Coles' able management.

Mrs. Annette Tatman, sister of William H. Swanson, secretary of the Universal Film Manufacturing Company of New York, died at her Chicago home, November 26. She is survived by her husband, Fred Tatman, a railroad conductor.

J. Parker Reed, Jr., an energetic film advocate, is recovering from a recent operation which he underwent in a hospital in Washington, D. C.

Francis X. Bushman, leading man for the Essanay western stock company, will leave for his home in Norfolk, Va., next week to spend Christmas with his mother and father. It has been seven years since Mr. Bushman and all his brothers and sisters have been together, so the reunion at Christmas will un-

doubtedly be a happy one. Counting up the kind invitations Mr. Bushman has received from admirers and personal friends to dine with them at Christmas shows a grand total of one hundred and six.

Frank L. Dyer, who has been with the Edison company since motion pictures were but begun, has resigned the presidency of the company to take an important office, it is reported, with the General Film Company. His first connection with the Edison company was as counsel, and much of the credit given the excellency of the Edison films is due to the ability of Mr. Dyer.

Miss Beverly Bayne was thrown from her horse last week on the Lake Shore drive, suffering a fractured knee cap. Her physician hopes to see her out in a week or ten days. The accident occurred when a passing motorcycle spun past right under the horse's head. Miss Bayne was thrown headforemost and landed on her knees in the street. A passing pedestrian picked her up and carried her to a nearby drug store, where she was attended by a physician.

"Billy" Mason, the juvenile man of the Essanay stock company, was a hero in a pickpocket scandal on a Chicago street car last week. Mason was sitting in one of the rear seats of the car when a man shouted out that he had been robbed. Mason glancing forward, noticed that the man was his father. The pickpocket tried to escape out of the rear entrance, but was caught by Billy. A patrol wagon was called and the trio was taken to the Shakespeare avenue station. The thief was held under $1,500 bonds. Billy and his father were released and promised to return to court the next day to testify. Being a hero in real life is something out of the ordinary for a photoplay actor.

Christine Van Buskirk has been given charge of the business department of the Victor company, with which she has filled almost every position since its founding.

Charles Jourjow, president of the Eclair company, accompanied by E. Arnaud, spent a week in Chicago on business connected with the Eclair output.

E. H. Calvert, an Essanay lead, is quite a favorite in his college town. A letter from a Madison, Wis., theater manager reads as follows: "We are featuring with good success Essanay photoplays in which you are acting." Calvert has a host of friends in Madison, where he attended the University of Wisconsin for four years. His rapid rise to success in the film business has been phenomenal.

Isadore Bernstein is to be the general manager of the Monopole Film Company of New York. This will be in the way of a promotion from his present position with the International Feature Film Company. Managing the publicity campaign of the Marion Leonard feature films will also be a duty of Mr. Bernstein's. He will remain with his present affiliation for another week.

Hal Wilson, character man and one of the earliest of Vitagraph players, has left the company. As yet he has made no new affiliation.

W. C. Smith is the new assistant general manager for the Nicholas Power Company. He is well qualified for the position as he has had much experience as an operator and dealer.

Marion Leonard has been engaged by the Monopole Film Company to play leads in a number of three-reel films, at a salary, it is said, of one thousand dollars a week. Director Stanner E. V. Taylor, with Miss Leonard and a company of twenty other actors and actresses, have gone to Los Angeles, where thirty of the most successful dramas of the past few years will be filmed. The westward bound troupe left the Lackawanna depot by special train to which were attached two baggage cars bearing costumes, furniture, a complete set of Aristos quartz lights and other equipment. Long streamers bearing the names of Miss Leonard and the Monopole company decorated either side of the cars. Work was begun immediately upon the company's arrival and the erection of a studio is already under way.

G. M. Anderson is soon to be seen in three-reel pictures, as the making of 3,000-feet sets have been decided upon by the Essanay company.

L. W. Atwater has been appointed to fill the position of sales manager of the Nicholas Power Company, succeeding H. B. Coles.

Albert W. Hale, of the International Feature Film Company, is making a three-reel mining picture in the mountains of Pennsylvania. Miss Wedgewood is playing the role of ingenue and Joe Graybill, a former Biograph player, is taking the juvenile lead.

Director Ince of the Kay-Bee company was the pleased victim of a surprise party on the event of a recent birthday. The Kay-Bee and Broncho companies contributed their members to the party, and there were many outside guests. A banquet, an entertainment and a dance was the order of the evening. The feature of the event, though, was the presentation to Mr. Ince of a topaz and diamond set ring.

Miss Kathlyn Williams, who was recently transferred from the Chicago studios of the Selig Polyscope Company to the Los Angeles branch, last week underwent a thrilling experience while acting in a marine picture under the direction of Colin Campbell. During the action of the scene Miss Williams was lashed to a spar and set adrift in the surf near Santa Monica. Miss Williams cannot swim a stroke, and the spar accidentally became disconnected from the rescue party and was carried rapidly out to sea. The life guards were hastily summoned and the actress was brought to shore unconscious. Upon regaining her senses Miss Williams insisted upon trying the scene once more, and this time it was accomplished without mishap.

Paul Rainey, the hunter and producer of remarkable wild animal pictures, accompanied by the marquis and marchioness of Stafford, and an outfit of dogs, has started for Mombasa on a wild game hunt. It is probable that more pictures will be a result of the expedition.

S. W. Spangler, a photographer of Helena, Ark., has been appointed representative of the Gaumont Motion Picture Company for Arkansas and adjoining states. He has just returned from Hot Springs, where he took many scenes of the state fair and took scenes on the Mississippi near Helena, showing the sinking of one of the Lee Line steamers.

"Old Ed" Howe, as he is familiarly known to the newspaper fraternity, the famous editor of *Howe's Monthly*, of Atchison, Kans., was an interested visitor at the Selig establishment last week. Mr. Howe is preparing to start on a second trip around the world and will include a motion-picture outfit in his luggage. As he intends to visit many out of the way places during his jaunt, he will undoubtedly bring back many reels of good educational film.

Directors Wilbert Melville and F. J. Grandon of the Lubin company have taken their respective troupes south for the winter. Mr. Melville will locate in Los Angeles, Cal. He takes a big company selected from the best Lubin players and two carloads of equipment. F. J. Grandon and his company go to Birmingham, Ala., where arrangements for a new studio have been perfected, including quarters for the players, rough riders and horses which always figure in Mr. Grandon's pictures. This arrangement will leave five companies still at the Philadelphia plant and four in the south and southwest.

Sherman Bainbridge is back again in the Nestor fold in the west and is playing leads with Mr. Fahrney.

J. E. Parsons secured twenty-five more Indians for the Universal camp by a sixteen days' trip to New Mexico. The Pueblo Indian tribes in the vicinity of Isleta contributed the new selection.

Manager and Mrs. James Young Deer (Miss Red Wing) have left the western photoplay world for a three weeks' business stay in New York. Charles K. French is filling Manager Young Deer's place during his absence.

Belle Bennett, who formerly played leads in the Lubin company, is in Los Angeles, where it is thought she intends making a permanent connection with a western producing company.

General Auditor Davidson of the Selig company has been the guest of Manager James L. McGee at his home near the Selig western studio, at Edendale, Cal.

Edna Maison (Mrs. Tom Poste) has reconsidered her intention of leaving Director Ricketts and the Universal company.

Mr. and Mrs. Ed Clisbee, who enjoyed a long engagement with the Ammex Motion Picture Company at San Diego, have gone to Los Angeles, where it is said Mr. Clisbee has accepted an offer from the Lyceum stock company.

Mrs. George Hernandez has terminated her engagement as character woman of the western Selig company.

ROLL OF THE STATES.

ARKANSAS.

J. W. Enlow, who has been engaged in the picture show business in Argenta for the past five years, has sold out to J. W. Lippincott, who operates the Crystal theater in Little Rock. The transfer took effect December 1, and it is Mr. Lippincott's intention to operate the Colonial theater in Argenta in connection with his Little Rock picture house. Mr. Enlow has not yet announced his plans.

J. L. Martin, proprietor of the Mian theater, at Paragould, has sold his shoy to the National Theater Company, which concern also owns the Lyric theater. Both shows will be continued by the National company.

CALIFORNIA.

A picture theater, to be erected on the corner of Washington and Park Grove, Los Angeles, Cal., by Hilda B. Lawler, has been leased to H. H. Wellenbrink for a term of years, at a total rental of $35,000.

Mrs. E. Kantrewitz (owner A. W. Rienne) is building a moving picture theater building at Los Angeles. Cost, $10,000.

Plans have been drawn for the new picture theater for H. Iwata at Fresno.

Architects Train and Williams have completed plans for a brick theater building at corner 47th and Moneta avenue, Los Angeles, for John Berelli.

A sale which has been pending for several months, was consummated when E. M. Walters, principal owner in the Gem theater in Oroville, Butte County, sold his share to L. T. McCutcheon, a prominent capitalist of Bakersfield.

CONNECTICUT.

Over 400 people, watching the moving pictures in the Globe theater at No. 1058 Main street, Hartford, were thrown into a panic when smoke began to trickle into the hall from a fire in one of the lower hallways of the building. By playing two streams of water down the stairs from above, the firemen soon had the fire under control and within half an hour had it extinguished. The damage was hardly more than $400 or $500.

ILLINOIS.

Julia F. M. Armstrong, brick theater building, 129 Garfield boulevard, Chicago. Holsman, architect. $25,000.

A brick photoplay house will be built at 3132 South State street, Chicago. W. A. Bennett, architect. Cost, $6,500.

Plans are being considered for the erection of a new moving picture theater at Springfield.

Motion pictures will be shown at the Sexton roller skating rink at Bushville, Monday, Tuesday and Wednesday evenings. These pictures will be selected with the idea of training young America by travelogues through the Bible lands and foreign countries as well as the United States.

The Louise Amusement Company, by Alfred Hamburger, president, has extended its lease on the Ellis theater at Sixty-third street and Ellis avenue, Chicago, for a period of nine years at a gross term rental of $27,500. The same company now operates three theaters on Sixty-third street.

Mr. Burkhardt has opened the opera house at Homer with a moving picture show. The new play house which will seat about 300 people, is modern in every respect, being steam heated, and rather better than the usual moving show houses in towns the size of Homer. Manager Burkhardt will, however, book plays from time to time in the new amusement house.

G. F. Fortunate, New Era building, Chicago; J. T. Fortin, architect, new theater building. $20,000.

G. H. Young, 3961 Irving Park boulevard, Chicago, brick theater building. Cost, $14,000. Architect, C. J. Eck.

A fire damaged the Erie theater, 647 North Clark street, Chicago.

A. Anderson will erect an addition to the theater building. 5123 Wentworth avenue, Chicago.

N. W. Bushelemn, 1012 East Sixty-third street, Chicago; Grossman and Preskauer, architects. $40,000. Moving picture theater building.

The old Lincoln theater property at 1225-35 North Clark street, has been sold to T. J. Lefens, John B. De Voney and Otto Price, who will erect a modern theater building.

INDIANA.

Harry Waterman and Charles L. Palmer, proprietors of a chain of high class motion picture theaters in northern Indiana and southern Michigan, leased the old Indiana theater at South Bend from A. Ciralski, renamed the house Elite and opened on Thanksgiving Day with motion pictures.

"The prettiest motion picture theater of its size in the United States," is the description applied to the new Princess theater, at South Bend, erected in the store building occupied by E. K. Ashby Company on Main street near Third. The theater holds about 450 people, all being accommodated on one floor. The pictures are thrown on the latest mirror screen known as the snow-white velvet, and projected on the screen by two Simplex projecting machines, so that there are no waits between reels. The house is owned and operated by the American Amusement Company and R. R. Russell, formerly manager of the New Majestic, is in charge.

IOWA.

Lewis Sprague, a young man from Sioux City, has purchased the Star motion picture theater at Hawarden from Robert Curran and Herman Storrs. Mr. Sprague expects to make a number of important changes in the theater in the near future. The stage is to be moved back and widened and the floor dropped so as to slope from the front clear to the stage. The whole is then to be seated with opera chairs. This change will be made to accommodate home talent plays and other theatrical engagements in connection with the motion pictures.

Danbury, Woodbury county, is to have a new opera house. Articles of incorporation filed. Capital stock, $10,000. C. F. Seibold, J. H. Crilley and others.

Elbert & Getchell, owners of the Pricess, Berchel, Majestic and Unique theaters, have plans for the erection of a new show house in Des Moines.

KENTUCKY.

A motion picture and vaudeville theater for colored people has been opened on Spring street, Louisville.

At a conference between members of council and the proprietors of moving picture shows in Bellevue, the latter were warned that if they cannot get together and eliminate objectionable features of vaudeville a license of $250 per annum will be placed on such attractions. The picture men promised to get together and comply with the wishes of the city officials.

MAINE.

R. D. Marson Moving Picture Company, Portland. To do a general amusement business; capital, $45,000. President, J. A. Connellan; treasurer, W. A. Connellan, Portland.

MARYLAND.

Proprietors of motion picture theaters in Baltimore are cooperating in the sale of Red Cross Christmas seals for the benefit of the Maryland Tuberculosis Association by showing films explanatory of the work of the organization.

Baltimore is to have another new theater, which will be built on the north side of the 1100 block West Baltimore street, will seat from 1,200 to 1,500 people and will cost not less than $35,000. The house will be built for Pearce & Scheck and will be designed for vaudeville and moving pictures. It is the first house of its kind for West Baltimore.

Action Will be taken by the Minneapolis Grade Teachers' Association and the Women's Welfare League, jointly, to obtain for Minnesota a strict censorship of moving picture films.

MASSACHUSETTS.

Boston—Kellmann's Feature Films, Inc., Boston, $5,000; Alfred A. Kellmann, Samuel V. Grand.

MICHIGAN.

Petitions are being circulated by moving picture show owners of Lansing in an effort to decide whether the picture houses should be allowed to open Sundays. The moving picture men hope to obtain the necessary 25 per cent of the vote to assure the question being submitted to the people.

Miss Dolline Cole has taken the management of the Star theater, Wakefield, and will conduct a moving picture show every evening. She contemplates making several improvements at the theater—such as raising the floor, installing a new stage and putting in new scenery. Miss Cole is quite well known there, having appeared various times in Wakefield in vaudeville. When the improvements are completed the Star will be one of the best theaters on the range.

MINNESOTA.

Any person desiring a motion picture theater license in St. Paul must apply to the city council, according to a recent decision of the state supreme court, affirming the district court, and cannot compel the city clerk to issue him such a license in spite of a city ordinance seeming to bear that interpretation. The power to grant or refuse such license is held to be strictly legislative and not capable of being delegated.

A license to R. Bushalla to conduct a motion picture theater at 166 S. Wabasha street was approved by aldermanic committee on streets. The license of the theater was revoked several weeks ago by Mayor H. P. Keller because it was claimed the building was not constructed to comply with the building code. Changes in the arrangement of the building to meet the provisions of the code have been made.

The November term of United States court closed at Winona when a jury returned a veridct of $2,000 for the plaintiff in the $20,000 damage suit of the Multiscope Film Company vs. the Conley Camera Company of Rochester for alleged failure to live up to contract in supplying cameras.

MISSISSIPPI.

A branch of the Motion Picture Exhibitors' League of America will be formed in Gulfport some time after the first of January. Fred Abbley, manager of the New Dixie theater in Gulfport, will be instrumental in organizing the branch, and the meeting will be held in Gulfport. M. A. Neff, of Cincinnati, national president, is expected to arrive here shortly after the Christmas holidays.

MISSOURI.

John C. Hiatt is receiving bids to erect a moving picture theater at St. John and Elmwood avenues, Kansas City.

Fire which occurred recently in the Lyric theater at Seventh

and Walnut streets, Kansas City, destroyed four reels of moving picture films valued at about $200, and blistered the face, hands and arms of E. B. Roberts, the operator. About 100 persons were in the theater and at the first sign of flames a stampede was started for the exits. Calmer members of the audience soon quieted the panic-stricken and they then passed out in orderly fashion. The fire started when a film broke and came in contact with the glowing carbon of an electric arc light. The loss is about $250.

The St. Louis Motion Picture Company filed suit in the Circuit Court against A. C. Wagner, former vice-president of the corporation, for $5,550 it alleges is due it on a transaction surrounding the sale of stock. Wagner does not live in St. Louis. The suit, according to company officials, is a friendly one and was filed with his knowledge.

NEBRASKA.

The Elite has changed hands, B. O. Hallquist having bought his partner's interest in the moving picture show at Stromsburg.

Work is progressing nicely on the remodeling of the front on the Princess theater at Grand Island now under the ownership of F. H. Michelson. When completed this little playhouse will be neat and ornate enough to suit any of the patrons of photoplays.

F. W. Grantham has sold the Gem picture show at Chadron to Batterson & York. Wm. Batterson comes from Stromsburg, where he has been in the picture show business for a number of years.

Roy Stover and John Minnick formed a partnership and opened a picture show at Berlin.

NEW YORK.

Ames & Company have leased the top loft in 213 to 227 West Twenty-sixth street, New York, to the Famous Players Film Company for a term of years.

The Dreamland moving picture theater in the Clark building in Oneida has been sold by Ralph Clements to Foster Brothers of this city.

John A. Evans leased to Bernard Feinstein a motion picture theater now under construction in Arthur avenue, south of 187th street, New York, for ten years, at an aggregate rental of $25,000; also to the M. & R. Company a motion picture theater to be constructed in the west side of Prospect avenue, north of 167th street, for ten years, at an aggregate rental of $21,000.

The new Hippodrome theater at Ogdensburg, erected by Eli Rosenbaum on the site of the building which was burned on Ford street last February, has thrown open its doors. It is one of the handsomest and best equipped photo playhouses in the state. The seating accommodations are in the neighborhood of 600. When the building is completed there will be a bowling alleys in the basement and dance hall and roof garden above the theater.

W. F. Kruger and J. W. Boeckmann have broken ground opposite the park entrance at Olcott for a two-story pressed brick veneered building, 104 by 40 feet, the ground floor to be devoted to a lunchroom and a motion picture and vaudeville theater. The new building will be on the site formerly occupied by the Park View hotel, which was destroyed by fire last March.

Henry Healy, 61 Dante place, is making alterations on his motion picture theater at Buffalo. $1,200 will total the improvements.

Mrs. C. Brunel has contracted for the erection of a brick theater building at New Rochelle to cost $8,500.

Clarkstokn, motion pictures, film projecting machine and musical instruments; $225,000. Pliny P. Craft, Daniel A. Hawkins and George E. Van Derbitt, 139 Duane street, Manhattan.

Florence D. Savage, 30 Triangle, will build a motion picture theater to cost $6,000 at Buffalo.

It was announced that Ogdensburg is to have still another photo playhouse. Gerald Fitzgerald, a well known theatrical man of this city, has leased the city opera house's open time for the rest of the season and will stage moving pictures afternoons and evenings on dates that are not held by regular bookings. Manager Hubbard continues in charge of the theater the same as before and the new arrangements will not interefere with the bookings of traveling shows.

Motion Picture Travelogues, Inc., Manhattan, motion picture; capital $10,000. Incorporators: Chas. M. Sudin, Leon Mintz, D. A. Weil, all of 55 Liberty street, New York City.

The old Christ church building, Schenectady, is to be remodeled and used for pictures. Another moving picture theater is to be located at 523 State street.

Essenkay Amusement Corporation of Manhattan, theatricals, moving pictures and concerts; $25,000. Samuel S. Watson, Victor C. Cormier, and Florence H. Berg, 78 Sixth avenue, Brooklyn.

United Amusement Sales Company, Inc., of Manhattan, moving pictures; $30,000. Arthur S. Gunn, Thomas Moynan, John MacIntyre, 4 East Eighth street, New York.

Plans have been filed by Von Berger & La Velle, architects, for a two-story stucco fireproof moving picture theater, to be built on the west side of Amsterdam avenue, New York, 50 feet south of 180th street, for the Kerlock Realty and Construction Company. It will have a frontage of 38 feet and a depth of 100 feet. The cost has been estimated at $12,000.

Tremont Amusement Company, Inc., of Manhattan, moving pictures and amusements; $10,000. Henry Heing, Isidore Scherer and Nathan Bernbach, 931 East 179th street, Bronx.

The new Lyndhurst theater, situated at North and Lyndhurst streets, the latest addition to Rochester's string of motion picture playhouses, opened Thanksgiving eve under the management of Irving M. Salyerds. Among the theater's appointments is a forty-inch electric ventilating system by which the air in the theater can be changed every five minutes. The building, which is capable of comfortably seating 1,000 persons, is of strictly fireproof construction and has ten exits, which will enable the management to empty the house within 30 seconds. Water fountains and rest rooms for women and children are among the accommodations offered by the owners, who promise to present only the better class of pictures.

The Exhibitors' Co-operative Motion Picture Company, New York City, to produce motion pictures of all kinds; capital stock, $2,500,000. Incorporators, Howard T. Graves, Edward H. Collins, Paul J. DuBois, all of New York City.

Harry Levy leased for David Lippman for ten years No. 403 and 405 Third Ave. New York City, on a plot about 37x90, for the purpose of constructing a moving picture theater.

The American Travel Film Company, Incorporated, of Manhattan; $50,000; Albert S. Ford, Albert C. Pegg, Jacob Grudberg; 74 Rivington street, New York.

Raymond M. Davis, proprietor of the Lyric theater of Binghamton, will erect a new theater building on the outskirts of this city.

Exhibitors' Co-operative Motion Picture Company, New York, $2,500,000.

The Genesee Amusement Company has purchased the property at 823 East Genesee street, Syracuse, and will erect a moving picture theater.

In compliance with Mayor Otto Pfaff's instructions, Police and Fire Commissioner Smith of Oneida, has issued orders to the police department to enforce the law against the opening of amusement places on Sunday. Hence means that the moving picture theaters will not be permitted to open their doors on Sunday.

The old Keteltas mansion at the northwest corner of Second avenue and Eighth street is to be made over into offices with stores and a moving picture theater at an estimated cost of $20,000. The Samuel Augenblick Company is the lessee. B. W. Levitan is the architect.

About $100 damage was caused at the Temple theater in Canandiagua owing to a brisk blaze that destroyed some valuable picture films. Earnest Gunnison, an employee, was painfully burned about the hands and face.

A contract has been let for the erection of the new theater building at the corner of West 125th street, New York City.

Bids for the construction of a new moving picture theater which the Genesee Amusement Company is to erect at No. 823 East Genesee street, near Irving avenue, Syracuse, have been opened. Located in exclusive residential territory, the new theater will be of unusual attractiveness architecturally. It will be 40x120 feet in dimensions, with a seating capacity of 500.

The Minor Theater is a new picture play house to be built near Irving avenue, Syracuse.

NEW JERSEY.

Cranford is to have a theater auditorium which will meet the demand for a public hall. The building is being erected by Mr. Lesser, owner of the property at Union avenue and Alden street. The theater will be used for moving pictures, and will seat 600 persons.

Sax & Abbott, Irwin & Leighton, J. G. Doak & Co. and Henry L. Brown are estimating on a one-story moving picture theater, 49 feet 6 inches by 130 feet 6 inches, to be built at the Boardwalk and St. Charles place, Atlantic City, for Seltzer Brothers, from plans by Magaziner & Potter.

NORTH CAROLINA.

After serving in turn as a picture house, a vaudeville house and a combination house in turn, the old Palace theater at Asheville is to be thoroughly remodeled, and converted permanently into one of the prettiest and best appointed picture houses in the state. The house has been purchased by Brunswig Brothers and Sparks, three of the best known and best informed picture

men in the south, and these three gentlemen promise to give Asheville pictures guaranteed to be shown not later than seventeen days after release.

Messrs. Brunswig & Sparks, who have bought and remodeled the Palace into a modern picture theater, will show some very rare film productions at their new theater. At the opening of the theater they offered the lovers of the silent drama a three-reel filmed story of "Jess," a famous writing of Rider Haggard.

NORTH DAKOTA.

Charles Lyons and A. P. Blonds of Devils Lake will erect a motion picture theater at Rugby.

OHIO.

The Boston Amusement Company, Cincinnati, $15,000; moving picture theater. B. S. Oppenheimer, A. W. Hackermann, Walter K. Siffald, H. D. Kroh and Edward F. Peters.

A new picture theater is to be built at 3376 Monroe street, Toledo. J. E. W. Klei is the owner and builder of the amusement hall. It will be frame in construction and will cost approximately $3,000.

The Welfare Exhibit Company, Canton; moving pictures; $15,000; 1,500 shares at $10 per share. C. W. Recard, Adam W. Oberun, J. H. Kauffmann, M. E. Campbell, Karyl E. Wright and W. W. Stephens.

Victoria Theater Company, brick motion picture theater building at Cincinnati, 928 E. McMillan street, to cost $10,000.

Plans for a moving picture theater to be erected at 416 East Fifth street, Dayton, have been prepared for Sam Gelman and Jacob Bremen. The plans have been sent to Columbus for approval of the state fire inspector. They will raze a one-story frame building at that location and erect a one-story brick building. It will be completed within a few months.

The Weller theater at Zanesville will be reopened for business shortly.

A. Van Camp has given the Peters Realty Company a contract to build a modern fireproof motion picture house on Edgeworth, near Epworth avenue, Winton place, Cincinnati. It will contain about 266 seats.

Complaints that air in booths used by moving picture operators is so poor that the operators are made ill has caused Miss Mildred Chadsey, sanitary chief at Cleveland, to request City Chemist Goldberger to make tests in a number of moving picture theaters.

Plans have been made for a moving picture theater to be constructed by Gelman & Bremen on Fifth street, between Brown and Jackson, at Dayton.

Contract has been let for the erection of a new theater building at Cleveland. Architect, O. N. Chamberlain; location, 4618 Dennison avenue.

Chester Cagg, aged 21, whose home is in Nelsonville, proved himself equal to an emergency recently when a film ignited on the moving picture machine he was operating at the Princess Theater, in High street, south of State. Cagg slammed the doors of the booth and fought the flames that had started with his bare hands. He was burned about the face and hands but refused to go to a hospital. Twenty-five people in the theater, who were watching a Wild West film when the fire started, left the place without disorder. The damage was confined to the films.

Health department authorities of Cleveland are preparing to have a series of films made showing conditions in the Cleveland tenement district. This will be part of a tuberculosis and general health department exhibit which is now being planned by the department. The time and place of the exhibit have not been decided.

The Kleervue Film Company, Elyria; manufacturing and developing motion picture films, machines, cameras, etc., $75,000; H. J. Morris, August C. Caleb, C. G. Thompson, W. H. Stockman.

A contract has been let for the erection of a five cent theater building by C. P. Morton on Montgomery Pike, near Clarion avenue, Norwood, Cincinnati. Cost $25,000.

Cleveland City Councilman A. Benesch will not introduce an ordinance prohibiting children under sixteen years of age from attending moving picture shows at night. Benesch says that an investigation has shown him that an ordinance of this kind is not needed in Cleveland.

A vaudeville and motion picture house, costing about $50,000, which will include the necessary outlay for the land, is projected for the northwest corner of Fifth and John streets, Cleveland.

PENNSYLVANIA.

Despite protests of the Women's Christian Temperance Union in Penbrook work will be started on a building at Chestnut and Main streets which will provide the town with moving pictures. The new building will be built of brick and will be conducted by a Harrisburg woman, Miss Tillie Zarker. The women of the town have not given up the fight against the show but are circulating petitions among the residents of the town.

J. Richard Jackson is estimating on a one-story moving picture theater, 43 by 76 feet, at the southwest corner of Twenty-second and Berks streets, Philadelphia, for M. A. Malony.

Benjamin Jacobson is planning to build a moving picture theater building at Patten and Columbia avenue, Philadelphia.

A small blaze ignited several films in a moving picture theater at 4239 Frankford avenue, Philadelphia, causing them to explode. A nearby engine company was called out and the flames extinguished. The fire occurred before the doors of the theater were opened for the evening performance, and while a number of persons were waiting to gain admission.

The Chrono-Kinetograph Company, Philadelphia, has filed articles of incorporation with the secretary of the state of Delaware, with a capitalization of $6,000,000, to manufacture and operate an original brand of speaking-talking moving pictures, says an eastern theatrical paper. John Cort and associates from the west will have the controlling interests.

A contract has been let for the erection of a new moving picture theater for Miss Tillie Zarker at Penbrook.

Newport—The United Evangelical church at Newport will be remodeled into a theater building. Location, Walnut street

Annsbury Hall at Front and Rockland streets, Philadelphia, owned by D. R. Harper, is to be converted into a moving picture theater.

The moving picture theater property Nos. 5123-25 Germantown avenue, Philadelphia, on a lot 50 by 200 feet, has been bought by Howard Sowden from Edward Fuhrman for a nominal consideration, subject to a $17,500 mortgage. The assessed value is $25,000.

Motion Picture Contract and Brokerage Company; capital $100,000; A. Eugene Carpenter, Brooklyn.

B. Goodritz will erect a one-story concrete and brick moving picture theater, in Philadelphia, 32 by 32 feet, seating capacity 482 people, at 415-417 Moore street, within a short time. The building will cost $10,000.

A fire in the Grand Nickelodeon at 614 Braddock avenue, Braddock, is reported to have been caused by George Carven, operator of the moving picture machine, when he dropped a red-hot piece of carbon on the floor. The carbon ignited a film. The 15 spectators who were in the place rushed to the exits and escaped in safety. Craven jumped from the operator's booth and was not injured. The flames spread from the booth to the ceiling and were extinguished by the firemen with a loss of $300.

SOUTH DAKOTA.

Plans are being prepared for the erection of a new theater building at Aberdeen. Ben Ward, proprietor, interested. Cost $18,000. Commercial Club interested.

TENNESSEE.

Dan L. Williamson of the Marlowe theater, will erect a new theater building in Jackson.

Memphis' first suburban, permanent moving picture theater has been opened at the intersection of Trimble place and South Cooper street. There have been the summer airdomes, but the present structure represents the first introduction of the metropolitan idea into the suburbs.

J. E. Ferguson, of the Temple State Bank, Chattanooga, contemplates the erection of a theater building.

George Shafer, of Wheeling, will erect a theater building at Moundsville.

Panic-stricken by smoke curling up from a hot air register in the Colonial moving picture theater at 102 North Main street, Memphis, 250 persons made a mad rush for the exits despite the efforts of A. G. Wagner, the operator, to quiet their alarms. All escaped unhurt, but as the last man left the place flames burst through the register, which is in the floor in front of the first row of seats. The pipe of the furnace leading to the register was along a floor joint and when the furnace became overheated ignited the joist. No protective covering was over the pipe. J. E. McFadden, chief of the fire department, ordered the theater closed until the owner, A. R. Richards, complied with the city ordinance regarding furnace protection.

TEXAS.

Through the good offices of Manager W. J. Lytle of the new Wigwam theater No. 2, San Antonio, $44 has been added to the fund for the St. John's orphanage. This represents half of the net receipts of the performances which marked the formal opening of the theater. As the workmen did not finish the decorating until late, the attendance suffered. However, 880 people were entertained. Edgar Campbell and Will R. Winch, of El Paso, with Mr. Lytle, are the owners.

Kamey Brothers' store building at Port Lavaca, is being remodeled for an opera house. John Juliff, manager.

J. H. Fuller is erecting a building on Elm near Colorado street, in Pearsall, for his moving picture show.

UTAH.

A moving picture palace, it is rumored, is to occupy the building immediately west of the Walker Bros. old bank corner with an entrance on Second South, at Salt Lake City. The property is owned by the J. R. Walker estate. According to the report the building is to be remodeled for the moving picture theater and will surpass anything in this line in the west.

Articles of incorporation of the Utah Motion Picture Company of Salt Lake City have been filed with the county clerk. The company is capitalized at $2,000, divided into shares of the value of $1 each. W. A. Burnell is president, E. S. Wallace secretary and H. A. Birch treasurer.

The Utah Motion Picture Company has been incorporated under the laws of Utah. The first release, which will be out in about three weeks, will consist of between 700 and 800 feet of views of Salt Lake City and places of interest in this vicinity. After the first release, the firm will take pictures all through the intermountain country, having its factory and headquarters in Salt Lake City. According to the officers of the new firm, it has nothing to do with the Ellaye Motion Picture Company, but is composed of local men and backed by local capital. Officers of the firm are W. A. Burdell, president; E. S. Wallace, secretary; Harry A. Birch, treasurer; James Lee and D. G. Archer, additional directors.

WASHINGTON.

The Bungalow motion picture show at Colfax has been sold by Ernest Russell to H. J. Howser of Asotin, who will open same.

WEST VIRGINIA.

A contract has been let for the erection of a new moving picture house on the car line at Edgington Lane, Wheeling.

WEST VIRGINIA.

George Shaffer of Wheeling will erect a moving picture theater building.

W. E. Deegans of Glen Jean, is erecting a new opera house at the corner adjoining Pickus Brothers' department store. Contractor, John Martin.

WISCONSIN.

T. D. Breslin sold the Unique theater at Elroy to W. E. Allen through the Rossman and Rowan agency.

Ed. Fuchs will open his picture house at the Fuchs opera house at Marion.

The Independent Moving Picture Operators' Union No. 1 has been organized at Milwaukee. Officers are: President, Herman Hammer; vice-president, Joseph Shansky; secretary, Joseph Arnold; treasurer, John Held; financial secretary, John Richards; business agent, Louis Schinsky. The union has fifteen charter members.

Mr. and Mrs. Paul Dreske sold the Idle Hour motion picture theater at Neenah to Alex. C. Raatz of Oshkosh.

The Independent Moving Picture Operators' Union filed articles of incorporation for the welfare and protection of operators in the court house at Milwaukee. Louis Schnisky, Sam R. Pylet and J. Bart Pulee signed the articles.

D. S. Kornblum, 238 H. W. Hellman building, owner; Milwaukee Building Company, builder; one-story three-room picture theater, $13,127; 1042 Temple street, Milwaukee.

Hugh Andress, former manager of the New Orpheum theater at Racine, has taken charge of the College Avenue Orpheum as part owner and has begun a campaign to make the popular show house one of the best of its kind in this part of the country. Under Mr. Andress' direction, the College Avenue Orpheum will be devoted to moving pictures entirely.

Harry L. Johnson of Antigo purchased the motion picture theater at Escanaba from P. J. Coady, and will remodel same.

FRIDAY: Thanhouser, Solax, Lux.
SATURDAY: Great Northern, Reliance, Comet.
SUNDAY: American, Thanhouser, Majestic.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY as they may be obtained of the manufacturers.

BABY LILLIAN WADE—SELIG

ESSANAY FIVE A WEEK

Unexcelled Photoplays

Essanay's New Year Edition of Unparalleled Features for the First Two Weeks in January

Released Wednesday, January 1st
"SEEING IS BELIEVING"
(A corking good comedy)

Released Tuesday, January 7th
THE "HEIRESS"
(A comedy scream of 1000 feet)

Released Thursday, January 2nd
"THE MINER'S REQUEST"
(A remarkably clever western story)

Released Wednesday, January 8th
"HERE'S YOUR HAT"
(Another bully good comedy)

Released Friday, January 3rd
"WHEN SOUL MEETS SOUL"
(The feature dramatic story of 1913)

Released Thursday, January 9th
"ALKALI" IKE IN JAYVILLE
(A screamingly funny comedy with Augustus Carney)

Released Saturday, January 4th
"BRONCHO BILLY AND THE MAID"
(A feature western story with Mr. G. M. Anderson)

Released Friday, January 10th
"JIMMY"
(A splendid story for modern boys)

Released Saturday, January 11th
"Broncho Billy and the Outlaw's Mother"
(A beautiful dramatic subject of the far west with G. M. Anderson)

COMING VERY SOON **COMING VERY SOON**

"KING ROBERT OF SICILY"

Longfellow's Wonderful Poem in THREE REELS

GORGEOUS IN SCENIC SETTINGS **UNPRECEDENTED IN UNEXCELLED BEAUTY**

THE GREATEST SCENIC PRODUCTION EVER STAGED BEFORE A CAMERA IN AMERICA

THE HEIGHT OF YOUR SUCCESS lies in your securing three-sheet posters of all Essanay Saturday Releases, lithographed in full four colors, price 25 cents. You can order these from your exchange or direct from Morgan Lithograph Company, Cleveland, Ohio. Your lobby display is incomplete without Photos of Essanay Players, size 8x10, price $3.00 per dozen. Can be secured from the Players Photo Company, 177 North State Street, Chicago, Illinois.

THESE MATTERS DEMAND YOUR ATTENTION

BETWEEN THE YEARS.

IT is easy enough, in an industry that progresses as fast as ours, to write about the accomplishments of the past year. Indeed, the subject may be satisfactorily, if briefly, covered by acclaiming that we have today better films, better posters, better theaters and a better spirit than we had a year ago. But those are improvements of degree only, such as are natural in any work that goes constantly forward. If the steps are more marked, or the upward rise more acclivous, it is because the young industry has a superior vigor and virility.

So it is our purpose, in recasting the year in a diminutive mold, to recall only the salient features of the year's motographic history—the really radical changes the twelve months have wrought.

Most important of these, we think, is the development of the Motion Picture Exhibitors' League. The movement of organization itself almost confines its credit to 1912; and doubtless 1913 will see the practical completion of the preliminary work of organizing the states. Reports of new states brought into the ranks are coming in with a frequency and regularity that tell of unremitting, indefatigable, enthusiastic effort. Already, incomplete as the work is, the exhibitors of the country are knit into a homogenous, powerful unit. Organization, the greatest of all influences for the good of any cause, has been established.

Another significant factor has been the growth of the multi-reel subject. This, perhaps, has not met with the approval of some exhibitors, who continue to prefer the varied program of shorter subjects. The two or three thousand foot film, though, gives dramatic opportunities that the single reel does not, and aligns motography with the legitimate stage.

This leads us to the fact that the most honored talent of the legitimate stage either has already entered the film circle or is standing on the threshold. The old disdain has died a natural death. It is succeeded by genuine approval and admiration of the newer art. Great actors are recognizing that while the artificial stage has many limitations, the picture film has none.

The factional and political changes of the year have been many. Perhaps, even before the year is ended, there will be others. These, however, we shall not recount. After all, they have meant little to the progress of the industry. Every producer, whatever his affiliations, continues to make the best films he can; and that best continually becomes better with added years of experience and hundreds of productions.

Just now, a court has voided an important patent; a company has been indicted for restraint of trade, and has filed its answer. These things are interesting, and make industrial history. But they do not make one iota of difference in the steady march of progress. The business will go on just the same, whatever the outcome of these cases; for it is bigger than any of them. It will

keep on growing stronger and better, until it is invincible—the one industry that embraces all others—for it images life itself.

ADVANCE INSPECTION OF FILMS.

IN her paper on "Standardization of Picture Programs," which appears in this number, Josephine Clement, manager of B. F. Keith's Bijou Theater, in Boston, specifically calls attention to the right enjoyed by the Boston exhibitor of inspecting all films before drawing his program. She maintains, with obvious logic, that no manager can make an intelligent program without a previous knowledge of what he is to incorporate in that program.

Since Mrs. Clement read her excellent paper it seems that conditions in Boston have changed. It has been the habit of the General Film Company to exhibit each Tuesday and Friday in a room in the State House at Boston, the films to be released the following week. The exhibitors of Boston and its suburbs attended these advance showings regularly, depending on them for their bookings. Early in the current month the General Film Company issued an order for the discontinuance of this advance exhibition of its releases. The reason given is that the State House will no longer permit the use of the room for this purpose. A Boston exhibitor immediately offered the use of his theater, that the Tuesday and Friday displays might continue. This offer, for some reason, was refused. It is said, however, that the Boston branch of the League saw at the State House on the tenth of the month the films scheduled for release on the twelfth. Exhibitors like Mrs. Clement, who do not own the theaters they manage, are not eligible, it seems, to membership in the Boston branch; and announcements of this particular advance showing were not issued.

It may be that the Boston difficulty will be adjusted by the time this number of Motography is distributed. We hope it is. For it surely is a serious mistake to deprive the exhibitor of his right to "see the goods" before placing his order.

It has been, and still is, the habit of the majority of exhibitors in this country to accept their film programs "sight unseen." It is true that the display rooms of manufacturers today are crowded with interested exhibitors at every advance showing, whereas a few years ago only a handful attended the advance guard of the present leaders in the business. But even the comparatively large attendance at these functions is but the proverbial drop in the bucket. The representative exhibitor never sees his show until he puts it on.

And, probably, the small town exhibitor never will see it any other way. He must obtain his program as he obtains other necessities from the city—by mail order, telegraph or telephone. Nor is it entirely essential that he should be able to select his subjects by personal inspection. His competition is less intense, his patrons are more easily pleased, his requirements are all simpler than those of his metropolitan cousin.

But the exhibitor in the big city has more complex conditions to contend with. He is competing not only with other motion-picture exhibitors as keen and enterprising as himself, but with countless other means of entertainment, from illustrated lectures to grand opera. His discrimination must be fine, his conception of the public's taste accurate. What he shows his patrons determines whether he is a good or a bad manager, and consequently his success or failure. It is idle to maintain that all the pictures released by any group of producers are so good that no selection is necessary. The various parts of a picture program must be fitted together with as much regard for harmonious relation as the numbers of a musical program. Each program, too, must be arranged with particular regard to its prospective audience. This factor only the theater manager is competent to judge. It is quite impossible for the exchange man to relieve the exhibitor of this duty, even with the most careful personal service.

In short, the highest form of picture exhibition is possible only when an efficient manager personally selects the subjects of such exhibition. It is to be hoped that the distributors of films will continue to appreciate this fact and to provide for it.

BENIGHTED NEWSPAPER MAKES ATTACK.

IT is with no sense of enthusiasm that we find ourselves called upon to give some crowded space to another vicious attack on motion pictures. We are disappointed. Such attacks used to be common, because newspaper editors naturally like sensational material and often have neither time nor inclination to verify reports of that kind. Then, too, the motion-picture business was popularly supposed to be overflowing with money, of which the newspapers coveted a share. But we have not seen one of the old-time bitter, biased, venomous articles in so long we thought the press had really found time to investigate pictures.

It is the New York *Evening World,* of course. We cannot spare the space for reproductions of its canards—nor would we soil our pages with them if we could. We will, though, show a few of the scare heads. This from the issue of December 3:

Vile Moving Pictures Corrupting the Morals of Countless Children.

Silly, Repulsive and Immodest Films Alternate With Reels Depicting Carnivals of Crime in Scores of Malodorous Houses.

And from the issue of December 4:

It's Suggestive "Movies" That Are Now Shown to 40,000 Little Folk.

And from the issue of December 5:

Health as Well as Morals of Children Is Menaced in Cheap Movie Theaters.

Burglary Movies Started Youth on Career of Plunder.

Isn't that a nice mess to shove its way into our Christmas number? But we are not going any further into the nauseous details. This, it seems to us, is a matter for the Exhibitors' League. Make the *World* prove its dirty charges in court; and when it is unable to, the law will take care of it.

WAR ON FIRE TRAP PICTURE HOUSES.

The New York fire department is planning a vigorous crusade against theaters and moving picture houses which violate the fire prevention ordinances. In one night Chief Guerin of the fire prevention bureau and his forty lieutenants visited eighty theaters and noted the conditions. When their reports were turned in Commissioner Johnson announced that the findings would be made the basis of civil and criminal action against the proprietors of a number of houses. Twelve serious violations were reported.

The criminal procedure will be the first for this class of violations ever pushed by a fire commissioner. The criminal code says that any one responsible for a public nuisance which makes the lives of any considerable number of persons insecure is guilty of a misdemeanor and it will be under this act that the fire department will prosecute.

Standardizing the Picture Theater

By Josephine Clement*

THE motion picture, produced and exhibited primarily as an entertainment for the masses, has become a world-wide enterprise. Both as a means of education and as an appeal to cultured and artistic tastes, its influence is universal.

For the motion picture theater, however, there is as yet no standard. It may be a modern well equipped building, seating from 1,500 to 2,000, with a fine orchestra, or it may be a little dive evolved from a cheap tradesman's shop, with a tin-pannie piano. Its manager may be a man of education, who recognizes the needs of the people, or he may be, and too often is, some little enterprising upstart who has not an idea in his head beyond the price of admission. "Get something that brings them in—and having brought them in give them something and then get them out as soon as possible so that more may be brought in."

The nature of the popular priced theater program, in Massachusetts at least, is determined entirely by the manager. He may give or withhold from the public any pictures he chooses. While there is still much to be censured in the productions of both the "trust" and the "independent" film manufacturers, the weekly releases of 42 films by the General Film Company, and as many by the independent manufacturers, permits a discriminating manager to select a sufficient number of dramatic, comedy, and educational subjects to meet the needs of any theater, and yet avoid all films that are not desirable.

Nor can he give the excuse that he did not know what his pictures were before he ordered them. Two exhibition days a week are provided by the Boston exchange, affording him ample opportunity for reviewing his pictures and making his choice with a full knowledge of what he is to show his public. I understand that in some cities this privilege is not accorded, the films being distributed in a more or less arbitrary fashion by the local exchange; the selection being determined mainly by the rental price rather than the subject matter. In Massachusetts, however, the responsibility clearly rests with the managers.

From my own experience I have found that I am able to approve of about fifty per cent of the pictures produced; the remaining fifty per cent I consider so far below the desirable standard that I should refuse to exhibit them at any time or place. Of the fifty per cent approved for the Bijou, part are exhibited immediately and part are kept on a reserved list for future booking. Our policy in selection is not easy to define. In brief outline we emphasize

A good story—well told,

Good photography,

Good acting,

Artistic stage settings,

Historical events—when they do not distort history.

All scenic and educational subjects, and whenever we get them,

Any *real* comedy pictures.

The Pathe Weekly has become as much a fixture as the weekly paper, with a more far-reaching power. I could wish that they did delight less in train wrecks and burning buildings, and more in civic exhibits and artistic endeavors, but they remain nevertheless a fixture.

The Gaumont Weekly is a similar film produced for the independent theaters. Until a few months ago Gaumont was a memeber of the "trust," and it was a great loss to that organization when he went over to the independents. For a time there was a great lack of colored scenic films—a lack which is still felt, although the Pathe company, through its foreign office, is doing much at present to supply the need.

Indeed, there are so many really good pictures to exhibit that I wish I might ignore the unapproved fifty per cent. But it is a painful fact that the pictures in this list are often the ones generally demanded. I have in mind a series of western pictures which I have never been willing to show. They are not bad, but they are coarse and without wit and usually depict the antics of a would-be-funny bore. The most recent of these pictures I have happened to see in a theater in Boston which claims to, and does, cater to a neighborhood audience. It pictured the predicaments of the aforesaid bore incident to the stealing from him of his pants upon the eve of his wedding day. The picture made a sorry attempt at humor and succeeded only in being vulgar; and yet it is a popular subject

Josephine Clement, Manager B. F. Keith's Bijou, Boston.

When I have not been able to see the week's pictures, I sometimes question the young man who fills our orders at the exchange, regarding certain films, and he quite frequently replies, "Oh, that picture! Well, that's *some* picture, but not for your house."

Undoubtedly the time will come when here will be a more or less universal standard for moving pictures, and what this standard will be is a question. There is at present some attempt at attaining it in the National Board of Censorship, but this censorship is evidently limited, and one is often astonished at the pictures it approves.

In leaving this part of the low admission theater program, I wish to repeat that in Massachusetts at least the manager can give to or withhold from the public any pictures he chooses.

This is also true of the remainder of the program. If he

*An address before the state educational conference at Haverhill, Mass.

"A Loyal Deserter," January 1. Copyright 1912, Selig Polyscope Co.

believes that a "rattling" good, so-called rag-time player with drums and effects, is desirable rather than a competent pianist who can play "rag" on occasion but who realizes that better music will make the more lasting appeal, then he will hire a ragtime pianist, If he believes that a "slap-stick" dialogue between two hideous made-up Irishmen is more effective than a well-written, well-staged one-act play, the one-act play must suffer.

Some of us believe that the public wants what it is given, or, in other words, that if the illustrated song is improved upon, the public will want the improvement. It is true that good rich milk will not always be readily assimilated by a skim-milk fed child, but by a judicious process the child can in time be accustomed to the change, and ultimately benefited.

The trouble that exists today, and the reason we hear the frequent and oftentimes just condemnation of the programs offered at motion picture theaters, is either that those who are responsible are not qualified to select the pictures or music, or that they fail in comprehending the capacity of their public for discriminating appreciation. It is not unusual to hear a manager or booking agent remark, "Yes, that is good; I like it myself, but the public, they wouldn't care for that; the public doesn't want good music, it doesn't want lectures,"—and so the poor public is obliged to accept a program suited to exactly the order of intelligence the manager happens to attribute to it.

As a result of this, the moral and artistic standard of the average picture show is below the taste of the audience that patronizes it. It is no doubt enjoyed by some, but many people of refinement and culture attend who could not but welcome the needed improvement alike in picture, music, and vaudeville number.

The illustrated song should be criticised perhaps more than any other part of the program. I have selected a few titles of such songs, that will bear me out in this regard. They are:

"Gee, But I Like Music With My Meals."
"Kid, You've Got Some Eyes."
"And You're My Baby."

These three are advertised by their publisher as the song hits of the season, and are representative of what songs of this class are likely to be. The stereopticon views that accompany them are usually crude in the extreme, and almost always are in bad taste when they are not worse.

The mission of the theater is great; the mission of the popular-priced theater is doubly so because of its more far-reaching influence. It is a mission, however, which may be fulfilled with proper management. There are untried and unknown artists who are ready to respond with genuine enthusiasm when an opportunity for service offers itself. They are not to be found in the average motion picture theater, for two reasons, and these reasons are not commercial ones as might be supposed. In the first place, the singer who is a student and who hopes to improve knows that the music they are expected to sing and the way they are expected to sing it will prove a certain death to artistic advancement. In the second

place, he finds surroundings utterly lacking in inspiration. I have never found it difficult to secure singers, both men and women, who were earnest workers, taking a genuine pleasure in their work and always studying and preparing themselves for future advancement. The chorus of some thirty voices which we have organized for Sunday night programs and for which only a nominal amount is expended, is a very fair example of what can be done.

The ten-minute talk, while not so attractive to all patrons of the theater, has a legitimate place upon a program, and many people do enjoy such numbers. An endless variety of subjects are available. The following are a few of the subjects which have been presented at the Bijou:

The Pilgrims and their memorial at Provincetown, given at the time of the unveiling of that monument.

The Brown Tail Moth. This talk is given in the spring of the year and has been added to from year to year by information obtained from our city forester.

A series of lectures on Life in Japan, written by Julian Mortimer Cochrane, who lived for some three years among those people.

Porto Rico Music Talks, given by the instructor of music at the University of Porto Rico.

Dr. Peter McQueen has also lectured for us many times.

I recognize the fact that some of our audience are bored with the lectures, but I always feel that it won't hurt them to stand it for the sake of the part of program which they do enjoy. I remember one day having a man I happened to know, say to me as he grabbed his hat, "Oh, my, here comes the lecture, let me run." "Wait a minute," I called to him, "have you ever listened to the lecture?" "I have not—not for me," he replied. Then I said, "You had better sit right down and do so, and you may find you like it." Which he did, and on finally leaving he remarked to me he was glad he remained for he had secured a piece of information he had been wanting for some time.

I believe that the illustrated song could be made a wonderfully beautiful and attractive feature when it is produced to combine beautiful music and lyrics and artistic pictures. Such illustrated songs may exist at present, but I have never been able to find them. In providing musical interludes for the program there is such a wealth of delightful music one need never feel at a loss. The folk songs of all countries, ballads of modern composers, song cycles, arias from the various operas, duets, trios, quartettes, all possible of rendering in as simple or as elaborate a fashion as one chooses. I have found my

Madam Andre Presented to Napoleon. From the Kleine-Cines Feature, "At Napoleon's Command." Copyright, 1912, George Kleine.

audience at the Bijou listening with unmistakable enjoyment to the music of Floriana, that beautiful song cycle of Mr. Arthur Whiting's, to solos from the operas of La Boheme, Tosca, and Madam Butterfly, to songs of Arthur Foote, Lesa Lehman, and many others, and I do not believe that my audience is the only one which is capable of enjoying just such music.

The motion picture theater affords an opportunity for the presentation of the one-act play which is not to be overlooked—an opportunity of which we have availed ourselves for the past four years. In that time we have presented at least thirty one-act plays each year. Our material has been secured from many well known authors. This list which I will read will mention some of the more important.

"The Faraway Princess of Soudermann."

"Gettysburg," by Percy McKay.

"The Second Story Man," by Upton Sinclair.

"The Lad of Largymoor."

"Seumas McManus Shadows," Mary E. Wilkins Freeman.

"The World Too Small for Three," Hermann Hagedorn.

We have also produced three little one-act operettas composed by a young Boston musician of promise. While it is never possible to present these little plays with the finish to be obtained with actors of experience, still with conscientious attention, we have obtained results which have been acceptable, and often-times really satisfying.

The motion picture and the popular priced theater are here to stay just as surely as the penny press. It is for us to make them a wholesome, entertaining and highly valued force in every community. Everywhere there are evidences of its increasing use as a social force for civic betterment. In neighborhoods the low admission theater has become a social center. The school boy, the mother with the baby in its carriage, the tired working man, all testify to this by their regular attendance. They don't have to be coaxed; they come, come in droves and are glad to pay for the privilege. A very recent announcement informs us that the high schools of greater Boston are to provide not only for the pupils but for the older members of the family as well, entertainments that will include motion pictures.

Is there any limit to the possibilities? Where all that is best in art, literature, music and plays can be presented at a nominal cost, and the great public waiting right there to receive it. This public accepts what is now offered it because there is nothing better. When the improvement comes it will accept that, too.

Some day, some where, the ideal popular priced theater will be built and maintained. It will be a building beautiful to look upon, with four sides for exits and ventilation. Its interior will be simple and artistic, with every seat commanding a view of the stage. It will be so equipped that an absolute sanitary condition may be maintained with a minimum number of employees. For its attractiveness it will depend upon the art of the architects, upon its beautiful structure and simplicity of coloring, rather than upon an over-abundance of gilt and tawdry splendor.

This theater will have as dignified an entrance for those who are engaged in providing the entertainment as for those who witness the performances. There will be no little hole in the wall down a dirty alley for the performers. The few people who are capable of providing the amusement for the many will be helped and stimulated to better service by conditions conducive to dignity and self-respect. For until we insist upon and provide better conditions, we cannot hope for finer products at their hands. Many, many times I am told, "We could do something better, but the managers do not seem to want it." The manager seeks refuge in the excuse that the public does not want it. Who shall say?

This ideal neighborhood theater will provide for the tired mother a place of safety to leave not only her baby carriage but her baby, a nursery; why not? It will see that the child who comes alone is kept in a section provided for it under special supervision, and that it is sent home at a proper time. It will even have certain hours set aside for children with programs suitable to their minds. It will interest itself in and encourage any talent that may exist in its neighborhood and when such talent has been taught and properly coached it will be given an opportunity to try out. The ideal neighborhood theater will not lack for support when it is once established, and once demonstrated it will point the way to others of the same kind. In it will be realized the dream of Thomas A. Edison, who said:

"Motion pictures have already had a tremendous educational effect. This is true of the seemingly purely amusement motion pictures. Little cross sections of life are shown in them, staged and acted infinitely better than are the cheap shows given at considerably higher prices. When to these are added the thousands of historical, industrial, scientific and scenic motion pictures which have been shown in the past fifteen years, it is obvious that the motion picture is an important factor in the world's intellectual development.

This general diffusion of information is having and will have a great uplifting effect on the morality of mankind. It will wipe out narrow-minded prejudices which are founded on ignorance, it will create a feeling of sympathy and a desire to help the down-trodden peoples of the earth, and it will give new ideals to be followed. For this reason, I believe that the motion picture presents a ready means in the hands of the broad-minded, intelligent and informed workers for the world's good, for the innocent amusement, efficient instruction and the moral advance of the great masses of people."

Motion Pictures in Charity Work

The motion picture has been adopted by the New York Association for Improving the Condition of the Poor in its effort to reduce the number of street beggars by pointing out the evil effects of indiscriminate almsgiving. A Thanhouser film, entitled "The Other Half," has been produced at the suggestion of C. J. Hite and the association, and will be displayed generally throughout the country.

The film portrays the misfortune of a laborer's family living in a New York tenement. After recovery from an accident the husband applied for his old job, but was refused because he was physcially unable to perform the work. Desperate and hopeless, he soon degenerated into a drunken vagrant and his family suffered. Indiscriminate charity aided the man. The coins that he begged went for drink and his family received no benefit. Investigation made by the A. I. C. P. developed that the man was weak rather than worthless. The family was aided, work that the man could do was secured for him and in a short time he was again self-dependent.

The association believes that through motion pictures it can emphasize the fact that helping the other half to help themselves will bring happiness to many persons who seem to be headed for the prison or the almshouse. Marguerite Snow and James Cruze, the Thanhouser stars, have the leads in the initial film.

Motography's Gallery of Picture Players

WHITNEY RAYMOND is awfully good looking and is not a bit spoiled by the fact. He plays as well since he was told he possessed "looks" as before, and pompadours his hair because it demands less attention so, and not because it adds to his looks — though it does, of course. Whitney was destined for juvenile roles and went into them' pompadour and all, with tornado-like zest. He hasn't come out of them yet, because he is creating such satisfaction right where he is and, if he continues to diet and guard his slenderness, he will be a second Julian Eltinge in no time, as he makes a perfectly charming girl and revels in the role. A truly, purely dyed-in-the-wool American is Whitney, even though he did go to Canada to start his work in theatricals. He was with Robert Hilliard a whole season in "A Fool There Was." after which he joined Essanay.

Whitney Raymond.

DOLORES CASSINELLI is she of the dark eyes and black hair and the charming foreign appearance who, whenever there is a disagreeably haughty lady to be played, is given the role. Not because she is disagreeable or even haughty, for she is neither; she is most likeably nice and, during her two years in Essanay films, has convinced people of the fact, the extent of her popularity being proven by her winning second place in a recent magazine popularity contest. Besides achieving fame in motion pictures. Miss Cassinelli is planning to make a name for herself in grand opera, as she possesses a wonderful dramatic soprano voice and spends every spare minute in its cultivation. Her work in photoplays is a pleasure both to herself and her spectators. "The Girl at the Brook" is a forthcoming Essanay release in which she is being featured.

Dolores Cassinelli.

RUTH STONEHOUSE is a wonderfully interesting little actress. Though not yet twenty years old, she plays leads and does it so well that you are anxious to see her again. The "Colorado Girl," Miss Ruth is called because she lived in Victor, Colorado, where her father is an expert in mining operations. The remarkable grace of Miss Ruth is due to her being a dancer —a professional, at that—her ability in this art makes her adept in many roles for which, otherwise, she would not be eligible. It is a pleasure to see Miss Stonehouse in films and a pleasure, equally great, to meet her out of them. She is vivacious, interesting and pretty and is considered one of the best leading women in photoplays today. "Requited Love" is an Essanay release in which Miss Ruth will interpret, in dancing, "Mendelssohn's Spring Song," "Vision of Salome" and the waltz from "Il Trovatore."

Ruth Stonehouse.

BRYANT WASHBURN is a "heavy" in the Essanay eastern company; he is likewise "heavy" in popularity both in and out of films, even though he does portray the bad man in the plot, and that in a manner that would intimidate his own best friends. But that's just in films; out of them, he is a most docile and pleasant sort of person, guaranteed to return kindness with interest and to be a perfectly peaceable citizen, generally. This is Washburn's second year with Essanay and his work has been of a variety and quality to merit praise. Previously he had much experience on the legitimate stage, having played several seasons with George Fawcett, with Miss Percy Haswell in stock in Toronto and starred for a season in "The Wolf," besides being associated with a number of other successful productions. "The End of the Feud," "Chains" and "The Voice of Conscience" are late scores of his.

Bryant Washburn.

Patents' Company Answers U. S. Suit

In the suit of the United States government against the Motion Picture Patents' Company, answers were filed by the company December 10, in Philadelphia, with the judges of the Federal District Court for Eastern Pennsylvania. The suit is based on the Sherman anti-trust law, charging the Patents company and a number of other defendants with monopoly in restraint of trade. A dissolution is being sought by the government.

The answers give complete information regarding the factors in control of the motion-picture business, which has developed into a monster industry. Before and since 1908, the information covers the entire range of the business.

The Patents' Company claims in its reply, that the so-called "motion-picture trust" has brought the motion-picture industry up to its present high rating; that it made of it an art and educational force in contrast to the nuisance and factor for evil it promised to become. It declared the investment in the business to be $100,000,000.

It denied that it committed the illegal acts as charged by the government, explaining that prior to the organization of the picture producers, there existed no lawful art or trade in the business and that, therefore, the respondent could not agree or combine in restraint of trade.

Rather, it contended, it established the lawful trade there is in pictures and now the organization is necessary to the very lawful existence of the motion-picture art.

Embodied in the answer is a history of the litigation, dating with the patent infringement suits brought by the Edison company, and stating that before the organization of the Patents' Company, there was not a concern or individual in the United States able to do a lawful business in the picture art as the various companies each owned a respective patent and there was a constant infringement upon patents and a consequent series of suits. The result was that manufacturers were afraid to invest and exhibitors were afraid to erect theaters.

That was the reason, it is stated, for the importation of foreign films, many of which were indecent and nearly all were partly worn. The morals and the eyes of the people suffered from the flickering pictures. It was then that the Patents' Company was organized in order to terminate the expensive litigation and to get the business under an efficient head. That was in 1908, and the Patents' Company pointed out that since then everything for the betterment of the industry and its conduct has been done, even to censors being appointed to serve without salaries.

The company claims that if the suit of the government is a successful one, the industry will again be cast into its former unhealthful condition and the more than 10,000 theaters in the country will not be able, lawfully, to do business. In conclusion, the company denies its illegality and asks that the bill be dismissed.

Two central groups of answers have been filed, one headed by the Motion Picture Patents' Company, and the other by the General Film Company. In all, they comprise nine separate answers.

The Patents' Company answer is the larger, containing many charts and half-tones explanatory of the patents in its control. It was filed by Attorneys David J. Myers, George R. Willis, Luther M. R. Willis and Frederick R. Williams, solicitors for the respondent, as well as for the Biograph Company, the Armat Moving Picture Company, Jeremiah J. Kennedy and Harry N. Marvin. Besides the answers for the Motion Picture Patents' Company these attorneys filed separate answers for each of four other defendants above named.

The General Film Company and Thomas A. Edison (Inc.) made the more complete answers in the second group. They were filed by Caldwell, Messlish & Reed of New York and John G. Johnson, J. H. Caldwell and Charles H. Zug, of counsel. Other well-known lawyers are associated in the case, but their names do not appear on the answers. This group of attorneys filed answers for Thomas A. Edison (Inc.), Frank L. Dyer and William Pelzer; Pathe Freres, Kalem Company, Gaston Melies, J. A. Berst and Samuel Long, and also for the Melies Manufacturing Company.

In each instance, the defendant replies with such admissions in the government's suit as were correct and then makes denial of such charges as will be contested when the case comes up. Every answer denies the government's contention of violation of the Sherman law.

The Patents' Company answer will be rated as a classic in the annals of both the law and motion pictures. It comprises a volume of 175 printed pages. The first portion begins with a history of the picture art and continues through five other sections which deal with litigation between patents prior to their assignment to the Patents' Company; the commercial condition of the art before 1908; with licenses prior to the organization of the respondent; with the Patents' Company and its patents after the organization and the sixth section with reasons for the formation of the General Film Company and its acts as licensee.

These six sections are adopted in their entirety by the General Film Company, Thomas A. Edison (Inc.), Pathe Freres, Kalem Company, Gaston Melies, J. A. Berst and Samuel Long.

Two Thanhouser Road Companies

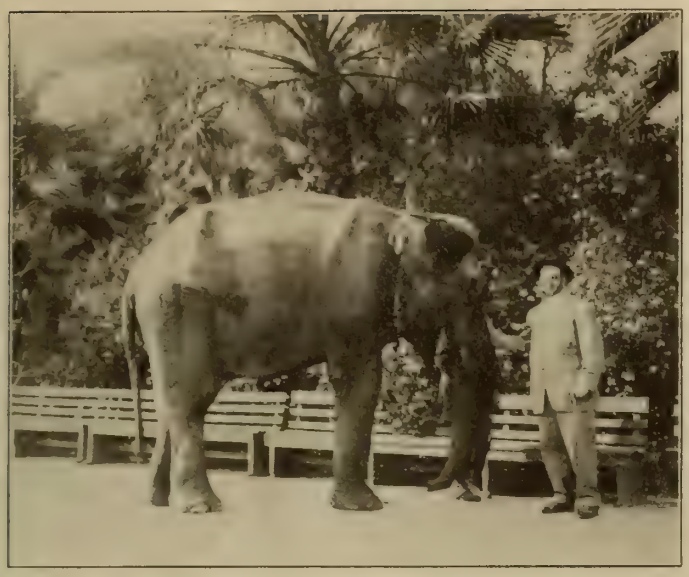
Sunday, December 14, the Thanhouser California stock company left New York for Los Angeles. It consisted of Flo La Badie, Jean Darnell, William Russell, William Garwood, Fred Vroom and Riley Chamberlin, under the direction of Lucius Henderson.

The Thanhouser middle western company, directed by T. N. Heffron, and headed by Harry Benham, Ethyle Cooke Benham, Mignon Anderson, Leland Benham and Frank Urson, leave the home studio at New Rochelle Thursday, January 2. Their first stop is Chicago. Arthur Cadwell is photographer for the "Californias"—as the name goes at the Thanhouser studio, and William Zollinger for the "Middle westerns."

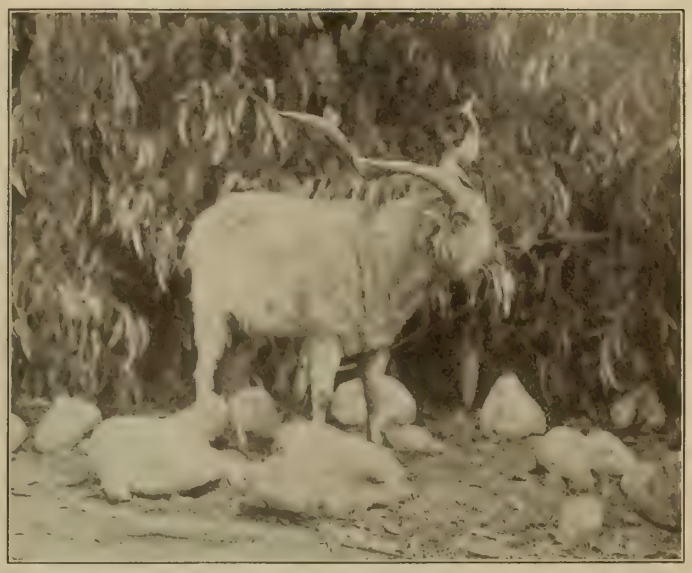
The principals in the home stock company will be Margaret Snow, James Cruze, David Thompson, Eugene Moore, Justus D. Barnes, Victory Bateman, Lila Chester, the Thanhouser Kid and Kidlet, under Lawrence Marston's direction. This organization is now working on an adaptation of "The Dove in the Eagle's Nest," from the pen of Mrs. Yonge. It will be in two reels, released Tuesday, Jnauary 28.

Films to Teach Kindness to Animals

The introduction of moving pictures and lantern slides into the public schools as a means of teaching Minneapolis public school children to be kind to dumb animals is the plan of the Humane society. Secretary W. W. Bradley received a large number of slides from New York City, dealing with humane work in the care of animals, and these he arranged in preparation for a series of talks that will eventually be given in every public school building in the city before the year is over.



That Selig "Toddles."



Here's Where You Get Selig's Goat.

On the Outside Looking In

By the Goat Man

THE promoter keeps fussing around. I'm beginning to think more of him. He doesn't breeze in with the old-fashioned gusto that there's nothing to it. He talks with conservatism. He knows that he can get in if he has umpty-steen million dollars and while he has a lot of mildewed coin in his kick he prefers to follow the short route to quick success. The thought that it is dead easy has been relegated to the rear. The promoter of today has gone into the whole scheme. He knows what he is talking about. He has been through the theory and has studied the practice. There is larger hope all the time that outside money will find foot-hold in the m. p. game, and when it comes it will come in chunks.

* * *

I have always had a big, warm spot in my heart for the scenario author. He has had rough sledding. He has been gouged as hard as anybody and has had license to holler his head off. But he is coming into his own. The strife of manufacturers under the pressure of a larger output—a bigger program—is beginning to tell. I've seen some impossible plots of late. They were merely excuses for a thousand feet. There was no hope for the producer, the actor, the scenic artist, the exchange or the exhibitor. Impossible film and nothing else. There can be but one answer—that more money be spent for the scenario. More money will appeal to new talent and new talent will deliver new ideas.

* * *

If you are an exchange man, resolve that you will refuse to rent a scratched and dirty film. Every time you send one out you put a spike in the ointment. There is no need for it. You can't hope to reach new customers for the nickel theater with dirty films.

Scates (Chicago), Bond (Chicago), Beadell (Chicago), Cummick (Los Angeles), Libeau (Oklahoma), Pearsons (Omaha), Fredick (Butte), Hudson (Butte). Others present at the meeting, but not in the picture, were, Messrs. Dyer, Long, Berst, Preller, Hodkinson, Ramsdell, Kane, Stevens, Aiken, Von Runkel, Steele, Lieber and Gilligham.

red for the red-head. It looks to me like both the Hornes were playing the new color to win.

* * *

"Get an interview with Kennedy," the *Telegraph* man said; "I've got to hear from Jerry, about this news that spread. So hurry off you scribblers and beard him in his den and when you get his answer, I'll read it over then." They scampered o'er to Brooklyn town where Jerry sleeps at night; they loafed on lower Broadway until they were a sight; they tried him on the Avenue at every other door and raced around like mad men a-letting out their roar. At last they got him cornered when their faith was nearly run. They asked him "How about it, how was the mischief done?" He stared 'em out of countenance—there was no need to try. He didn't say "Good morning," but they heard him say "Good Bye!"

* * *

Save your golf bags—they will make dandy carrying cases for home projector reels.

* * *

A film-maker went broke in Rochester, according to our Sunday contempt. Liabilities $1,400—assets, minus the clothes on his back, $20. I wouldn't say a word about this if the aforesaid Sunday contempt hadn't taken the matter seriously. Why should I have to point out the difference between an Eastman employee and a film manufacturer with assets of only $20?

* * *

There was a new kind of rally in Chicago last week. If it wasn't the custom of the La Salle Hotel to bulletin the events, I might not have known. There were no brass bands and banners. It wasn't that sort. Regular pussy-footed procession of General Film Company's western managers to meet the president and treasurer and chairman of the broad of directors who had come on from New York. The meeting was in the nature of those meetings which have become popular with other big corporations—a get-together, booster proposition, where you find out how the other fellow makes a better showing than you do. No details have leaked. The press was not invited because it had no place in the transactions. There was a noonday luncheon and a nighttime banquet at five the plate—no restrictions on spending your own as far as you liked. I take pleasure in knowing that the business is shaking down. It begins to smack of industrialism of high order. Nothing but good can come from such meetings—good for everybody.

* * *

I read it somewhere, that Herbert Corey is turning out some good magazine fiction. I took the trouble to look up some of it and there's no mistake about it—not the slightest. Fiction in a magazine is not unlike fiction anywhere you may find it. Corey has found that his imagination has no limits. If you don't believe it, ask the Little Corporal of Filmdom.

* * *

My compliments to J. D. Williams and W. H. Bell, of the antipodes, who like MOTOGRAPHY so well that they steal from it, style, text and illustrations.

* * *

What's this the sign of? My Billiken—god of things as they ought to be—had four toes of his left foot knocked off in the Christmas rush. Maybe I'll kiss the missus. It may mean more goat luck!

* * *

Speaking of goats, there's some class to that newest one of Selig's, don't you think? Beautiful pair of corkscrews, those. Neff ought to have 'em to pull the stoppers out of his loving cups.

* * *

Resolve this, oh you exhibitor man—that you will not show more than three reels for a nickel or four for

The Selig Animal Farm—Some of the Farm Hands.

a dime. You know, as well as I, that two reels for five is the biggest show in the world for the price.

* * *

You may wish you had a film exchange, a hundred on the score; or else a big producing plant—six reels a week or more; a chain or two of theaters a-holding out the pack, with not a wrinkle in your brow—your money's coming back. I'd call them idle wishes, for I wouldn't give a shuck if I had Joe Engle's beauty and a chunk of Laemmle luck.

* * *

My old cosmopolitan friend Kurt Waldemar Linn

The Royal Family at Their Country Estate.

This Is Not a Hog—It's Selig's Tapir.

has assumed the role of the open market. After touring all over the U. S. A., visiting exchange men and exhibitors, he departed last spring for a sojourn in Europe. While he was on the continent he received his mail at the old homestead, but he did some traveling on his own account, visiting the scenes of his boyhood, examining the sword scars of his old college chums and dropping in now and then at a film rental agency and a picture theater. It would seem that he was developing an idea that had meaning for film correction insofar as North America is concerned. Linn believes he knows what foreign films will go in this country. He is prepared to back his judgment by showing you. He has lived over here long enough to realize that the show-me proposition is the only one that has half a chance.

* * *

Thomas Bedding slipped off the tripod at 1600 Broadway on the 21st of November and I've just found it out. That puts the U. W. on Joe Brandt and his Helping Hudson. Where is Thomas Bedding now? Will somebody please put another log on the fire?

* * *

Every operator's booth ought to have one—a picture of Frank Richardson. I tell you, Grace, its a shame to limit a de luxe edition to a single thou. And by the way, if you want it raw, get it from *Movie Woild*. You can get it good, too, and goodness knows what you can't get.

And to think that Babe Farnham has been dragged out of his old berth to accept a new one, and right in the middle of the night. Babe never liked riding over the wheels. I hope he will be real nice to the chocolate who manipulates the lift at 133 W. 44. That's the guy who put the 'el in elevators!

* * *

I see that the Esmeralda Sisters get into a specialty for the Majestic Jack-in-the-Box. I think it was ten years ago right now when they were doing a specialty for the Illinois Electric Specialty Company and I'm wondering if they might recall it.

* * *

Hoogland says: "The season's blessings on the Goat, Goatess and little Goatees." To include all this, I'll have to adopt some near kin. But it was mighty kind of "Hoog," don't you think?

* * *

Where will you be this time next year, providing, of course, that you stick around and escape the undertaker? You haven't given it a thought? Well, this is the glad season of the year to do some thinking. You will stop long enough to take stock, during the remaining days of the year. This much is sure. There will be film factories and film exchanges and film exhibitors—more of them next year than there are now. There will be some more good men come in and some more men, not so good, who will go out. Some of the latter are on

A Diamond-S Eland, or Gazelle, or Something.

There's that Eland Again.

the threshold this minute. There will be big news from Gotham in a very little while. There will be big news from the big camps about Los Angeles right soon. The changes of 1912 will be tame as compared with 1913, but the game will go on. This has been a tremendously big year, full of action, but it will prove tame when we are looking back at the year to come.

* * *

And now, when it is all over but the shouting, I'm thankful to my friends in the motion-picture business. They are rallying around the journal which has proven that it can give and take, and tote fair. I wish you abundant joy and prosperity for the New Year and the heartiest Kris Kringle jingle of a Merry Christmas.

Advocating Industrial Pictures

The whole world will stand still for a few minutes, if necessary, in order to watch human life in action, such creatures of habit are we, says the *Journal of Electricity, Power and Gas*. Perhaps never before in the ages of evolution has so potent an influence for education of the masses arisen in so short a time as has that of the moving-picture machine. Life—throbbing life—confronts us on every hand in our daily existence. Hence it is not to be considered in the category of a miracle that the animated panoramic picture of this throbbing life should hold us all spellbound in our hours of leisure or relaxation from keen business tension.

At the Seattle convention of the National Electric Light Association last June, the paper which held all spellbound was that which told by means of moving pictures the story of the Northern Colorado Power Company and its efforts to spread broadcast the economic results to be attained by both power company and farmer in the application of electrical energy for the pumping of water upon the arid lands in their territory.

The story told by the speaker was simple and of but a few words. The pictures themselves gave the finger marks of the amateur in their production, and yet the consensus of opinion of those present was that the evening passed in seeing the trials and tribulations of John Redman was the most enjoyable and instructive spent during the convention. Why was this? Because as one looked, he saw pictured human endeavor with its trials, its disappointments and its forebodings, finally crowned with success—a story so human, so realistic, so sympathetic and entuned with the daily struggles of all the listeners, it could not help but go home to the hearts of the hearers. Added to this was the life and action of John Redman and the other characters displayed vividly before the mental vision of all.

No one could see an exhibit such as this without taking to heart the potent influence the moving-picture machine can be made to have in the advertising of the electrical industry. So new and so constantly changing are the applications of electrical energy, the public is always interested. Especially is this true of our rural communities. Here in the rural life of the arid sections of the West is to be eventually found the market for gigantic powers. The commercial departments of our great Western power companies would do well to exert considerable effort in the gathering of moving-picture data illustrative of matter of human interest to those before whom they wish to make a dsiplay. If now the subject matter is of this human interest to the audience, the life and action brought out by the moving picture can not fail to hold every observer spellbound. Incidentally, too, in a truly painless manner the speaker will be able to carry home to the listener the great benefits to be derived by taking advantage of any use and opportunity offered by the proper application of electrical energy.

Let us, then, take in hand every weapon of publicity and by no means the least among them will be found the story as told by the moving-picture machine.

Majestic's Christmas Story

"Jack in the Box" is Majestic's Christmas offering. A poor little waif visits the Christmas window of a large department store every day and with the aid of her wonderful child's imagination plays with the toys as if they were in her actual possession. One day she discovers that her favorite "Jack-in-the-Box" and chocolate soldier, along with several of their toy companions, have disappeared from the window. Heart-broken, she wanders up Fifth avenue and looks in the window of a large mansion. There she sees her toys grouped around the Christmas tree of a wealthy little girl. She falls asleep on the steps and the little rich child, unknown to her parents, finds her and takes her to bed in her own room. The

"Jack in the Box," a Majestic of December 22.

children fall asleep in each others' arms and have a wonderful dream. The toys, led by Jack-in-the-box take the little girls to toyland and introduce them to Santa Claus. They watch Santa make his pretty toys. The dollies and tin soldiers dance for them and they are very much shocked when the mother of the rich child wakes them up and asks who the little waif is. Her daughter announces that she is a little girl that she has adopted and insists upon her sharing all her Christmas presents. The children have a happy time playing with the toys but can't quite understand why Jack-in-the-box refuses to talk to them as he did in their marvelous journey to toyland.

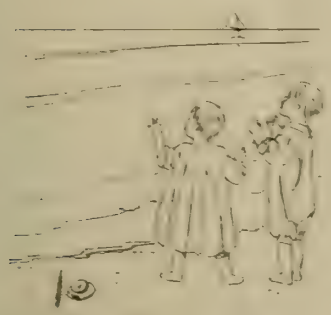
Janesville Churches Fight Sunday Shows

With the arrest of Peter L. Myers, proprietor of the Myers theater, and Earle M. Brown, who controls the moving picture and vaudeville theaters of the city, charged with operating on Sunday, the first step in the church campaign to close Janesville, Wis., up tight, has begun. Both pleaded not guilty and will pay their fines of $8 and continue to give Sunday performances. This step was taken by a retired farmer, S. M. Jacobs. It was against the advice of the committee of fifteen, named by citizens some weeks ago, which is advising the city commission relative to changes in present laws.

A Flickerless Motion Picture

By Edwin L. Barker*

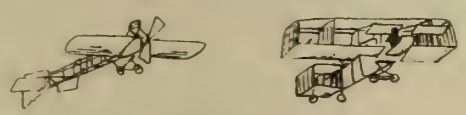
VANOSCOPY—a brand new word, just coined. Anchor it well in the mind. One of these days it will find its way into our dictionaries. Up to now we have had no such word, for the very good reason that up to now we have had no use for it. It stands for continuous projection — the continuous projection of a motion-picture film. Long has this been a dream. Now it is a reality. Dreams do come true—sometimes.



A Picture Without a Flicker.

The other day I journeyed over the river, out into Chicago's big west side. And there, upstairs, I saw for the first time continuous projection — a flickerless motion picture.

I wonder if you fully understand just what this means. To one who always has lived beside the muddy Missouri, a true-to-nature color picture of Lake Michigan seems unreal. And to one who always has lived near Lake Michigan, a natural picture of an Italian lake—Lake Garda, for instance—appears overdone. This was the sensation which I experienced when first I gazed upon this flickerless motion picture. For a minute or two I could not believe that I was seeing a motion picture. I missed something. I missed the flicker.



Great Obstacles Have Been Overcome.

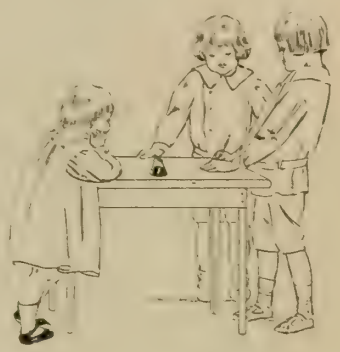
To do away with flicker has been the great motion-picture problem. This problem has been growing less and less, for which all are truly thankful. And the other day I saw the problem hang its head, and slink away, robbed of all excuse for appearance.

He Has Taken the "Wiggle-Waggle" Out of the Picture.

Oculists and nerve specialists have talked and written on the evil effects of flicker in motion pictures. A good many people, who should be patrons of the picture theaters, have become stay-aways because they fear the flicker. Now all this promises to be changed. And so, with a really flickerless projection machine, it seems to me, the motion-picture business is taking on a fresh lease of life.

This new machine is called the Vanoscope. Again history has repeated itself. Many inventions, which today are making this old world a better place in which to work, are the creations of men who were looking on from the outside—men who were not in the "game." This is true of the Vanoscope. The inventors had their hearts set upon building a perfect aeroplane. They turned out a motion-picture machine instead.

What is it like, and how does it get rid of the flicker? First, let me say that the Vanoscope is unlike any motion-picture machine you ever have seen. It is as full of interesting points as a porcupine, most of which I shall try to mention. I have put the flicker first because that seems to me to be of first importance.



"Here's What I Saw."

In the Vanoscope there is no shutter—no intermittent movement. The film is not pulled or jerked into place. Thus, it is plain, there is no dark period between pictures. The light is full upon the screen all the time. Instead of intermittent projection, with the Vanoscope we have continuous projection. This is done with revolving mirrors, or mirrors which revolve and oscillate in the plain of reflection. The pictures are dissolved, one into the other.

The machine is small and compact; in fact, it could be carried in a space not larger than an average size traveling bag. The lamp house, with condenser, is directly over the film, and not back of it, as in other machines. The Vanoscope uses only about half the light ordinarily used in projection, and with it the days of broken condensers are at an end. The light is directed through the film and onto the mirrors, which are directly underneath. As the film passes between the light and the mirrors, the mirrors revolve, or rotate. There are two mirrors. The picture is caught in one mirror, which reflects it and then is projected through the lens onto the screen. In this way we are given a real continuous picture, instead of a series of snapshots. The light is never shut off, and so there can be no flicker.

Children Often Weigh Matters While Adults Guess at Them.

Instead of hot condensers, such as we are accustomed to, in the Vanoscope the condensers are never more than lukewarm. Practically all the heat is distilled from the light and is carried off. The heat and the light are separated. This focuses all the light through the condensers, and thence through the films, eliminating waste, and reduces the current consumed.

While I am on the subject of light and heat, I would like to take you for a ramble into the highways and byways of the probable future. Were it possible to-

*Mr. Barker is well known to Motography readers for his articles on educational motion pictures and his development of the extensive motographic advertising work of the International Harvester Company.

morrow to install a Vanoscope in every picture theater in America, do you know what I think would happen before 1913 grows into 1914? First off, oculists and doctors would change their talk from the bad effects to the good effects of motion pictures. This in itself would be worth much to the business. The saving in condensers would be a saving for managers; also the saving in light. Many of the regulations which now surround picture theaters would be removed. Insurance rates would be reduced, for, understand, it is impossible to fire a film with the Vanoscope. Impossible is a large word, but not too large when used in this instance. Booths would become a luxury instead of a necessity, for the Vanoscope is noiseless, as well as fireless and flickerless.

Subjects for Home Projector.

As I have before stated, there is no pulling or jerking of the film. There are no intermittent sprockets to catch the film and wear or tear it. With the Vanoscope the breaking of film is another impossibility, and the work of patching and resplicing is done away with. The film flows along continuously, like a belt, with never a particle of strain on it at any point. Scratches are reduced to a minimum, and the life of a film is almost indefinite. In the mechanism there is nothing to wear out the film, and so whether it is in use for a month or a year, it should remain in good condition.

The Vanoscope is as simple in construction as it is efficient in results. It projects both motion pictures and slides, and the pictures may be made large or small.

Before I had recovered from the sensation of having seen a perfect motion picture, the inventors ushered in a second treat. And what do you suppose that was? A motion picture in natural colors. I am not sure that the Vanoscope people are anxious to have the true-to-nature color pictures talked about. But before very long they are likely to make an announcement of the color process, so why not take this opportunity to be a little ahead?

The Vanacolor process is as simple as the Vanoscope machine. It will be possible to reproduce every tint and shade with practically the same ease and expense that black and white pictures are now produced. And such pictures can be shown without any additional equipment. The color pictures are without flicker or "fringing."

There is also a little Vanoscope—a small, easily operated machine for the home and the school. There is a growing demand for just such a projection machine, and also for educational pictures which are truly educational. Only last summer a professor in one of our leading universities told me that for two years he has been carrying the money with which to buy a moving-picture machine. He is waiting for the right kind of pictures. And his is not the only name on the waiting list. The list is a long one. I know of thirty colleges that are waiting, and I do not know them all.

The inventors of the Vanoscope have also invented a motion-picture camera. This camera is expected to play a leading part in the further perfection of the motion picture.

It is plain that my trip over the river, out into Chicago's big west side the other day filled in a very large afternoon. But it was the best afternoon I have spent these many years. I have long dreamed of seeing just what I saw there. But I am afraid I have not described it very well. Trying to describe the Vanoscope seems to me like trying to describe the Grand Canyon. Each person describes only the things which impressed him most at the time. Were I to see this machine again, no doubt I should discover an entirely new set of points worthy of lengthy description.

The Vanoscope touches so many angles for the betterment of the motion-picture business—chief among which is Vanoscopy—continuous projection.

In Northern Mexico

Consul Wilbert L. Bonne says San Luis Potosi, Mexico, is the center for the distribution of motion-picture films to northern Mexico. The local branch of a Mexico City house (P. Aveline & A. Delalande) receives its supply twice a week from the capital and dispatches films daily by express to points on the northern frontier and the Pacific and Gulf coasts. The San Luis Potosi distribution also extends south to Guanajuato.

Motion-picture theaters are flourishing at the present time in spite of some interruptions in the schedules due to train delays. The larger cities support several enterprises of this kind, and there is scarcely a town of 5,000 inhabitants that does not maintain one, with daily changes of films. In the smaller towns of this district humorous subjects seem most popular, while in the city of San Luis Potosi views of artistic character are more desired. Recently films showing the progress of the Panama Canal work met with an excellent reception. Fleet and army movements are always popular. Presentations of operas and of well-known dramatic works are preferred above either melodrama or humorous sketches in this city.

The motion-picture theater occupies an important and serious part in public entertainments in the district. The Mexican is naturally given to graphic representations and novelty, and the price of admission to the motion-picture salon suits the purse of many of the people. Foreign visitors who can not speak Spanish resort to these theaters as a form of public amusement in which they can participate. Especially attractive films are announced and even reviewed in the local newspapers. The picture theaters here have not the neighborhood character they have in large American towns, but are centrally located. Traveling outfits have not succeeded in this district.

The leading motion-picture house in the city of San Luis Potosi is superior in structure and equipment to most similar enterprises in the United States and gives three "tandas" each evening, the house usually being full to its capacity of 250. The business has every appearance of being prosperous and permanent.

Use Picture Machine as Spy

A new use has been made at Ladysmith, Wis., of the moving-picture machine. Owners of a mill have installed one with automatic arrangement whereby it can be hung up in a hidden position in any room and set so as to run for any period of thirty minutes during the day or night. By its aid the superintendents of the different departments can determine how the crew has been working in their absence. Its greatest help is to detect what workmen, if any, are smuggling liquor into the building at night. Such employees are more closely watched thereafter, and eventually discharged if necessary.

"Madeline's Christmas"

Lubin's Yule Story

THE Christmas offering of Lubin is a pretty story demonstrating the virtue of forgiveness with its happiness-for-all reward. It is called "Madeline's Christmas," and tells the following story:

Hermann Von Schultz plays the first violin at the Pikes Opera House, Cincinnati. Among the ballet or extra girls there is a young French girl, Marguerite Ne Moyer; she is very beautiful, but not over proficient in the language. Her salary is small, but she dresses with excellent taste and is a favorite with the company. Her father has been dead two years, and her mother is employed as a forewoman in a department store. Marguerite has a fair voice, and the violinist takes great pleasure in instructing her when opportunity permits. Hermann is some twenty years older than the girl, but the little music lessons bring about an attachment, and the violinist finds himself deeply in love with his beautiful pupil.

Madeleine's Return. From "Madeleine's Christmas."

One night on leaving the store, Marguerite's mother is knocked down by a wagon and receives injuries from which in a few days she dies. Hermann does all in his power to comfort the girl and help her along. At last Hermann summons up courage and proposes marriage; he can then assure her of more protection. Marguerite accepts him rather joyfully. The wedding is a modest home affair and as most of the guests are theatrical folks, everybody has a good time, but on breaking up the frivolous girls poke fun at the violinist and suggest that he was rather too old to have secured so young and beautiful a girl. A year passes. Marguerite is fairly happy and Hermann passionately in love.

Then comes a baby girl and a new joy enters the home. The wife is frequently visited by her female theatrical chums, but continually reminded that she has tied herself up to a man of small quality and much too old; they describe pictures of what her life might be if she were fancy free and could be earning big money upon the stage. The poison weeds are sown, and one day Marguerite leaves her home, husband and child and goes to New York to join a local company at an excellent salary.

Five years pass and Hermann, broken-hearted, has moved to Milwaukee; and working, his only comfort is the child, little Madeline, who has grown to be a beauty. He goes to the theater every performance to play and locks the child in, placing the key in a flower pot outside of the window so that she can get it in case of emergency. It is Christmas eve, and a blizzard is raging, but Hermann must go to work. Madeline urges him to play a favorite tune on the fiddle before he leaves her. The song is one that the mother used to sing, and the violinist looks up at a lithograph picture of his wife which hangs over the fireplace. She has been gone just four years, and the tears rolls down his cheeks. Madeline wants to know if Santa Claus will come tonight, and the father tells her yes, he will come, but she must not look for him, as he does not wish to be seen.

A Scene from Lubin's "Madeleine's Christmas."

He puts the child to bed, and leaving the house, puts the key in the flower pot. Presently a knock is heard at the door. Madeline, who is in bed in the next room, thinks that it is Santa Claus and calls out that the key is in the flower pot. A woman appears at the window. She

gets the key and lets herself in. It is the mother, bedraggled and starving. The child cannot resist the temptation to peek in and see Santa Claus. She sees the woman and tells her she has no right to come into the house. The mother pleads for protection, as the storm will kill her if she is driven out. Madeline tells her that her father will not allow any woman in the house, but after much persuasion tells the woman she may go upstairs and sleep in the attic. The mother embraces the child, who again goes to bed.

The storm is so bad that the theater cannot open, and Hermann returns. Madeline has again replaced the key in the flower pot, and the violinist comes in and sits down in front of the fire. Madeline creeps in and again persuades him to play the favorite tune. The mother upstairs hears the violin, and commences to sing the refrain. Hermann hears it and demands of the child who is upstairs. The child replies that it is a woman. Hermann recognizes the voice. He rushes in and drags his long lost wife out, covering her with kisses. She has returned, as he knew she would. The mother embraces the child frantically, then puts her to bed again.

The scene closes as Hermann tells Marguerite to go and get one of the child's stockings. They nail it on the mantel piece and Hermann goes to the bureau drawer and gets a lot of toys that he has laid in. The two fill the stocking, then sit down by the fire as Hermann loads up his pipe and takes his recreant wife in his arms.

The story is well acted, and has for its making a cast comprising Guy D'Ennery as Hermann Von Schultz, Ormi Hawley as Marguerite Ne Moyer, little Henrietta O'Beck as Madeline, Mary Smith as Mrs. Ne Moyer, while James Humphreys makes a typical Santa Claus.

Burro Eats Last Will and Testament

There were dire threats, much hullaballoo and things like that out in Hope Ranch when one of those good for nothing burros deliberately ate up a will to valuable property. At the same time a villain's carefully laid plans were foiled. It was just a scene in a "Flying A" picture made by the American company. A forged will was an important document and it was necessary to the play that this be destroyed in some unique manner. Of course, Jack Richardson was the villain in the play, as usual.

One of the company's live "props" is a burro, and it occurred to Director Dwan that these animals eat most anything, and so why not a will? The burro was first given a bit of education. A few pieces of paper were buttered and the burro thoroughly enjoyed them. The paper, representing the will, was then given a coat of butter and Richardson placed it in his hip pocket and Operator Overbaugh commenced to turn the crank that ground out sixteen pictures to the second. True to its training, the burro stepped up behind Richardson and nipped the paper from the pocket and in view of the camera, and consumed it, Richardson turning around to see the final morsel disappear.

All Are Enraptured with Billy's Music. From the Eclipse Comedy, "Kidnapping the Fiddler."

A Christmas Imp and a Bison Feature

Universal Subjects of Merit

THE OLD Folks' Christmas" is a Yule-tide film by the Imp company, its date of release being December 23. It is the tale of a Christmas "Good Fellow."

It was the day before Christmas. Little Helen's brother Bobby had broken the head of her old bisque doll. She started to cry but when he told her how sorry he was the forgiving little girl leaned over and kissed him and asked her daddy if he wouldn't get her a new doll for Christmas. But daddy had just been laid off and there was no money, so she patted his cheek and told him not to worry, for she would pray to God, like the little girl in the story that daddy had just read to them.

"The Old Folks' Christmas."

That night the little girl could not sleep, so she decided to write God a letter. Climbing out of bed, she found a pencil and piece of paper and commenced to write. The letter finished, and not having a stamp, with the assistance of Bobby, she raised the window and with a prayer tossed the letter out. The slamming of the window startled the mother and father, and they came rushing into the room. Daddy asked for an explanation. Bobby was about to tell, but the little girl warned him to silence, so the children were kissed and again put to bed.

The "Old Folks" were a very wealthy couple, who had lost their first and only child. The old lady had come across a baby's stocking, the old man had picked up the baby's shoe. They met in the library, each saw what the other held, her eyes filled with tears, his shoulders shook with a sob. He took her in his arms, the old lips met in a kiss. Then he took her out in the bracing air so they both could forget. It was cold and windy. A piece of paper blew on his chest. He was about to throw it away when writing on it caught his eye. He rubbed a tear away as he read. It was the little girl's note to "God," and they decided they would make a child happy on Christmas.

That night the Bradley's were surprised by a knock at the door, for no one ever called but the landlord. Bradley answered the knock; the Old Folks came in, followed by men carrying a Christmas tree and toys and food. The finding of the note was explained and preparations were made for the dressing of the tree. A few hours later the little girl was awakened by the beating of a drum. Hopping out of bed, she ran to the door and peeping through the key hole, she jumped with a cry to her brother. "Oh, Bobby, Bobby, God has come." Pulling him out of bed, she dragged him into the other room. She looked over the presents and not seeing anything for daddy or mother, she asked the one she thought was "God" about it. He lifted her and kissed her, and as he put her down handed her a roll of bills. She kneeled to pray, and looked up, found her brother standing. Catching him by the coat, she pulled him to his knees. Bradley attempted to thank the old folks, but the old man pulled off the Santa wig, took the old lady in his arms and passed through the doorway. So when little Helen asked her daddy "If that was God and his wife?" the father could only take her in his arms and smother her with kisses.

"The Heroine of the Plains."

"The Heroine of the Plains," a Bison release of the day before Christmas, tells in two reels the story of a trapper's sweetheart who is captured by the Indians. At the outset Joe, a young trapper, is nearly caught in the oncoming swirl of flames from a prairie fire. He further imperils his chances by rescuing an Indian squaw, Blue Bird. He carries her to safety. In her gratitude she gives him her most treasured possession, a long bead necklace, fastened by a barbaric ornament. Joe hurries to the settlement. He gives the necklace of beads to his sweetheart, Elizabeth.

The trappers leave to inspect the traps, and Elizabeth takes two children with her and goes berry picking. They are captured by Indians and taken to their camp.

Scene from 101 Bison, "The Heroine of the Plains."

On the way Elizabeth, as she is hurried along the path, breaks the necklace and drops a bead now and again, to blaze the trail. When they arrive at the camp, the captives are turned over to Blue Bird, who sees the barbaric clasp she gave her pale face rescuer. She learns that Elizabeth loves Joe, and promises to help her when the opportunity arrives.

Joe and the trappers return to the settlement and Joe rides off to the fort to get assistance. In the meantime, the Indians have ridden near the fort to steal some steers. The sentry on guard sees a hog rooting for nuts, and as he passes it the hog, which is an Indian in a skin, springs up and kills him. The Indians run on and drive off the steers.

Colonel Graham rides out with his troopers to find Elizabeth, to recapture the steers, and punish the Indians. Joe accompanies them. He finds a bead and recognizes it. They follow the trail. An Indian scout sees them coming and the Indians take the war trail. A battle ensues, during which several braves enter the tepee where Elizabeth is guarded and drag her out, tie her on the horns of a steer and start it down the mountain side. Blue Bird follows, secures a horse and rides out to rescue Elizabeth. She shoots the steer and releases Elizabeth, and they ride back to the fort just after the cavalry has returned, and find Joe distracted. Blue Bird is happy to have paid her debt of gratitude, and they swear eternal friendship.

Coloma, Michigan, is to have a fine new theater building. It will be built by Dr. W. A. Baker, who with a gang of men is now clearing away the ruins and debris of the recent fire preparatory to erecting the new amusement place. The building will be occupied by Edward Mergen, who will re-open his moving picture show as soon as the structure is completed.

Pathe Releases Films of Interest

"The Christmas Miracle" will be Pathe's official "Merry Christmas" greeting to film lovers and will be extended them on December twenty-fourth. It will depict the true spirit of the season in the offering of a widow's charity to the Giver of all gifts, in the guise of a beggar. The peace and quiet happiness of the season are sympathetically sensed in the transformation of the beggar and his accompanying blessing.

But as the embodiment of daring and spectacular acting "The Last Performance" is Pathe's latest special offering, a two-reel feature. December twentieth was its release date and its tale is an interest-holding one of a royal scion whose love for a beautiful circus rider is so strong that it causes him to give up his beautiful home for the life and ventures of a circus actor. His success is so great that it inspires an insane jealousy in the heart of the girl for whom the royal personage had renounced his inheritance. The diabolical return of the girl is witnessed in the royal rider's plunge to death from an aerial platform, which he mounted on a spirited horse amid the crackle and flare of wonderful fireworks.

Of especial educational value is the Pathe Weekly, reel number fifty-two. Besides showing the call upon the president of the Congress of Governors, in session at Richmond, Va., the reading of the declaration of peace to the Tripoli populace and the launching of the Hudson River day line steamer Washington Irving, at Philadelphia, Pa., which event was attended by fifty red-haired girls from the Washington Irving high school of New York, there is an interesting series of Balkan war scenes, depicting incidents at Tabanovce, Vasjo, Skja and Constantinople, Turkey, and Vranje, Servia. "French Naval Maneuvers," "The Bear Trap," "The Beach Combers" and "Dynamited Love" are all good Pathe releases for latter December.

A Diamond-S Potpourri

Interesting Items from Selig's

THE Mullens' prospect for a merry Christmas was so slim that it was not even visible to Mike Mullens and his wife as they sat in their foodless, fireless kitchen with their two children cuddling under ragged bed-clothes to keep warm. To make matters more hopeless, the janitor entered with an order from the landlord to eject the Mullens for non-payment of rent and the very blackness of despair settled down upon the helpless little family.

"A Counterfeit Santa Claus."

Something had to be done, and Mike Mullens determined to make a last effort in the way of its doing. His resolute expression as he pulled his cap down over his head made his wife entreat him to do nothing dishonest, and he went out into the cold of a Christmas eve with not an idea of where he could obtain help.

He decided to try again for work and petitioned the owner of a grocery store, the manager of an express office, and a bartender, but was ordered roughly out of each place. There seem to be work a'plenty for others, but not for him. Then he tried begging, but no one dropped anything into the extended cap and finally a policeman appeared and ordered the beggar to move on. He explained his need to the officer, but was threatened with arrest, so shambled off.

He stopped to meditate in front of a rich looking home and as he gazed at it, the resolve to rob was fixed in his brain and he gained an entrance into the library, where but a short time previous, two little children had happily hung up their stockings, and later, after they had been tucked into bed, their father and mother had placed and decorated a tree and left a Santa costume in readiness on a chair.

Santa's bag, Mike Mullens filled with silver from the buffet in the dining room, then returning, took some of the toys from the tree for his own children and was tempted to try on the Santa costume. While thus arrayed, he was surprised by two litttle pajama-clad figures who had waked and come down-stairs to try to get a glimpse of the wonderful Santa. Mullen cautioned them to be quiet and sent them back to bed. The children's father had heard the subdued voices and stationed himself with his revolver behind some draperies. As the children departed the counterfeit Santa Claus removed the gay costume, abandoned the bag, and leaving a note pinned to it, started to make a retreat when he was covered by a revolver and the command to hand over the note. He did and the man read, "My wife and children are starving and I came to rob the house, but I shall go away an innocent man and still trust in God to help them."

The Children Meet Santa Claus.

Then Mike told the whole story, and the man wrote him a check and told him to return after Christmas and he would also give him work.

It is a happy woman and two delighted little children who welcome Mike and his basket of good things to eat and some coveted toys, in the hitherto dismal little room they call home, and where now there is warmth and comfort and much thanksgiving.

That is the Selig story of "A Counterfeit Santa Claus." It is released Christmas day—the right time to release a Christmas story.

No Christmas in Sight for the Mullens.

There are other interesting Seligs in prospect. The famous Selig child actress, "Baby" Lillian Wade, and Sir Thomas Lipton, the world-renown yachtsman, joined forces last month and did a "turn" together which was duly recorded on a Selig film.

Sir Thomas is an enthusiastic admirer of moving pictures, and proved his devotion to the art by consenting to play a role in a Selig photoplay in which Baby Lillian appears. A toy yacht figures in the story, and Sir Thomas is seen teaching the children to sail it. The rugged, stalwart Irish lord, 6 feet 3 inches in his stocking feet (he's not in his stocking feet in the picture, though) and dainty, blonde little four-year-old Lillian, form a most fascinating contrast as they romp together before the camera on one of the most beautiful lawns of Pasadena, the celebrated "millionaires' suburb" of Los Angeles.

The great international yachtsman is an actor of real ability. When Director Parker, zealous to conserve his lordship's valuable time and inconvenience him as little as possible, prepared to take the first scene after only a verbal rehearsal of the action, Sir Thomas raised a protesting hand. With a delightful touch of Irish brogue, which it is impossible to do justice to on the printed page, he said: "Now then, let's take things easy. I believe that anything that's worth doing at all, is worth doing right. I want you to rehearse me several times on this scene before you start the crank." And forthwith Sir Thomas began to practice his entrance on the greensward "stage" and his initial meeting with the little sweetheart of the story.

This adds one more scoop to the progressive house of Selig, as this is the first time Sir Thomas has consented to be photographed by the motion-picture camera.

No release date has yet been set on this feature.

"Baby" Lillian Wade, whose portrait graces our cover, is one of the most winsome and promising juvenile actresses who ever performed before the motion-picture camera. She is rather small for her age—four years—but her mentality and "feeling" for her art are developed far beyond her years. Baby Lillian is of the blue-eyed, curly-haired blonde type, is exquisitely shapely and graceful, and is literally afraid of nothing. This naturally "nervy" disposition has been carefully nurtured and developed by Grandmother Wade—in whose charge the child's acting career has been ever since she first started to work—by impressing her with perfect confidence in the director and the members of the company with whom she may be working in a scene. As a result, the little four-year-old wonder will carry a part through a wild animal scene without the least self-consciousness, or allow the leading man to leap from a ship's deck into the sea with her in his arms, or be picked up by a careering horseback rider, and show that she is enjoying every minute of the exciting scene.

This remarkable child-actress was born in Denver, Colo., but has spent half of her short four years in Los Angeles, where she is a regular member of the Selig Pacific Coast branch. She made her debut before the camera when two years old, in the Selig production "One of Nature's Noblemen," and has been a "Selig girl" ever since.

A great future has been predicted for the child by theatrical people competent to judge stage talent. She is also remarkable musical. She is the daughter of J. S. and Hulda C. Wade of Los Angeles, but Grandmother Wade, who comes from a long line of professional people, has taken Lillian's education in hand, and is always on the "side lines" in any scene which includes the little one. Lillian has a very attractive brother only a year older than herself—Frankie—who also figures in many of the Selig productions.

The sensational crux of Selig's thrilling railroad drama "The False Order," which will be released January 9, 1913, shows a realistic head-on collision between two giant locomotives. This effect heavily discounts any stage device ever materialized to thrill an audience. In order to secure this one scene the company sent a company of competent players and several camera men to Kalamazoo, Mich., last fall where the collision was staged after enormous cost and weeks of preparation. The story deals with the romance of an engineer. William Stowell and Winnifred Greenwood play the principal roles. Oscar Eagle made the production.

By far the greatest feature of its kind yet produced by the Selig company is the new two reel wild animal subject just completed. Those who witnessed the initial exhibition of this thriller at the Selig vaults recently are unanimous in their praise. The picture has not been booked as yet and the company will set no date at present, although it is supposed that the jungle masterpiece will be released sometime this winter.

The first of a series of war dramas, "A Loyal Deserter," which was produced recently by the Chicago branch of the Selig company, will be released January 1.

Investigation Follows Theater Collapse

The collapse of the roof of the Home theater at 1538-42 Milwaukee avenue, Chicago, has led to a rigid investigation of the buildings that serve as the homes of the photoplay throughout the city. The wrecking of the Home theater occurred early on Monday morning, December 9th, following a big attendance of the pictures on Sunday evening. The theater was a new one, having been opened last July. On its completion, Building Commissioner Ericsson states, the building was condemned but, by a special order from the city council, it was allowed to open. In early November and again on December 7, orders were issued for its closing, Mr. Ericsson having pronounced the roof too heavy for its supports. R. Goldstein is the owner of the now roofless theater.

Search for Son Results in Finding Double

The mother who was so confident that it was the picture of her son she saw on a motion picture screen in a Portland theater, was doomed to bitter disappointment when the orinial of the picture was found to be a drug clerk in San Francisco. The resemblance between the two men was striking and, after viewing the film several times, Mrs. Vail began another quest for her son, Gustaff Erby Vail, who has been missing since August first.

"Greater Wealth," January 2. Copyright 1912, Selig Polyscope Co.

Motography Publication Dates

Since Motography has changed its publication date from the first day of each month to every other week, there has been more or less confusion regarding the time when advertiser's copy should be in our hands. This table will supply the information:

Publication Date	Closing Date
January 4	December 30
January 18	January 13
February 1	January 27
February 15	February 10
March 1	February 24
March 15	March 10
March 29	March 24
April 12	April 7
April 26	April 21
May 10	May 5
May 24	May 19
June 7	June 2
June 21	June 16

"Where Shall We Go?" Asks Trigger

Representatives of civic and political bodies addressed a recent meeting of the Motion Picture Exhibitors' Association of Greater New York at their club rooms, 136 Third avenue. President Samuel Trigger presided and began the discussion as to the laws needed to aid in the upbuilding of the picture industry and urged the members to take the matter up with their senator or assemblyman. He stated that picture houses are barred from the neighborhood of churches and schools, and now the objection to their being near saloons is raised. Mr. Trigger asked, "Where shall we go?" and it is this question that he wants the members to put forcibly before their aldermen. Mrs. H. Chester Arthur, president of the Mothers' Protective League, and mother of twelve children, declared her belief that motion-picture houses are good places for children to patronize and pledged her support to the work of the exhibitors' league.

To Use Bobbs-Merrill Stories

William Bobbs, president of the Bobbs-Merrill Publishing Company of Indianapolis, accompanied by Mrs. Bobbs and Mrs. Ayres, wife of the owner of the largest department store in Indianapolis, were interested visitors at the Selig plant last week. The party were exceedingly enthusiastic over the methods employed behind the scenes in picturedom. In order to better understand the work they consented to take small parts in a scene then being produced.

The Selig Polyscope has formed a working arrangement with the Bobbs-Merrill Company which gives it the first choice and exclusive rights to all the works of those authors represented in the Bobbs-Merrill Company's six best sellers, for use in pictures.

Two American Companies in California

The temporary closing of the Chicago studio of the American Film Manufacturing Company means an extra California picture each week to take the place of the weekly subject heretofore made in Chicago. This is regarded as a big step forward. Perfect weather conditions means flawless, perfect photography not possible anywhere else and the new company of picked, experienced workers assures a grade of acting not to be surpassed. The new company, under the directorship of W. Wallace Reid, promises a splendid addition to the exceptional program now offered exhibitors by the American.

"Picture Car" Feature of Road

The Georgia Central Railway will adopt a course of motion-picture instructions for its employees. A private car is to be fitted up with the necessary moving-picture apparatus and is to be moved about over the system. It will be in charge of competent instructors who will organize classes and meetings at all points along the line.

The moving-picture scheme of instruction is designed particularly to reach the employees whose education is so limited as to make it impossible for them to take up the regular text books courses offered by the educational bureau. However, the plan was not decided on solely for the benefit of these employees, as it is expected to help a great many others.

Pictures showing accidents and methods of avoiding them will be a feature of the exhibition. The whole idea behind the project is to improve the efficiency of the employees, to lessen the danger of accidents and to improve the service of the road.

Mutual Withdraws from Film Supply

Saturday, December 14, the Mutual Film Corporation announced its withdrawal from the Film Supply Company. It intends to buy its supply of films according to its own rules in future. This does not, of course, necessarily indicate any change in the order of buying, but is merely an adoption of principles.

Additional names have been added to the committee which has the first international exposition of the motion-picture art, to be held in the New Grand Central Palace in New York, in charge. The new committee members are B. E. Cornell of Syracuse, R. M. Davidson, Binghamton, A. N. Wolff, Rochester, R. C. Whitton, New York City, E. M. Day, Auburn, G. F. Wright, Albany, and William Douque of Utica.

An Improved Film Rewinder

Managers and operators will be greatly interested in learning that the makers of the famous Lang rewinder are now coming forward with a new model rewinder, which will be known as the Lang No. 3 film rewinder. The makers have, ready to be mailed to any address, an advance supplement, which plainly illustrates and describes improvements unthought of by any other manfacturer in their line. Exhibitors should ask the Lang Manufacturing Company, Olean, N. Y., for its latest printed matter on this new No. 3 rewinder and other products made by that firm.

Teach Table Manners by Motion Pictures

Following its policy to utilize the motion picture machine wherever possible in its curriculum, the University of Minnesota has flashed on the chapel screen, for the benefit of its students, the use and abuse of table manners. Eight "perfect lady" students seated about a dining table observing all the rules of etiquette were shown.

Then eight "low brows" spearing the bread and reaching for the butter, darkened the screen. The steady radiators were turned on when they drank their soup.

Mayor Fitzgerald of Boston, Massachusetts, has signed a draft for $612.50 for motion pictures for the Charlestown evening high school and the South Boston, East Boston and Roxbury high school evening centers. This action is in accordance with plans for the extension of use of the school buildings.

The Status of Patent Reissue No. 12,192

Court of Appeals Decision

ON December 2 the Court of Appeals of the District of Columbia delivered its decision in the case of Chicago Film Exchange, appellant, vs. Motion Picture Patents Company. The appeal was taken from a decision of the Supreme Court of the District of Columbia granting the Motion Picture Patents Company an injunction to restrain the Chicago Film Exchange from infringing patent reissue No. 12,192 of Thomas A. Edison. The Court of Appeals has reversed the lower court and has handed down an opinion which holds that claim 2 of that patent is unpatentable and void, and that "the invention of Edison was exhausted in the construction of the camera."

Within fifteen days of the date of the decision an appeal may be taken to the United States Supreme Court, provided the case is considered to fall under the conditions limiting such an appeal. Or it is possible to bring suit under the jurisdiction of some court outside the District of Columbia, and from its decision make appeal to a higher court. The Court of Appeals of the District of Columbia, however, is the court of appeal from the decisions of the commissioner of patents, and therefore its decisions in patent cases have great weight with other courts. An abstract of the decision, as delivered by Chief Justice Seth Shepard, follows:

This is an appeal from a decree on a bill by the Motion Pictures Patents Company, a corporation of the State of New Jersey, against the Chicago Film Exchange, a corporation of the State of Illinois, doing business in the city of Washington, for the infringement of a patent to Thomas A. Edison for a photographic film, declaring claim 2 of said patent valid, its infringement by the defendant, and granting an injunction against its further infringement, together with an order of reference to take an account of damages. The pleadings are in the usual form and were not excepted to.

It appears that Thomas A. Edison on August 24, 1891, applied for a patent for a photographic camera and film, and received the same, No. 589,168, on August 31, 1897. Claims 1, 2, 3 and 4 of this were for the camera apparatus, and claims 5 and 6 covered the films used therein. Claims 5 and 6 read as follows:

"5. An unbroken transparent or translucent tapelike photographic film having thereon equidistant photographs of successive positions of an object in motion, all taken from the same point of view, such photographs being arranged in a continuous straight line sequence, unlimited in number save by the length of the film, substantially as described.

"6. An unbroken transparent or translucent tapelike photographic film provided with perforated edges and having thereon equidistant photographs of successive portions of an object in motion, all taken from the same point of view, such photographs being arranged in a continuous straight line sequence, unlimited in number save by the length of the film, substantially as described."

A suit was brought by the patentee in the United States Circuit Court for the Southern District of New York against the American Mutoscope Company for the infringement of said patent. From a decree sustaining the bill (110 *Federal*, 660) an appeal was taken to the Circuit Court of Appeals for the Second District, where the decree was reversed and the bill dismissed (114 *Federal*, 926).

The court found that Edison was not the first to devise a camera for taking negatives of objects in motion and at a rate sufficiently rapid to result in persistence of vision, but that the specific type of his apparatus was not disclosed in the prior art; that while Edison's predecessors were at work during the transition period from plates to flexible paper, and from the paper to celluloid films, they nevertheless left no new principles to be discovered and no entirely new form of machine to be invented in order to make the latest improved photographic material available for the purpose; that Edison by perfecting the first apparatus for using this film immediately met all the conditions necessary to commercial success; but that this did not entitle him to a monopoly of all camera apparatus for using the film. The conclusion was that while he had made an invention, it was not the broad one of his apparatus claims. The fifth claim, for the film, it was said, "is obviously an attempt by the patentee to obtain a monopoly of the patent of the apparatus described in the patent so that in the event it should turn out that his apparatus was not patentable, or the product could be made by apparatus not infringing his, he could nevertheless enjoy the exclusive right of making it."

Claim 6, which differed from claim 5 only by the insertion of the words "provided with perforated edges," in describing the film, was not discussed.

Compelled to accept this decree as final by the denial of a writ of certiorari, Edison applied for a reissue, dividing his application. The reissue patent for the apparatus, having four claims, was subsequently declared valid, save as to claim 4 (151 *Federal*, 767). He also received a reissue, No. 12,038, after some objections and amendments, with the two following claims:

"1. An unbroken transparent or translucent tapelike photographic film, having thereon uniform, sharply-defined photographs of successive positions of an object in motion as observed from a single point of view at rapidly recurring intervals of time, such photographs being arranged in a continuous straight-line sequence, unlimited in number, save by the length of the film, and sufficient in number to represent the movements of the object throughout an extended period of time, substantially as described.

"2. An unbroken transparent or traslucent tapelike photographic film provided with perforated edges and having thereon uniform, sharply-defined photographs of successive positions of an object in motion as observed from a single point of view at rapidly recurring intervals of time, such photographs being arranged in a continuous straight-line sequence, unlimited in number save by the length of the film, and sufficient in number to represent the movements of the object throughout an extended period of time, substantially as described."

This patent was surrendered and a reissue applied for on December 17, 1903, the applicant stating that the word "equidistant" had been inadvertently omitted as defining and explaining the word "uniform," used in the description of the photographic film in the claims of the first reissue. Reissued patent No. 12,192 was then obtained with the claims 1 and 2 as follows:

"1. An unbroken transparent or translucent tapelike photographic film, having thereon uniform, sharply-defined equidistant photographs of successive positions of an object in motion as observed from a single point of view at rapidly recurring intervals of time, such photographs being arranged in a continuous straight-line sequence, unlimited in number, save by the length of the film, and sufficient in number to represent the movements of the object throughout an extended period of time, substantially as described.

"2. An unbroken transparent or translucent tapelike photographic film provided with perforated edges and having thereon uniform, sharply-defined equidistant photographs of successive positions of an object in motion as observed from a single point of view at rapidly recurring intervals of time, such photographs being arranged in a continuous straight-line sequence, unlimited in number, save by the length of the film, and sufficient in number to represent the movements of the object throughout an extended period of time, substantially as described."

The only difference in these claims is that No. 2 contains the words "provided with perforated edges" inserted after the word "film" in the second line.

Infringement of both claims was charged in this suit, but the decree was founded on claim 2, which is the preferred one of the patent.

Following the language heretofore quoted relating to the attempt made through claim 5 of the original patent (herein above set forth), it was said by the Circuit Court of Appeals (114 *Federal*, 926):

"A claim for an article of manufacture is not invalid merely because the article is the product of a machine, whether the machine is patented or unpatented; but it is invalid unless the article is new in a patentable sense—that is, unless the original production involved invention as distinguished from ordinary mechanical skill. If it is new only in the sense that it embodies and represents superior workmanship, or is an improvement upon an old article in degree and excellence, within all authorities the claim is valid. (Hatch vs. Moffett, 15 *Federal Reporter*, 252; Worcester vs. Calhoun, 11 *Blatch* 215; Excelsior Needle Com-

pany, vs. Union Needle Company, 32 *Federal Reporter* 221; Smith vs. Nichols, 21 *Wallace* 112; Risdon Locomotive Works vs. Medart, 158 *U. S.* 79.) * * * The film was not new, and if the other characteristics of the product are not new, or are new only in the sense that they add to the article merely a superiority of finish or a greater accuracy of detail, the claim is destitute of patentable novelty."

The claims of reissue are the result of an attempt to overcome the effect of that decision. Answering an objection in the Patent Office that there was no necessity for the complete description of camera apparatus, the applicant said: "We also think it desirable that the complete apparatus should be described because the differences which distinguish applicant's film from the prior films are largely due to the features of novelty in the apparatus."

Passing by the discussion relating to the reissue and the limitations claimed to have been placed upon the claim by the proceedings in the Patent Office we come to the question whether Edison was the inventor in the sense of the patent law of the article of manufacture described in claim 2 of reissue patent No. 12,192. "A manufacture is an entity distinct from the substance of which it is composed and from the instruments or art by which it is produced." (1 *Robinson Pat., Sec.* 184.) "Articles of manufacture may be new in the commercial sense when they are not new in the sense of the patent law. New articles of commerce are not patentable as new manufactures unless it appears in a given case that the production of the new article involved the exercise of invention or discovery beyond what was necessary to construct the apparatus for its manufacture or production. Nothing short of invention or discovery will support a patent for a manufacture any more than for an art, machine or composition of matter." (Collar Company vs. Van Dusen, 23 *Wallace* 530-563.) "A patentable invention is a mental result. It must be new and shown to be of patentable utility. Everything within the dominion of conception belongs to him who conceived it. The machine, process or product is but its material reflex or embodiment. A new idea may be engrafted upon an old invention, be distinct from the conception which preceded it, and be an improvement. In such cases it is patentable. * * * But a carrying forward, or a new or more extended application of the original thought, a change only in form, proportions or degree, the substitution of equivalents, doing substantially the same thing in the same way by substantially the same means with better results, is not such invention as will sustain a patent." (Smith vs. Nichols, 21 *Wallace*, 112-118.)

Sometimes improvements in a product, owing to skill of workmanship or the perfection of machinery, consist of superiority of finish, greater accuracy of detail, and result in increased commercial value, but they do not thereby become patentable. (Smith vs. Nichols, 21 *Wallace*, 112-119; Risdon Locomotive Works vs. Medart, 158 *U. S.*, 68-81; Glue Company vs. Upton, 97 *U. S.* 36). Applying those rules to the conditions of this case, we are of the opinion that plaintiff's assignor, Thomas A. Edison, is not the inventor of the film described in claim 2 and that his patent therefore is invalid. The flexible, transparent or translucent tapelike film prepared for taking photographs was neither discovered nor produced by Edison. It was improved and brought to its present state of perfection by Eastman. When exhibited to Edison he seized upon it as the thing needed to make his camera apparatus a complete commercial success. He provided it with perforations along the edges at regular intervals into which the teeth of ratchet wheels of the camera centered to give it the required motion; a mechanical contrivance to adapt it to the performance of the functions of the machine. This co-operation of the rows of holes with the teeth of moving wheels he had described in a caveat of 1889 as similar to that in the Wheatstone telegraph instrument for insuring a positive motion of the band. Moreover, perforations had been previously made in photographic films for feeding purposes. (See Reynaud's French Patent.) So far our conclusion is the same substantially as that of the Circuit Court of Appeals in the decision before referred to, in which claim 5 of the original patent and incidentally claim 6, were under consideration.

It is further contended that the film of the present patent claim has been invested with new and substantial qualities by reason of distinct, uniform, equidistant photographs taken by moving objects which when the negative strip is converted into a positive, can be passed in the same manner through the exhibiting machine and give a lifelike representation of the moving objects never before obtained. In the course of their argument counsel for plaintiff (appellee) say: "In a word, the film produced by Mr. Edison and described minutely and with accuracy in his patent represents a practical embodiment of all the elements necessary to complete and perfect practice of the motion picture are as we know it to-day. No detail seeems to have escaped him; no problem growing out of the largest conception of the taking and exhibiting of photographs of moving objects in a lifelike and natural manner seems to have baffled his solution. In saying this we do not mean to say that Mr. Edison in the patent, in suit, foreclosed all further improvements in his camera and in his exhibiting machine, but we do say that this record fully proves that he did supply all of the fundamentals of the film that is used in the art as practiced to-day."

We do not dissent from the proposition that Mr. Edison solved the problems of the motion picture art with great ingenuity and skill, but the problems that he solved were in the camera apparatus wherein his true claim to invention lies. He did not supply the "fundamentals of the film" that is used in the art as practised to-day. The long, pliant, translucent, celluloid film with the sensitized surface was the invention and improvement of others. The pictures taken on such a film are photographs.

It is the particular character and arrangement of those pictures for which Mr. Edison is entitled to credit. But those pictures and their arrangement are nothing more than the result of the operation of his improved camera apparatus. The problem that was solved by their production and arrangement was a problem of camera making. Appreciating this, he insisted, as we have seen, that the complete apparatus should be described "because the differences which distinguished applicant's film from the prior films are largely due to the features of novelty in the apparatus." Also in explaining why he had not referred in any of his numerous caveats to the character of the film he said that he was not interested in manufacturing photographic material and did not regard the film as part of his invention; he looked to the people who made it for that. It seems also that while his original application was filed August 24, 1891, the claims for the film were not made until December 28, 1896, in an amendment filed that day. The conversion of this negative film strip into a positive for use in an exhibiting apparatus was effected by one of the familiar processes of the photographic art.

The invention of Edison was exhausted in the construction of the camera which enabled the photographs of moving objects to be taken upon the Eastman film in distinct, uniform and satisfactory manner justly claimed for them. The pictures are the direct result of the mechanism of the camera with the Eastman film mechanically adapted to and applied thereon.

In our opinion claim 2 of reissue, patent No. 12,192, is unpatentable and void; and the decree must be reversed with costs and the cause remanded with direction to dismiss the bill.

Conducts Sunday Shows in Aberdeen

The attempt of a moving picture house at Pierre, S. Dak., to give Sunday performances has aroused considerable interest over the state, owing to the protest of the ministers of the various churches against the performances. There is a state law prohibiting the giving of Sunday performances of any theatrical play or moving pictures where an admission fee is charged, but the Aberdeen Young Woman's Christian Association has rented the Idle Hour theater for Sunday afternoon, and gives two performances each Sunday afternoon to capacity houses. No admission fee is charged, but a collection is taken. Purely religious subjects are shown, such as "Pilgrim's Progress," the "Holy City," etc., and so far the ministers of the city have made no objection to the plan.

Pastor Commends "Star of Bethlehem"

The Rev. Tillman B. Johnson, pastor of the Salem Baptist church of New Rochelle, N. Y., sent the following letter of approval to the Thanhouser Film Corporation after viewing "The Star of Bethlehem." film:

It was my pleasure on Wednesday afternoon to witness your presentation of "The Star of Bethlehem." I thank you for this courtesy, and I have this frank word to say:

The motion picture is here, it is here to stay; it is a mighty factor in present-day civilization; it is steadily improving morally and has within it the possibilities of unbounded good.

Some of its presentations are yet to be condemned, and must be prohibited; but your picture story of "The Star of Bethlehem" is to be heartily commended. It is sympathetic, instructive, forceful and reverent.

"A Christmas Accident"

Edison's Offering

IT was all an accident that the Biltons had a turkey for Christmas, but it was enjoyed just so much more because its unintended giving meant the thawing of a mean and mercenary nature and the enjoyment of the giver in the hitherto unknown happiness of giving. And the seven little Biltons rose up and called him Santa Claus, and poor old grouchy Gilton performed an act which surprised even himself; but he was happier for it and took his lesson like the reformed grouch that he became.

It all came about because the Giltons and Biltons were next-door neighbors. That made Gilton all the grouchier because his money-making instinct had crabbed him and issued the warning that the seven little Biltons would infringe on his back yard and worry his dog. And because her husband was so horrid, poor Mrs. Gilton had become submissive and dared not call so much as a window curtain her own. Also, there were no little Giltons to play with the little Biltons.

Toyshop Scene from "A Christmas Accident."

In contrast to their next-door neighbors the Biltons were possessed of everything which the Giltons had not. Their poverty rivaled the Gilton's riches and their good nature and pleasantry made up for the Gilton grouch.

It was no fault of the Biltons that the groceries ordered by their neighbor were delivered at their own humble door and Mrs. Bilton construed the basket of good things as coming through an order of her husband and meaning that "things had come his way" that morning. Mr. Gilton did not believe that, however, and was accordingly disagreeable.

But the poisoning of Gilton's dog was the last straw to the tolerance of supposed wrongs, and Gilton accused his neighbor of killing the dog, though the loss of the canine was more of a sorrow to the young Biltons than to the owner of the pet. But from that time Gilton's hatred of the family next door was intense.

The season of good cheer for the Biltons and good eats for the Giltons came along, but it made no impression upon old Gilton other than the thought of the money to be expended upon the pur-

Trimming the Tree—"A Christmas Accident."

chase of a turkey, while at the Bilton home the hoarded-up funds were given the little people to buy some toys and they were made to understand that Santa would have no turkey for them that year.

" 'Tis the night before Christmas—" read Mr. Bilton to his family gathered about him and the array of cheap toys which comprised their Christmas gifts, when the door opened, admitting a gust of wind and a snow-covered figure with a huge bundle under his arm. From the bundle dangled the head and legs of a turkey. That was quite enough for the young Biltons; with one accord they hailed the figure as Santa and the bundle as his remembrance of them. But when the stranger had shaken the snow from his shoulders and hat and was recognizable, they saw him to be Mr. Gilton, while he was horror-stricken at having blundered, on account of the storm, into the home of his neighbor.

But the joy of the children at the supposed visit of Santa Claus, and the sight of the Bilton's poverty, overcame Gilton's scruples and ill nature, and be generously bestowed the Christmas fowl upon them, and leaving was at peace with the world and his neighbor.

That is Edison's story of "A Christmas Accident."

Believes Pictures Would Cure Drunks

That the scheme of Thomas A. Edison to teach the different trades and sciences by motion pictures would bring excellent moral results if pictures could be taken of "drunks" from the time they reach a saloon to the scene in the home at the height of a debauch was the statement of Justice Ulrich of Baltimore, Md., when a man was brought before the magistrate on the charge of disturbing the peace. The prosecuting witnesses were his mother and sister, and both cried as they testified as to the son's conduct under the influence of liquor. "If the plan of Thomas A. Edison, to teach trades, etc., could be extended to take pictures of drunks from the time they enter a saloon to the ensuing scene in the home, incalculable moral good would be done," declared the magistrate. "A habitual drinker should be given a set of these pictures that he might see himself reflected in them. The pictures would show how the public views him as he passes, and it would show him as the monster in the home and the grief and humiliation he causes to those dear to him."

To Film Transcontinental Auto Route

A plan to take an elaborate series of moving pictures along the Denver-Salt Lake City link of the proposed Midland trail is the latest movement under way to bring before the motor tourists and automobile manufacturers of the country the scenic wonders and other tourist advantages of this section of the trans-continental highway recently marked out through Colorado's mountains.

A letter is being sent to all the members of the Denver Chamber of Commerce, urging them to join the local branch of the recently organized Colarado-Utah Midland Trail association and get into the fight to obtain the official adoption of this proposed motor-tourist route from New York to San Francisco, via Denver, Grand Junction and Salt Lake City.

"Broncho Billy" in Real Life

By Mabel Condon

"Broncho Billy."

A BIG smile, a hearty grip, a flannel shirt open at the throat, corduroy trousers, a Stetson and a villainous looking gun and you have G. M. Anderson himself.

If you are in the act of shaking hands with him, however, he has you and you know it. You don't care, though; you're willing to stay around a week, if he will let you, out at that wonderful studio at Niles, California, and watch the Anderson method of taking and making motion pictures. And while you are there, Mr. Anderson will give you of the best that Niles and his bungalow afford.

He doesn't get so very much time to spend at that cozy little bungalow, himself, though, as his oft repeated "Start your action," seems to have become his slogan, and if there's any one thing Mr. Anderson believes in living up to, it is slogans. That is why he keeps the name "Essanay" so prominently within everybody's vision; he put the "ay" in that name and feels its responsibility so keenly that no western films but the best are worthy of its decoration.

While you are on the subject of names—there are many, doubtless, who know that Mr. Anderson's first name is Gilbert, but those who know that the "M" stands for Max, are comparatively few. You see, his first and last names are so lengthy that the "Max" is rather lost in there between them, and whenever the owner is mentioned it is something like "G'm Anderson" and people forget to wonder what the "M" does stand for, anyway. A rather modest little name for such a big, all-present man!

Pine Bluff, Arkansas, was where Anderson started life with three noisy whoops and some jolly sisters and brothers, whose favorite game was "play acting." When the lusty Gilbert Max appeared upon the scene, he started out to show 'em and now he is doing it to the tune of two westerns a week, out there in the land of sunshine and big hearts.

And the people like it. When "Broncho Billy" makes the whole film smile his quiet, attentive audiences smile also and when he swings down the main street at Niles, wearing his citizen's clothes and straw hat, maybe, the children patter up to him with the proud query, "Y're Broncho Billy—ain't y'?" Even the dogs, at Niles, follow "Broncho Billy."

But when he is busy, and he is that mostly, he jumps into his big white car and his chauffeur does not have to be told to speed up; he knows Mr. Anderson's slogan.

From writing a scenario to producing it and sending it to Chicago, is but a few days' work for the genial G. M. And never has a film produced by Anderson been put on the shelf. The eastern office does not have to wonder if it is going to be good, for every film that comes out of the west and Mr. Anderson's directorship, is predestined to popularity.

"Looks like a man who'd be nice to work for," is one of the many thoughtful remarks made about Mr. Anderson; and everybody who ever had anything to do with him, can and does vouch for it.

In addition to writing all the Broncho Billy stories, Mr. Anderson was also the originator of the Alkali Ike series and has written all the stories in which that humorous character figures.

It has been little more that two years since Mr. Anderson adopted the West as his work-shop. His boyhood days were spent in East St. Louis, Ill. He had always been interested in dramatics and earned his way through various dramatic schools in the East and West. While on the legitimate stage, he was a familiar figure on the Rialto in New York.

Then a temporary engagement, when he posed in the first lengthy motion picture "The Great Train Robbery," gave him the idea that he could stage a longer and just as interesting a picture; so he produced "Raffles, the Cracksman." It was successful and Mr. Anderson was conceded to be a bona fide producer. Later, coming to Chicago, Mr. Anderson met George K. Spoor and the result was the formation of the Essanay company. For a while Mr. Anderson remained in Chicago writing and producing scenarios, but conceived the idea of taking a company to the land of cowboys and romance, and he has never been sorry.

'Tis said Mr. Anderson can claim to be the originator of motion pictures of western drama; a big claim and a creditable one. And out there, in the realm of big things and broad ideas, up early and to bed late, Mr. Anderson fills "the unforgiving minute with sixty seconds' worth of distance run."

And that's G. M. Anderson!

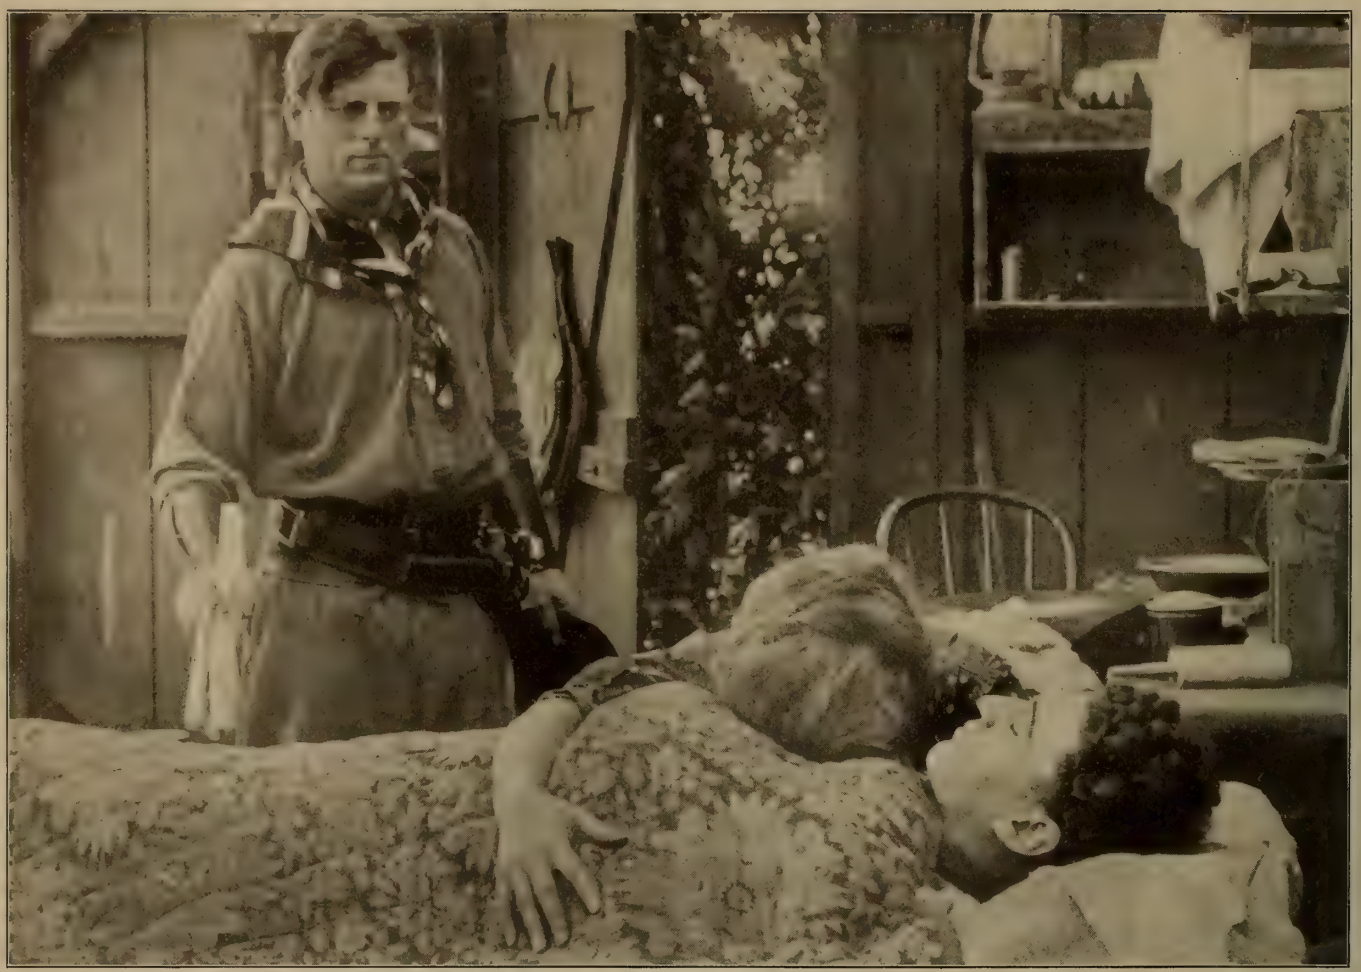
Reel Club Forms in Los Angeles

The Reel Club is the latest development on the social horizon of things motion-picturesque. It was ushered into existence by forty boosters of the picture world of Los Angeles and vicinity and at the acclaim of the original forty, more than one hundred directors, producers and players celebrated the club's second meeting and declared themselves Reel brothers.

The chairman of the Reelers is Fred Mace. George Melrose was declared secretary and Charles Giblyn treasurer. Ten dollars was decided upon as an appropriate sum for the purchasing of a membership, one-half of that being payable upon application.

Chairman Mace appointed A. L. Christie, Frank Montgomery and W. E. Wing a committee on constitution and by-laws, the committee being authorized to employ an attorney to draft necessary papers for making application to the secretary of state for a charter.

The original intention of the forty who heralded the formation of the Reel club was to make it an affiliation of the New York Screen Club, but owing to certain requirements of the eastern organization, it was deemed



Essanay's "Broncho Billy and the Outlaw's Mother," with G. M. Anderson.

advisable to make the Reel Club a real one on its own responsibility, and the western picture people are quite proud of themselves as a result.

The forty who named the club are: Thomas H. Nash, Thomas Forturn, Frank Montgomery, Joseph De Grasse, David Kirkland, A. E. Christie, Russell Bassett, Charles Edler, Donald A. Macdonald, Lee Moran, Edward Lyons, R. T. Thornby, Henry Lehman, Charles Giblyn, Carlyle Blackwell, G. H. Melford, Charles Kessel, P. C. Hartigan, Richard Stanton, Fred Mace, Frank Ford, Ray Meyers, W. E. Wing, Frank E. Woods, William Bertram, Arthur Ford, Joe King, J. B. Sherry, Henry W. Otto, Raymond B. West, Lee Morris, Edgar Keller, William C. Dowlan, E. L. Morrow, Charles Avery and Roy L. Manker.

Those who added their names to the list at the second meeting and who also become charter members are: Eugene H. Allen, Nick Cogley, Walter Wright, John E. Brennan, Marshall Milan, Sherman Bainbridge, P. H. Leve, W. H. Gillis, Ford Sterling, Charles Bartlett, Chas. E. Basley, W. H. Ryno, H. A. Lockwood, A. M. Kennedy, A. Brandt, C. L. Fuller, James L. McGee, L. D. Maloney, S. J. Edwards, Herbert Rawlinson, E. M. Langley, W. A. Carroll, Bob Leonard, George E. Gebhardt, Paul M. Santchi, Alvin Wyckoff, J. A. Crosby, Jack Obrien, Art Acord, Richard Garrick, Walter E. Stradling, L. D. Clawson, Rowland Sturgeon, Frank B. Shaw, Howard Davies, Milton H. Fahrney, Robert H. Grey, Lewis W. Short, Chas. E. Inslee, Richard Willis, William Clifford, Roy Watson, Mack Sennett, Felix Modjeska, Al Ernest Garcia, Henry McCrae, Edwin August, Horace Davey, Otto Lederer, Lenard M. Smith, Chas. Dudley, J. L. Leonard, True Boardman and George E. Stanley.

Brooklyn Advocates Pictures in Schools

Working in co-operation with the Parents' Association in making possible picture shows in public school No. 5, Brooklyn, is the People's Institute. It is the intention to put on shows of various educational value once a week. In time, and as soon as the other schools provide fireproof booths for the machines, it is the intention of the institute to give shows in all the schools of Brooklyn and Queens. More than three hundred children, properly chaperoned by parents or friends, attended the first pictures given in a public school since last year when an attempt to have them regularly in public schools in Queens failed.

The Parents' Association of P. S. No. 5 gave the show for the pupils and their friends, after having had built a special booth for the machine, as required by law. Heretofore none of the schools have been able to give the children the privilege of seeing motion pictures on account of the lack of facilities. The booth provided by the Parents Association in No. 5 is fireproof.

Most of the pictures shown were educational. The Declaration of Independence was the first reel. Then came the Wonders of Idaho, the famous and horrible "Red Cross" film, showing the ravages of tuberculosis, and The Charge of the Light Brigade in turn.

Current Educational Releases

At the Dog Show.—Vitagraph. Dogs of all degrees, high, low and pedigrees. Pet dogs, watch dogs, house dogs, and every breed in existence. If you are a dog fancier, this will surely strike your fancy, and if you are not especially fond of dogs, you will certainly be pleased with this picture anyhow. It is the biggest collection and the greatest variety that have ever been brought together.

The Octopus.—Pathe. Showing this curious inhabitant of the ocean in various and realistic views.

The Beautiful Valley of the Toronto.—Cines. Two hundred and fifty feet of enchanting scenery and views of the people who make the valley their home.

The Latest Addition to the U. S. Navy.—Edison. The launching of the United States steamship New York at the Brooklyn Navy Yard, showing near and distant views of the ceremony. A view taken from the traveling crane above the vessel gives an adequate idea of her mammoth size, while intimate views of President Taft and other officials make the film a decidedly interesting one.

The Apple Industry in Washington.—Pathe. A film of rare interest showing the growing of apples big and fine looking.

Reindeer Hunting in Norway.—Pathe. Deer being stalked during the open season in the land of the midnight sun. The hunting of reindeer is the popular sport in Norway.

In a Japanese Garden.—Selig. Another excellent educational subject in a creditable series of travelogues through the Orient.

Cork and Vicinity.—Vitagraph. Here is a chance to see the city of Cork without going to Ireland. There is Queens College and Blarney Castle, known the world over. Some of the old ruins are included in this bewitching panorama. John Bunny at the Black Pool makes us feel quite at home; we can almost imagine he is trying to fathom some of the traditions connected with its depths. We pass through the streets of Cork, getting an idea of its commercial importance. Last but not least are the stockyards where its vast cattle interests are handled and inspected.

Red Hawk Takes Leave of June Dew. From the Kleine-Eclipse Indian Drama, "The Red Man's Honor." Copyright, 1912, George Kleine.

"Our Lady of the Pearls," December 30. Copyright, 1912, Selig Polyscope Co.

Among the Abruzzi Mountains, Central Italy.—Cines. Showing the ancient city of Sulmona, views of the surrounding country and several beautiful winter landscapes in the reclaimed basin of Lake Fucino.

Lisbon and Oporto. (Colored).—Pathe. The beauties of these two Portuguese cities is brought home to the observer by means of excellent photography and beautiful coloring.

Raising Barley in Japan.—Selig. A portrayal of the various methods employed in raising Japanese barley, an instance showing the little brown people at work in the fields.

Saving the Innocents.—American. Highly interesting and instructive, this series shows how crippled children are cared for and instructed to become useful members of society.

The Velino River and Falls (Central Italy).—Cines. Showing many picturesque views of the Velino River as it wends its way between its grassy banks, and finally plunges over the beautiful falls.

Palmetto Hat Industry.—Lubin. This is a very interesting educational picture of the evolution of the Palmetto hats for ladies. Excellent scenes of the gathering of the dwarf palm leaves are pictured, then the stripping, plaiting and finally the fashioning into the wonderful crown of glory favored alike by the grande dame and the humble factory girl. The girl at the bench always tries the hat on when finished. She cannot see herself in it, but likes to imagine how it becomes her. She has evolved a symphony in straw and believes she is an artist. It takes many people to build the wonderful structure, but the work is rapidly performed and the atmosphere of the picture indicates that the labor of making a thing of beauty is a joy forever. The factory used for the setting of the drama is one of the largest in Florida.

The Tivoli Hills and the Falls of Anio (Central Italy).—Cines. A charming travelogue subject, spreading before us the picturesque ruins along the banks of the river Anio, such as the Lucano bridge, the ancient tomb of the Plauti, the Acque Albule and many other places of interest.

The Busy Bee.—Eclair. This film most entertainingly depicts the picturesque industry of apiculture or bee cultivation. It shows men's ingenuity in furnishing and decoying the bee into a home of its own which is known as a hive or hive-house. The perfection of these hives is an essential as would be the building of a mansion for a multimillionaire, for bees are workers, and like all real workers, they demand system and facility. So it is necessary to prepare the waxen foundation for the bee's home, or comb, to use the proper word, in a laboratory. All of which is shown in its various evolutions. Then are shown the bees at work in their hive, each striving in competition with the others in other separate cells.

The queen bee is seen and described by careful subtitling. The artifice of bee swarming is carefully portrayed and then is shown the clever manipulations by which the honey is collected, still leaving the bee his house and structure, in which he will again faithfully perform the same labors in the season to come.

Beauty Spots in South Wales.—Eclipse. An extremely interesting film illustrating the different phases of this important industry. We are shown the cutting down of the fir trees; a mechanical saw at work; marvelous skill in woodcutting and some remarkable products in the line of fancy furniture.

Wood Industry in French Jura.—Eclipse. Commencing with views of Tenby and its picturesque harbor, we are shown the quaint towns of Manorbier and Cenarth, Pembro Castle, now a noble ruin, and finally are taken upon an interesting visit to Mumble's Head and the Sands.

Insect Hunting.—Eclair. This very curious scientific film initiates the spectator into the secrets of insect-hunting so dear to students and collectors. One will be able to follow—with interest—the hunting of insects in fields and meadows, looking for them on the branches of trees by means of umbrellas, searching for them on carrion, etc. Then, in a most extraordinary way, one is shown how the aquatic insects are hunted. Next come some very curious specimens which will attract the spectator's attention by their ugliness and ferocity. These are the Parying Mantis, the Chrysomelis, or the Green Beetle, the ferocious Carabis, and so on. One will be shown, also, the Dytiscus—swimming beetles—the enemies of fish culture. It is most instructive and interesting to behold the voracity of this infinitely small insect feeding on its prey.

Sea Anemones.—Eclair. In certain seas the corals, madrepores or authozoaires, form immense multi-colored forests. In the numberless species of zoophytes some are very curious to observe. For instance, the Asteria, or star fish, which moves very slowly; the acinia, commonly called the sea anemone on account of its brilliant colors and its resemblance to that flower; in fact, the sea anemone, like the living coral, draws to itself with its thousand tentacles, and by learned evolutions, the prey it is seeking, then closes up as soon as the victim is within its grasp.

Dallas to Reduce Age of Operators

Within the near future the building code of the city of Dallas, Tex., is to be amended by the Board of Commissioners to reduce the minimum age limit of moving picture machine operators as at present provided. The board, on recommendation of Commissioner Lee, voted to direct the city attorney to draft an amendment to the code so as to permit boys between the ages of 18 and 21 to operate moving picture machines when their parents or guardians have given their consent, and further, that such operators satisfy the city electrician as to their competency.

Russell Sage Foundation's Theaters

A model projection hall is planned for the first floor of the new nine-story building being erected by the Russell Sage Foundation at Twenty-third street and Lexington avenue, New York City. This building will be occupied within about ten months by the various departments of the Russell Sage Foundation, of which departments several have already expressed a very practical interest in the educational use of motion pictures. The newly organized Department of Surveys and Exhibits, under the direction of Shelby M. Harrison and E. G. Routzahn, is co-operating with the architects in planning the arrangement and equipment of two halls, a small auditorium and an exhibition hall.

Several unusual features are proposed in order to facilitate the holding of a succession of special exhibits covering health, civic and other welfare topics. Suggestions are invited from any persons interested in the idea, either commercially or otherwise. The following letter has been addressed by the Department of Surveys and Exhibits, 31 Union Square, New York, to leading motion picture equipment firms:

In a new building being erected for use by the Russell Sage Foundation there will be two small halls—an exhibit hall and a lecture hall—which we hope to have equipped in approximately ideal fashion for motion picture projection.

We are not now considering any purchases but are seeking information which will make possible the placing of the most desirable equipment in due season.

The extreme length of the hall will be either 50 or 82 feet. This length may possibly be increased by four feet, the depth of an alcove 10 feet wide.

Can you conveniently write us concerning the following points:

1. Would you advise using a curtain or screen placed in the rear of the alcove, thus making 10 feet the extreme width of the picture; or,
2. Would you advise a rolling curtain placed in front of the alcove, thus making it possible to accommodate a larger picture?
3. If you advise the second procedure, is your service department prepared to suggest the best type of rolling screen?
4. Will you suggest the parties to which we should apply for information as to wiring for connections the booth which is to be movable by being placed on castors, etc.?
5. We would be glad for a written statement as to the most complete projection apparatus you would suggest for our use, with approximate cost of installing same, and the current demanded.

It is planned to equip the hall so that daylight can be controlled and the picture machine can be made ready for use within a couple of minutes' time at any hour of the day.

If a personal interview will be helpful we will welcome the suggestion from you, but you will understand that we are not now in position to discuss any purchase of equipment.

The Eclair company will maintain a western studio. The location secured is in Pawnee City, Oklahoma, where arrangements have been made with "Pawnee Bill," Major Gordon Lillie, to use the Pawnee Bill buffalo ranch and Pawnee Indian village as the backgrounds for pictures. Charles Jourjon, president of the Eclair company, Etienne Arnoud, stage director, and Louis R. Grisel visited Pawnee City and Major Lillie and completed plans for the new venture. Will Haddock, a pioneer western director, will be in charge and will have a company of eight members, two of whom are Lamar Johnstone and George Larkin, of the eastern company, both splendid riders.

Photoplays From Essanay's

Starting the New Year

FOR the first two weeks of the new year Essanay's releases will be exceptionally good features. "When Soul Meets Soul" is an Egyptian story, portrayed as Essanay pictures are portrayed, in a manner impressive in every detail. The scenic effects are absolutely correct as taken from painting of the old Egyptian architecture. It is released January 3.

A sarcophagus is sent to Professor Delaplace by his old friend Andrews, traveling in Egypt. Andrews, in a letter to the professor, explains that the mummy is in a perfect state of preservation, this being the reason he has sent it. Delaplace, with the aid of his assistant, removes the solid stone cover. Feeling among the wrappings entwining the body, Professor Delaplace finds an ancient parchment which tells of the fair Princess Charazel vowing to live through the ages to find her lost lover. Enchanted by the visions the ancient sarcophagus brings to his mind, Delaplace sinks back in his chair and gradually falls asleep. The sarcophagus slowly dissolves and the Princess Charazel is seen awakening. The scene then again dissolve and we find ourselves in the beautiful land of Egypt, the home of the lotus flower and the Nile. Professor Delaplace, transformed into Arames, the handsome lover of the fair Princess Charazel, is seated beside her couch. He tells of his infinite love and they pledge eternal vows. The call of war takes Arames from her. On his return from battle a feast is given in his honor. Escorting the princess to the great banquet hall, the honored Arames seats himself beside her. Becoming infatuated with a young slave girl, Arames showers her with caresses and incites the jealousy of the princess, who swears by the god of death, Osiris, to die. Realizing his mistake Arames dashes after the fleeing princess, only to find that she has killed herself before the graven image. Delaplace, awakening, goes slowly to the sarcophagus and, kneeling beside it, prays for the soul of the woman he loved back in the dim ages. The production of this story has taken weeks of hard labor to produce, making every detail correct, from the costuming to the beautiful and luxuriant settings. Dolores Cassinelli is featured in the role of Princess Charazel.

"When Soul Meets Soul."

"Here's Your Hat."

"The Miner's Request," released January 2, Leonie Davis, her sweetheart Tom, and her father are

seated at the breakfast table in a small cabin in the far West. Davis departs for work at the mine, while Tom strolls down the bank of the river in search of gold. Davis is met at the mine by a young fellow who presents him with a note from a friend in the East asking him to give the bearer a job. Davis takes the young fellow to his home, where he is introduced to Leonie. That same afternoon an accident happens at the mine and Davis is seriously injured. The easterner makes a record breaking ride for the doctor. During his absence Leonie's father writes a dying request that she marry Tom one month after his death. The girl tells Tom she does not love him and that she could never marry him. The doctor arrives too late, for Davis is dead. One month later Leonie marries the man she does not love. The same day the young easterner tells her of the great world outside and asks her to run away with him. She consents, packs up her belongings and leaves the house. Walking through the lane near the river she spies him robbing the gold sluice. She returns to the house, secures a revolver and demands the stolen gold. She then forces him to leave the county. Realizing now that she had nearly lost a good husband for a thief, she returns to her home and awaits, with open arms, Tom's return. This is an exceedingly interesting story of the West with hazardous deeds and daring adventures.

"Broncho Billy and the Maid" is released January 4. In this dramatic feature, with G. M. Anderson in his character creation, we have a splendid story with excellent portrayal of a western subject of merit. Jim Clay, a rough western ranchman, kisses his beautiful daughter good-bye and departs for the town saloon. Entering, he sees four of his comrades finishing a game of cards. Broncho Billy, one of them, wins all the money. Clay exits and seats himself on a barrel in front of the place. Broncho with his winnings, departs from the saloon, meets Clay and together they proceed to the ranchman's home. Broncho is introduced to Clay's daughter, who at the time of their arrival is preparing the noon-day meal. The ranchman and Broncho engage in a game of cards. Broncho detects Clay taking some cards from his boot. A fight ensues in which the ranchman is shot in the head and Broncho in the leg. The daughter, hearing the tumult, rushes into the room to aid her father. Broncho has escaped. Crawling on his hands and knees he finally reaches the stable where he manages to climb into an oat bin. The girl, thinking only of her wounded father, secures a revolver, and tracks Broncho by the drops of blood. Finding him in an exhausted condition, she drags him into a store-cellar and washes and bandages his wound. Later, when Broncho has almost recovered from his wound, she gives him a revolver and tells him to go. Clay swears vengeance. Seeing Broncho leave the cellar he rushes after him. His daughter, fearful of her father's safety, because of Broncho's quick draw, intervenes and prevents him from being shot. She then tells her father that she loves Broncho. Seeing that it would be madness to bear grievance against Broncho, Clay shakes hands with him and the feud is ended.

In "The Heiress," released January 7, Jimmy, the impecunious, arrives at the club, where his fellow members are engaged in a game of cards. He helps himself to a cigarette and borrows a five-spot from one of the boys in the same breath. Calvert, a fellow club member, receives a message from the family doctor stating that he had better return to his home immediately. Arriving at home he sends a message to the boys at the club telling them that the heiress has arrived and that some of the nice marriageable fellows had better come up and meet her. Enthused with the spirit of being "near uncles" they buy everything from a rattle to a rocking horse, and with the cargo under their arms, swarm in upon the new father. In their excitement they leave the message on the table at the club. Jimmy picks it up and returning to his home, dresses for the unusual occasion of meeting an "heiress." Out of funds he returns to the club, where he makes a small touch. Returning to his home again, Jimmy takes all of his earthly belongings and proceeds to a pawn shop with them. He then calls at Calvert's home and, mistaking the maid for the heiress, invites her out to dine. With his roll of hard earned money he buys the best of everything for her from soup to wine. Mason, one of the club members, sees Jimmy and the girl, tells Calvert about it. They all go to the restaurant where Jimmy introduces the girl to his friends as his fiancé. Calvert invites them all to his home. The second maid brings in the baby and the proud father introduces the baby to Jimmy as the heiress, and explains that the young lady Jimmy has been dining with is his maid. Realizing his mistake, Jimmy dashes madly from the house, leaving behind a heart-broken imaginary heiress, and a hilarious congregation of club colleagues. John Steppling portrays the part of Jimmy in a pleasing manner. E. H. Calvert, as the proud father of the heiress, distinguishes himself admirably.

"Broncho Billy and the Maid."

"The Heiress."

Released January 10, "Jimmy," with high ideals and very little ambition gets himself into difficulties which are told in the following synopsis. Jimmy, a modern boy, delights in the reading of dime novels. His employer, John Strong, a crabbed old gentleman, rings incessantly for him. Aware of the fact that Jimmy is otherwise occupied he rushes into the outside office and takes him gently but firmly by the ear, and explains to Jimmy that he has just received a note from Long and Company, stating that his order for $20,000 in government bonds will be delivered that afternoon at four o'clock. Strong then tells Jimmy he is going to the gold club and that he is to sign for them. Jimmy's employer leaves and forgets the note from Long and Company, which he carelessly left on his desk. The bonds are delivered and Jimmy signs for them. He goes to the safe and accidentally locks it. Not being able to open it he places the bonds in the waste paper basket and covers them with some scrap paper. The janitor finds the note written by Long and Company and takes it to his pal. Jimmy sees him on the street and decides to follow him. The janitor unconsciously drops the note which Jimmy picks up. His further attention to the case is forgotten, however, when he encounters another boy about the same age, and they fight desperately in the mud. Returning to his home his mother puts him to bed. The next morning, when he arrives at the office, two detectives and his employer meet him. The safe has been blown open during the night. Jimmy explains how and where he found the note the night previous. The janitor is sent for and recognized as an ex-convict. The bonds are taken from the waste-basket by Jimmy, who tells his employer that he had accidentally locked the safe. His employer takes him over his knee and gives him a good, sound spanking. Seeing the remains of the mud on Jimmy's coat, Strong asks the reason for it. Jimmy tells him. Strong, now realizing how much money Jimmy had saved for him, gives him some money and tells him to go and buy a new suit. This is an object lesson for young sleuths. Tom Shirley plays the part of Jimmy excellently.

"Here's Your Hat," released January 8, is a feature comedy story. In this thousand feet of hilarity can be seen the smiling faces of Raymond Hitchock and his fascinating wife, Flora Zabelle, now starring in the "Red Widow" company. Herbert Cothell, star of "The Girl at the Gate," together with the above mentioned celebrities happened to be making a tour of inspection at the Essanay studio the day the production of "Here's Your Hat" was taken, and were asked if they would like to participate. In seeing "Here's Your Hat" the audience sees a great comedy story, and three of the greatest entertainers in the world.

The above releases for the first two weeks of the new year are a splendid indication that the month of January will have rare and exceptional subjects. That great scenic production, "King Robert of Sicily," is to be released very soon.

Pictures Aid "Back to Land" Movement

By Watterson R. Rothacker.

The mere cry "Back to the land" has enlisted a host of recruits to the great army of city folk who are forsaking the atmosphere of steam-heated flats and electric lights for the more tranquil and serene independence of country life offered by our southern, western and northwestern states. But the hundreds who heard the cry and did not immediately respond demanded something more reliable than the mere assertions of enthusiastic land agents and boomers—something more convincing than the promises of inanimate photographs—so moving pictures were enrolled and are getting better results than a British recruiting sergeant.

Through the enterprise of the Northern Pacific Railway prospective homesteaders can now see in motion, just as in actual life, the great reclamation work now being done in the Northwest, harvesting scenes which are proof positive of 1912's bumper crops, magnificent herds of cattle and immense droves of sleek sheep, and other vistas of agricultural and industrial prosperity which beckon alluringly and cause him to pore over railroad folders and conjure visions of an independent and profitable life in the open.

By means of moving pictures the Northern Pacific Railway has also given the American public a definite idea of the wonders of Yellowstone Park. On film, and for five cents, one can see Old Faithful geyser, the Bee Hive, the Grotto, the Giant, the Riverside, and other phenomena of America's most unique wonderland in full eruption. On film, one can now see the churning waters of the Yellowstone leap from the river-bed and tumble a sheer 312 feet into the depths of the multi-colored Grand Canyon of the Yellowstone. On film, one safely views wild bears, untamed elk, deer and other animals in their native haunts. In fact, the moving picture route offers an eye trip to and through Yellowstone Park to thousands of people who have neither time nor money to make the

trip, and to those who have the time and money the suggestion is made which actuates the latent desire to "see America first."

The Chambers of Commerce at Charleston, Columbia and Sumter in South Carolina have financed and engineered a moving picture campaign to attract the tourist, home-seeker and investor by showing in motion on film that South Carolina is a good place in which to live, make money and be happy. The moving pictures thus used illustrate the cotton, tea, and phosphate industries, show truck farming and drainage work, and lay great stress upon the school facilities and general advantages of the state.

To teach actual and prospective farmers the great value of modern farming methods the Du Pont Powder Company have made a series of moving pictures showing how farming is done with dynamite. These pictures show how land clearing, deep plowing, tree planting, ditching, etc., are done by means of high explosives.

The Holt Caterpillar Company and the M. Rumely Company are using moving pictures to demonstrate the efficiency of their time and labor-saving farm machinery. Various agricultural schools throughout the country are using these pictures to explain to their students the wonders and value of farming with machinery.

The Back to the Land movement is epochal and it is notable that its impetus is, in no small way, given by the pictures in motion which are believed by any audience where the most convincing word argument of the promoter is taken with handsful of salt.

American Company Gets W. Wallace Reid

W. Wallace Reid has joined the American Film Company as producer at the new studio at Santa Barbara. He brings with him a company of competent players, some of whom have been associcted with him at the Kalem western studio, which he leaves to engage for the American.

Mr. Reid is but twenty-three years old and is accredited with being the youngest producer. He is the son of that illustrious novelist, Hal Reid, was born in St. Louis and spent the years 1903, 4, and 5 at the New Jersey Military Academy, Freehold, N. J. In 1909 he graduated from a small eastern college and spent the remainder of that year in Cody, Wyo., on a ranch where he was engaged in surveying for the Shoshone dam.

In 1910 Mr. Reid entered newspaper work, and later in the year joined a film company's staff at Los Angeles as general utility man. He learned to operate a camera and acquired a working knowledge of the picture business.

The winter of 1910 Mr. Reid spent in New York as associate editor of *Motor* magazine and in May, 1911, joined the Vitagraph forces as a leading man playing opposite Turner, Storey and Baird. In the spring of 1912 Mr. Reid joined his father as assistant director and leading man for Reliance, leaving that company to become assistant to Otis Turner and scenario editor while Mr. Turner was engaged by the Imp. After six weeks at the Imp studio Mr. Reid was sent with Mr. Turner to make Bison 101 pictures in California.

Xydias, Houston, Tex.; Carl Gregg, Tulsa, Okla.; Paul LeMarquand, Winnipeg, Can.; M. C. Everstein, Jacksonville, Fla.; Geo. Osborn, St. Paul, Minn.

Iowa Exhibitors Meet

The exhibitors of the state of Iowa held a rousing meeting December 3 and 4, and organized a substantial prominent branch of the league.

President Neff arrived in Des Moines early the morning of the third and was met by Fred Young of Cedar Rapids. The convention was called to order at 2 p. m. and everybody was welcome. The speaking lasted until after five o'clock and membership was taken for the new organization. However, the meeting was an open one. At night a splendid entertainment was held in the big hall at the Savery hotel. After the entertainment, the exhibitors and their friends adjourned until ten o'clock Tuesday morning, when an executive session of the members who had joined the organization was held. President Neff again addressed the exhibitors and seventy-five joined the organization. In the afternoon a permanent organization was perfected and the officers were elected. Great credit is due Fred Young, of Cedar Rapids. He seems to be possessed of wonderful ability in conducting a convention and arranging for entertainments. Everything went off just as smoothly as though they had had months to prepare for it, instead of a very short notice.

The next convention will be held in Des Moines, Ia., on the first Tuesday in May.

After the Iowa convention was over several of the Iowa exhibitors, U. P. Frost of Atlantic, Fred Young, of Cedar Rapids, Julius Singer of Des Moines, C. E. Wirick of Sioux City and several others joined Mr. Neff and went to Omaha, to attend the convention there. The last night at Des Moines a big banquet was held in the spacious dining room of the Savery hotel, where one hundred partook of the good things.

The officers elected for the ensuing year are J. S. O'Brien, of Oelwein, president; Fred Young, of Cedar Rapids, secretary; J. E. Tierney, of Sioux City, treasurer; J. S. Bassett, of Independence, first vice-president; H. J. Dewey, of Chariton, second vice-president, and Thomas A. Brown, of Iowa City, national vice-president.

Nebraska League Organized

The Nebraska State League was organized by President M. A. Neff on the sixth of December, the meeting beginning on the fifth.

Mr. Neff, accompanied by several Iowa exhibitors, arrived in Omaha over the Rock Island, one hour late, Wednesday the 6th. When they alighted from the train, a wild western blizzard was blowing and the snow flying. They were met at the train by J. S. Schlank of Omaha and W. H. Rubert, who were waiting with Mr. Schlank's automobile to take them to the Rome hotel, where a large number of Nebraska motion-picture exhibitors were assembled. As Mr. Neff and the Iowa delegation had had their lunch on the dining car coming to Omaha, in ten minutes the Omaha meeting was opened.

President Neff spoke for about two hours, explaining in an open meeting the benefits to be derived. The spirit of fair play and western progressiveness was displayed both at Des Moines and Omaha. All of the film exchanges were represented, friendly and ready to assist in making the convention a grand success. On the night of the 5th, the big ball room of the Rome Hotel was beautifully decorated. Everybody was enthusiastic and on the 6th when members were called for, forty-nine joined the organization. Mr. Schlank had charge of securing the members, and proved to be an efficient and untiring worker, while Samuel Harding and others were at all times hustling to secure new members.

At night a banquet was given at the Rome hotel. The banquet hall was beautifully decorated with flowers in profusion; and the most beautiful ladies in Omaha graced the occasion. Everybody seemed to be imbued with the spirit of the occasion. Vaudeville and pictures, the banquet and a general good time, wound up the Omaha convention.

President Neff stayed over until Saturday the 7th, and held a meeting with the newly elected officers. In company with the newly elected president, Mr. Stoecker, and the national vice-president, Mr. Schlank, Mr. Neff visited many places of interest in Omaha, and left for Kansas City on the Burlington at 10:45. The Des Moines and Omaha meetings were great affairs, full of action, and the western exhibitors mean business.

The officers elected by the Motion Picture Exhibitors' League of Nebraska, are, W. F. Stoecker, Omaha, president; P. L. McCarthy, Grand Island, first vice-president; J. W. Ballinger, York, second vice-president; E. C. Preston, Superior, secretary; W. A. Walden, Hastings, treasurer, and J. E. Schlank, Omaha, national vice-president.

Ohio Convention in January

On Tuesday, January 21, 1913, Ohio State Branch No. 1 of the Motion Picture Exhibitors' League of America will hold their annual convention at Columbus. New officers will be elected, committees appointed, etc.

At the same time the Ohio state convention meets, the national vice-presidents from thirty-three states will meet in Columbus. The Ohio state convention will be very interesting as the state legislature will be in session and the new governor, Hon. James M. Cox, will then be at the helm. As there are several bills which will affect

the members of the State League of Ohio which will be introduced at the coming session of the legislature, naturally there is a great deal of interest being taken in the coming convention. The attorney general is also very active and at that time will be working in conjunction with Senator Foraker's office and Hon. J. J. Lent's office in developments of legal points which will be left for the courts to decide.

The national vice-presidents will have a number of important matters to discuss and take care of. M. A. Neff, president of the Ohio State League, who has just returned from an extended and successful trip through the West, was in Columbus in consultation with Attorney General Hogan and also arranging for the state convention.

In the next issue we will give the name of the hotel which will be chosen as headquarters and where the convention will be held, as well as many other important details.

Indianapolis League Wars on Ordinance

The Motion Picture Exhibitors' League of Indiana has opened an active fight in Indianapolis against the city ordinance forbidding children less than fourteen years old to attend moving-picture theaters without an adult escort. Members of the league in Indianapolis are basing their fight on the assertion that the ordinance is class legislation, and expect the Supreme Court to uphold this contention on an appeal from Judge Charles Remster of the Marion Circuit Court, who recently ruled against the exhibitors in a suit to declare the ordinance invalid.

The ordinance adopted by the city council within the last year makes no provision that children less than fourteen years old may not attend any other theaters, even a burlesque house, the exhibitors contend.

Now the exhibitors are distributing copies of a pamphlet setting forth their arguments against the ordinance and explaining what they have done to assist local charitable organizations.

League Notes

The motion picture exhibitors of the Northwest have announced that they will hold their first annual convention in Seattle February 18 and 19. The temporary executive board has issued the call for the meeting and all motion picture men of this state are expected to respond. The British Columbia league of exhibitors has signified its intention of coming to the convention in a body. The present executive board consists of A. B. Campbell, president; W. L. Shanks, vice-president; John Runtz, Bremerton, secretary; H. O. Allen and L. S. Richardson.

John I. Pittman was elected president, Pat Lennox, vice-president; Joe C. Clemmons, secretary and treasurer of the Jefferson County Motion Picture Exhibitors' League formed by motion picture proprietors at Beaumont, Texas. Its purpose will be to promote the interests of those engaged in the motion picture business.

Moving pictures used in his unsuccessful campaign for congress, cost Clarence P. Dodge of Colorado Springs $456.22.

"Another Man's Wife," January 6, 1913. Copyright, 1912, American Film Mfg. Co.

Motion Pictures for Y. M. C. A. Work

By John Collier*

IF books were to be had only at paid circulating libraries, and if these libraries, with mere money-making as their object, did not find it profitable to keep a large number of the best books, we should think it a very peculiar situation. Our Carnegies would hasten to endow public libraries; our city fathers would stock them with books. Our churches and our Young Men's Christian Associations would establish book departments. We should never consent for a moment to the absolute commercialization of the printed book.

Now, a new kind of book has been produced and is being read by millions of people daily. The motion picture is a book, and an acted play, and a scenic wonder-world in one. It is more popular today than our public libraries, and it should concern the educational and religious agencies more than the printed book for the reason that motion pictures, being a form of drama, nearly always have a moral or immoral lesson to convey. Whether it be sermons, or educational lectures, or temptations to wrong-doing, each and all of these things can be conveyed more vividly through motion pictures than through printed books.

This pamphlet deals with the possible use of motion pictures by the Young Men's Christian Association or other religious and educational agencies, on a self-supporting or even a profitable basis, but with a view to public welfare first of all.

In America, the motion picture has had its first development as a vehicle of simple amusement and has been in such enormous demand for this purpose alone that all other uses have been discouraged. In about six years the number of picture theaters has grown to 14,000; the daily audience seeking amusement in American picture theaters is 5,000,000, more or less. A great many motion pictures are wholly or partially educational, but they are produced for the amusement market and exhibited under conditions which make it impossible for the educational picture to receive proper encouragement.

In the last year, the Young Men's Christian Association, along with schools, libraries, play-grounds, etc., have become widely interested in motion pictures, and a large demand for educational films has grown up. But the producers of motion pictures are still so heavily taxed in taking care of the purely theatrical market that the educational demand has run far ahead of the educational supply. Associations, schools and other institutions are today anxious to use moving pictures for educational purposes but are unable to secure them. This pamphlet aims to answer two questions:

(1) What are the peculiar features of the present motion picture situation and how can motion pictures be improved in theaters?

(2) Why should the Young Men's Christian Association and educational institutions use motion pictures; and how, and at what cost may they be secured?

HOW MOTION PICTURES ARE MADE AND DISTRIBUTED.

About thirty-five studios produce the 4,000 "subjects" (more or less) which are annually placed on the American market. Each of these 4,000 "subjects" (drama, history, geography, comedy, etc.) is duplicated approximately a hundred times.

Each motion picture "subject" has always a distinct name and bears the name of the manufacturer. They are copyrighted, and motion pictures have been considered by the Supreme Court as being, under the intent of the copyright law, both a form of the book and a form of drama.

After being made, the motion pictures are ordinarily submitted to a board of censorship called the National Board of Censorship of Motion Pictures (address 50 Madison avenue, New York). This board, made up of ten civic and philanthropic societies, has no power in law but works through a co-operative arrangement with the manufacturers, maintaining its relations with a given manufacturer so long as he submits all his product and carries out all recommendations of the board. The board in its last report, stated that "from November 1, 1910, until November 1, 1911, only one foot of film in each 4,680 feet escaped its censorship." The National Board censors solely from a moral standpoint, not from the artistic standpoint, and does not pass on the historical or scientific accuracy of motion pictures. The board publishes complete reports.

After the censoring is completed, the motion pictures are sold or leased by the manufacturer to middlemen, called renters or exchanges. The renter pays approximately $100 for a reel of pictures (1,000 feet—a fifteen-minute performance) and rents the reels by the day or week to theater managers (called exhibitors). The exhibitor pays a rental varying from $1 to $5 a day for each reel, according to the newness of the reel.

Now, to understand the motion picture system, one must bear in mind certain facts:

(1) The motion picture market is divided between two large groups of manufacturers—the Motion Picture Patents Company and the Motion Picture Distributing and Sales Company.* These main manufacturing groups dispose of their product to renters who are limited strictly to the product of that manufacturing group which supplies them. Therefore, no renter obtains the entire supply of films; probably no renter gets more than half of the different film "subjects" issued week by week. The exhibitor in his turn must make up his program from the supply of films of a given renter, and therefore the program of a given picture theater is made up from one-half or less of the total film "subjects" at any one time being circulated.

There is one exception to the above rule. The General Film Company (distributing agent of the Motion Picture Patents Company) has recently organized an educational department, which is privileged to acquire, if it is able, any motion picture, no matter by whom produced. This department has prepared a catalogue of educational films available through it (200 Fifth avenue, New York).

(2) Only a small fraction of the total number of motion picture subjects that have been made is at this time available in America. First, the majority of educational pictures have been made in Europe and only one in twenty (perhaps) has been imported to this country. Second, motion pictures wear out with use and a manufacturer rarely or never reissues an old picture. Therefore, even of the educational pictures that have been mar-

*Secretary National Board of Censorship of Motion Pictures. From Industrial Department International Y. M. C. A.

*NOTE—The Motion Picture Distributing and Sales Company was recently split into two companies, The Film Supply Company of America, 131 West 44th Street, New York, and the Universal Film Manufacturing Company, 1 Union Square, New York. Color-photography motion pictures are independently handled by the Kinemacolar Company, New York.

keted in America, the majority are out of circulation and cannot be secured save by putting in a special order and buying the film outright. The films that can be rented in this country represent practically the output of the past year. For the above reasons, not more than five per cent of the moving pictures that have been produced since the beginning of the motion picture art are actually available. This is a peculiar condition, which is not true of the book market; it is a condition which is true of the fashions market and novelty market, and motion pictures in this country are unfortunately still regarded mainly as novelties.

(3) Most important of all, a renter obtains his film from the manufacturer by a routine process; he takes a given proportion of a given manufacturer's product, or he takes one copy of each film produced by all the manufacturers in one of the manufacturing combines. Having obtained his film in this routine manner the renter is compelled to dispose of it an equally routine manner. He therefore discourages any attempt on the part of the exhibitor to select *this* picture and reject *that* one. Any exhibitor who tries to select his own programs fights a losing battle. This condition, which holds good for the whole motion picture market of America, is unfortunate and must be changed sooner or later if the motion picture art is to continue to develop.

(4) As for the Young Men's Christian Association or the educational institution, if it wants to use motion pictures it must go to the regular theatrical exchange to get them, and is there subject to the same restrictions that are laid upon the commercial theater. It also finds that the renter is in possession only of one in fifty, perhaps, of the desirable film subjects that have been produced and described in various catalogues. Secondly, the Young Men's Christian Association or educational institution finds that the film renter is using, on a theatrical circuit, most of his pictures which are in good condition, and it is, therefore, difficult for the institution to secure for a given day a given set even of the new films a renter has in stock.

There are minor exceptions to the above statements, but these are conditions which both the picture exhibitor and the educational institution meet, broad and large, in this country. These conditions are not wholly objectionable, for they have led to a standardization of motion pictures, and certain manufacturers have set a high average for all of their product and have thereby gained reputation and increased their total of sale. But the system discourages the use of educational motion pictures and likewise discourages any manufacturer from putting extra money and extra thought into any one film which he produces.

The educational pioneer must first of all become familiar with the above facts and considerations. He will then not expect to accomplish the impossible and will be able to discover just what is possible within the means at his command.

UNDER WHAT CONDITIONS SHOULD A YOUNG MEN'S CHRISTIAN ASSOCIATION OR SIMILAR ORGANIZATION USE MOTION PICTURES?

In general, any institution should use motion pictures in case it wants to reach a class of people at present out of reach, or in case it wants to grip more strongly and inspire and inform more richly those whom it reaches already.

Often it will be found that the neighboring commercial picture show can be used to good advantage. Go to the neighboring show; talk with the manager, raise the question of whether he might not arrange special programs and make other improvements, as a means of increasing his patronage. Offer on your side to help him get an audience for the right things. You may in this way succeed in transforming the neighborhood show into an entirely beneficent institution. In any case, you will learn the things you need to know about the cost of motion picture exhibits and the right way to conduct them. You will find that the picture film itself is only part of the problem; that the film should be shown under different conditions, with better music, with proper verbal explanation, with proper advance advertising. The picture itself is only a beginning; it is the skeleton—the exhibitor must fill in the flesh and blood through the accessory features which he introduces.

If you find that you cannot make a co-operative arrangement with the neighborhood show, or if there is no neighborhood show, then it can be said that in practically every case you can use motion pictures to advantage in your own building.

Make a tabulated statement of the following facts:

How large a population can you draw on for your show?

What will be your investment, and what rent must you pay?

What will be the weekly or monthly expense budget of the exhibit?

What are the local building, health, police and license regulations for motion picture exhibits?

What competition exists or should be feared?

If you answer these questions wisely and then conduct the show properly, there will be very little speculation involved in the enterprise.

The following are bits of desirable information:

DETAILS OF INFORMATION.

Projecting machines cost about $225 complete; they are likewise stereopticon machines. The fireproof booth in which to enclose the machine costs about $100. An operator, if employed continuously, earns about $18 a week, but any intelligent mechanician can readily qualify to exhibit motion pictures.

If the electric current is not sufficient, or other mechanical problems arise, the operator should know how to solve them or he can seek information at the office where he gets his films. One of the trade journals should be subscribed to and the operator and manager should read it very carefully.

Daily programs lasting an hour and a half can be rented at prices ranging from $30 to $75 a week. Any film that is going to be used continuously or frequently can be secured outright for about $100 per thousand feet, providing a twenty-minute exhibition.

Any room can be used for motion pictures if it is forty or more feet deep, and if it can be darkened, or if the screen on which the picture is projected can be properly shaded from the light.

Learn the addresses of the renters patronized by the shows in your town—the licensed renters and the independent renters. Find out their terms; learn whether they are interested in having educational institutions for customers; learn what pictures they regularly get.

Read in the trade journals the descriptions, sufficiently accurate, of all films produced week by week. In making up your program, learn from the trade journals the date on which given films are to be "released," or placed on the market. According to the rental price you are paying you will be entitled to a given film one, two, three or more weeks after it is placed on the market. Keep together the descriptions of films; strike out the ones you positively will not want; then, for each day's

program, send to the renter, several days in advance, a list of a dozen or more films, any one of which would be satisfactory. He can then select from this list the films which he can let you have on that specified date. In this way you will get a reasonably satisfactory program. In special instances you can make an urgent demand for a given picture to be furnished on a given day. But do not ask the impossible; read carefully the first part of this article.

If fifty or more associations or educational institutions in adjacent parts of the country should undertake to start motion picture shows, they could then consider two possibilities: (1) They could approach a given renter and agree to use, each one for so many days, a desired picture; this would justify the renter in purchasing this picture, or (2) they could co-operate and organize an educational rental department which could lease or purchase the desired films and circulate them at cost price among the fifty or more institutions. A state department of education could start such an educational film-renting department; or the associations in a given section of the country do the same.

Always remember that there are municipal or state laws which will guide you in the construction and operation of your educational show. For a reasonably complete law, which can be conformed to in any part of the country, and which, if conformed to, will insure safety, write to the National Board of Censorship, asking for a copy of the Folk Ordinance prepared for New York City. Do not forget that motion pictures need not and should not be given in complete darkness. The best way to regulate interior lighting for motion picture auditoriums is to invert the electric bulbs, placing reflectors beneath them and throwing the light upwards onto a white or light green surface, thus diffusing the light throughout the auditorium. Other mechanical methods can be worked out. The main consideration is that the rays of light shall not fall directly on the picture screen or directly on the eyes of the audience.

Remember that you can have good ventilation without flooding the place with cold air. A single draught, introducing one current of air, and then two or three electric fans circulating the fresh air, will be sufficient for perfect comfort. Remember also that the room should not be overheated. Sixty-eight degrees Fahrenheit, or at the utmost seventy degrees, should be the maximum of heat, and it can well go as low as sixty-four degrees. Modern ventilating science teaches that too much heat or too much humidity, or, on the other hand, too little humidity, are as injurious to good ventilation as is vitiated air.

Remember, too, that motion pictures are made to be exhibited with accompanying music, and that the music should be expressive of the emotional meaning of the pictures. You can add 50 per cent to your show's effectiveness through good music. You can add another 25 per cent if you will prepare the mind of your audience in advance by proper advertising and proper announcements. Also, lectures and dramatic dialogues, if skillfully introduced, will make a motion picture more popular and far more instructive. In general, the exhibition of motion pictures is as much an art as the manufacture of motion pictures—and art richly repaying careful study.

Moving pictures showing the methods of examination and treatment of patients followed in various state hospitals were shown as the special features of the Mental Hygiene Conference held at the College of the City of New York from November 8 to November 15.

Bernhardt Sees Herself in Pictures

Mme. Sarah Bernhardt sat in a box in the darkened Chicago Studebaker theater one recent afternoon and critically viewed the adventures of Adrienne Lecouveur with Mme. Sarah Bernhardt in the title role.

"What do you think of Sarah Bernhardt in that role?" she was asked as she left the theater later in the afternoon.

"I refuse to tell," replied Sarah Bernhardt and she would not even explain whether it was modesty or inability to judge of anything so personal as her own art that prompted her to chain her usually vivacious tongue.

This double appearance of the actress-newspaper contributor was made possible through the magic of the moving picture. There was a private exhibition of new moving pictures in which Mme. Sarah Bernhardt and Mouney Sully, a French artist, had posed in the Theatre Fraincais.

Mme. Bernhardt was invited to be one of the guests and her manner indicated that she was the most pleased of those in the theater.

She already has shown her authority by blue penciling a troupe of acrobats out of the Majestic theater's weekly bill. She said she objected to having "Camillie" or "Phedre" either preceded or followed by acrobats. Her plan to continue this program throughout her twenty weeks' vaudeville tour in America was indicated by a request for all programs in houses where she is scheduled to appear.

Motography Course at Syracuse College

The art of cinematography is to be taught at the Syracuse University, beginning January 1, 1913, and the event will mark an important step in the history of the motion picture. It will mean the full acceptance of the industry of short but phenomenal growth, into the realm of science and the vesting of the photographic art with a new dignity and an added distinction.

The course planned for the disciples of motography will comprise four years' instruction in every branch of the art, the instruction beginning in the section of the university known as the Crouse College of Fine Arts, the chemical branches being continued in the Bowne Hall of Chemistry.

The course will be established for the practical photographer whose ambition is to perfect himself in all the intricacies of the art; it is not a course for the amateur. The completion of the four years' curriculum will mean the graduation of motion-picture experts who will readily find positions with the manufacturers of the pictures as their thorough training and knowledge of the subject of cinematography will be appreciated as now it is impossible to procure skilled people in the technique of the art.

A prominent but reticent motion-picture manufacturer has made the establishing of such a course at the university possible by a liberal benefaction to the university and an appeal to the board of control.

Otis Skinner Praises Motion Pictures

Contrary to the usual attitude assumed by actors toward the moving picture shows, Otis Skinner, at the City Club, of St. Louis, Mo., recently commended motion pictures as thoroughly worth while, often educational and always furnishing a cheap form of entertainment for the masses.

Sans Grease Paint and Wig

By Mabel Condon

George Periolat.

GEORGE PERIOLAT is lonesome and wants to go home. But he won't let himself go because Director Dwan, Warren Kerrigan, Jack Richardson and others out at the Santa Barbara studio of the American Film Company would say, "I told you so!"

Rather than that, the character man would stay on in Chicago, submit to the ater parties and late dinners, not to mention his heroism in being dashed madly about, around and across the city in the American's new car—to which street cars are as lamp-posts and blue-coated, protesting officers but specks on the receding landscape.

And if it were not for the noise and the thousands of people, incident to the loop district, Mr. Periolat might make himself believe he is having a good time; but State street, both before and after dark, is too much for him. In comparison, the West with its "broncho bustin'" and other perils, typifies the quiet of an old ladies' home, in Mr. Periolat's opinion.

Hence his troubled spirit and the new line in his forehead. He has several lines there "but not from age," the man who makes characters assured Mr. Nehls, the latter's littered desk and me, as he opened back his raincoat, displaying thereby an English cut black and white suit, a wisteria tie and a snugly fitting collar which allowed his semblance of a second chin to lop, when he laughed real hard.

Mr. Nehls paid no attention to the ageless remark. I did; that was one of the things I went to the American office for and besides, I scented a secret. Information regarding Mr. Periolat's age was due me anyhow, to recompense for the shock administered with his introduction. For I had splashed out into the wetness of an indigo Monday with a borrowed umbrella and the prospect of a quiet chat with an elderly—if not old—gentleman, and behold! it was a trim, almost slender and not even elderly person who removed his *pince nez* with a flash of triplet diamonds and shook hands with a heartiness and style which I still like to think was truly western.

And that is George Edwin Periolat. His eyes are round and blue-gray and his hair—well, I couldn't quite decide about the color of his hair, so asked if he considered himself a blonde or brunette. He replied that his hair used to be very dark but that the West sun-burned it; his friends advise him to use another bottle and it will be about right.

But to return to Mr. Periolat's age and the secret. It wasn't at all easy to get him to confess to owning a secret but he finally did and this is it—he doesn't know how old he is! His father says one age, his god-mother another and he himself compromises by claiming to be "over twenty-one and under forty." Now, if that isn't a nice fix for an honest-to-goodness character man to be in! But he doesn't care for it's a secret, and anyway, he's so glad at being a character man in motion pictures that so trivial a thing as his age matters not at all, in comparison.

"Photoplays," declared Mr. Periolat as he balanced his *pince nez* on the end of his left thumb, "are the greatest things in the world, today; and they've just started. The players who get into them now, while the profession is still young, are lucky. Contrary to the legitimate stage where all classes are accepted, there seems to be but one class in picture acting and that, the refined and educated. Both the life and work are to my liking and I've never met as agreeable people anywhere as those I've met in films."

He changed his *pince nez* to the right index finger and continued, with a frown that engulfed the little new line:—

"If the players would only *not* use so many gestures! It's maddening, in this advanced day, to see an actress yawn, point to the clock, to herself, then up-stairs and place her head on her hands—all this to tell the spectators she is sleepy and is going to lie down. All that pantomime is totally unnecessary. It may have been required some time ago, but certainly not now.

"Another common mistake and one that is *awful* is talking to oneself." The *pince nez* were abandoned in preparation for the pantomime to follow. "You get a letter containing bad news—" a sheet of ad copy on the desk served for the letter of ill omen—"you read it, tear your hair—" Mr. Nehls rescued the ad copy from a like fate—"address the ceiling in the wild protest, 'It can't be true! I'll go mad! I can't stand it!' Ridiculous! A look of hopelessness, a shake of the head—so—that's all, and people understand it and like it better."

The speaker smoothed his hair, took a long breath and continued: "The man who thinks he knows all about film acting just because he was a fine director once upon a time, or a really good actor 'in the good old days,' is a hindrance to the progress of whatever company he is with. For his way is not the way of today, and the people who see the pictures point him out as 'old time' in every instance. In film acting, perhaps more than in anything else, you have to keep up with the procession; the march is a rapid one because the industry itself is, and people have taken to it with an interest that is critical because it is intense.

"Yes sir," (he was not looking at me) "photoplay is the biggest thing in the world today and it is being handled in the biggest kind of a way—lots of money and lots of returns."

"And lots of personal risk," I reminded him. "Ever get hurt?"

"No, never. I'm not superstitious but—" he interrupted himself to knock wood, "I very nearly though, one time I had to die of apoplexy. I told the director I had

never died of apoplexy and didn't know how but he said, 'O, just drop!' So I dropped and actually saw stars."

The mention of stars put Mr. Periolat in mind of his beloved Santa Barbara—the idea! as if there aren't beautiful stars in Chicago,—and he had loads of nice things to say about the place and the members of the company.

"We're just the nicest big family imaginable," enthused the character man of the "fambly" (to steal a word copyrighted by the Goat Man). "There has never been the least bit of dissatisfaction among us nor has there ever been an unpleasant word spoken during the two years we have been together.

"Warren Kerrigan is the finest man I ever knew—" and he meant every word of the five-minute oration which followed. Pauline Bush and Jessalyn Van Trump, he said, call themselves "bachelor girls," intimating they have had proposals but refused them. Miss Lester (Mrs. Frank Beale) he declared to be a "dear woman" and asserted that "they're not making them any finer than Director Dwan and Jack Richardson."

"Everybody in Santa Barbara knows the players to see them," he went on, "all except me. I've often heard the remark, from someone near me, 'I wonder where they kep the old man? Nobody ever sees him.' And Mr. Periolat laughed at how his appearance out of films, fools everybody.

"I'll be glad to get back," he confided as Mr. Nehls was called to an outer office. "They treat me fine everywhere and of course I enjoy it, but—". I understood.

"Just last week, my father offered me his business if I'd stay, but business life, to me is like being in jail and serving a term. My father runs a skin game," he added, and then I knew that C. F. Periolat, the city's best known furrier, is George Edwin's father.

"I hate business," continued the character man, "and I especially dislike the fur business. I was in it, for five months, and as a result, detest the sight of fur. I have a fur coat and I shudder when I look at it.

"But we're even, my father and I," he laughed, "for he dislikes my line of work. He only saw me play once and that was the worst show I was ever in. Went out to Hammond to see me, too, and said the whole thing was 'punk.' I agreed with him, that time, and wanted him to come to the Illinois or the Studebaker when I played there; but he refused, saying he had had enough.

"My work suits me just fine, though," and there were both conviction and satisfaction in the Periolat voice. "I was on the legitimate stage for fourteen years and started film work with the Selig company. I was there eight months, then came to the American Film Company with Director Beale and have been with its western company ever since, almost two years. This is the first vacation I have taken; they gave me two weeks to stay away but I'm going to stick it out till after the holidays and then take the fastest train I—"

"Do your Christmas shopping in Chicago?" I interrupted to ward off the impending attack of lonesomeness.

"Did it before I left home," he answered with an air of pride that would make most anybody resolve to shop Yule-tide gifts on the Fourth of July, hereafter.

"I've stored up some Chicago souvenirs to take back with me; but—" and the joke seemed to be a good one—"they won't see the gift they think I came here for."

Curiosity prompted an expectant, "What?"

"A wife. Every member of the company was sure I was coming up to be married."

"Perhaps you were," Mr. Nehls put in as he reseated himself at his desk; and he said it in the kind of voice that meant "Were you?"

"Yes, perhaps you were?" I echoed.

"But I'm not married," evaded the character man, and added in a jubilant, misery-likes-company voice, "neither is Kerrigan."

With the exception of the mysterious remark, "People change," he refused to say another word on the subject so I let him help me on with my coat and trotted back to the office on the side of Clark street where the rain had dried away and the sun was brightest and thought—

But you'd like Mr. Periolat, too!

Memory Restored at a Picture Show

A man giving the name of J. Emerson Gittig, who declared he was employed by a Columbus wholesale house, is held by the Baltimore, Md., police, according to a message from that city. The arrest, it is said, followed a statement by the man which gives evidence of a rare case of aphasia. Moving pictures, he is said to have declared, restored him to his lost identity and told him of a wrong he had committed.

His statement, voluntarily given to the police, is reported to have been:

"About two weeks ago I severed my connection with the concern, but there were some outstanding debts to collect and I collected about $120. I was on an electric road when I got horrible pains in my head and got off at a hotel to get some whisky.

"I remembered no more after that until I came to myself in a Baltimore moving picture theater. On the screen was thrown a picture story of a young man who went wrong financially and then straightened up by making an open confession of his wrongdoing. Then I knew who I was again."

Ask for Kansas City Censor Board

Kansas City, Mo., has been divided into districts, each in charge of a captain, and women working under the orders of the various captains will inspect every motion picture theater in the city. When the investigation is ended a complete tabulated sheet of information concerning the class of films and surroundings at every theater will be presented to the city council. The object of the information is to convince the authorities of the need of a duly authorized censor of the films. There is no venom in the fight the women are to make on bad films and undesirable practices at certain motion picture shows. They are going to ask and expect to receive the support of the better class of managers. The women say the motion picture shows are here to stay, provided they do not make the mistake of becoming a menace to public morals.

American's Effective Advertising

Exhibitors have been writing in about the excellent display advertisements of the American Film Manufacturing Company. The effects are produced by a new system inaugurated by Manager Nehls in which the illustration is first mounted on a white bristol board. The border and detail are then carefully drawn by an expert artist and a half tone made of the entire layout.

No two borders or designs are identical and the entire effect is very pleasing as well as more economical both in labor and in engraving, so Mr. Nehls says.

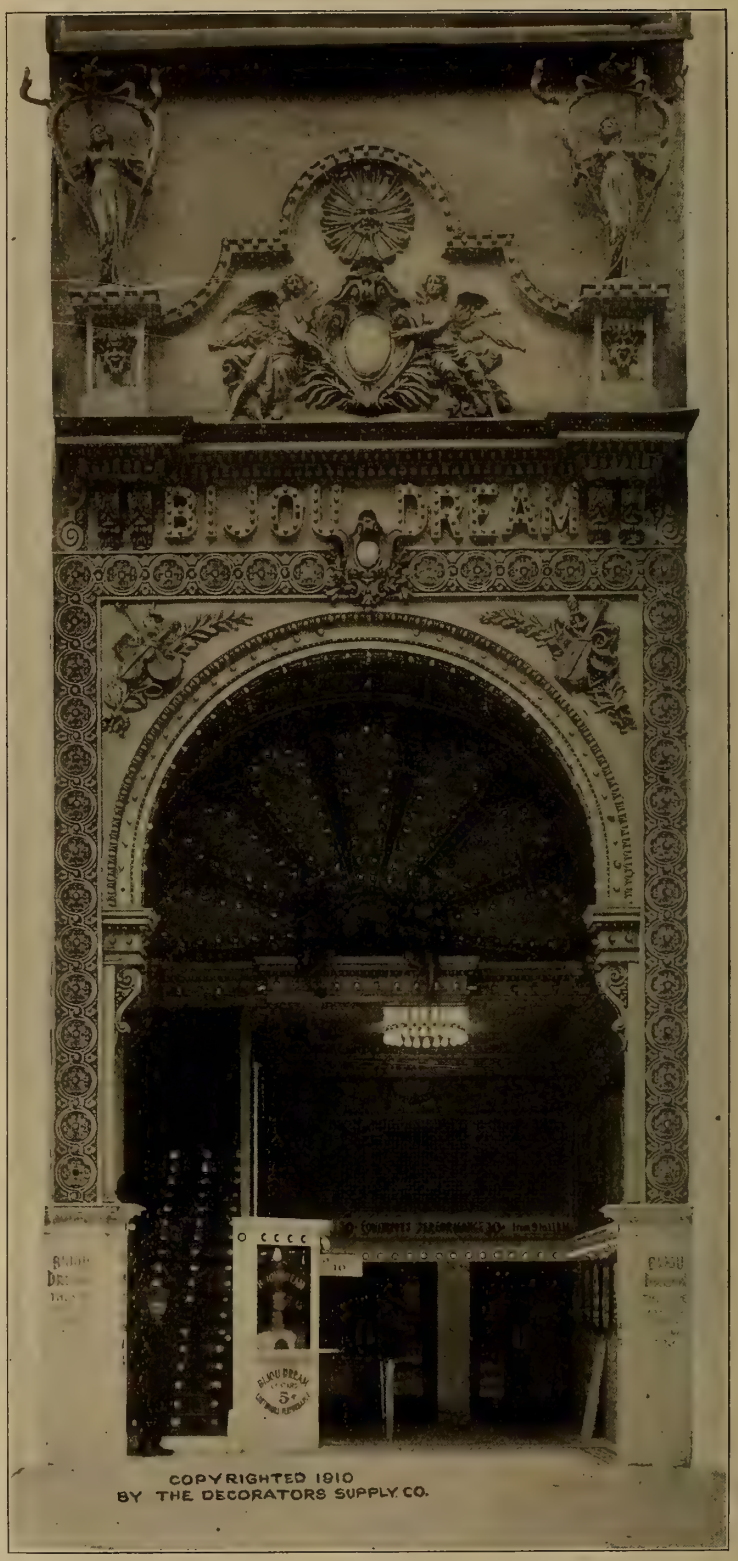
Of Interest to the Trade

Beautiful Theater Fronts

"A thing of beauty is a joy forever," and the results obtained in moving picture decoration and designing of fronts accomplished by the Decorators' Supply Company are certainly beautiful.

One of the theaters for which this company designed the front is illustrated on this page. It is one of the most popular of many popular Chicago houses, and being on State street is noticed by thousands of people daily.

The Decorators' Supply Company design individual decorations for every theater on which its product is used, and will send an expert to anyone to submit plans and estimates without charge. Its advice is valuable to any one contemplating any changes in the design of a theater front.



The Bijou Dream, Chicago. Front by Decorators Supply Company.

Pictures a Fire at Sea

The Great Northern Special Feature Film Company is giving the assurance that its latest sensational feature film, entitled "The Great Ocean Disaster, or, Peril of Fire," will prove one of the most dramatic and convincing of the many multiple reel subjects which this concern has placed upon the market. It is a story which carries heart itnerest in addition to being filled with thrills.

Fire at Sea.

Frank Harvey, a young music hall performer, takes passage for America on board the steamship "Sverige" and at once an attachment springs up between himself and Mary, the daughter of the captain.

While the passengers are enjoying dinner in the saloon the crew forward discovers fire in one of the hatches and Captain Wilson is notified. Frantic efforts are made to quench the flames below deck and likewise to keep the passengers unaware of the danger. In order to accomplish this Captain Wilson through the medium of his daughter urges Harvey to give an entertainment in the cabin, while the officers and crew attempt to subdue the flames. Harvey does his utmost to keep the attention of the passengers and finally collapses under the nervous strain to which he has been put. After he has fainted behind a curtain in the steamer's saloon, Mary takes his place and holds the attention of the passengers for the time being. A puff of smoke, followed by a volume of fire, is sufficient to cause a panic among the passengers and a mad scramble is made for the lifeboats. The latter have been lowered by Captain Wilson and in the interim the wireless operator has been exerting every effort to get in communication with a ship within reaching distance. The operator on board the "Adriatic" catches the message and her course is changed toward the ill fated "Sverige."

Captain Wilson is the last to leave his doomed steamship and he does this only with the understanding that the rescue ship shall tow the "Sverige" until such time as it is evident that the vessel must be abandoned to the dual elements of fire and water. In the excitement, Harvey and the Captain's daughter have been overlooked and are left on board the burning steamship. The young man carries his sweetheart to the side of the vessel and then sees the hawser connecting the doomed steamship with th "Adriatic." He leads the way in an overhand journey

Great Northern Feature, "The Great Ocean Disaster."

toward the rescue ship. Mary follows him and when midway on their perilous journey a lifeboat is sent from the "Adriatic" to rescue them. On the deck of the rescue ship a happy reunion takes place under the pall of smoke which rises from the ill fated "Sverige."

The picture is said to be replete with thrills and is entirely out of the ordinary run of feature films. The Great Northern Company is sponsor for the statement that this is one of the most sensational films which has been brought to the attention of the public and is as near perfection as has yet been attained in motography.

Music for the Theater

There are still some people who, never having heard a musical program rendered by an automatic instrument, or having heard only random selections with a prejudiced ear, maintain that automatic music is inferior to manual music. Even these, however, can admit, without conceding their main point, that automatic music, rendered by a perfectly constructed instrument, is bound to be superior to the manual playing of the usual or "garden variety," as delivered by the average picture theater musician. So much granted, it is an easy and logical step to the conclusion that the excellence of automatic playing is as much a matter of degree as is the excellence of manual playing. In other words, if ordinary automatic playing is better than common-place manual playing, the kind of music delivered by an automatic instrument whose design has been the subject of expert study, and whose construction is a matter of applied science, must be superior to the music of any but the most advanced exponents of manual playing.

We allude particularly to the instrument, called by its makers the "Peerless Orchestrion," which is made by the Peerless Piano Player Company, St. Johnsville, N. Y.—an instrument which has been installed in a great many picture theaters of the better class, and is finding a constantly widening field of usefulness in this kind of work. The following features of this device may be interesting to our readers:

The mechanism contains the well-known Peerless pneumatic player action, playing the entire key-board of piano—88 notes. It is equipped with re-wind music drawer mechanism holding perforated rolls containing fifteen selections. Rolls can be changed instantly. After last selection has been played, it stops, re-winds automatically, and begins with first piece.

Besides the full piano of 88 notes, seventy-two wood pipes produce effects of violin, flute and cello. It has bass and snare drums, cymbal and triangle, tympani and crash cymbal effects, set of castanets, solo mandolin; all orchestral effects are produced automatically and correctly direct from the perforated roll and true to the composer's interpretation.

Any piece can be repeated by means of pneumatic push buttons provided, which will re-roll the piece to any desired part and another button will start it playing again.

A New Act—"The Versatile Benhams"

We here introduce you to Harry Benham of Thanhouser company, and family—or Harry Benham and family, of Thanhouser company, you might say. For they are the versatile Benhams; each one can do some sort of part in the Thanhouser pictures, and does. Harry is capable at leads, Mrs. Benham at ingenues, Leland at "kid" parts, and Dorothy at baby bits. To see their "work outs" look for the father in "The Merchant of Venice," "The Making of An American," "Aurora Floyd," "Nicholas Nickleby," "Dotty, the Dancer," "The Ladder of Life," "A Noise Like a Fortune," "Dora Thorne," "Miss Robinson Crusoe," "The Wrecked Taxi," "The Star of Bethlehem" and "Brains vs. Brawn." Then see the mother shine in "The Militant Suffragette," "The Making of an American," "The Wrecked Taxi," "The Star of Bethlehem," "The Merchant of Venice," "Lucile" and "Dotty's New Doll." Leland is seen to advantage in "The Making of an American," "On Proba-

Harry Benham, of Thanhouser, and Family.

tion," "The Greatest of These Is Charity," "In a Garden," "Cross Your Heart," and "The Ladder of Life." You can watch Baby Dorothy's performance in "Don't Pinch My Pup," "The Wrecked Taxi" and "The County's Prize Baby."

For they are the Versatile Benhams, actors every one!

Linn to Market "Cosmopolitan Films"

K. W. Linn has arranged for the importation of films from all Europe which will be given the American picture spectators under the general title "Cosmopolitan Films."

And Mr. Linn qualifies as a cosmopolitan film man, meaning that he knows, thoroughly, trade conditions in Europe, America and other countries. He has visited approximately every city and town in America and Europe and speaks a number of languages, which requisite is an important one and quite essential to receiving the title, "cosmopolitan film man."

Rhenish Prussia is Mr. Linn's birthplace, but twelve years in America have made him like one of this country's own sons and have given him a really fine use of

Kurt Waldemar Linn.

the English language. Five of these twelve years have been spent in various branches of the motion-picture industry. He was branch organizer for the Pathe company in 1907, and when the Patents' Company was organized in 1908, he was sent by Pathe to Chicago as branch manager. Later, he became that company's special representative, touring the United States and Canada. In the spring of 1912, he determined to embark in the business for himself and sailed for Europe, where he contracted for the partial and, in some instances, the entire output of various companies and returned as American representative of a lengthy chain of studios which will send to Mr. Linn the cream of every range of subject.

The offices of J. D. Williams & Company, moving picture and theatrical firm at Melbourne, Australia, were destroyed by fire and thousands of yards of films stored in the building were burned.

The Motiograph Machine

The Enterprise Optical Manufacturing Company, of Chicago, makers of the Motiograph moving picture machine, commenced business in January, 1898; therefore, with the beginning of the new year the company has been in business fifteen years and must thus be recognized as a pioneer manufacturer of moving picture machines.

The company was not incorporated until January, 1900, and then only for a small capital; but the business grew so rapidly that it became necessary from time to time to add capital to take care of the additional equipment necessary in the manufacture of a larger quantity of machines, and early in 1911 the company was re-organized and capital stock increased to a quarter of a million dollars.

The Motiograph machine, the principal product of the company, has been on the market some six years, and while extremely popular in this country, and recognized both for its finished appearance and quality of picture projected, the introduction in foreign countries has been almost equally successful, and it may be said that the Motiograph machine is as well known in Europe as it is in this country, as a large number have been sold and installed in some of the most representative picture theaters on the other side.

The main office and factory of the Enterprise Optical Manufacturing Company is in Chicago, and it has an eastern distributing office in New York City, and another office in San Francisco, with European offices in London, Paris, and Berlin.

During the past six years the evolution in the picture theater has required many changes and large expenditures of money to build a machine in keeping with the general advance in the moving picture industry.

In presenting the 1913 model to the public, the company seems to have met all reasonable demands—in fact, seems to be somewhat in advance of the times, and its motor-driven equipment has proven extremely popular in all parts of the country.

The facilities the company offers the users of this machine cannot be excelled, for, with the repair department in the factory in Chicago, in the eastern and western offices, and in Europe, Motiograph users, for minor repairs, can telephone or wire for a part and receive it within a few hours from the time of placing the order; and where the damage is more serious, the company keeps in each of its offices a number of emergency mechanisms, which, upon a reasonable deposit for safe return, are loaned without charge to those desiring to send in their own equipment for repairs.

No Scenery, No Fine, Says Law

When is a theater not a theater? And the answer is, when it has no scenery.

Louis Schindler, proprietor of the Fairyland Theater, Sacramento, Cal., will not be prosecuted following his arrest for allowing the aisles of his theater to be overcrowded. City Prosecutor Cross declares there is no ordinance that will reach a theater man who does not have any scenery in his theater. Schindler put up $100 bail, but this money was refunded him by Chief of Police Ahern. Ordinance No. 648 declares in Section One: "Every building now or hereafter erected which is used or which is to be used for the purpose of a theater, opera, public entertainment or assemblages of any kind in which stage scenery and apparatus are employed, must conform to and be built in accordance with the provisions of this ordinance."

Brevities of the Business

PERSONAL NOTES.

Harry Cashman, whose portrayal of character roles in Essanay eastern films made him a noted figure in screen stories, is dead. The end came Saturday morning, December 14, after an attack of heart trouble for which Mr. Cashman was doctoring at the Alexian Brothers' hospital. Mr. Cashman was a man whose friendship circle was a wide one and his absence from its midst and from film work will be deeply felt. His past theatrical experiences covered a range of years of work. Previous to taking up film acting, he played with light opera companies, being associated for several seasons with the Tivoli Opera company of San Francisco, where he had a splendid reputation as comedian. Then he played with T. Daniel Frawley James Neil and Edythe Chapman, starred for two years in "Chimmy Fadden" and for two seasons was with Richard Carle and "The Spring Chicken." His photoplay work won him much appreciation among motion picture theater goers, and his admirers were many. They will surely miss his face from the screen.

Francis X. Bushman, George Periolat, Lottie Briscoe and George Johnson, represented the realm of picture players at the December twelfth ball held in Columbus, Ohio, by the Columbus Motion Picture Exhibitors' League. Short curtain speeches were made by the players, whose appearance at the event contributed largely to its big success.

Henry Reimers, camera man of the Selig Colorado company, is at present confined in the Canon City Hospital with pneumonia.

Miss Ruth Stonehouse, leading lady of the Essanay Film Manufacturing Company, has proven herself quite a popular photoplay actress in Memphis, Tenn. Last week the manager of the Majestic Theater in that city offered a prize to any patron of the theater giving the name of the person whose photo appeared on the cover of the week's program. Everybody guessed right. The names of the guessers were put in a box and one was selected. The lucky person won the prize. The picture, of course, was of Miss Stonehouse.

Captain E. M. Stedman, of the United States navy, has been visiting his son Marshall Stedman, manager of the Selig Colorado company at Canon City.

William Duncan, leading man and producer of the Selig Colorado Company, who recently was so badly injured by being thrown from his horse that he still is unable to use his left arm, is once more on the job directing the production of his own scenarios.

Miss Gene Gauntier has taken it upon herself to form a company of her own, to be known as the Gene Gauntier Feature Players' Company. With her in her new venture are Sidney Olcott, as director, Jack Clark who has played lead to Miss Gauntier for several years, and Allan Farnam, scenic artist. This is but the nucleus of the company, Mr. Olcott carefully selecting other members who will aid in the making for fame of the new company.

Mabel Trunnelle and Herbert Prior have left the Majestic Company and will again be seen in Edison releases.

Miss Barbara Tennant and Guy Hedleund are of the Eclair party taken to the Adirondacks for a two weeks' filming of stories with winter settings. Oscar Lund has the party under his wing.

William A. Paley, the elderly motion-picture cameraman, who has been confined to the Columbia hospital at Los Angeles with an injured foot, has had the foot amputated and recent reports state he is doing nicely. The Paleys, however, are in straitened circumstances and Fred Mace is receiving contributions toward a Paley fund.

Wilfred North and Bert Angeles are now on the directors' staff of the Vitagraph Company.

L. Henderson has taken the Thanhouser California Stock Company to Los Angeles. The company comprised Flo La Badie, William Russell, Jean Darnell, Fred Vroom, William Garwood and Riley Chamberlain.

Frank Powell has taken a company to the west coast where "Merit" brand of picture will be produced.

Eugene Palette, late of the New York Motion Picture Company at Santa Monica, has joined the American Company at Santa Barbara as juvenile lead.

Charles Inslee, who played leads under Otis Turner at the Bison camp, has succeeded to the position vacated by James Dayton.

Charles Kessel, who put the Kay in Kay-Bee, is now a resident of Los Angeles and spends more than eight hours a day at the studio at Edandale.

F. D. Halliday, who is general manager of the Annex Motion Picture Manufacturing Company at San Diego, is in New York making the purchase of two new latest model cameras and arranging for the handling of more and better goods by the eastern office. During Mr. Halliday's absence the western studio has closed for improvements, a new printing plant being installed and the studio being enlarged.

C. J. Hite, president of the Thanhouser Film Corporation, and Herbert Blache, manager of the Gaumont Company, deserted New York for a busy week spent in Chicago.

Miss Lillian Berry, who played opposite William Gillette for two seasons, is arranging to take up motion picture work.

Hobart Bosworth and Norval MacGregor have gone to Salt Lake City from Los Angeles to direct the final scenes in the film "One Hundred Years of Mormonism," which will be ready for release in latter December. Three camera men accompanied the directors and the film, which met with the approval of both the church and the historical body of the state of Utah, has been copyrighted in Washington.

Mr. and Mrs. Maurice Costello, their daughters Helen and Dolores Cosctello, Mr. and Mrs. W. V. Ranous, Harry Keiffer, camera man, W. S. Smith, Mr. and Mrs. James Young Deer and G. F. Mullen, scenario writer, December 13 formed the Vitagraph party which started on the trip around the world. The trip will be of indefinite length.

Mae Hotely, star of the Lubin comedy company wintering at Jacksonville, Florida, is a motor boat enthusiast. The Leola May, a neat little craft, so named for the little daughter of Director A. D. Hotaling, is Miss Hotaling's especial property and is champion racer of that vicinity. A regatta is being arranged by the Lubin people for the purpose of giving Miss Hotely and the Leola May a chance to further distinguish themselves in the speed class.

Director Allen, assistant to Thomas H. Ince, had his face badly burned recently by a powder explosion which occurred during the taking of a big battle scene for Broncho pictures in Santa Monica, California. With his face bandaged, he was back at work within an hour after the accident.

Lillian E. Christy is now an American Film Company player at the new studio at Santa Barbara. She is well known through work in the films of other companies.

Will C. Smith is the new assistant general manager of the Nicholas Power Company.

Chet Withey, character man, is another addition to the American Film Company's players at the new studio at Santa Barbara.

L. W. Atwater is H. B. Coles' successor as sales manager of the Nicholas Power Company.

Carl Holliday, B. S. M. A., professor and author, and brother of Frank E. Holliday, managing editor of the Gaumont Weekly, has joined the staff of the latter company, filling the newly created position of director of the educational department.

Jean Hathaway, the Bison star, is again at work after a six weeks' illness at a hospital in Los Angeles.

James Dayton, photoplaywright of the Universal company, will accompany a party of seventeen people to Honolulu, where motion pictures containing the local color of the Hawaiian Islands will be directed by Mr. Dayton. His promotion to the title of "director" is considered a big one. The seventeen people to take the Honolulu trip comprise the World's Fair Stock Company working in conjunction with the Universal company.

King Baggot has achieved another honor in addition to that of hero lead of Imp films and president of the Screen Club, his newest title being that of benedict. On December 3 Miss Ruth Constantine became Mrs. Baggot. William Robert Daly witnessed the ceremony. Mr. and Mrs. Baggot spent the rest of the week at Atlantic City, stopping en route at Philadelphia; then on December 7 they left for Bermuda for a stay of a week or ten days. The health, wealth and happinesss wishes of the Baggot admirers are accorded the King Baggots.

Jefferson Osbourne and William Ryno of the Universal company received painful burns in the fire at the St. George hotel in Los Angeles. Mr. Ryno was injured but slightly, while Mr. Osbourne is still in the Sisters' hospital, where his injuries are declared severe.

J. Roy Hunt, formerly manager of a local moving picture house, but now with the Gaumont people, is in Egypt, and a post-card to friends at Birmingham, Ala., says he has taken pictures of the Sphinx and of the Pyramids.

Joseph L. Schnitzer, heretofore president and manager of the Toledo Film Exchange, has gone to Boston, where he will have his office as manager of four branch film exchanges under the ownership of P. A. Powers. Mr. Schnitzer has sold his interests in the Toledo Film Exchange to Detroit parties, and the new position in Boston will bring to him more extended duties for which he is fitted by long business training. Mr. Schnitzer is a member of the Toledo Commerce Club, and has made many friends among the business men of that city. Preliminary to his removal to Boston he was guest of honor at a series of stag parties given by his business friends and companions.

Maurice Costello, leading man for the Vitagraph Company of America, had a narrow escape with no stage setting nor moving-picture machine handy to catch every fall, when his automobine, which he was driving himself, came into violent collision at Ocean and Church avenues, Brooklyn, with a grocery wagon, which was practically demolished and the driver thrown to the street. He was badly bruised and shaken up and was removed to the Kings County hospital. The automobile was scarcely damaged and Costello also escaped injury. Curiously enough, the accident took place in front of the home of J. Stuart Blackton, vice-president of the Vitagraph company, and one of its principal stockholders.

Jack Cohn is the new manager of the Rex company. He left the Imp company to assume his new office.

Frank Jones of the Kinemacolor company is father of a two weeks old boy.

Harry Shulberg, a recruit from the Universal company, is giving his entire attention to the publicity department of the Famous Players.

Bert Ennis has changed from the Vitagraph to the New York Motion Picture Company, and has taken charge of the advertising for the latter company.

Arthur W. Hale, who formerly was with the Mutual Film Corporation, is now assistant to Producer Porter, of the Famous Players Company.

Evelyn Selbie is a new member of the western Essanay company in which she is playing leads and heavies. She formerly was with the Melies company.

Hector Dion has resigned the playing of leading roles with the Reliance company.

The following item appeared in a Chicago paper last week. "E. H. Calvert of the Essanay Film Manufacturing Company, will pay ten cents apiece for one hundred turkey wishbones." Up to date Mr. Calvert, the popular leading man of Essanay's Eastern stock company, has received fifty-five of the "Good Luck" bones. The object dates back some years ago when Mr. Calvert was a student at the University of Wisconsin. It seems that Mr. Calvert was smitten with a fair coed who, when leaving the college presented Mr. Calvert with a turkey wishbone and told him it meant good luck, and to carry it on his person always. His good fortune and prosperity is credited to the wishbone, so he wants a hundred of them to mail to his friends at Christmas time.

Bert Adler is becoming a proficient chauffer, his experiences with his new auto, given him by C. J. Hite in appreciation of services rendered the Thanhouser company, being many and varied.

James L. O'Brien, proprietor of the Orpheum theater at Oelwein Iowa, was elected president of the Iowa branch of the Motion Picture Exhibitors' League of America at the state convention held in the Savery, J. D. Bassett of Independence was elected first vice president and L. E. Dewey of Chariton was named second vice president F. W. Young of Cedar Rapids was made secretary, J. B. Teiny of Sioux City was chosen treasurer and L. A. Brown of Iowa City was elected national vice president.

Dr. Wilbert Shallenberger, of Chicago, was a guest of C. J. Hite, president of the Thanhouser Film Corporation, at New Rochelle, last week. Dr. Shallenberger spent his days watching the work at the Thanhouser plant.

Miss Eleanor Blanchard of Essanay's Chicago company, has left for her home in New York to spend the holidays with her folks. It has been some time since Miss Blanchard has seen her mother so the meeting at Christmas time will be a happy one.

ROLL OF THE STATES.

ALABAMA.

The new theater building erected by W. S. Taylor on Oak street near the Southern hotel, Mobile, is ready for business.

ARKANSAS.

Plans are being formulated by Abe Stiewel of the Little Rock Trust Company for the erection in Little Rock of what he states will be the finest and largest moving picture theater south of St. Louis. The building, which will be located at Fifth and Spring streets, will cost, it is estimated, about $65,000, and will be erected upon a plot of ground 150x150 feet. A feature in connection with the erection of this new theater will be a park which will be laid out by landscape artists, and will occupy all that part of the theater grounds not used for the erection of the building. The building will be occupied by the theater alone and will not, according to the promoters, be used for or in connection with anything other than moving pictures.

J. W. Lippincott, who recently purchased the Colonial moving picture theater from J. W. Enlow, has taken possession, and Vernon Story, a well-known Argenta young man, and a former machinist at the Iron Mountain shops, is managing the house for the new owner.

ARIZONA.

Bisbee is to have a moving picture house. Bisbee's largest suburb is to conduct amusement enterprise on its own account.

CALIFORNIA.

A three-cornered moving picture merger has been organized, embracing the Majestic theater of Chico, the Gardella theater of Oroville, and the Wigwam theater of Marysville. C. E. Howard of Oroville, Nick Turner of Chico and William Gardner of Marysville are behind the scheme. The three theaters are owned by the same company, of which Howard is president; Gardner, vice-president and secretary, and Turner, general manager. The combination of the three theaters goes into effect at once.

Manager Alex. Kaiser of the Empress Theater addressed the council at Sacramento in relation to the differences between the Local and the Empress management. He stated that he did not grant the demands of the operators for $1.50 for each show in excess of twenty-one performances per week owing to the fact that when an extra show was given, the time required for the three performances never exceeded four hours and he did not think the operators were entitled to overtime when they worked less than eight hours per day.

A brick theater will be erected at 1778 West Adams street, Los Angeles, Mrs. Esther Kautrewitz, owner, at a cost of $10,000.

The town of Burbank will soon have a moving picture and vaudeville theater. The construction of a large concrete building is to commence at once and will be valued at about $6,500 when finished. The hall will have a capacity of 850 seats and a modern-designed stage will be equipped with facilities for vaudeville acting. The theater will be located at Fourth and Olive streets and the owners expect to have it completed and in operation by March 1, 1913.

GEORGIA.

Fifty feet of film burned at the Bonita theater, Augusta, recently and the audience was totally ignorant of the conflagration until it was all over. Without, pedestrians saw smoke emerging from what was found to be the air pipe to the booth. The fire alarm was sounded and a number of the department responded. The fire had been practically extinguished, and the last show was then in progress.

The Lyric theater has reopened and shows daily a line of high-class motion pictures, of such a nature as to make the house distinctive. The picture house is under the management of Harry P. Diggs, who is associated in the management of the Majestic. Mr. Diggs came to Macon last spring from his home in Baltimore.

KANSAS.

A license for operating the new colored moving picture show has been issued by J. H. Kirmeyer, city clerk at Leavenworth. The license is good for one-half year.

Another motion picture theater will be installed in Hutchinson. The new playhouse is to be located at 108 North Main street. The owner of the new building is Alonzo Umstot. Mann & Gerow drew the plans for the new theater. The theater is to be one of the most modern in the city and will have a balcony and other fittings which will make it appear to be a regular playhouse.

ILLINOIS.

The New Venetian has opened for business at Rochelle. It is a moving picture theater.

Mr. Flagg has been in Quincy negotiating with the Labor Temple Association in which to conduct a motion picture theater.

On Stony Island avenue, Chicago, John McInnis, 6253 Kimbark avenue, is building a new theater.

C. B. Burkhardt has opened his new Pastime theater at Homer.

At 2419 Wentworth avenue, Chicago, a brick theater is being built by Ed Schell, 7358 Union street; A. G. Lund is the architect. The cost will be $7,500.

Investors' Theater Company, 38 South Dearborn street, G. L. Rapp, architect, will build a new theater building to cost $20,000.

Regent Amusement Company, $10,000; amusement enterprises; at Chicago; Fred J. Kicker, Abraham Brimm, J. Schwartz.

American Cinematograph Company, $5.000; Chicago; moving picture machines, films, etc.; Paul S. Schmidt, L. A. Boening, Paul Suhling.

Anthony Theater Company, Chicago; capital, $10,000; incorporators, Percy B. Eckhart, W. M. Klein and Thomas G. Deering.

J. H. Milligan of Tampico has bargained of Frank Pitney for the Woodman hall, moving picture building and residence on the same lot, the consideration being $3.000 for the lot and buildings. Mr. Milligan will move into the house and occupy it about January 1, 1913. The property is well located and is considered a bargain at the price paid.

The Coloniol Motion Picture house at Sycamore will open for business in Maple Park.

R. C. Wittenberg, 1739 Milwaukee avenue, is owner and D. S. Klafter architect, of a moving picture theater to be erected in Chicago to cost $15.000.

The Kaiserhof Theater has been sold to C. R. Boyer, of Rockford.

Plans for the erection of brick theater building at 321 East Sixty-eighth street, Chicago, have been drawn for C. Krug, 2952 Butler street; W. C. Kenfeldt, architect. Cost, $8,000.

The Pastime theater on West Adams street, Chicago, was slightly damaged by fire recently.

INDIANA.

A permit has been issued by the city building inspection department to Julius F. Reinecke at Indianapolis to erect a one-story motion picture theater building at Virginia avenue and Stevens street. It will be of brick and cost $9,500. When completed, the building will be leased by a company in which Reinhold A. Miller, Jr., is interested.

William M. Dickson and Percy H. Dickson owners and managers of the Orpheum and Princess theaters at Wabash, secured a long-time lease on the South Wabash street business block, recently vacated by the Fair store. It is the intention of the lessees to install a moving picture attraction in the theater as soon as it can be placed in readiness. The room will be extended back to the alley, making it 130 feet in length and with the balcony which will be installed the theater will have a seating capacity of 400.

Oscar Webrock bought a moving picture theater at 914 Calhoun street, Fort Wayne, for $600 from M. Lamfert, 1306 Columbia street.

A deal was made by which George E. Gardiner sold the Mystic theater in Fort Wayne to Wesley E. Draper. It is one of the city's popular moving picture shows.

IOWA

William Hoops will start a picture show at Kingsley in the near future.

The Odebolt Booster Club will investigate the feasibility of erecting an opera house at Sac City.

A Humboldt concern has secured a contract for the construction of a fine new opera house at Panbury.

The new Casino theater, announced as the Theater Beautiful, on Locust street between Fifth and Sixth, has been formally opened. It has a bright and attractive foyer, and seats 225 people. The aisles are all wider than required by the city ordinance and there are five alley exits. A. H. Blank is the proprietor of this new theater. He announces that he will show censored films only. Appointments of the theater are all of the latest type. Included is an electrical orchestra of seven pieces.

Charles Namur has a lease on the property owned by F. M. Hubbell, at corner Ninth and Locust streets, Des Moines, and will erect a theater building there.

A. H. Blank will open the new picture theater at corner Locust and Sixth avenue, Des Moines.

The Des Moines Amusement Company, headed by B. I. Van Dyke, a local restaurant proprietor, has leased a site, 44x88 feet on the southeast corner of Eighth and Locust streets, for a term of fifteen years and will operate a theater on the location. The property, on which is located a two-story building, is owned by Pleas J. Mills. According to Mr. Van Dyke, the west half of the building will be used for a moving picture theater to be installed immediately. The company is under contract to erect a new building on the site after two or three years. When the new building is erected, it will cover the entire site and will be used exclusively for a moving picture theater. The Des Moines Amusement Company is now being organized and will be incorporated soon. Mr. Van Dyke will be president of the company.

LONG ISLAND.

The Lyceum, Patchogue's principal theater, has been bought by Frank Losee, a New York actor. Mrs. Ruth Litt has been the owner of the Lyceum up to the present time.

Charles Wetzel has sold a plot 40x100, on the south side of Broadway, 60 feet north of Paris boulevard, at Elmhurst, L. I., to a syndicate which will erect a moving picture theater.

LOUISIANA.

The Lomo theater at Hammond, one of the two motion picture theaters here, was sold to Lynn H. Dunn. Mr. Dunn has also leased the Alpha theater, and both houses will hereafter be run under the same management.

MARYLAND.

A permit for the erection of a theater building to cost $23,000 on north side Baltimore street, near Carrollton avenue, Baltimore, has been granted to J. C. Spedden, contractor.

MASSACHUSETTS.

The Premier moving picture house at Falls River has been badly damaged by fire. The loss is $7,000.

Plans are being considered for the erection of a theater building on the site of the old Winthrop school, Tremont street and Dix place, Boston.

MICHIGAN.

The Northwestern Motion Picture Company is considering locating in Mason county for the summer of 1913, and it is expected that a number of moving pictures illustrating the fruit industry from the planting of the small trees to the marketing of the crop, will be secured.

Harry B. Knapp, pioneer moving picture man of Battle Creek, announces that one of his dreams is to be realized. He plans to build in Battle Creek one of the finest motion picture palaces between New York and Chicago.

A capitalization of $50,000 is represented in the organization of the Kalamazoo Amusement Company, whose articles of association were filed for record with County Clerk Curtenius at Kalamazoo. Eleven well-known business men of the city are named as stockholders in the amusement enterprise, at the head of whom is Goddie Rosenbaum, identified with the Orpheum and Lyric theaters, together with Louis Rosenbaum and Edwin S. Rosenbaum, and Horace J. Fuller, proprietor of the Colonial theater. All three of the amusement places are photo-play houses. The company, which is organized for "the operation and management" of theaters, takes over the Lyric, the Orpheum and the Colonial, at a total valuation of $30,000, while $20,000 of the capital stock is paid in cash. The Lyric with its lease, furniture, fixtures and all assets is valued at $15,000, the Orpheum at $8,000, and the Colonial at $7,000.

Two hundred and fifty panic stricken people fought one another in a mad effort to escape when a film caught fire and exploded in a moving picture show at Coloma. An entire business block was destroyed. The loss is estimated at $25,000.

The family theater at Battle Creek has changed hands, and Harry Knapp no longer has anything to do with its management. This famous old play house, which as Hamblin's opera house was Battle Creek's first theater, is now under the management of M. E. French and F. J. French, who have leased the theater from Hoffmaster brothers, owners of the building. The place will be conducted as a moving picture theater.

M. W. Merrer of Detroit will lease a building on West Main street at Owosso and put in a moving picture and vaudeville theater.

MINNESOTA.

H. J. Breilien, Faust theater, says he will build a motion picture theater at 302 University avenue, St. Paul.

The people are rejoicing over the establishing of a motion picture theater by Village Clerk J. J. Roberts and Thomas Johnson which was opened to the public at Keewatin.

NEW JERSEY.

Two static slides concerning the early closing movement and early Christmas shopping, the other a vivid picture showing results of late close and delayed Christmas shopping, will be shown in Taylor Opera House and the Star moving picture place at Trenton every day until January 1.

NEW MEXICO.

Plans are being prepared for the erection of a new picture house on lots north of Farr market on South Second street, Albuquerque, for Joe Barnett.

NEW YORK.

Moving picture building will be erected by P. Hanke, 150 East 23d street, New York, owner. C. B. Brun, 1 Madison avenue, architect. Cost, $10,000.

A fire which started in the operators' booth, on the balcony of Gaines' Manhattan Theater, a moving picture playhouse at No. 1249 Broadway, New York, created almost a panic and a number

of those in the audience left the place when they heard the clanging of the fire apparatus in front of the door. The fire was caused by a film igniting, and was put out with little difficulty.

Clement B. Brun, architect, has filed plans for the construction of a one-story moving picture theater on the west side of Madison avenue, 18.6 feet north of 113th street New York. It will have a frontage of 43.6 feet and a depth of 70 feet and has been estimated to cost $10,000. R. Hank is the owner of record.

Independent Exchange Company, Portland, to acquire, exhibit, sell, lease and deal in moving picture machines, films, etc.; capital, $100,000. President, A. F. Jones; treasurer, T. L. Croteau, Portland.

The Casino Moving Picture Theater has been closed, due to alterations and enlargement by the proprietor, Michael W. Sandusky, who has expended about $4,000 in the improvements.

L. H. Smith has purchased a moving picture theater in Rochester.

OHIO.

A new theater building will be erected on Main avenue in Norwood, a suburb of Cincinnati.

A contract has been let for the erection of a new theater building to cost $15,000, for W. A. Bettis, at 239 Summit street, Toledo.

Work has started on the construction of a new fire-proof motion picture theater in South High street, Columbus, between Broad and State, on a site now occupied by several stores, just north of the Metropole Hotel. The new theater will be owned by Max Stearn, proprietor of the Exhibit theater in North High street. It will cost $100,000 and will take six months to build. It will be called "The Majestic," will have a seating capacity of 1,200, with a main floor and balcony. Robert J. Harmon, for seven years manager of the Exihibit theater, will have charge of the Majestic when finished. Mr. Stearn, the owner, is an officer in the Motion Picture Exhibitors' League of Columbus. He helped form the state motion picture association, which was the nucleus of the present national organization, which has more than 10,000 members.

OREGON.

With the remodeling of the Dekum building in Portland, one of the important features is the alteration on the Fourth street part of the structure, which has been converted into a modern theater. The improvements were installed at a cost of $30,000, making it one of the finest photo playhouses in the Northwest. The new theater is known as the Circle theater and has a seating capacity of 800.

The motion picture films of the 1911 Roundup celebration were shipped from Pendleton to Superintendent Steiner of the Oregon Hospital for the Insane at Salem.

PENNSYLVANIA.

Platt Construction Company, moving picture building corner 36th and Haverford avenue, Philadelphia, for Wm. F. Boogar.

Milligan & Pierson have invited sub-estimates on a one-story moving picture theater, 60 by 140 feet, at Seventh and Dickinson streets, Philadelphia.

W. S. Pugh, of Pottsville, and George Steidle, of Minersville, have purchased the G. F. Dietz building, near Second and Sunbury streets, at Minersville. It is understood the consideration was $10,000. Messrs. Pugh and Steidle are remodeling the premises for a moving picture house, which will be shortly opened. Frank Gallo has acquired the Charles Ludwig property, on Sunbury street, formerly used as a shoe store, and has remodeled it for a moving picture house. With the new acquisitions, Minersville will have four motion picture theaters.

George & Borst have a contract for a moving picture theater to be built at the southwest corner of 22d and Berks streets Philadelphia, for M. S. Maloney.

Title to the moving picture theater on the west side of Ridge avenue above Vineyard street, Philadelphia, has been conveyed to the Satinsky Brothers' Realty Company for a nominal consideration. The property has a frontage of 72 feet and a depth of 244 feet, running through to Poplar street.

Deputy United States Marshal Hugh J. Evans and Paul K. Holgate, real estate dealer, purchased the Orpheum moving picture theater at 220 Lackawanna avenue, Scranton, from Fred Hummler for a consideration said to be about $3,000. It is the intention of the new owners to remodel the playhouse after the Christmas holidays. Marshal Evans and Mr. Holgate have already taken title to the theater business and will continue it on a more elaborate scale than has been attempted by the former owners. The building is owned by Myer Davidow and Morgan S. Kaufman and has been occupied as a moving picture house for several years. The taking over of the Orpheum is the first venture of either Marshal Evans or Mr. Holgate into the moving picture field.

The National Amusement Company, Philadelphia. Capital stock, $500,000. To lease, buy, operate and conduct moving picture shows, etc. Incorporators, F. R. Hansell, Philadelphia; Charles W. Martin, S. C. Seymour, Camden, N. J.

Plans have been filed with the Bureau of Building Inspection for a moving picture hall, 38 feet by 93 feet, to be built on an irregular shaped lot at Frankford avenue, Belgrade and Crease streets, Philadelphia, for the Kerr, Pollock & McCrone Company. P. M. Coles is the architect.

The Gamble will be the name of Altoona's new playhouse to be erected at the corner of 11th avenue and 14th street by Gamble Brothers. W. B. Scott, of Johnstown, contractor.

SOUTH DAKOTA.

After a week of discussion of the proposed new city ordinance prohibiting Sunday moving picture shows in Pierre it has been discovered that an ordinance prohibiting Sunday shows of any description has been on the ordinance books many years, but forgotten. This means that the new ordinance will not likely be pushed any further, but Manager Hipple of the Bijou theater, who started the contention by his Sunday evening show, says he will carry the old ordinance to the people by the referendum, just as he would have done with a new one.

TEXAS.

Plans are being prepared for the erection of a new theater for Beaumont by a New York corporation.

W. K. Sheppard, who recently moved to Brownsville from Laredo, has purchased a site and let the contract to P. K. Magruder, a San Antonio contractor, for the erection of a one-story, fireproof building, to be used exclusively as a moving picture theater. The building will be 50 by 120 feet.

A branch was formed at Waco of the Motion Picture Exhibitors' League of Texas by State Organizer Theo. Clemmons, of Beaumont. The following officers were chosen following an address by Mr. Clemmons: President, W. L. Terry; vice-president, A. M. Jacobs; secretary-treasurer, J. A. Lemke.

Messrs. Landry & Box, of Lake Charles, have leased store room in the new Stark building on Front street, Orange, where they will open up a theater. Moving picture attractions will feature the programs offered by the new amusement concern, which declares that it will install a superior equipment.

The Dixie theater at Waco, a moving picture show, was gutted by fire recently. The fire caught from a film which was held too close to an electric light. Oscar Miller and P. A. Barton, operators, were painfully burned. The loss to the picture show totaled about $15,000, practically covered by insurance.

WASHINGTON.

Two new show houses are in construction at Juneau. One for Spickett & McIvor will be called the Orpheum and the other is being built for W. D. Gross, at present conducting the Grand theater. Both play houses will be modern and fitted up elaborately.

WISCONSIN.

As a result of a fire which had smoldered for hours, the Pastime theater, one of the largest amusement places in Kenosha, Wis., was destroyed. The loss is estimated at from $8,000 to $10,000. Twelve hundred persons had attended performances at the theater during the evening and the fire broke out an hour after the curtain had gone down.

Albert Carter has bought the Palace theater at Seymour and has taken possession.

TUESDAY: Thanhouser, Majestic, Gaumont.
WEDNESDAY: Reliance, Solax, Gaumont Weekly.
THURSDAY: American, All Star, Gaumont.
FRIDAY: Thanhouser, Solax, Lux.
SATURDAY: Great Northern, Reliance, Comet.
SUNDAY: American, Thanhouser, Majestic.

Complete Record of Current Films

Believing the classification of film pictures by the nature of their subjects to be of greater importance to the exhibitor than classification by maker, MOTOGRAPHY has adopted this style in listing current films. Exhibitors are urged to make use of this convenient tabulation in making up their programs. Films will be listed as long in advance of their release dates as possible. Film manufacturers are requested to send us their bulletins as early as possible. Reasonable care is used, and the publishers cannot be responsible for errors. Synopses of current films are not printed in MOTOGRAPHY as they may be obtained of the manufacturers.

TRADE MARK

A Breezy Westerner Fresh From Range and Cattle Corral

with the *sting* and *bloom* of the West in his cheeks, blew into the *American's* office one day last week—came, he said, to find out just where *American Films* were made.

"Absolutely true to life—those cowboys were REAL cowboys—couldn't fool HIM—why, some of those boys were BOW-LEGGED from horse-back riding!!"

Contagious, wasn't it—and highly gratifying! "Gallery-God applause is the sincerest form of flattery," is an old theatrical wag; and we must have felt like the Star Heavy Lead and on a first night when the gallery burst into howls of delight!

AMERICAN FILMS depict the West as it is today—the great rolling prairies, mighty mountain ranges and sylvan dales with their rough, almost primitive life, their healthy, wealthy, quick-witted, emotional inhabitants.

AMERICAN photography is stereoscopic, clean-cut and flawless, with backgrounds of surpassing beauty, obtainable only in beautiful, historic, dreamy El Cajon Valley, Southern California.

AMERICAN PANTOMIME is founded on a stock company, especially selected, drilled and equipped to produce the *Highest Possible Grade of Western Pictures.*

When you buy "Americans" you buy the best

"THE MORMON"

(Release January 25th. Approx. Length, 1000 Feet, Western Drama)

A tale of the early days when wagon-trains were held up by Mormons in the hope of forcing white women to join their Polygamous faith. Stirring, historically true, charged with quick action, this film will pack houses. It's an epoch-making picture well worth your particular attention.

"LOVE AND LEMONS"

(Release January 29th. Approx. Length, 1000 Feet, Comedy-Educational)

Combining the educational with the story interest. Will teach much concerning the lemon industry of Southern California. Throughout runs a love story, absorbing, dainty, delightful, centering about the purchase of a lemon grove by a charming Eastern Miss.

"THE BEST POLICY"

(Release February 1st. Approx. Length, 1000 Feet, Western Drama)

A tale of three train-robbers retiring into the bush to divide the swag. It's "double cross" upon "double cross." Screamingly funny. A bully good story with a laugh in every picture.

"THE REAL ESTATE FRAUD"

(Release Feb. 5th. Approx. Length, 1000 Feet, Western Social Drama)

A charming, delightful story, centering about the efforts of two real-estate sharks to swindle an inexperienced but pugilistic young man, and how that attempt was frustrated by the Boss' own stenographer.

Bank Floor, Ashland Block, CHICAGO

"SUNLIGHT" SCREENS

are being used by the best patronized theatres in this country

These screens have become "standard" strictly on their merits alone

¶ Soft, clear, well lighted pictures. ¶ Lower electric light bills. ¶ Pleasingly lighted theatres. ¶ No harsh, eye straining high lights. ¶ Guaranteed not to change color or get dark. ¶ Screens up to 12x16 without a seam. ¶ Perfect installations with our patent frame and tightening device.

Absolutely Free From Wrinkles

Our frame installations can be used either as a fixed screen or a drop curtain.

"Sunlight" Screens displace plaster and calcimine walls and aluminum paint screens.

"Sunlight" Screens save one-third to one-half of your electric power bill and earn their own cost.

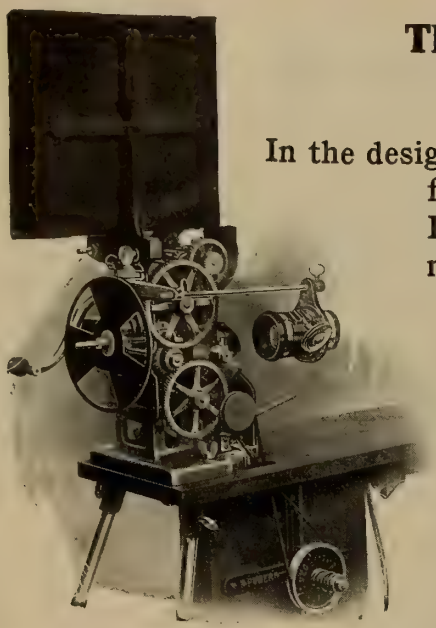
Power's Cameragraph No. 6

The Perfect Motion Picture Machine



In the design of Power's No. 6 we have eliminated the objectionable features found in other machines, including our No. 5. It is wonderfully simple and rugged. All parts of the mechanism are on the outside where they are accessible.

We have confidence enough in its wearing qualities to guarantee every No. 6 mechanism against natural wear and tear for one year.

Books You Should Have

Books pertaining to the Motion Picture Industry are scarce. The reason is obvious—the art is new and things have been accomplished more rapidly than they could be recorded in books. But books which are real authorities, as well as practical, are beginning to appear. Those we list are all good. MOTOGRAPHY backs every one of them as being the best possible value for your money.

The Motion Picture, Its Making and Its Theater

150 pages, no advertising. A book which has had a phenomenal sale among practical men because it actually tells how to get better results. Our best offering. **Cloth $1.00. Paper 50c. Sent prepaid.** You'll not be sorry you bought this.

The Modern Bioscope Operator

This is a 160 page cloth bound book which is published in London. We are the importers and have sold a large number of them. It is practical all the way through and you can use it to good advantage.
Price $1.00 prepaid.

Living Pictures

Also published in London. One of the most interesting books you ever read. It starts with the theory of the motion picture and gives a readable account of the early experiments that were made along this line. And then it comes down to rock bottom and gives up-to-the-minute information, including a chapter on film making. A mighty good addition to your library. **275 pages, Cloth bound. Price $2.00 prepaid.**

Science of Organization and Business Development

A book which should be in the library of every man who realizes that the motion picture industry is a real business. It tells all the ins and outs of organizing and conducting a business. If you are incorporated, or ever expect to be, you need this book.
Price, bound in full Morocco and prepaid $2.75.

Business Record

We have sold hundreds of these books because they fill the business requirements of proprietors of picture theaters. There are 104 large pages, 9x12 inches, printed upon strong ledger paper and nicely bound in blue cloth. The book affords a complete record for two years' business. Every theater owner needs one.
Promptly sent for $1.50.

Special Offers:

We will include free a paper bound copy of The Motion Picture with a year's subscription to Motography at the regular price of $2.00.

For, $3.75 we will send the Science of Organization, bound in morocco, and Motography for a year.

For $3.00 we will send the Business Record as described above and Motography for a year.

These offers are all special and may be withdrawn at any time

"When You Buy 'Americans' You Buy the Best"

TRADE MARK

Buy Film as You Would Buy an Automobile—

Consider All the Merits—"The Talking Points"—of Every Make of Independent Film—Then Compare It, Point by Point, with the Product Manufactured by the American—and We'll Leave the Verdict with You

Length of Life

would be a most important consideration in your selection of a car. Reputation, based on *satisfactory service to others*, would help to govern your choice. You surely wouldn't overlook the quality of steel, leather and tires in such a purchase —and—

You Would Pay More

for a better grade car. **American Film** costs no more than any other make—it's simply a question of your **Demanding American Film** in place of some inferior product.

A Secret Chemical Treatment

is given all **American Film**—a chemical bath that adds greatly to its normal life, prevents early cracking and brittleness. Hence—**American** films are a money-maker for exchanges.

Reliability

You wouldn't forget the reliability of the maker. The character of men back of any undertaking is of prime importance to the buyer. Consider that in buying film—consider that **The American** is only a little over one year old! In **fifteen months** of existence its sales have shot to the top! A striking testimonial to the business acumen of the men back of **American**!

American Photography

has set a pace for all of them. It's stereoscopic, clean-cut qualities needs no comment here. Every one in the film trade knows **American Photography.**

California Backgrounds

have been extensively advertised by the **American.** It's peculiarly fitting, we think, in an age of out-of-door sports, to specialize more or less in out-of door pictures, using the studio only where necessary to carry out the thread of the story. Particularly fitting, you will admit, where the backgrounds are superb California—dreamy, delightful El Cajon Valley.

American Pantomime

acknowledges no superior anywhere. We give you the product of experienced players adapted by nature and training for the work. If better could be had, the **American** would have them.

American Productions Are the Result of an Able and Efficient Organization, Careful Study of the Markets and a Determination to Give You the Highest Uniform Grade of Work That Brains and Experience Can Provide.

"Coming Americans"

A LEAP YEAR COMEDY.—**Release February 22. Western Comedy. Length 1,000 Feet.**
A rollicking good story, centering around the leap year sentiment, timely, dainty, enticing. You should have it.

THE LAND BARON OF SAN TEE.—**Release February 26. Western Drama. Length 1,000 Feet.**
Touching on that great western problem--the water supply. A dramatic, stirring, well-acted bit of western drama that you're sure to like.

AN ASSISTED ELOPEMENT.—**Release February 29. Western Comedy.**
Illustrating the point that it's "up to the girl after all." How a mechanic made his rich attorney-rival settle his bills, get him out of jail and do sundry other favors.

FROM THE FOUR HUNDRED TO THE HERD.—**Release March 4. Western Drama. Length 1,000 Feet.**
Concerning the Earl of Derbley and his wife and a young western ranchman. A tale that will interest. This film combines some of the handsomest backgrounds ever seen in a motion picture.

THE BROKEN TIES.—**Release March 7. Western Drama. Length 1,000 Feet.**
The old, old tale of a selfish stepmother handled from a new and novel angle. A story that will enlist the sympathy of your audience and appeal to every heart.

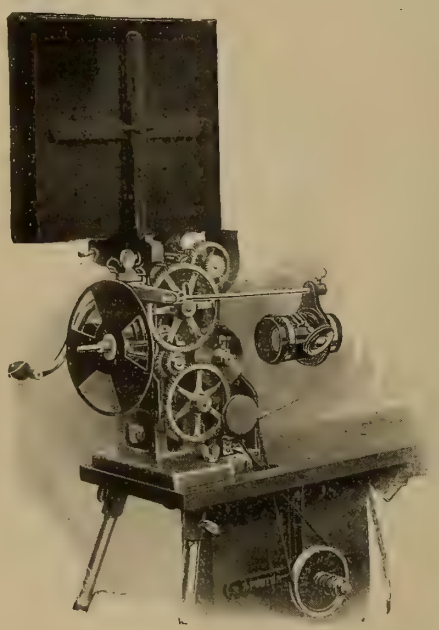
Bank [illegible]or, Ashland Block, CHICAGO

"Put Money in Thy Purse"

Shakespeare didn't say this with regard to *Power's Cameragraph No. 6*, tho' he could have, were he alive today. And we might add that as Shakespeare produced the best plays of his or any other age, so the best product today in the Moving Picture Machine Industry is



Power's Cameragraph No. 6

The best is the only thing you can afford; competition is keen, and if you don't get it the other fellow will, with the result that he will play to full houses, for the public is wise to POWER'S No. 6, and knows it to be the only Moving Picture Machine which gives perfect results.

We are the pioneers in this industry, and our fourteen years' experience and skill have enabled us to produce this machine, which is built for wear and tear, is guaranteed for a year, and projects a picture absolutely without flicker.

Our Reputation is Behind This Machine

and we repeat that a POWER'S No. 6 in your house will surely "put money in thy purse."

Thomas A Edison

In what other business can you start with such small capital, such a small pay-roll and such great promise of big returns as the moving picture business offers?

Success and big profits await every *good* motion picture show that opens. Short sighted exhibitors who try to economize by starting with a cheap machine are the ones who fail.

Start with the best machine first — get

The Edison Kinetoscope

and build for the future as well as for the present. The Edison Kinetoscope, projecting the clearest, steadiest pictures, without flicker, long pauses or dead stops; builds up a permanent, night after night patronage that keeps the profits coming home. Besides, the Edison is the simplest and most economical to operate — you don't throw away a big percentage of your income on repairs — and it will outlast any other motion picture machine made. Write us today for complete information and copy of the Edison Kinetogram.

MOTION PICTURE PATENTS COMPANY

80 FIFTH AVENUE, NEW YORK

January 10th, 1912

NOTICE

The validity of the Edison Re-issued Patent No. 12,192, covering motion picture film, has been sustained by the Supreme Court of the District of Columbia, and for the information of those concerned, there appears with this notice a copy of the order and decree entered in that Court on December 23rd, 1911.

The manufacture, sale, rental or use of motion picture film containing the invention covered by said patent, without license from this Company, will be diligently prosecuted by suits for an injunction, accounting and damages, including all profits, gains and advantages that the infringer has received or that have accrued to him by reason of such infringement, in manufacturing, selling, renting or exhibiting such film.

MOTION PICTURE PATENTS COMPANY

MOTION PICTURE PATENTS COMPANY

80 FIFTH AVENUE, NEW YORK

In The Supreme Court of the District of Columbia.

MOTION PICTURE PATENTS COMPANY,
Plaintiff,
vs.
CHICAGO FILM EXCHANGE,
Defendant.

In Equity.
No. 28,605.

This cause having been brought to final hearing upon pleadings and proofs, and upon Defendant's motions to strike out testimony taken on behalf of the Plaintiff and for leave to take further testimony on behalf of the Defendant, and having been argued by Melville Church, Esq., of counsel for the plaintiff, and by Harry N. Low, Esq., William Houston Kenyon, Esq., and William J. Wallace, Esq., of counsel for defendant, and having been duly considered by the Court, it is, by the Court, this 23rd day of December, 1911, Ordered, Adjudged and Decreed, as follows:

I. That reissue letters patent No. 12192, granted to Thomas A. Edison, on the 12th day of January, 1904, for Kinetoscopic Film, referred to in the plaintiff's bill of complaint, are good and valid in law as to the 2nd claim thereof.

II. That Thomas A. Edison was the original, first, and true inventor of the improvements described in said reissue letters patent and particularly claimed in the said 2nd claim thereof.

III. That the plantiff, Motion Picture Patents Company, has good title to said reissue letters patent.

IV. That the defendant, Chicago Film Exchange, has infringed upon said reissued letters patent No. 12192, as to the said second claim thereof.

V. That a perpetual injunction issue against the said defendant, Chicago Film Exchange, prohibiting it, its officers, directors, attorneys, agents, servants and workmen, from directly or indirectly making, using or selling Kinetoscopic or Motion Picture Films containing or embodying the invention set forth in said reissue letters patent No. 12192, and particularly covered by claim 2 thereof.

VI. That the plaintiff do recover from the defendant the profits, gains and advantages which the defendant has received or made or that have accrued to it by reason of its said infringement of said reissue letters patent No. 12,192 since the date of said reissue letters patent, and also the damages which the plaintiff has sustained by reason of said infringement, to be assessed as provided by law.

VII. That this cause be and is hereby referred to the Auditor of this Court to take and state an account of said gains, profits and advantages and to assess such damages, and to report thereon with all convenient speed; and that the defendant herein, Chicago Film Exchange, its officers, directors, attorneys, clerks, servants and workmen be and are hereby directed to attend before said Auditor, from time to time, as required, and to produce before him such books, papers, vouchers and documents and to submit to such oral examination as the said Auditor may require.

VIII. That the plaintiff do recover of the defendant its costs in this suit to be taxed by the Clerk of this Court.

IX. That defendant's motion to strike out parts of rebuttal testimony of the plaintiff as not being proper evidence in rebuttal, and defendant's motion to be allowed to take further testimony strictly in surrebuttal, heretofore reserved for the final hearing, are hereby denied.

WENDELL P. STAFFORD, Justice.

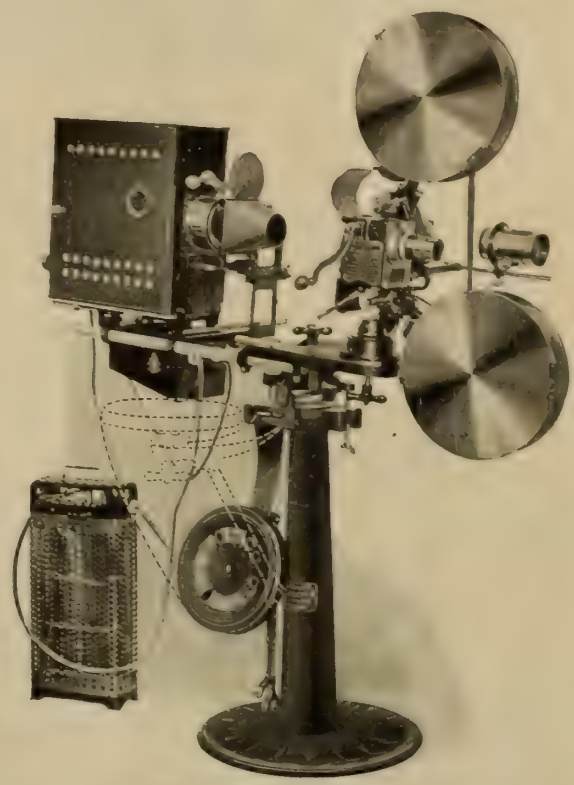
No. 1000B Motiograph with Operator's Seat In Position

1912 MOTIOGRAPHS



No. 1000B Motiograph with Operator's Seat Dropped Out of the Way

PICTURES DE LUXE

Extract from Program of Lyric Theatre, Minneapolis

"NOTE—Please note the wonderful clearness of these pictures, the perspective obtained and the ABSENCE OF ALL EYESTRAIN, ETC."

THE MOTIOGRAPH MAKES IT POSSIBLE for you to call the attention of your patrons to your picture—you no longer need be ashamed to meet them.

STAND OUT IN FRONT just like THE PICTURE projected by THE MOTIOGRAPH. STANDS OUT IN FRONT OF ALL OTHERS.

Mr. S. L. Rothapfel, the originator of the De Luxe picture performance and inventor of Daylight Pictures, has installed THE MOTIOGRAPH in the Lyric of Minneapolis, Alhambra of Milwaukee and Empress of St. Paul—the three largest and best theatres in Central West. "NUF SED."

Books You Should Have

Books pertaining to the Motion Picture Industry are scarce. The reason is obvious—the art is new and things have been accomplished more rapidly than they could be recorded in books. But books which are real authorities, as well as practical, are beginning to appear. Those we list are all good. MOTOGRAPHY backs every one of them as being the best possible value for your money.

The Motion Picture, Its Making and Its Theater

150 pages, no advertising. A book which has had a phenomenal sale among practical men because it actually tells how to get better results. Our best offering. **Cloth $1.00. Paper 50c. Sent prepaid.** You'll not be sorry you bought this.

The Modern Bioscope Operator

This is a 160 page cloth bound book which is published in London. We are the importers and have sold a large number of them. It is practical all the way through and you can use it to good advantage. **Price $1.00 prepaid.**

Living Pictures

Also published in London. One of the most interesting books you ever read. It starts with the theory of the motion picture and gives a readable account of the early experiments that were made along this line. And then it comes down to rock bottom and gives up-to-the-minute information, including a chapter on film making. A mighty good addition to your library. **275 pages, Cloth bound. Price $2.00 prepaid.**

Science of Organization and Business Development

A book which should be in the library of every man who realizes that the motion picture industry is a real business. It tells all the ins and outs of organizing and conducting a business. If you are incorporated, or ever expect to be, you need this book.

Price, bound in full Morocco and prepaid $2.75.

Business Record

We have sold hundreds of these books because they fill the business requirements of proprietors of picture theaters. There are 104 large pages, 9x12 inches, printed upon strong ledger paper and nicely bound in blue cloth. The book affords a complete record for two years' business. Every theater owner needs one.

Promptly sent for $1.50.

Special Offers:

We will include free a paper bound copy of The Motion Picture with a year's subscription to Motography at the regular price of $2.00.

For $3.75 we will send the Science of Organization, bound in morocco, and Motography for a year.

For $3.00 we will send the Business Record as described above and Motography for a year.

These offers are all special and may be withdrawn at any time

"COMING AMERICANS"

(Each of these releases will be advertised to SEVEN MILLION people. You will feel the demand. Prepare to meet it by insisting that your exchange buy BOTH AMERICANS. Help us to help you.)

"THE BROKEN TIES"
Release Thursday, March 7. Western Drama. Length 1000 feet. A brilliant virile drama sure to please.

"AFTER SCHOOL"
Release Monday, March 2. Western Drama. Length, 1100 feet. An old, old story handled from a new and novel angle. Thoroughly "*American.*"

"A BAD INVESTMENT"
Release Thursday, March 14. Western Farce-Drama. Length 1000 feet. A Western tale of a mining stock deal, a wayward son and an over-wise Father. You will want it if you like real farce and superfine photography.

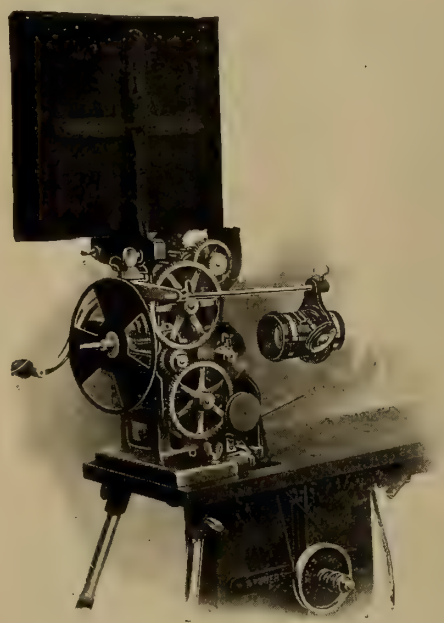
"FULL VALUE"
Release Monday, March 18. Western Social-Drama. Length, 1000 feet. A love-making "boss," and a pretty stenographer play leading roles in "Full Value"—a dainty, charming bit of film that will entertain and interest.

AMERICAN FILM MFG. CO.

Bank Floor, Ashland Block, CHICAGO

"Put Money in Thy Purse"

Shakespeare didn't say this with regard to *Power's Cameragraph No. 6*, tho' he could have, were he alive today. And we might add that as Shakespeare produced the best plays of his or any other age, so the best product today in the Moving Picture Machine Industry is



Power's Cameragraph No. 6

The best is the only thing you can afford; competition is keen, and if you don't get it the other fellow will, with the result that he will play to full houses, for the public is wise to POWER'S No. 6, and knows it to be the only Moving Picture Machine which gives perfect results.

We are the pioneers in this industry, and our fourteen years' experience and skill have enabled us to produce this machine, which is built for wear and tear, is guaranteed for a year, and projects a picture absolutely without flicker.

Our Reputation is Behind This Machine

and we repeat that a POWER'S No. 6 in your house will surely "put money in thy purse."

Motiograph Machines

Every Motiograph is a Motiograph Through and Through—Built for Those Who Want the Best.

Much has been said by other makers about the greatness of their factories—Few people realize that the greatest of them all is the Motiograph Plant.

The reason it has not been necessary tc exploit it has been the *high standard quality* of the *Motiograph*—For four years the *Motiograph* has been less advertised than any other make, and still it has forged steadily forward in popular favor—Our competitors are forced to spend thousands of dollars yearly more than we do, and still we go onward.

Don't Take Chances

and buy because of the size of advertising space—but read the small, direct *Motiograph* talks.

The Motiograph organization is a unit which represents a *high degree of efficiency* in Motion Picture Machine construction and *that is why The Motiograph* maintains its *reputation of THE BEST BUILT MACHINE ON EARTH.*

THE HOUSE OF

SELIG

Announces another great big quartet of Selig features for March. Each and every one of the four big Selig subjects released each week is a prosperity passport. Don't miss one of them.

Bounder

Another remarkable and thrilling Selig animal picture, depicting a mountain lion's devotion to its mistress. Miss Betty Harte plays the heroine role. This is the first of a new series of Selig animal pictures. A box office magnet.

Released March 12th **About 1,000 Feet**

Across the Isthmus of Panama in 1912

Showing Uncle Sam at work on a project of far greater magnitude than ever before attempted. The best topical of recent years. A great single reel feature of vast educational worth.

Released March 15th **About 1,000 Feet**

Sons of the North Woods

A sterling drama of life and romance in The Great Canadian Northwest. A picture teeming with thrills and excitement. Pictured in midwinter in the isolate and barren north. A Real Feature.

Released March 25th **About 1,000 Feet**

All on Account of Checkers

A comedy of new and clever situations, delightful acting, and a thousand laughs. A group of Selig's best comedy players furnish one of the most enjoyable comedy reels of the year. You know how scarce real comedies are. Here is one. Don't miss it.
